"They would say, 'Loan me a quarter.' They never seen the man before. Just walk right up to him and say 'Loan me a quarter.' And if the man acts anyways like he resents it, then there's an argument. Then, when an argument starts with one, well, you know, it's 20 of them.

TRY TO GET THEM OUT

"You always try to get them out of the store. That's number one. You try to protect the customer. You say, 'Come on,' like you were going to walk with him to his car if they don't stop you. But they cause quite a bit of trouble this way. . . .

"Those windows were broken out about five times. And every time they were broke it was $150. So I had them broke down into 12 sections. Smaller windows in small sections. So that if just one of them were broken it would cost in the neighborhood of 18 or 20 dollars. This is providing it ain't on a Saturday or Sunday. If it's $20 on Monday, it's $30 on Sunday. It's always time-and-a-half if they have to put them in at night or Saturday or Sunday.

"It's not so much robbery or snatching here. There's robbery, too, but it's one of those things that's not hitting the people in neighborhood so much. It's the people who are in business—their customers—that's getting hit hardest.

YOU CAN FEEL TROUBLE

"Just like last Saturday night past. A man from Delaware, he stopped in. He said he'd been to Atlanta, Ga., to get some plans to build some trailers and he stopped here to get a cup of coffee at my place. I was here. And these kids was in the store, about six of them. I was in the back of the store.

"I walked to the front of the store. You can always feel when something happens, when something's going on. When I walked in the front of the store, they rushed out front and the man finished his coffee and went out right behind, about 15 or 20 seconds after. And he comes right back and says his three suits, a briefcase, and his suitcase has gone from his car. And he looked down the street and the boys was running with the suits and they drop the suitcase, but not his briefcase where he had his plans in it to build these trucks. Then he left his name and his address and told me if I get his briefcase back to give him a ring collect. He wouldn't worry about his suits, but he was worried more about his plans.

"So, ordinarily, you would lose any customer that this would happen to.

THEY STARTED YOUNG

"My feeling is it's something like they started when they were very, very young, and I felt like they had no means of getting anywhere. And sometimes this is the onliest way they have means of eating. Because sometimes when they can't find anything to take that's with any value to it, they'll come in an' order a sandwich and run out without paying for it.

"In a case like that you try to catch them and talk to them—if he is one of the smaller ones—anywhere from 8 to 14 or 15. But if they are 18, 17 or 16, it's hardly any use of saying anything to 'em.

"I have actually pinpointed some of them to the police. For instance, the police caught one who had broken into the jukebox—my jukebox in my store. And the police catch him and take him to the precinct. Now when his parents come to the precinct, she says that 'The girls (who were in the store) don't know whether it was my boy or not.' So the police says, 'Well, I'm not worried about the girls; I seen him myself.' But this is just about the only thing that happens to the boy. He is released to his parents. And that's all. Over and over.

RESENT COMPLAINTS

"I have never complained to a parent yet who would agree, who didn't show some resentment, when you say it's their child doing something wrong.

"For instance, a kid threw a rock through my car windshield parked on the lot. And the next day I was on my way to the shop to get the windshield put in. On my way, these kids were getting out of school, on the way home to lunch. A little, small fellow, he must have been 8 or 9 years old at most, I'm looking right at him, and he threw a rock through the side window of my car. So I backed up, catched him, put him in the car. Asked him where he lived. He told me. So I took him home to his mother. She says, 'I believe he did it because I'm always after him about throwing rocks.' But when his father came home, she would get her husband to get in touch with me.

"So he called that evening about 5 or 6 o'clock. Told me he was the kid's father, but he didn't like the way I manhandled his son. Said I had no right to put my hands on him. So what do you do about that? Really, it makes you so disgusted, you just don't say nothing. He couldn't have been over 8 or 9.

INSURANCE COST DOUBLES

"You pay so much for vandalism, you pay so much for thefts, you pay so much for robbery, that you get to the point where you can't even pay your bills. This is what it does to you. Sooner or later it'll put you out of business.

"All of my insurance was canceled out and rewrote at a double premium. I don't know why. Too much of a loss, I guess that's why they did it.

"It's very hard to keep help for the simple reason of the way the teen-agers come in, the way they talk to the counter girls and the girls really can't control them. The minute I leave, this is when they start. They will, maybe, wait across the street, but they will watch and the minute I leave if the girls say something to them they will get a good going-over—in language.

"Then you have the problem wherein you can't put anything within reach of a customer. Like, carry-out shops have always been one of those things where you put certain items on the counter. Like a pie or a cake or a soda machine. But there you can put nothing on the counter. And they even get to the point where they come along and ring the cash register.

NOT ENOUGH POLICE

"When the counter girl turns her back, they stands on the footstool up on the counter and they just lean over and hits the key on the register until the drawer flies open. Even like the cigarette machine, it's been broken in several times, but the place ain't closed. They'll break in it right while the girl is looking at them.

"Well, you don't have enough police, and then again sometimes you may call and they say they don't have a foot man for the beat. If you don't have a foot man for the beat, maybe a car stops by once or twice in eight hours.

"The police are doing as good a job as they can possibly do under the circumstances. Meaning, if they are lucky enough to catch one like they caught one in the jukebox, I mean nothing happens.

"The only solution that I think would be helpful is that if one of these kids gets into something, they should be punished . . . All the kids over there is not bad. Some of them is not destructive. But you have such a few that's not destructive and so many of them goes and throws that all of them seems destructive. . . .

"Now, I'm lost when you ask me what it takes to help them. All I can tell you is what's it's like, what has happened to me."

Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. WILLIAM L. ST. ONGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. ST. ONGE. Mr. Speaker, our Nation was founded on the principle that all nations have the right to govern themselves and to mold their own destinies, free from outside interference and domination. At this very moment the lives of our young men and our national treasure is committed to upholding this principle in southeast Asia. The right to self-determination is therefore not only the cornerstone upon which our great country was founded, but it is also a basic premise of our foreign policy.

In recognition of our devotion to freedom I believe it all important that we give every possible support to those people for whom self-government is still a dream. January 22 marks the 49th anniversary of Ukrainian independence. This nation of 45 million people represents the largest captive non-Russian group in the Soviet Union. The continued refusal of the Soviet Government to grant these people their independence is unmistakable proof that the Soviet Union is the primary practitioner of the worst form of colonialism existing in the world today.

History has substantially proven that western men will not long tolerate foreign domination and the denial of their freedoms. The monolithic Soviet East European empire has been no exception to this rule, and there are increasing signs that the Soviet Government is at last recognizing that its subject peoples can no longer be kept in bondage. It is therefore hoped and anticipated that the brave spirit of the Ukrainian nation will prevail, and that in the not-to-distant future their Russian masters will accept the inevitable right of this nation to be free and independent.

On this anniversary of their national independence, I am pleased to join with many of my colleagues in the Congress to extend greetings to the people of the Ukraine and to their kinsmen in America. We pray for the early restoration of their liberty from Soviet bondage.

The Defeatist War of Words

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. MULTER. Mr. Speaker, although there is disagreement and misunderstanding about our policy in Vietnam there is no doubt that a majority of our citizens support the fight for freedom being waged in that country.

William R. Hearst, Jr., in the following column from the January 1, 1967 edition of the New York World Journal Tribune, has drawn some interesting parallels between Mao Tse-tung, Ho Chi Minh, and the dictators of the past.

I commend the article to the attention of our colleagues:

THE DEFEATIST WAR OF WORDS

(By W. R. Hearst, Jr.)

SAN SIMEON, CALIF.—When I read and hear some of the defeatist words which have been appearing in some American newspapers and on radio and television, I don't see how Peking or Hanoi could improve on it as propaganda—for their side, that is.

Lord Haw Haw in Europe and Tokyo Rose in the Pacific theater in World War II did not serve the purposes of our enemies one-tenth so well as has some of the material being distributed as news and opinion by war critics on our own home front.

What I am talking about is the deluge of material calculated to give the impression that American bombing raids in North Viet Nam are indiscriminately killing innocent civilians. All of this, deliberately or not, gives tremendous boost to the Communist campaign to have the U.S. cease its bombings.

In the reports, and the complaints and breast-beatings which have followed throughout the world, sight has all but been lost of the fact that such activity is helping an atheistic and cruel tyranny which surpasses Hitler's.

I cannot help but contrast the disservice being done to their country by the perpetrators of enemy-inspired lies with the heroic service being rendered by our fighting men in Viet Nam.

They march vividly before my eyes, these patriots whom I saw just last month returning from a patrol in enemy infested, rugged back country—soaking wet from sweat and rain, with mud-covered faces and clothing and weapons—but proud and determined to help win a just and honorable peace for the people of Viet Nam.

I'm not saying nor even trying to suggest that perfectly decent, loyal Americans who sincerely believe that we have stumbled into the wrong war in the wrong place have no right to their opinions.

Whether or not our country should get into somebody else's war has historically been a matter for debate and divergence of view—before the decision has been arrived at in Washington.

But once our government's course has been agreed on and set by the majority of the people's representatives, then those who wittingly or unwittingly give aid and comfort to our enemies by their words, deeds or actions are treading a dark path indeed.

In Viet Nam we started out, as we did before Pearl Harbor, aiding with men, money and materials the cause we determined was right—the cause of a virtually defenseless people whose freedom was being menaced by the power of a mighty tyranny.

Once again in this just and honorable and humane cause we have become committed militarily and for the same reason—that the fight to preserve freedom shall not be lost by default. Anything which weakens that effort is a service to the enemy.

* * * * *

Consider the parallels: Hitler and Mussolini were racists. Mao and Ho are racists.

Hitler and Mussolini were atheistic and anti all religions. Mao and Ho are atheistic and anti all religions.

All sought or seek to impose tyranny on those unable to resist.

So, and I repeat, it is in reality the same fight as before, but on a larger global area and with even more at stake in the ultimate outcome. It is a struggle we are committed to win and must win. Anything less than victory for our side, as Cardinal Spellman aptly said, "would be inconceivable" since we are engaged in a crusade for the defense of civilization itself.

And yet, sadly, we have people in our midst not only thinking we should cease our efforts but openly advocating it.

Some of these people are shortsighted. Some are deluded. Some are coldly calculating in their efforts to help the Communist cause.

Hitler's fantastic conceit is matched in every way by Mao's titanic arrogance, perhaps even surpassed by it.

Whereas Hitler denied and dared the wrath of Jehovah, Mao denies the very existence of any being—whether human or divine—who could even possibly be greater or more important than himself.

* * * * *

My conviction is that we should never sell the gods—yours and/or mine—short.

It wouldn't surprise me in the slightest if eventually, with a terrible and appropriate justice, they might permit and even encourage the two great atheistic forces of the world to destroy themselves.

Week by week, the tension between these two great atheistic powers grows sharper and sharper. So bitter is the hostility between them that only the slenderest diplomatic threads have survived. It would take only a slight military incident along their vast and disputed border to result in a mighty showdown of force.

This possibility was recognized this past week by Red Star, the official Russian army publication, which declared that Peking's leaders have now ordered an all-out, hate-Russia campaign in the Chinese army.

To quote a very, very old saying:

"Whom the gods would destroy, they first make mad."

Hopefully, I say, at each other.

With this pleasant little possibility in mind, I feel cheered enough to say what I should have said in the first place. Here's hoping our new year will be filled with more happiness and patriotism than was the late and unlamented 1966.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. RUMSFELD. Mr. Speaker, 49 years ago, on January 22, 1918, patriots of the Ukraine proclaimed their freedom and independence after centuries of subjugation by the Russians. For the Ukrainian people, this is a memorable day—a day on which honor and tribute are paid to the Ukrainian dead and the Ukrainian living, all of whom have served with glory in the forefront of the fight for freedom against Communist oppression.

For 3½ years following the proclamation of the sovereign and independent Republic of the Ukraine, the people of that nation fought valiantly against the overwhelming forces of the Soviet Union. Their determination to retain their freedom and their valor will be long remembered. But the might of the Soviet Union prevailed, and the light of freedom was extinguished in the Ukraine. Since then, the Ukrainians have suffered under Red tyranny, but their dream of liberty remains strong.

In honoring this valiant people on this anniversary of Ukrainian Independence Day, let us reaffirm our hope to see freedom for all oppressed people and the liberation of the Ukrainian Nation from Soviet domination.

Legislative Program of Affiliated Young Democrats, Inc.

EXTENSION OF REMARKS

OF

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. ROSENTHAL. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I would like to set forth at this point the legislative program for 1967 adopted by the Affiliated Young Democrats, Inc., of New York State at their State meeting which was held at the Hotel Piccadilly in New York City on Thursday, December 22, 1966.

The program follows:

Affiliated Young Democrats, Inc. of New York State Adopt Legislative Program for 1967 at Their State Meeting Held at the Hotel Piccadilly, 227 West 45th Street, New York City on Thursday Evening, December 22, 1966

The Affiliated Young Democrats of New York at their State Legislative Committee meeting held last evening at the Hotel Piccadilly, 227 West 45th Street, New York City, unanimously endorsed their State Legislative Program for 1967, which Program will be introduced and advanced in the State Senate by their 20 members, under the Chairmanship of Samuel L. Greenberg of Kings County; and in the State Assembly, by their Chairman, Dorothy H. Rose of Eric County, with their 45 members in the Assembly.

AFFILIATED YOUNG DEMOCRATS STATE LEGISLATIVE PROGRAM FOR 1967

1. Bill requiring State-Wide Primaries for all State Offices.

2. Raise drinking age to 21 years.

3. Change Condon-Wadlin Law with no strike clause, and to settle all strikes by impartial Arbitrators agreeable to both sides.

4. Lower voting age to 18 years.

5. Stronger Code of Ethics.

6. Bonus for Korean and Vietnam Veterans.

7. Study cost and financing of all Political Offices and a bill for this solution.

8. Tighten Laws to combat air and water Pollution.

9. Strengthen Law to enforce Compulsory Auto Insurance Law.

10. Raise the Juvenile Jurisdiction of the Courts from 16 to 18 years. All youthful offenders should be put in different Institutions than adults.

11. Law to enforce sale or purchase of cigarettes, tobacco, and cigars to anyone under 18 years of age.

12. Raise minimum wage to $1.75 per hour.

13. Outlaw Boxing.

14. Permanent Spring Primary Election day in June.

15. Mandatory free tuition at all State and City Universities and Community Colleges.

16. A printed Record of all proceedings verbatim of each State Legislative Session be made available to the public.

17. Bill to create three day-week-end plan to celebrate all Holidays, except Religious Holidays, on Monday.

18. More incentive Scholarships to assist needy students to go to College.

19. Bill for permanent Personal Registration be made State-wide; and changed to have less congestion in New York City.

A. Do not have to Register if a person moves in same County of New York City, only have to mail notarized change of address to Board of Elections of that County.

20. Bill for State-wide Recreation Department to be created.

Richard H. Weis, Chairman of the State Legislative Committee of the Affiliated Young Democrats of New York presided at this important meeting.

Across the River, Part III—The Star Documents a Civic Crisis

EXTENSION OF REMARKS

OF

HON. HERVEY G. MACHEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. MACHEN. Mr. Speaker, the third article in the excellent series, "Across the River," by Haynes Johnson, published last week in the Washington Evening Star, draws a disheartening picture of life in public housing in that section of the District of Columbia which is east of the Anacostia River.

The public housing projects in this section have been struck as hard by vandals and reckless destruction as any other part of the area. What happened to the public housing projects can only be described as disgraceful. Like the stores, shops and residents of the area, the public housing projects appear to be sitting ducks for wanton vandalism and terror which is characterizing the area east of the Anacostia River. This third article, published on Wednesday, January 18, 1967, in the Star, follows:

Across the River, 3—The Public Housing Islands of Despair

(By Haynes Johnson, Star staff writer)

The best that can be said about the Valley Green public housing development is that it is still standing. It must also be said that it is a disgrace to Washington.

Valley Green, across the Anacostia in the Far Southeast, is a place of lawlessness and neglect, fear and hatred, destruction and looting. Its problems cannot be overstated.

There, children prey upon children, adults upon adults. For the tenants there is no security, no protection and, one can only feel, no hope.

"Last Friday night there was a party in the apartment next to mine and I was afraid to go to sleep," said a mother of five children. "They started fighting inside, and then they went outside, right outside by window, and they started firing shots. I was afraid to go to the window, even. Two times they did that. They went back inside and started fighting again and then they go outside and start shooting again.

"I was scared to death, of course, and I was afraid for my kids. I'm on the ground floor and they was right outside the window and the violence was outside and it could come right in and get me.

"It's bad when you're afraid to lay down to go to sleep at night. It's like at Highlands (an adjoining public housing project) when all the apartments was catching fire and my friend's girls got burned up. It's bad to have a place you call home and you're afraid to lay down your head."

Valley Green is no special island of despair. Nearby are other housing projects, both public and private, wearing the same look—drab slabs on a drab landscape—and containing the same problems. Broken windows, looted mailboxes, smashed fixtures, terrifying sounds in the night—all these are part of the way of life in the trouble spots Across the River.

Two generalizations can be made about public housing projects studied during the preparation of these articles:

First, the people who live in them hate them—with good reason.

Second, there is something seriously wrong with the planning and administering of the units.

Public housing always has been a vexatious problem in Washington. It throws together large numbers of people, all of them poor, in areas away from the heart of the city. Many of these people reinforce each other's problems and behavioral patterns. As a group, they also form the true dispossessed of Washington.

In the projects, families without fathers are the rule. They are large families, most of them dependent on welfare for a living. Many of them have been uprooted and forced to move from other areas of the city by urban renewal or freeways. At Valley Green, for example, nearly all of the 100 families who moved there when it became public housing had been displaced and were given housing priorities because relocation officials could do nothing for them. In fiscal 1966, of the 196 housing priority families needing four or five bedrooms, nearly half went to Valley Green.

Thus, that project became a focal point for problem families in an area that already had substantial housing problems.

Complicating the picture is another fact. The National Capital Housing Authority (NCHA) always has been—and still is—timid about tackling the social problems of the people it serves.

Housing officials can point to numerous difficulties in their path—lack of funds, the complications of dealing with Congress, the necessity to build a maximum number of units at the lowest price on the cheapest land available, disagreement over which public agency should be responsible for providing community services, employment, health, recreation.

They can point to their awareness of sound planning principles—and also their difficulties in applying these principles.

But what emerges most strongly from talks with these officials, and from a review of the record, is that planning for public housing over the years has been, at best, fitful. More important, there apparently has been no real recognition that the system just doesn't work in its present form.

Consider again Valley Green, a collection of four-story walk-ups stretching back from Wheeler Road SE and facing on numerous small and dreary courts. Until 1964, Valley Green was operated privately; then, over vigorous protests from integrated neighborhood groups, it was converted to 350 public housing units for large families.

The neighborhood, bounded by St. Elizabeths mental hospital, Bolling Air Force Base, the Anacostia River, and the Maryland line, already contained a large number of public and low-income private housing units. Valley Green added more.

A father—a rarity in the project—who works for the Treasury Department at night, described what has happened since then.

"It's getting worse since they made this place public housing," said Vadon McDowell, 28, a Negro. "And I say this destruction of the buildings don't make sense. I'll tell you, I can understand why the government don't have the money to help them because they tear it up. I figure it comes from the parents. If the parents can't stop it nothing can. The mothers is either afraid or don't care. Children roam the streets unsupervised as late as 2 a.m.

TRANSFERS UNAVAILABLE

"Now I went through this Korean conflict. You think I'd be afraid of these people? No sir, I'm not afraid. But it just don't make sense to live in a world like this and that's why I'm getting out."

Others interviewed over a six-week period said essentially the same thing. Many mothers want to leave, but cannot. There are no transfers available, and, because of economics, they have no other place to go.

Residents who lived there in 1964 when it was a private project claim there has been a decline in services since the government took over. Before, they say, the garbage was collected seven days a week. Now, it is only picked up twice a week. Before, there were two security guards on patrol at night, making the area safer and keeping children inside. Now there are no guards. Before, the maintenance work was better. Now it is almost impossible to get repairs.

NCHA gives a variety of answers.

On the question of security, all the housing authority personnel in that section—NCHA's Area 9—work regular daytime hours. There is no resident manager. Maintenance men might work at night on an overtime basis to make specific emergency repairs, but they are not there to serve as police.

Edward Aronov, the acting executive director of NCHA; Harvey Everett, director of management, and other officials say the authority is not budgeted to provide a place like Valley Green with adequate protection. One man estimated Valley Green alone would need at least 10 men on night-time patrols.

Thinking in terms of all the projects, Everett said, "It would probably cost several hundred thousand dollars a year."

On the question of garbage collection, there is an odd regulation that says if a project has individual heating units the city provides pickup. Where there is central heating, NCHA must pay. The procedure then is for NCHA to invite bids by private trash firms. At most projects, two pickups a week are arranged. At Valley Green, the officials maintain, it is picked up six times a week. If that is so, then the residents are wrong.

FEELING OF DESOLATION

After going to the Valley Green area day and night for the six-week period, one comes away with a feeling that no one is supervising the buildings. As only one small example, in front of one of the apartments stands a trailer truck, rusting in the rain. It has been standing there for a year, residents say. No one seems to know why it and other abandoned vehicles have not been removed.

The most vivid impression of Valley Green is its feeling of desolation. There are virtually no doors left on the entrance hallways, and on the upper landings the large glass frames have been completely broken out. At night, there are few hall lights. Then, Valley Green is dark and dangerous. In the daytime, it is merely depressing.

Out of 350 apartments 109 are vacant—the result of vandalism. By last summer, the destruction clearly was getting out of hand.

"There has been a drastic change out here," said James Wentz, the hard-working former investigator for the Department of Licenses and Inspections who took over as Area 9 manager last summer.

"The situation is now far beyond normal management and maintenance problems. This used to be a private development. The construction wasn't the best, but at least it had a good appearance. Now it has every appearance of a slum area. As recently as last summer there was glass in the first-floor front windows and there were doors. Now there is little glass and few doors.

"This problem was what to do about housing for large families. So NCHA experimented at Valley Green. Now, with the number of children in each apartment, the place has become an attraction for other young people. They come from all parts of the city, and they cause a great deal of trouble, especially at nights and on weekends.

"Now, I'm not saying all the trouble comes from outsiders. Many of the people living here have lost sight of the thought, 'This is our home.' There is a strong feeling in the air that you can do anything to hurt government property, and it is all right. And there is also the feeling in the air that the authorities are taking it easy. At night the police come out here, and they are as cautious as possible."

At Valley Green, the damage is so great, so frequent and so extensive that the maintenance men cannot really tell new breakage from old.

"BUT WE ARE TRYING"

"So many things are happenning that we can't get to them fast enough," said Wilber Branch, the maintenance supervisor for that area. "We are trying to keep up. I think we are falling behind, but we're trying."

Wentz said conditions have reached the point where people "don't even report damage to their apartments. They are accepting it. They know what's going on, but they say if they tell us where it's coming from, they'll get their own apartments smashed."

Both men are dismayed by what's happening. Branch, in particular, seems stunned. He and the 30 men under him cannot keep up. "We thought it would get better after the summer," he said. "Instead, it has gotten worse."

It was during the summer that Branch's crews began boarding windows of vacant apartments. They went from the first floor up. By the time they got to the top floors not long ago, the boarding on the first floor had begun to disappear. Then they ran out of plywood. Three hundred sheets had been on hand in July. Now two more shipments of 72 sheets apiece have arrived and the boarding will resume.

At various times, Wentz said, he has had 50 apartments ready for occupancy, but they were damaged before families could be moved in. So the would-be tenants had to go back on the waiting list.

The oldest public housing project in the Valley Green section, Highland, was built during World War II to house naval personnel. Five years ago, the housing authority began replacing and repairing those buildings to correct fire hazards. That work was accelerated after two fires in recent years killed several children.

Today, 109 families live in Highland, while work continues on 26 buildings with nearly 100 more units. With so many vacant buildings, Highland, too, has serious vandalism problems—though not of the magnitude of Valley Green. A possible explanation might be that the families are smaller.

Another public housing project, Highland Addition, lies between Valley Green and Highland. It contains 246 units, nearly all of them occupied. While the maintenance and vandalism problems are troublesome, they are not as bad as at Valley Green.

LEASING MORE APARTMENTS

Across the street, also adjoining Valley Green, is a complex of private apartments, High Point, Barnaby Terrace and Sky Tower.

Now, the housing authority is beginning to lease apartments there for its public housing tenants. Why, when NCHA is fully aware of the over-all problems there, it adds still more tenants to a troubled area has not been satisfactorily answered.

John P. Walsh Jr., the manager of those private apartments, says difficulties are "getting worse." As an example, he said that for the month of November he ordered 500 new window panes for the 579 units in the development.

Thefts and destruction are common, he said.

"They tear up everything. We replace the locks left and right. They swing on the pipes and break them. They tear out the panels. They take the doors off the hinges, and cut holes big enough for you to put your fist through on these hollow steel metal doors. One and a half months ago they totally destroyed 80 percent of the laundry machines. They turned them upside down and took the coin boxes off the washers and dryers."

Now the coin boxes are covered with an eighth of an inch of steel plate attached to concrete posts sunk in the floor.

Valley Green and the other housing developments stand in the midst of one of the two areas already examined in earlier articles in this series. The other section, also across the Anacostia, is in Kenilworth in the Far Northeast. There, the same general problems are evident.

Across the street from a group of boarded-up stores described earlier is Kenilworth Courts, a public housing project. A combination of row houses and four-story walk-up apartments, it contains 423 units, of which only a handful are vacant. In common with the project to the south, the families are large and there are few men.

Unlike Southeast, where the apartment projects are stacked row on row, Kenilworth Courts is a study in isolation. In the front is Kenilworth Avenue; on all the other sides are woodland, the aquatic gardens, and the Anacostia River. Behind the apartments, on the strip of open land between the woods and the river, is the Kenilworth dump.

Still, physically, Kenilworth Court appears in far better condition. The exteriors are neat, there is some grass. But inside the larger apartments the same old problems are evident.

"We have problems of window breakage, fire extinguishers disappearing, and damage to equipment in storage rooms," said Edwin Gardner, NCHA's Area 11 manager.

Damage in the last year has been greater than at any time before, Gardner said. "There seems to be a growing trend among young people to lose respect for authority."

He readily concedes that Kenilworth Court tenants, mostly the young, have been principally responsible for damage and pilferage at business establishments across the street.

As always, the tenants themselves express the most discontent.

"This is the only neighborhood where it appears the police are afraid of the children," said a 35-year-old mother of four interviewed in her sparsely furnished living room. "There's no police protection out here. Right here in my hall the kids beat up a little boy. He was beat up and had his coat taken. He was afraid to say he'd been robbed of a genuine leather coat. It just goes to show that people aren't depending on police to protect them out here."

CITES GAMBLING PROBLEM

She, like others, said that gambling is a major problem.

"Every night men gamble in the halls. The quarters hit the cement so hard that I can hear it in the last bedroom in here. Half the night in the street people are screaming at the top of their voices."

Then she said:

"I've always maintained that this is the worst place on God's earth to live."

Her words help to explain why James Wentz, the housing manager in the Southeast, is talking about "a feeling of rebellion out here."

"There are regulations, and they will have to be enforced," Wentz says. "This soft patting on the shoulder is going to have to be done away with. At the same time we're going to have to build something of a community out here. We need things like adequate recreation, but that might take two years.

"Something has to be done now."

THE COST OF VANDALISM

It is virtually impossible to determine the full cost of vandalism and destruction at Valley Green public housing project. But here some clues:

In July, 30 boxes of large panes of glass, six sheets to a box, at $14 a box were requisitioned, as well as several dozen smaller boxes, 12 sheets to a box, at the same price. Today, only a few boxes are left. On some days, eight to 10 panes of glass are replaced. One hundred new boxes are being ordered.

In July, there were spare 500 mail box locks and 100 mail box doors on hand. They are nearly gone and 200 more locks, at $1 apiece, and 150 doors, at $2 apiece, are being ordered.

On Sept. 13, an order was placed for 200 thermostats at $7.20 apiece. There are not many left.

Last summer, there were 1,200 hall light bulbs in supply. Another 1,200 were purchased then. A new order is being placed for 2,800 more. Maintenance men have been putting in 60 hall light bulbs a day.

About 50 wash basins are needed to replace those broken in vandalized apartments. Orders have been placed for 50 toilet seats, 50 fire alarms, and 150 fire alarm switches.

A Centenarian Leaves a Legacy

EXTENSION OF REMARKS

OF

HON. SPARK M. MATSUNAGA

OF HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. MATSUNAGA. Mr. Speaker, when a man lives to be 101 years old, this in itself is a noteworthy accomplishment. But when a man lives to be over a hundred and leaves behind him a legacy of continuing benefits to the people whom he served and to their posterity such a man deserves to be recognized by his fellow men on as wide a scale as possible.

Dr. Ichitaro Katsuki, dean of the medical profession in the State of Hawaii, died peacefully in his sleep on January 18, 1967, leaving behind him a host of patients whose lives he had saved or whose health he had improved. He also leaves surviving him three sons who are medical doctors and a daughter who is a nurse to continue his contribution of mercy and humanitarianism to society. Truly, Hawaii is a better place in which to live because Dr. Ichitaro Katsuki lived there.

In the hope that others may be inspired by the life of one who lived the good life, I offer for the Record an excellent article written by Joe Arakaki in the July 19, 1967, issue of the Honolulu Star-Bulletin:

Dr. Katsuki, Dean of Medical Profession in Isles, Dies at 101

(By Joe Arakaki)

Dr. Ichitaro Katsuki, first Japanese doctor educated in the United States and dean of Hawaii's medical profession, died peacefully in his sleep yesterday.

He was 101 years of age.

The retired doctor died at 11 a.m. at his grand Victorian style home at 1326 Keeaumoku Street.

He had been in failing health for the past year and had been hospitalized for a while shortly before his 101st birthday.

His three sons are doctors; his only daughter is a nurse-receptionist for one of her doctor brothers.

Mrs. Katsuki, whom the doctor married in 1901 in Tokyo, Japan, died last June 23. She was 86.

Dr. Sanford S. Katsuki, one of the sons, said "My father died very peacefully in his sleep."

He said his father had been very active until quite recenlty and he thought nothing of walking two or three miles to Waikiki.

"But, he had to give up the long walks just before his 100th birthday," he said.

A few years ago, Dr. Katsuki's hearing went bad and his eyes began failing, forcing the avid reader of scientific journals to cut down on his reading.

The son of a well-to-do industrialist in Osaka, Japan, Dr. Katsuki was graduated from San Francisco High School in 1888. He returned to Japan and taught English in Kobe and Osaka.

He decided to take up medicine during his mother's illness. He felt he could help her if he became a doctor.

In 1896, he realized his ambition when he graduated from the University of California School of Medicine.

The bubonic plague brought him to Hawaii.

He was sent here in 1900 by the San Francisco Health Department to investigate the plague outbreak.

Dr. Katsuki immediately fell in love with Hawaii, decided to make his permanent home here, and became a pioneer physician for plantation workers.

In one of his many interviews, he recalled that the 1900 epidemic not only caused horror in Honolulu but alarmed Pacific Coast cities as well.

During the plague, he worked closely with such then well known doctors as R. W. Wood and F. Trotter.

After his study, he was sent to the Orient for spot-study of localities where the plague prevailed.

In his early practice here, most of Dr. Katsuki's patients were Japanese laborers from the sugar plantations.

They all told him the same story: the plantation doctors were always too busy; they did not have the time to give each patient much attention.

His patients came from all over Oahu—Ewa, Waipahu, Aiea, Waialua, Waianae, Waimanalo and even as far as Kahuku.

The Japanese plantation workers also had a common complaint: they didn't like the work and wanted to move out.

According to the doctor, the workers complained about poor pay, poor food and poor medical care.

He also remembered that some of them didn't like their doctor because he sometimes sent them back to work when they were still sick.

RETIRED IN 1932

Dr. Katsuki retired in 1932 after 36 years of practice, but he traveled widely in the Far East after that, pursuing his interests in genectics.

In his later years, he stuck to a quiet but active life.

Almost daily, he took his cane and dressed as if for an important business conference, he walked a half mile to two miles down to Waikiki.

On his 100th birthday, he told a Star Bulletin reporter he attributed his long life to "regular living, not irregular living."

"By regular," he said, "I mean staying away from drinking, smoking, and those wild places."

He used to be a two-pack a day smoker in his younger days.

The grand old man also gave this advice: "Moderation is the answer. Excesses in everything are bad, such as women and love affairs."

He said, "The frame of mind is important. I always say don't count your birthdays. Forget your birthday and you won't grow old as quickly."

He also ate simple foods—nothing rich and slept whenever he felt like it.

An avid gardener, he spent much time caring for his plants and flowers.

A hibiscus is named for him. It's one with a red center, yellow flower, and blood red edges.

Charles M. Dunn, a long time friend of the doctor, said the hibiscus was named for him 10 years ago.

"It's a flower of life," Dunn said, "so it was only proper that we name it Dr. Katsuki."

Dunn said, "When I was a baby 60 years ago, I was very ill. Dr. Katsuki saved my life."

Dunn made it a regular practice of giving the doctor a gift on each birthday (October 22).

The doctor received two plants on his 101st birthday.

Dunn recalled his many long talks with the doctor from 1927 to 1954.

"I will certainly miss him," said Dunn. "He was not only a great doctor, but a true humanitarian.

"I will pray for him every day."

In 1963, the Hawaii Medical Association presented Dr. Katsuki a special award as dean of Hawaii's medical profession.

He became a life member of the American Red Cross in 1919. The membership card was signed by President Wilson.

Memorial services for Dr. Katsuki will be held at 4 p.m. Saturday at Hosoi Garden Mortuary.

The family requests that flowers be omitted, but donations may be made in his memory to the donor's favorite charity.

Survivors are three sons, Drs. Sanford S. and Robert Y., both in private practice, and Dr. David I. Katsuki, former City health administrator and now with the State Social Services Department; daughter, Mrs. Carol Woolard; three grandchildren; and three great grandchildren.

Mrs. Woolard is a nurse-receptionist for Dr. Robert Y. Katsuki.

Air Pollution Is a Menace to All Who Breathe

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. MULTER. Mr. Speaker, one of the most dangerous situations faced by our people, particularly those who live in urban areas, as the majority do, is the increasing pollution of the air we breathe with noxious poisons. In the near future I intend to introduce legislation calling for a concerted attack on this problem.

An excellent treatment of the subject is contained in the following article from the December 23, 1966 edition of the Seafarers Log, a publication of the Seafarers International Union. I commend it to the attention of our colleagues:

POLLUTION MENACE TO ALL

On November 23, 1966, a pall fell over the New York metropolitan area that lasted for 4 days. The air became increasingly unfit to breathe as poisonous gasses pouring from thousands upon thousands of chimneys and and automobile exhausts slowly crowded the life-giving oxygen from people's lungs.

A simple temperature inversion had clapped a lid over the city, making its normal fresh air supply a stagnant sewer of human and industrial waste products. The proportion of harmful waste products in the air rose quickly from its normal 12 percent, past the danger point of 50 percent, and up to 60.6 percent. An Air Pollution Emergency was declared and drastic measures were being considered when Mother Nature fortunately decided to spare the city further grief and the temperature inversion lifted. The poisonous gasses which had gathered over the city quickly dispersed so people could again breathe "clean air"—which was only 12 percent polluted.

New York City has not been so fortunate in the past, nor have other cities both in the United States and elsewhere.

In December 1953, New York City sustained a week-long temperature inversion that killed 200 people. Back in October 1948 the polluted air of Donora, Pennsylvania, killed 20 people and made 4,000 acutely ill in three days. Four thousand Londoners died in a single week in 1952—murdered by air which was not fit to breathe. In December 1962 a mass of stagnant, filthy air settled on the U.S. eastern seaboard from Massachusetts to Virginia. Had it not fortunately dispersed just in time, the United States might have suffered one of the worst domestic disasters in its history.

Although Seafarers, who spend much of their time breathing the clean air available for the most part today only on the high seas may not have the full extent of the problem brought home to them daily as other Americans do, what man has been doing to his atmosphere for many years can only be described as fouling his own nest. The air without which he cannot live for more than a few seconds has been used as a vast open sewer. Into it pour the smoky excrement of man's factories, furnaces, automobiles—dusts and chemicals which can and do kill.

Our atmosphere always has and always will be called upon to dispose of waste products, and can process modest amounts without serious effects on mankind. Trouble has been growing in recent years because the amount of pollutants being released into the atmosphere have risen far above the "modest" level.

Almost 8,000 communites comprising over 60 percent of the total U.S. population are today facing an air pollution problem. The problem manifests itself in deaths and permanent injuries in the form of chronic respiratory diseases, including the common cold, chronic bronchitis, chronic constrictive ventilatory disease, pulmonary emphysema, bronchial asthma and lung cancer. Emphysema, a disease once restricted almost exclusively to miners forced to breathe stale, dust-filled air for long periods, has recently become second only to heart disease as a cause of disability in the U.S.

The costs of air pollution have become staggering. Airplane crashes and delays caused by low visibility at airports "socked-in" by smog take a toll in lives and money. Medical costs brought about by smog-aggravated diseases are immense. The poisonous chemicals pumped into the atmosphere damage crops, destroy timber, injure livestock, cause rapid deterioration of stone, metal and wood buildings, weaken fabrics, cause property values to plummet, destroy game animals and wildlife and corrode precision instruments and control systems. Millions are spent yearly on electricity for increased lighting because of smog induced darkness. Paradoxically, because of our present methods of producing electricity, this often serves to increase the amount of smog in the air.

Airborne pollutants are capable of doing this vast amount of damage because of the highly poisonous and corrosive nature of the chemicals involved. The average smog that descends over a city or larger region contains varying amounts of the following:

Sulfur dioxide (which is slowly converted in the air to sulfuric acid which literally eats away stone and metal); hydrogen fluoride, chlorine, hydrogen chloride, nitrogen oxides, hydrogen sulfide, and others.

Possibly the most vivid picture one can get of the extent of air pollution in our cities is from an airliner. While flying over the countryside the air is relatively clear and vision unobstructed. In the distance, however, the city can be seen wreathed in a blanket of poisonous smog (smoke pollutants and fog) or smaze (smoke pollutants and haze). As the city approaches the pollution increases and visibility drops to zero, which means you're right in the middle of it.

Where do these poisons come from? Who are the culprits? The truth is that each and every one of us does our bit to pollute the air which we must then breathe. From the time we get up in the morning and turn up the furnace to warm the house we are adding to the pollution of our air supply because fire of almost any sort releases pollutants into the air.

Driving to work in our cars we become veritable poison gas machines with a myriad of toxic gases spewing from our exhausts. Getting rid of our garbage means fires which pollute the atmosphere. In agriculture, crop dusts and sprays put poisonous chemicals in our air. Evaporation of volatile petroleum products from open tanks is an offender. There are more ways in which our air is being polluted than we could possibly list here.

Although we must all share some of the guilt for polluting our atmosphere, some are bigger pollutors than others. In the past our huge industrial centers have, along with the automobile, been principal offenders. Anyone who visited Pittsburgh, Pa., not too many years ago could touch, taste and smell the results of air pollution created by the area's many steel plants, where open hearth furnaces spewed dust and gasses into the air day and night. Basic changes in furnace design plus the addition of equipment to remove pollutants before they escape into the atmosphere did much to make Pittsburgh's air more breathable. Still however, there is much to be done, there as elsewhere.

The fact is that although air pollution has become a nationwide problem, with our expanding industrial capacity and ever-increasing automobile ownership making our air more and more unfit to breathe, almost nothing has been done to see to it that we don't simply poison ourselves out of existence. The majority of people in the U.S. are literally living their lives at the bottom of a sewer that is shortening the lives of themselves and their children. Yet they do so without even complaining until what should be a harmless combination of weather conditions makes them gasp for breath and peer with stinging, swollen eyes through an apparent twilight at midday.

Air pollution can and must be controlled. Strong air pollution control measures are sometimes expensive, but the technology is available and must be enforced. Continued research will certainly develop new ways of controlling air pollution, but we cannot afford to wait for the ultimate solution—time is growing short. The public must demand and be willing to share the cost of needed improvements. Air pollution is already costing billions. In the long run the cost of clean air would probably be much less.

Although Congress has passed a federal Clean Air Act, the prime impetus for air pollution control must come on the community level. Large regional plans must be drawn up to direct local action however, if such action is to be effective.

A very few communities are already tackling the problem. Los Angeles, faced with one of the worst air pollution problems in the nation, has possibly taken the most action. Automobiles not equipped with exhaust purification devices have been banned, open fires have been outlawed, factory smokestacks are regulated and equipped with control apparatus. Results of such action are being observed and further action planned. A few other cities have also taken some action.

To clean up the sewer of air under which we all live, every American must demand action. We all have much to lose if we don't demand action now.

Inaugural Address of Gov. Ray Shafer, of Pennsylvania

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. FULTON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excellent inaugural address of Gov. Ray Shafer, of Pennsylvania:

TO LEAD THE NATION

(By Gov. Raymond P. Shafer, Harrisburg, Pa., Jan. 17, 1967)

On January 15, 1963, I stood by the side of a young Governor as he took his oath of office.

As he spoke of his hopes and aspirations for Pennsylvania, the vision of William Penn once more became articulate.

For William Warren Scranton saw this Commonwealth in light of its historic promise.

He urged Pennsylvanians to stand tall and walk proudly.

A few moments ago, the parentheses closed on his Administration, fixing permanently his impress on the span of the past four years.

These years were proud years.

They were tall years.

He gave rich measure to the fulfillment of Penn's vision and Pennsylvania's promise.

With confident certainty that all Pennsylvanians share my sense of appreciation for the man and his achievements, I say:

"We wish you, Governor and Mrs. Scranton, Godspeed."

In 1681, on the eve of assuming the leadership of his new province, William Penn uttered this prayer:

". . . I beseech Almighty God to direct us, that his blessing may attend our honest endeavor and . . . the consequence of all undertaking will turn to the glory of His great name and the true happiness of us and our posterity. Amen."

As the first official act of my Administration, I would like to echo the prayer of the first governor.

For the strength of our people over these centuries has been their faith in God and in themselves.

It is in that spirit that I ask you to join me as we set our faces toward the future.

One chosen for high office is often admonished that history will be looking over his shoulder.

Let me say that I am far more interested in the realization that our children, and our children's children, will be looking over our shoulders in these next four years.

If you and I, working together, can accomplish things that will please them, then history's judgment will take care of itself.

Last fall the electorate of Pennsylvania approved the most remarkable program in the annals of modern politics.

It cast aside the fetters which for too long have bound the major political parties to ancient prejudices.

It beckoned enlightened men and women who wanted a credo that caught the pulse of the times in which we live.

It boldly proclaimed its philosophy under the banner:

"To Lead the Nation."

This is no sunburst of bright words, coined to be tossed into a wishing well.

It is a clear statement of objective.

And this objective is within our reach, if our hands will grasp it and our hearts pursue it.

We are a people blessed with a land whose beauty inspired poets and whose mountains stirred pioneers; whose earth yielded oil to light the lamps of the nation and coal to fire the genius of its industrial might.

But even more, we are a people whose fathers dared to shape the thought of young America, whose State House bell in July 1776 proclaimed, not only the independence of the thirteen states, but the truths embodied in the document which declared it.

Today we commemorate the anniversary of Benjamin Franklin's birth. This Pennsylvanian can point the way to the exciting potential of a creative citizenship we seek in our Commonwealth.

For not only did he pluck the lightning from our skies, he generated the power to move men's minds.

Pennsylvania spoke to the nation in Franklin's day.

It is high time we speak again.

It is high time we reassert the concept of the Republic which was fashioned in Philadelphia in 1787—strong states united in strong partnership with a national government.

There is need for a fresh perspective.

Today we are part of a fragile world that both frightens and fascinates.

Tension, revolution, changing mores, the fear of the loss of individualism in a computerized civilization are shaking ancient beliefs and disrupting the comfort and security of old institutions.

Our youth grow restless in search of new directions.

This is nothing new to man.

Only when men have taken hold of the temper of their times and moved to translate the discord of discontent into harmony through constructive thought and planning, has progress followed.

We Pennsylvanians have much to say to our times, for we have a legacy of leadership.

We are citizens of a proud state, but we cannot rest on this pride.

Our voice will have meaning only if each one of us becomes an active part of the times in which we live.

We must add our contribution of time and talent to the civic well-being of our day through the kind of creative citizenship that Franklin gave his day.

The strength of Pennsylvania, and of America, has always rested in the genius of the individual.

We Pennsylvanians are ready to put that genius to work.

Indeed, we can bring to this precious piece of America, where independence was born, a new statehood—a rebirth of state government—to restore balance and meaning to our federal system.

While we seek a more equitable share of federal revenue raised within our borders to help us help ourselves, we will see to it that we do a better job of helping ourselves.

But we need the vibrancy of creative citizenship.

With it, our horizons are boundless.

With it, we will have a modern Constitution designed to meet the constantly accelerating pace of this century, without sacrificing the safeguards which are an inherent part of our freedom.

We will bring new life to our splendid cities and, at the same time, bring them closer to our superb countryside through new highways and swifter transportation.

We will clean our water and air.

We will utilize our magnificant geographic position to become the dynamic hub of the world's most powerful concentration of people and industry.

We will bring the world closer to us through intensive attention to our land, sea and air facilities.

With advice of outstanding business and labor leaders, we will expand our industrial growth, bringing new markets and new enterprises to our State.

We will provide help to those who need it and opportunity to those who want it.

And our children will find our schools and colleges providing educations second to none.

Pennsylvania will speak with a strong voice.

And the voice will be heard throughout the land.

To lead the Nation

I ask you to remember this motto.

Let it serve to remind us that we have the opportunity to write a golden chapter in the history of our Commonwealth and our country.

There is no better way to lead than by example.

There is no better way to judge ourselves than through the eyes of our children.

With imagination, with boldness, and with enthusiasm, we shall make Pennsylvania the most envied state in the Nation.

This will not be an Administration of dreams.

It will be an Administration of vision.

I ask your hands, your hearts and your prayers as we set forth on this quest for excellence.

Indeed, the keynote is excellence.
The criteria: creative citizenship.
The goal: "To Lead the Nation."

Air Rescue and Recovery Service in Vietnam

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. FISHER. Mr. Speaker, on the evening of January 19, 1967, the distinguished Secretary of the Air Force, Dr. Harold Brown, delivered a most interesting and informative address before the annual chamber of commerce meeting at San Angelo, Tex. The audience, composed of nearly 1,000 heard the Secretary discuss our aerospace rescue and recovery service as it is being performed in southeast Asia. It is believed this is the most complete and authoritative discussion of this topic that has been undertaken. The speech should be read by everyone. The address follows:

I should like to talk to you tonight about one of the lesser known, but I think one of the most inspiring aspects of the war in Viet Nam.

It concerns the activities of our Aerospace Rescue and Recovery Service in Southeast Asia.

When the history of this war is finally written, I feel that the story of Air Rescue may well become one of the most outstanding human dramas in the entire history of the Air Force. Air Rescue did not begin, of course, with the war in Viet Nam. But the extent of the operation, the dangers involved, and the dedication shown on an every day basis—month after month—makes these rescue operations something unique in our military history. I'd like to tell you about them tonight.

It takes almost half a million dollars to train a combat flyer. But how can you put a value on a human life?

When a pilot is downed in the jungles of Viet Nam, he is far more than just a human resource, a statistic, a part of our military strength. He is a fellow American, with a family at home—with hopes and dreams and a potential for the future that cannot be measured. Most immediately, he is a man in trouble, and he needs help fast.

That help is coming from the Aerospace Rescue and Recovery Service.

It comes from the helicopter and fighter pilots, on runway alert at our air bases, who go into action as soon as they get word that a pilot is down.

It comes from the other fighter pilots in the air, who immediately divert from their missions to provide cover for the man who is down.

It comes from the men who fly the A–1E's—pilots who practically dip their wings into the trees to make a visual spot of the downed flyer, and then supply the close covering fire he needs.

And it comes from the men of the Jolly Green Giants—the HH–3 helicopters, who lower their hoist sometimes as much as 200 feet into the jungle—often hover in the face of ground fire—and bring the downed crewman back to safety.

These men are all heroes, but they're also normal Americans from all walks of life. They come from the cities and the farms. They share the same hopes and fears that concern us all. And as Colonel Allison Brooks, Commander of the Aerospace Rescue and Recovery Service said, "I don't believe you can do what a rescue crew does—what men in an unarmed helicopter will do to save another man—unless you're dedicated."

These men are dedicated.

The Aerospace Rescue and Recovery Service is part of the world-wide responsibilities of the Military Airlift Command.

It consists of fourteen squadrons. *Two* of these squadrons are doing the rescue and recovery work for us in Southeast Asia—the 37th at Da Nang, and the 38th at Tan Son Nhut.

In 1964 we had only a very small rescue center at Tan Son Nhut. It consisted of one major and two airmen. The first rescue airplanes were introduced in the late spring of '64—just three aircraft and something like 50 people on temporary duty. In 1965, as our commitment in Southeast Asia increased, we found that we had to match the build-up of our tactical forces with an increase in our air rescue.

Today we have operating in Viet Nam 1100 personnel and 49 aircraft devoted solely to Air Rescue.

They have saved over 500 people since March 1, 1965. And among them are 254 fighter pilots who have been brought back to fly and fight again some other day.

When you consider that the number of people who have been saved far exceeds the number of Air Rescue pilots and crewmen who are doing the actual saving, I think you have a very meaningful statistic.

We can always build another airplane, but it takes some twenty-five years to raise a boy, and then train him, so that he might someday fly one.

To put it briefly, we must look at first things first. And our people come first.

It has always been the way our country has viewed things, and I think it will always continue to be that way.

Air Rescue in Viet Nam involves a great deal more than simply sending out a helicopter to pick up a downed pilot. For reasons that I will explain, it involves the closest sort of teamwork, operating with great precision. It is not a simple matter to save a life, especially in a hostile environment. It engages the concentrated efforts of many people—for a matter of hours or even days—and, constantly, lives are *risked* so that a life may be *saved*.

One of the complicating factors is that the war in Viet Nam is a war without front lines.

Unless a pilot can ditch in the Gulf of Tonkin, where the Navy, with great skill, has effected water rescues and made nearly 50 saves, the downed pilot finds himself alone, in dense jungle, seemingly cut off from all help.

In South Vietnam, he may well have to escape detection by the Viet Cong.

In North Vietnam, he finds himself in a totally hostile environment. If he is to be saved, he is dependent on the Air Rescue Service, or—when requested—the Army which also participates in these rescue activities.

Constantly there is a race between those who might recover him, and those who would capture him. Nor can a downed pilot ever be sure whose footsteps he hears. Conditions are so trying that pilots have been known to hide even from the pararescue man who has been lowered on the helicopter's hoist to assist him in the jungle. There is no easy way to distinguish friend from foe. Life and death, freedom or capture, constantly hang in a balance between judgment and speed.

Locating a flyer in the jungle, therefore, does not mean that a simple recovery operation can take place. To find a downed airman is like trying to find a needle in a haystack, when the haystack is full of thorns. It is difficult to be sure just *where* the pilot is, or what dangers surround him.

While the helicopter has emerged as our primary rescue vehicle, the helicopter, in itself, cannot be the entire solution. It can hover, it can lower a hoist, it can reel a downed pilot in. But there are variables here. A helicopter is extremely vulnerable when it hovers. How much ground fire will it have to contend with? Can it effect the resuce before enemy forces close in on the downed crewman?

Because of these very real dangers, we have—during the past two years—evolved a team concept. The helicopter must have support from the air—enough suppressive fire to hold off the enemy until the rescue can be accomplished. How much supoprt, and how long, is still another variable. There simply must be enough until the job is done.

Thus, the Helicopter—A–1 team has been formed. The A–1's go in—locate the pilot visually—and supply the suppressive fire. When it is fairly safe, the pick-up is attempted.

Yet even now there is another complicating factor. A downed pilot often may not be in a position to assist in his own rescue. In spite of excellent training, the very act of ejecting from a crippled high speed jet is a traumatic experience. He may have been wounded before he ejected. Even if he is not wounded, and has a good chute, he must decend into a canopy of trees, sometimes 200 feet high, branches whipping at his face, and below, a hostile jungle.

To the helicopter and fighter aircraft team we have therefore added a third element. This is the highly trained pararescue man. He is part of the team aboard the Jolly Green Giant helicopter. He is trained to go down the hoist of a hovering helicopter, search for and find the pilot, administer first aid if necessary, and fight off hostile forces which may be closing in. His job is to bring the pilot to the hoist, strap him in, and ride back with him to the hovering helicopter.

The pararescue man is jump qualified, and also scuba qualified. He can operate in almost any environment. And we have found that almost 80% of downed crewmen need his assistance if a successful rescue is to be made.

Finally, there is one more variable. We learned quickly that the longer a pilot is in the jungle, the less chance there is for a recovery. We must get to him before his wounds do, or the enemy. This means starting a recovery operation not in minutes—but actually within *seconds* after word is received that he is downed. Ideally, the rescue operation begins while his parachute is still in the air.

To accomplish this, we need a command and control capability for our rescue missions that is sensitive and fast reacting. The first hour in the life of a downed crewman is the crucial one.

To achieve this speed, all rescue activities are coordinated at one of our two Joint Search and Rescue Centers at Da Nang or Tan Son Nhut. These centers are in constant radio communications with fighter aircraft during a strike, and monitor their radio frequencies.

But even this is not quite enough. We need a more flexible control center which is nearer the actual scene of the emergency. To supply this, we have airborne, during a fighter strike, what we call "Crown" aircraft. These are fixed wing Air Force planes, usually the HC–130 Hercules or the amphibious HU–16 Albatross, which has also made some dramatic water recoveries. In essence, these planes are airborne command posts. They, too, monitor the radio frequencies of the fighters, and can control the Jolly Greens and the A–1's during the actual rescue mission.

Command and control are thus established. Our other vital need is to have the helicopters and their accompanying fighters deployed as far forward as is possible in event they are needed. To achieve this, we have established what we call Forward Operating Bases.

These are small, forward areas—where an actual rescue team is standing by. It consists of two Jolly Greens, and, and four A–1's. They are on alert, and ready to scramble.

I'd like now to explain how this entire Air Rescue team works under actual operating conditions. For only by seeing them in action can you get an idea of the amount of effort that has to be expended in order to save one man.

The first word that a flyer is in trouble usually comes from either the pilot himself, or his wingman. Immediately, everything in the area turns to protecting the downed pilot. The wingman orbits over the spot where the pilot went in, and radios to other fighters in the area to provide a top cover in case of air attack.

In the jungle, if the pilot is conscious, he turns on a small radio which sends out a homing signal and which can also transmit voice.

Our Crown aircraft also responds immediately, and becomes the local rescue commander. Crown has heard the distress call, sends out the coordinates, and orders the two Jolly Greens and the four A–1's at the nearest Forward Operating Location to scramble.

A visual spotting of the downed pilot must now be made.

This is usually accomplished by the A–1's. As soon as the downed pilot sees the friendly aircraft approaching, he shoots off a pen flare which penetrates the jungle. It is the sign everyone is looking for.

While two of the A–1's say with the helicopters, the first pair begins to orbit low over the jungle where the crewman is down. At this point enemy ground fire usually commences. The A–1's respond, and try to suppress it. Meanwhile, the first helicopter is working closer.

A helicopter is extremely vulnerable when it hovers. The enemy has developed the habit of holding fire until the helicopter comes to a hover, and then letting go with everything he has. There is no sure way to know that ground fire has been completely suppressed. Meanwhile, enemy ground forces may be moving in on the downed pilot.

The A–1's make repeated passes, trying to clear the area for the Jolly Green. Sometimes a helicopter makes several approaches and is driven off each time.

The second pair of A–1's back up the first, with fresh ammunition. Often, the first helicopter sustains hits, which means the backup Jolly Green must attempt the rescue. Its pararescue man is ready to go down the hoist as soon as the jungle is cleared.

Finally, sometimes with fuel extremely low, the helicopter is able to effect a hover, and lowers its hoist. The pararescue man goes down with it into the jungle to give what assistance is needed. Finally—and it can seem an age—the hoist is raised with the pararescue man and the rescued flyer. The helicopter beings to pull away once the hoist has clear the trees.

As one pararescue man said, "We've given some people some scrapes and scratches, but we've never had a complaint."

Mission control is now notified that the recovery has been made. If the pilot is injured he is flown to the nearest local base where he can receive medical care. The Jolly Greens and their A–1's then return to their Forward Operating Locations. They will immediately go on alert again. For the mission they have just performed may be repeated another two or three times during that same day.

How successful has all this been?

Imagine, if you will, an airbase with 254 pilots standing at attention in front of their parked planes.

254 men standing before 254 aircraft.

Now—wipe away the aircraft.

These are planes that have been lost.

But now, let the 254 men step forward. These are the airmen that have been rescued. These are the pilots who would almost certainly have perished but did not because of Air Rescue. And I think if you could imagine these 254 now entering this room and taking their seats, you can get a pretty good idea of the tremendous human accomplishment Air Rescue has achieved.

All this has been done with 11 fixed wing aircraft, and 38 helicopters.

Nineteen ARRS personnel have been lost doing the job—6 killed, 11 missing, 2 known captured.

I think it small wonder that the Commander of ARRS, Colonel Brooks, said: "I've been a fighter pilot of sorts, I've been a bomber pilot, but now I'm getting more satisfaction out of saving peoples' lives who have laid it on the line for the United States—and bringing them back—than I've had before in my lifetime."

The rescue operation will go on.

I've tried to describe it in detail for you because it *is* a detailed operation, with the sole objective of saving a single life.

It is not one of the biggest activities of the Vietnamese war, but I think it is one of the most important. For there is nothing quite like a pilot knowing that he has a second chance. And there is nothing quite like knowing that you can *give* him that second change.

I think one lesson of Viet Nam is that Air Rescue is a vital part of any tactical operation. It has now taken its place as an integral part of tactical warfare, and our efforts in the future will be to make recovery even quicker and surer than it is today.

The men of the Jolly Green's and the A–1's deserve their recognition. For the term 'Jolly Green Giant' has stuck. It will go down in history with the 'jeep' and the 'GI'. Certainly, the ARRS people deserve their immortality. For they have lived up to their motto as if it were a solemn pledge: "That others may live."

It is a heartwarming thought to realize that hundreds of airmen and ground personnel, who otherwise might be lost, are living testimony to that pledge tonight.

Inaugural Address of the Honorable Robert E. McNair, Governor of South Carolina

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. RIVERS. Mr. Speaker, on Wednesday, January 18, 1967, South Carolina inaugurated a man who stands to become one of the greatest Governors our State has ever seen. I am speaking of the Honorable Robert E. McNair.

Governor McNair is a constitutionalist, yet he is also forward looking and progressive. Under his leadership, I am sure South Carolina will soon experience her finest days.

This new spirit is best illustrated by his inaugural address, which I am pleased to insert in the RECORD at this point:

INAUGURAL ADDRESS BY GOV. ROBERT E. MCNAIR, JANUARY 18, 1967

There are many feelings that a man wants to express when given the privilege of serving the people of his state as their Governor. It is a time to express the deep and sincere gratitude that I feel for the confidence placed in me by my fellow South Carolinians.

It is a time to share with you some of my thoughts about South Carolina's past and present—and even more important—about her future. It is a time to talk about positive action and the ability of our people to grasp the new opportunities of this exciting age.

As we meet here today, we have faced up to challenges and changes that have tested our dignity and our character. On this 18th day of January in 1967 the people of South Carolina are respected throughout the nation.

I believe that South Carolina wants to move forward aggresively in the last half of the 20th century. I believe that my fellow South Carolinians are not only prepared, but are eager, to reach out toward greater achievement. And, on the basis of that conviction, I give you my firm commitment to responsible forward movement.

I would like to believe it is the same kind of commitment my parents must have felt some forty years ago in a small farm community in Berkeley County. The efforts by my father and others to put as much quality as their resources would allow in a three-teacher schoolhouse near Jamestown gave me opportunities for which I have had many reasons to be grateful.

Proud as I know my parents were of the benefits they were able to provide, I regret that their life span was not long enough to share with me this greatest honor of my life.

As we look back into the history of our state, we discover convincing evidence that we descend from a proud and diligent people. Time has proved the relevance of the motto inscribed on the Great Seal of South Carolina—"While I breathe, I hope."

Your generations and mine has created a new and diversified economic base. We have ceased to imitate and begun to innovate. We are creating new jobs and new hope for those who show their willingness to help themselves. We are setting the pace for a vibrant, New South.

Although our recent economic gains are most gratifying, the cold facts of reality must be recognized and reckoned with. If we are to maintain our lead, and accelerate our thrust toward new horizons, we must come to grips with a basic fact. Vast numbers of our citizens are either under-prepared or under-employed. We must develop a continuing stream of human resources in order to insure a steady flow of progress. The primary requirement for future economic gains will be a reservoir of skilled manpower.

This can be done, and will be done, through vocational and educational training. This is a basic obligation imposed on the leadership of South Carolina today. We must apply our best efforts to the fulfillment of this obligation.

As we make plans and establish priorities for South Carolina, we must recognize those areas in which decisions cannot be postponed. Some of the principal needs requiring immediate attention are in the field of education and training.

We must achieve effective coordination of education at all levels, with ample opportunities for job-oriented, as well as academic training.

More emphasis must be given to the expansion and orientation of graduate programs in our colleges and universities. We know that grants and other resources are going to those institutions which are capable of generating modern research. We also know that industries looking to the future are gravitating toward those states which recognize this relationship.

We must have new laws and new programs to keep more of our children in school. If we encourage illiteracy by ignoring this need, then we are paving the way for a welfare state.

Other areas in which I believe we cannot afford to procrastinate include:

New concepts in industrial financing to avoid competitive disadvantages.

Additional safety measures and fully-supported law enforcement to reduce the toll of highway accidents and traffic deaths.

Reasonable insurance law revisions that will stabilize rates, prohibit aribtrary cancellations, and avoid penalizing the safe driver.

New emphasis on programs to provide more doctors, and to reduce the critical shortage of nurses, technicians, and other medical professionals.

Reorganization in our mental retardation and rehabilitation programs to render more effective and economical service.

Fuller development and increased promotion of our outdoor recreation facilities. This will require a consolidation of services and effort.

Closer coordination and expansion of agencies involved in agricultural service and research.

Another area of concern involves the impact of a growing and shifting population. The transition from a predominantly rural to an increasingly urban society has created new problems which demand new approaches. Air and water pollution, for example, must be dealt with before we are faced with a critical situation.

We must, at the same time, act on other crucial matters involving the structure and continuity of our government. Well-conceived action must be taken on reapportionment, provisions for county government, constitutional revision and election law improvements.

Those of us who have labored together in the Legislature know that real progress is seldom achieved through the ideals of one man; nor can legislation achieve intended results without effective and responsible administration.

That is why it will be my policy—as it has been during these past 20 months—to counsel with many, to keep lines of communication open, to seek the best thinking available for the solution of problems and the realization of opportunities. Thus, when the time comes for action, we are ready to act.

Through prudent and careful management down through the years, we have achieved an enviable reputation for fiscal responsibility. We should not, and will not depart from this basic and sensible course. However, experience has taught us an equally important lesson—that the needs of tomorrow are, in fact, the problems of today.

Unless we are willing to short-change coming generations, we must be determined to reach out for new goals through responsible growth financing. We live in a dynamic society. We must invest in the future.

We are advocating a program of growth financing that would be planned with the assistance of the best fiscal minds in the state. It should be structured on the basis of sound, business concepts—taking into account our goals for the future and our capacity to achieve them. Either we move forward with this kind of planning, or we will surely move backward.

As we take action to enhance the stature of South Carolina in all of these fields, we will continue to seek out and effectively utilize any and all resources that can be used to our benefit. The resources of the federal treasury have become an increasingly important factor in the extension of services. While these resources have been applied to many needs which the states, themselves, have been unable—or in some cases unwilling to meet—they have often been mis-applied and have impeded effective working relationships between the states and the federal government.

Working with other governors in recent months, I have suggested constructive proposals for improvement of this relationship. The response has been favorable; mainly, I believe, because South Carolina has tried to recognize not only its prerogatives—but its responsibilities, as a state.

We have reached a point where be are being given more responsibility for the conduct of federally-sponsored programs. We have asked for this responsibility. It is now up to us to demonstrate that we are, indeed, willing and able to expand existing programs and initiate new ones to provide for the legitimate needs of our people.

Our determination to move forward has been manifested in many ways in recent years of challenge and decision. But perhaps the greatest tribute to the people of South Carolina is the reputation we have established as a state whose citizens are dignified, fairminded, and respectful of the law.

I firmly believe that we can have no finer purpose than to uphold that reputation. Convinced as I am that this purpose is supported by a large majority of our people in every station of life, I intend to use all of the authority and influence at my command to see that the good name of our state is not tarnished—either by infringement of human rights, or by flagrant disregard for law and order.

I plan to discourage at every opportunity any attitude or suggestion that the law can be treated as a matter of personal convenience. Until laws are changed in our system of representative government, it must be assumed that they represent the will of the majority. We cannot engage in selective enforcement and maintain respect for the law. As law-abiding citizens, we are obligated to give full support to our local and state enforcement officers in their efforts to carry out their duties. To do otherwise will instill doubts in the minds of our children that we truly believe in the legal system and the constitutional form of government to which we pledge our allegiance.

If I could choose one word to use as a guide for the next four years, it would be "responsibility." I hope during the next four years to see many more of our people recognize their responsibility to involve themselves in planning and acting for the future of our state and our communities.

I believe the time was never better for leaders in every field to speak out for the interests of their state. There is no room in South Carolina for those who would subordinate the interests of the whole state to the building of political parties, or the furthering of political ambitions. The worth of an idea can neither be justified nor discredited by the imprint of a party label.

At the same time, government in South Carolina will not be enhanced by the two-party system if it results in promoting purposeless discord and dissension.

Today's South Carolina has no time for obsession with either "black power" or "white backlash." The time was never better to work for an improved climate of understanding—for opinion leaders and editorial writers to encourage action rather than promote reaction.

With the opportunities that are before us, this is not the time—and South Carolina is not the place—for those who are pre-occupied with extremism or petty frustration.

It is a time and a place for resolving problems rather than contributing to divisive frictions—for breaking down artificial barriers to progress—for reaching out to the timeless goal of human betterment through the wider extension of knowledge and the better use of our human and natural resources. This is the time, and South Carolina is the place, for building communities where only the clearly indolent will bear the bitter burdens of poverty and ignorance.

As I look at my state on this January day, I see people looking ahead with new breath and new hope. I see a place where shirt-sleeves are at the elbow and hands are on forward gears—a place where the unskilled become mechanics, and mechanics become technicians—where new opportunities unfold every day for men and women who want better lives for themselves and their children.

South Carolina has the eagerness to move upward—the basis—and the momentum.

When I first took office, 20 months ago, I pledged every fiber of my being and every talent at my command to the end that our progress and the welfare of our citizens would be maintained and improved.

I have attempted to keep that pledge. Today, I renew it.

Thank you.

Republican "State of the Union"

EXTENSION OF REMARKS

OF

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. RUMSFELD. Mr. Speaker, last Thursday night, the distinguished minority leader of the House, Congressman FORD, and the distingiushed minority leader of the Senate, Senator DIRKSEN, presented to the American people a constructive alternative program for the future growth of our country.

As indicated by many press reports, their views have received wide attention and quick acceptance. The editorial comments of many of our leading newspapers have supported the Republican view of the state of the Union, and I would like to call attention, particularly, to the following editorial of the Christian Science Monitor:

REPUBLICAN "STATE OF THE UNION"

The Republican Party's own "state of the Union" address has promised to provide leadership for a "dynamic and constructive center." If it does so, the GOP will be carrying out precisely what we believe the American people voted for in the November midterm election.

More specifically, the party's domestic program promised a revamping and redirecting of the poverty program, a postponement of low-priority programs in the interests of economy, steps to handle national emergency strikes, tougher law enforcement, and the encouragement of local school control and initiative.

It is crystal clear that the GOP has zeroed in on issues upon which large numbers of Americans feel very strongly. They are also issues upon which some further federal action is badly needed. By facing up to these problems, and a number of others, in a hard-headed, businesslike, but constructive manner, the Republicans will be in a position to serve the country well and, not unimportantly, to reap substantial political benefits therefrom.

We trust, moreover, that the Republican leadership bears in mind that November's vote was primarily for a move towards the center and not over to the right. The country does not wish to see necessary social and economic programs dismantled, merely made more efficient and more realistic.

It appears likely that the GOP will achieve a fair degree of unity (with some notable holdouts) on its domestic program. It is less likely to do so on the international aspects of its "state of the Union" address. Speaking on this aspect, Sen. Everett Dirksen enunciated an extremely "hard" line. He appeared to call for heavy new military steps to achieve a military victory. He spoke against the administration's plans and efforts to liberalize trade with the Communist world.

Each of these is certain to run counter to the views of susbtantial middle-of-the-road segments in his own party. This newspaper also feels that the Dirksen line is too rigid in its efforts to deal with communism in Vietnam and Eastern Europe. Great flexibility is called for in Vietnam. And in Eastern Europe it would be tragic if Washington were forced to pass up opportunities to use trade concessions as a means of fostering greater economic and political independence in those countries.

Senator Dirksen's suggestion of a common market for the Western Hemisphere is interesting and challenging. But it would seem as if many smaller, preliminary steps were needed before one could think in such broad terms.

What stands out most clearly from Rep. Gerald Ford's domestic program and Senator Dirksen's international program is that the Republican Party in Congress feels mightily rejuvenated. It now finds itself in an immensely strong and strategic position. It intends to use its power to the hilt. This is precisely what the country and a healthy two-party system need and want. Even more important, however, is that both Republicans and Democrats use their power in a way that will ensure progress in meeting the country's stubborn social and economic problems and its equally difficult international challenges.

Marriner S. Eccles

EXTENSION OF REMARKS
OF
HON. DON EDWARDS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1967

Mr. EDWARDS of California. Mr. Speaker, on December 22, 1965, a statement of the U.S. position in Vietnam was issued by Marriner S. Eccles. That statement is as appropriate for review today as it was then. The "P.S." he added on December 15, 1966, only emphasizes the validity of his original statement.

Marriner Eccles has given extraordinary service to his country in previous periods of crisis. During the depression of the thirties his courageous statements on economic policy, considered by his business associates to be heretical, resulted in major changes in government responsibility. His was one of the most seminal minds of the New Deal. Authur Schlesinger in the "Age of Roosevelt" speaks of Eccles' "sharp and probing intelligence."

Marriner Eccles was a banker who was more concerned with protecting the economic stability of his country than preserving the power of the bankers. The historic Banking Act of 1935 was essentially Eccles' basic philosophy of monetary control, and reflected his determination to transfer control of the money market from New York to Washington. We now take for granted the use of fiscal policy as an economic stabilizing instrument, but as Schlesinger points out, "except for Marriner Eccles, no leading person in Roosevelt's first administration had much notion of the purposeful use of fiscal policy to bring about recovery."

I remind my colleagues of the contributions of this great American because I want each of them to read his views on Vietnam with the care that any statement from him deserves. No review of the events leading up to our present despair has delineated our problems so precisely:

Statement of U.S. Position in Vietnam

(By Marriner S. Eccles, Salt Lake City, Utah, December 22, 1965)

Under no circumstances should we escalate the war in Vietnam. Our position there is indefensible. Contrary to government propaganda we were not invited by, and have no commitment to any representative or responsible government of South Vietnam. We are there as an aggressor in violation of our treaty obligation under the United Nations Charter. We have not observed either the letter or the spirit of our obligations with respect to our actions in Vietnam. As a result, we have the opposition of not only the entire Communist World but the rest of the world as well, with few minor exceptions.

The facts are, the Geneva Treaty of 1954, after the defeat of the French, affirmed the independence of the colonial government of Vietnam and called for an end to hostilities. The British and the Russians were Co-Chairmen of that conference. An interim trusteeship was agreed upon whereby the French would preside in the South and the Viet Minh in the North for two years, ending in a national election in 1956 when the Vietnamese people would choose their own government. The U.S.-Vietnam Lobby did not permit that election to be held knowing that Ho Chi Minh, the communist leader of the North, was so popular he would unquestionably win the election. As a matter of fact, John F. Kennedy, then Senator, in a major speech in the Senate in April, 1954, warned against any negotiated solution that would allow participation in the Vietnamese government by Ho Chi Minh. The communists, he said, would eventually take over because they were so popular. In his memoirs Eisenhower stated that had an election been held in Vietnam, as provided in the Geneva accord, an estimated 80% would have voted for Communist Ho Chi Minh as their leader.

Diem was brought to the United States in 1950 from a 17 year self-imposed exile, under the auspices of Michigan State University, and here he found strong support in the hierarchy of the Catholic Church, his brother being a Catholic Bishop. Cardinal Spellman became a strong supporter, also Justice Douglas, Joseph Kennedy and his son, John F. Kennedy, General Lansdale (the C.I.A. man in Saigon), C.I.A. Director Allen Dulles, General Donovan and other strong anti-communists. They were largely responsible for bringing about Diem's ascension to the Premiership of South Vietnam in July, 1954.

From his first day in office he set about crushing opposition and concentrating power in small nepotist groups. Diem's targets included the private armies of the religious sects and the anti-communist Vietnamese leaders, who were also anti-Diem. He wasn't looking for popularity. He know his support was slim—that he would have trouble with the majority of the population who had been supporting the Viet Minh in the long war against the French; therefore, force was the only way he could effectively ready his people for the democratic alternative. Due to the paid propaganda of the U.S.-Vietnam Lobby his dictatorial tactics were not widely reported in the American press until eight years later when he fell from power and he and his brother were assassinated by the military within his own government. Since that time South Vietnam has been unable to develop a stable or responsible government, as evidenced by the many changes in leadership.

The South Vietnamese Communists, with the help of the North Vietnamese, defeated the French. They are now fighting for the independence of their country against the non-communist South Vietnamese. In short, it is a civil war with the Viet Cong supported by North Vietnamese and the South Vietnamese held together and supported by the United States. The South Vietnamese Catholics (about 10% of the population), property owners and business interests in the large cities are the strong anti-communist supporters of South Vietnam.

We have provided large amounts of military and economic aid and supplied them with military advisers, but until the present administration came into office, we did not furnish American troops to help fight their war, until it was apparent they were being defeated. We have gradually taken over the direction of *their* government as well as *their* war until now it is becoming an American war rather than a Vietnamese war. Why go to Vietnam to drive the communists out when we can't get them out of Cuba, 90 miles from our shore.

The North Vietnamese supplied troops to the Viet Cong only after American troops entered the war and we commenced heavy bombing of North Vietnam and the Viet Cong. It was then that China and Russia publicly announced they would give all the military and economic aid necessary to the North Vietnamese in order to defeat the U.S. aggressors. As a result, we now have aligned against us the powerful countries of China and Russia, including all the Communist World, with practically no support from the rest of the world in spite of Rusk's and McNamara's recent appeals to NATO. Under these conditions We Cannot Win. You cannot defeat people in a jungle war where the majority is neutral or against you and it is impossible to tell your friends from your enemies.

We are rapidly destroying the very country we propose to save—South Vietnam—as well as killing thousands of its men, women, and children by our incessant and heavy bombing of the Viet Cong. We are adding to our burdens tens of thousands of refugees that we must feed, clothe and house. What would the situation be if North Vietnam, with the help of China and Russia, should retaliate by bombing Saigon and the other principal cities in South Vietnam? Even if we won freedom for the South Vietnamese and turned the country over to them, they have no capacity for democracy of self rule.

With a bigger war shaping up on the ground and fighting 9,000 miles away logistics are almost an insolvable problem. With troop strength only 158,000 in November our logistic needs shot up from 75,000 tons in February '65 to 700,000 tons in November. The jet aircraft were burning more than a million gallons of fuel a month. Ports were clogged—ships wait 10 days to two months to unload cargoes. What will the situation be if we undertake to double or quadruple our fighting forces, planes, helicopters, etc.?

Our sense of negotiating a peace reveals our total insensibility to the other parties' problem. Two antagonists cannot negotiate their own peace terms. The matter should be turned over to an impartial body, like the United Nations, each party agreeing to a cease fire and to accept any terms decided upon by the impartial body.

If the war is escalated, before many months the United States will probably be required to go on a war footing and our present domestic prosperity will be ended. Inflationary pressures will greatly increase and the position of the dollar in the world market will be further jeopardized unless we bring about a balanced budget through increasing taxes and cutting back domestic programs.

It may be the North Vietnamese do not control the course of the war—it is now in the hands of the Chinese and the Russians. As Co-Chairman of the Geneva Conference the Russians have refused to take any part in bringing about a peaceful settlement. They may be glad to have us tied down in a most unpopular war in Asia, which greatly weakens our position in NATO as well as throughout the world. They must avoid giving support to Peking's charges that they are conniving with Mr. Johnson to end the war. To do otherwise would greatly weaken their own leadership in the Communist World. It would seem we have fallen into a trap that neither China nor Russia is willing to let us get out of with either saving face or victory.

We could not have chosen anywhere in the world a more difficult place to challenge the communists and more to the liking of China—on her border. How could we have been so blind and misinformed. The decisions were made by the President and a handful of advisers in the White House, State, and Defense Departments without debate or prior approval of the Congress. This is dictatorship that has no place in our democracy. The public has not been advised as to what was taking place. They have been misinformed and brainwashed to such an extent that opponents are accused of being disloyal and supporting the enemy and patriotism has come to mean unquestioning support of the administration. Blindly accepting the government's position in Vietnam is more senseless than blindly accepting its domestic programs because mistakes in Vietnam can be far more disastrous. The real patriots today are the *members of Congress and other public leaders* who have the courage to oppose the administration and urge it not to escalate the war but to get out of Vietnam at the earliest possible date. This would be the least costly from every standpoint—even our image and world prestige would be enhanced.

If our leaders insist on escalating this war to a finish, it is likely to be the most disastrous war we have fought, measured by financial cost, loss of life and prestige throughout the world, and the most futile. It could lead to World War III—the United States practically alone fighting the Communist World. This could trigger an atomic war which all the world dreads.

The real tragedy is the useless suffering of the millions of our people whose sons, husbands and brothers are drawn into this conflict unwillingly and are killed or maimed for life, not in defense of their country, but because of our incompetent leadership.

Peace in the world will never be brought about by aggression or by rash and inept remarks like McNamara made at the Paris Conference of NATO when he urged our European allies to plan now to meet a Chinese military threat to their own security within five years. We are justly accused of trying to utilize NATO as a tool for our anti-Chinese policy of aggresion in Asia. Such remarks make it impossible for us to negotiate our way out of Vietnam.

The alternative is to recognize China and bring her into the United Nations before she becomes an atomic power in three to five years. Even her avowed enemies, India and Russia, have voted for her inclusion in the U.N.

With all our domestic problems—pollution, mass poverty, city slums, riots in our streets, and the world's highest rate of juvenile delinquency and crime—who are we to be the world's policeman?

The billions being wasted on the war in Vietnam, if used to eliminate mass poverty and illiteracy in the undeveloped countries, would do far more than aggression to prevent the spread of communism.

We must recognize that it is just as important, if not more so, for the communists to save face in Asia as it is for the U.S. We should be less interested in saving face and more interested in saving lives. Great nations over the years have survived saving face and withdrawing from an untenable position. It can be done with dignity. Certainly we are a sufficiently great nation to relieve the world of the fear of war that is so terrifying. Not only would we save face, but we would win approval of the world and gain in stature.

P.S.:

SAN FRANCISCO. CALIF.,
December 15, 1966.

Military personnel now engaged in the Vietnamese War number approximately 400,000. The War is now costing about $2 billion a month. It will require supplemental appropriations—from $12 to $15 billion—for the balance of the fiscal year if there are no increases in taxes or reductions in domestic expenditures.

Defense expenditures for the current fiscal year may go as high as $75 billion, which is only $5 billion less than was spent in the last year of World War II. Time magazine reports that the amount of aerial ordinances unleashed over North Vietnam and South Vietnam is already equal to World War II level and has surpassed that of Korea.

A Forward Look at the Transportation of Goods

EXTENSION OF REMARKS
OF

HON. JOHN O. MARSH, JR.

OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1967

Mr. MARSH. Mr. Speaker, my attention has been called to an address by Mr. R. R. Smith of Staunton, Va., before the Piedmont Traffic Club at a meeting in Charlottesville, Va.

Mr. Smith is known well to me as an individual who has a broad view of the problems and prospects of the transportation of the goods which are necessary to the maintenance of the standard of living of which we are so proud in the United States.

While "Jake" Smith, as he is known to his friends, is a trucker, and proud of it as one who has personal grounding in the problems of driving a truck, in town and on the road, he is also a qualified airplane pilot, and, while I do not know that he has had any opportunity to operate a freight engine on a railroad, I am sure he has a respect for this mechanism, and would be proud to be at the controls, because it moves goods.

Under leave to extend my remarks in the Appendix, Mr. Speaker, I should like to include the text of Mr. Smith's address as of possible interest to many Members of this House who have a concern for the trends of transportation in the United States.

Mr. Smith's remarks follow:

THE FUTURE OF THE TRUCKING INDUSTRY

(An address by R. R. Smith, president, Smith's Transfer Corp., of Staunton, Va.)

Thank you for inviting me to dinner. It is a real pleasure to have this opportunity to appear before the Piedmont Traffic Club.

Nothing is *more certain* than the future—and yet nothing is *less certain* that what the future will be. Between these two extremes is the *real* future that we will live and work in.

You have asked me—"What will the trucking industry be doing five years from now, or ten?" In our business, the big day is today. We plan tomorrow's operation—we are thinking about next month and next year. But I do not know a soul in the trucking business who can say with any assurance what our shippers will want from us five years or ten years from now.

Surely the country will be different a decade or two hence, as it is different now from what we knew ten or twenty years back. And a changing America and a changing trucking industry constantly mold each other. That has to be true of a major service industry.

What are the trends in population? In industry? In distribution? In how people earn and spend and how they live? If I tried to detail all those, we'd be here for a long time. But I can hit a few high spots.

Population is up—and because people multiply instead of just adding, we're told we may have 206 million Americans by 1970—instead of about 195 million now—and 233 million by 1980. And more than 70 per cent will live in urban areas under metropolitan circumstances.

The demand for mobility increases with our population. And the urban population is increasing each year by enough people to make another Chicago. In the remainder of this century, the government predicts urban population will double—city land will double—and we will have to build homes, highways and facilities *equal to all those built since this country was first settled.* To do that kind of work in only 34 years will require a great deal of truck mobility.

Let's talk about industry.

The trend is toward more and more shared production, decentralization of plants both of single companies and of entire industries. The old idea was that to make the most money you took in raw materials—owned their source, too, if you could— and turned out finished products. You did the whole job.

World War Two compelled the sharing of production through sub-contracting. Industry learned something. It was more profitable to do only what used your plant, people, and capital for their highest purpose. That might be final assembly and sales.

Let someone else do the rest of the job. Inventories were slenderized. Excessive investments in space and materials were closed out. Industry became faster on its feet, more flexible, more responsive.

This change was made possible by the speed and flexibility of truck service. No other kind of transportation had ever permitted daily shuttles of parts and finished goods to and from the assembly lines.

The same kind of change has run all through marketing and distribution. Retailers display more items. But they have thinner stocks. These nevertheless support tremendous volumes of sales. Truck service makes the trend practical—as well as profitable.

The combined advantage of better roads and motor vehicles has opened up almost all the square miles of the United States for comfortable living—as well as for production sites. This process is most visible nearest the cities, but it has gone much deeper than that—into remote areas.

We see in the press from time to time estimates of how high this country's economy will rise. We see figures and ideas on how the standard of living has risen—and how much farther up it might go.

It is very difficult to comprehend fully how our own wants are going to expand. They will expand. Anyone in this room could make quite a long list right now of the things he'd like to buy, large and small. We all want more.

The only real limits are purchasing power and the utmost in men's ingenuity to devise new products. Both those limits are receding rapidly—year by year because along with more consuming capacity, there is this other great gain—nationally—in ability to produce. And a greater percentage of Americans—thanks to transportation—are in position to participate in production and consumption.

Now when you add these factors—population growth, better distribution serving greater and greater production and consumption levels—the answers come up almost too strong for belief. But this is how we come up with the future figures that I will mention in a few minutes.

Take a look at the real roots of all this. The roots lie in the aspirations and opportunities of people— millions of people.

It isn't a mater merely of somebody wanting to sell more of something. Beneath it all is the dramatic full entry of many millions of people—for the first time—into the economy. I refer to the people on the payrolls of new plants set down in small towns, often by major corporations; to the farmers now thriving in areas once too remote—in terms of transport—to permit them to raise what soil and climate encouraged, because markets were hard to reach. Now markets are easy to reach by roads.

And the new ease of supplying people with frequent small deliveries has widened consumption for almost every product, so as to include the great bulk of the entire population. There is today almost no difference whatever between the array of products offered in the largest city and that displayed in the smallest town.

Now let's look at how these trends intermesh with the various modes of freight transport. All forms contribute to the total result—rail, water, pipeline, air—as well as truck, but not in the same way, or the same degree.

Inland water transport contributes unmatched economy for bulk movements of certain commodities between some points when the time factor is not critical. At the other end of the time situation, air is fast but costly. Both these forms have such limitations on origin and destination that they ordinarily require supplemental transportation.

Pipelines have the peculiar ability to move large volumes of fluids and gases long distances between terminals at modest costs, but of course their range of commodities is very narrow. For their special purposes, they are unbeatable.

Rail freight is—as we all know—now reaching in several directions. There is the unit train and long-train direction—made possible by diesel engine power and trading the flexibility of a shorter train and numerous stops for the economy of highballing right on through with a train-load of coal or some other bulk freight item.

There is the direction of flat-cars and piggyback—still not entirely clear in all its eventual implications. To some extent, piggyback is a borrowing of truck flexibility. It probably takes a lot of freight from boxcars and the more flat-cars, the fewer general purpose cars, which doesn't help the perennial car-shortage problem.

To properly utilize the diesel, piggyback trains have to be long, which again reduces flexibility in making up and breaking up trains and in dropping off cars en route.

It should be obvious that railroads are able to go more than part of the way in accommodating—or benefiting from—the trends I have been discussing. They can go only so far as they can make compromises with their basic nature as relatively inflexible, long-haul bulk carriers. Rail managements are using all ingenuity to overcome rail handicaps.

Some day there may be a new form of transport that doesn't depend even on the prevalence of roadways and which can do part of the job now done best by trucks—I don't claim to know. The most likely thing on the horizon may be probably some combination of the helicopter and the vertical-rising aircraft, if power and cost problems can be overcome.

But as of today—and a good many years ahead—the only complete answer to new demands for freight transportation is the truck. Our economy has the multiple-purpose, multiple-movement nature of a very busy anthill. The obvious ants are motor trucks. Big, busy ants carrying the eggs of prosperity—whether that means Titan rockets, TV sets, or tomatoes.

Business and industry have learned they can order up a truck to move just about anywhere anything almost anything that has any business moving at all.

The latest estimates of regulated for-hire freight revenues for 1965 show Class One, Two, and Three motor carriers receiving just under 48 per cent of the aggregate revenues of all forms of transport. Railroads got 44 per cent; pipelines, 4 per cent; water carriers, under 1½ per cent; and airways, a bit over 2 per cent.

Incidentally, you may recall that the Transportation Association of America computed that, including private carrier costs and all shipper costs, trucks in 1964 got nearly 72 per cent of the total transportation dollar. I don't think we did less in 1965, and we should do at least as well this year.

The ATA projection for the year 1980 are that total outlays for freight will slightly more than double—reach about 98 billion dollars. And of this, 77 billion dollars will go for all types of truck service.

Trucking will rise from 72 per cent to become nearly 79 per cent of all freight service in 1980 as measured in dollar values.

Since about 1952, the growth of truck ton-miles has risen, consistently, much faster than the Gross National Product—although it moves quite parallel. The national figure for all goods and services has been running higher than estimated, year after year, also.

So much for the figures.

Now let me say a few things out of my personal judgments as to how the trucking industry may fare in the years to come, in terms of operating conditions.

The great Federal-State road-building program means a lot—not only in the tremendous improvement in roads, and new roads, but also in what is happening in designing and using roads.

Motor carriers have always been—and they are now—under rather severe limitations in trying to utilize fully the basic idea of hauling freight on rubber tires over pavements. Horse and buggy thinking and unwarranted engineering assumptions greatly limited the efficiency and economy of trucks. Of course, it is also true that trucks have developed much faster than many roads did.

In recent years, there has been a growing realization of the public need for truck services in their most economical terms. We have seen an increased willingness in many places to plan an optimum coordination between truck design and road design and regulations.

This has been encouraged by the fact that better roads reduced the former traffic friction between large and small vehicles mixed on narrow, winding roads—up and down hills.

Differences between the States in their regulations are gradually being ironed out in regard to trucks, as they are in taxation and many other subjects. Ideally, we hope that someday trucks will be able to move more freely than they do now and will be able to reach whatever design optimum proves best for the job they do for the country.

Double bottoms are now legal in 32 states, including our neighbor state of Kentucky—but not in the Commonwealth of Virginia. Most of the Middle Atlantic states do not permit double accommodations. It makes no sense to prohibit their use on the interstate highway system in the East. In the Middle West, where the length laws permit, carriers are operating 27-foot double bottoms, which can be unhooked and used in local service without freight rehandling.

Western truck operators are experimenting in many states with triples and long doubles. Numerous tests are being conducted to determine the power and braking characteristics of these newer and more efficient combinations. The failure of Congress to lift the crippling limits on weights, widths, and heights means that the only direction for the trucking industry is *longer*. Hundreds of these long units are now operating in various areas of the United States. *They are an unqualified success.* Insurance records tend to prove that the safety experience with these units is exactly on par with other types of equipment.

The anticipated public hostility toward these long combinations is no-existent. So far as is known, there has been no valid complaint from any highway user driving on the highways used by the hundred-footers. These high cubic volume combinations cut transport costs drastically for certain traffic, but they will not cause a major impact until higher weights are permitted.

With higher cost factors confronting the industry, every user of highway transportation should do everything possible to convince Federal legislators of the need for increasing permissible weights, widths, and heights without delay, so that highway transportation costs will be reduced to the lowest practical minimum.

I believe there will be extensive *internal* changes in the trucking business. Technology will be vigorously applied to many areas of truck operation in a dual effort to give the shipper more for his dollar—and to make the dollar go farther inside the company.

There will be fewer companies and larger units. But there will still be thousands of truck lines and highly individual service. The number of companies with stock on the market will increase—but most companies will remain small business doing less than $1 million a year. Trucking will not be essentially different from now—but it will be better managed.

I foresee "computerized rates"—that is, determination of rates on a given shipment by push-button control. The industry is at the beginning of its "computer age." Today only the largest companies can afford the luxury of extensive data processing. Computers can and will be shared.

The problem of tracing shipments may eventually be solved by data processing. There will be vast improvements in interline tracing. This is long overdue.

With the use of computers, and with the upgrading of executive and supervisory staffing, I think operating companies in our industry have a new look. Those of us with the wit and will to do so can exercise pretty tight and direct control over our people and equipment. At best, the new techniques of information can bring them somewhat along lines of the small company where the boss knows which trucks are moving and what's in them and where they are scheduled next. That's the way most of us started, and it's great to have technology make that kind of intimate management again possible.

Within a few years, we should have new or much improved power units. The gas turbine engine is in experimental use. We need more efficient and less costly operating power units.

The pick-up and delivery truck is being completely re-evaluated by the common carrier industry. We are now testing a unit that can load front, side, or rear. A way must be found to reduce cost and improve pick-up and delivery operations.

We expect the practice of trailer interchange to be improved to the advantage of shippers.

There will be more batch handling of freight. This is a way of accumulating numerous small shipments into one larger shipment or container. It has reduced loss and damage, as well as cost.

All in all, I would say that the motor carrier industry has the brightest kind of a future. I say that because we are geared to what's been happening in this country and what's surely going to happen next. You who are shippers mold the transportation industry more than anything else does, taking into account that the reason for our very existence is to meet your order to get your business.

The future figures I have recounted may sound big. But the riskiest gamble I know is to sell America short—to discount *what* American industry and consumers will do—the advancement Americans are going to make in living better, year by year. The trucking industry isn't thinking negatively. All our chips are on progress—every time.

I close with a request to every traffic manager in this room. Please keep after us—in a nice, firm way, of course—for the very best service of which we are capable.

In the trucking business, we must always be looking to the future. The present does not satisfy us. Our ideal—whatever it may be—lies further on.

Thank you.

A Soviet Writer Attests to the Marked Effectiveness of the "Architecture-U.S.A." Exhibit

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. FASCELL. Mr. Speaker, my attention was recently called to an article written by a Russian, appearing in a Russian magazine intended only for Russian readers, which praises the quality and the effectiveness of an exhibit shown by the U.S. Information Agency in Leningrad.

It is at times very difficult to judge whether the money we spend to acquaint people living behind the Iron Curtain with what is going on in the United States, does any good or not. For this reason I believe that the views of this Russian observer may prove of special interest to the Members of the House, and to thoughtful Americans throughout our land.

Let me, first, say a few words about the background of this matter.

Our 1964–65 agreement on cultural exchanges with the Soviet Union was the fourth of a series of 2-year agreements on exchanges. It included among others an exchange of three circulating exhibits; namely "Communications," "Architecture," and "Handtools" from the American side, and "Conquest of Space," "Children's Creative Activities," and "Public Health" on the part of the Soviet Union.

Because of some delays on the part of the Soviet authorities, this schedule of exhibit exchanges was not fully implemented. The American "Handtools" exhibit had to be postponed and was included in the Fifth United States-U.S.S.R. Exchanges Agreement—1966-67. The "Conquest of Space" exhibit was canceled by the Soviet Union.

"Architecture U.S.A." was shown in Leningrad from May 24 to June 24, in Minsk from July 23 to August 24, and in Moscow from September 17 to October 19, 1965. A total of 714,000 Soviets were counted visiting the American show. Upon entering the exhibit, each visitor was given a lapel button and an attractive brochure which, in addition to information on American architecture, contained several pages of useful economic data. The staff of "Architecture U.S.A." consisted of 22 Russian-speaking American guides and five USIA officers.

It is noteworthy that while the Soviet press was critical of the U.S. exhibit, especially of the content of the brochures and of the information on the United States given out by the young guides, the Russian public's reaction was generally favorable. This is attested to in the article which I mentioned earlier.

The article in question was rather long. It appeared in the September 1966 issue of Molodaya Gvardiya, and was entitled "Letters From the Russian Museum" by Vladimir Soloukhin.

Vladimir Alekseevich Soloukhin is a member of the Union of Writers; he is a prose writer and poet living in Moscow.

I shall quote some pertinent passages from it.

To begin, the writer complained about the manner in which an exhibit of ancient frescoes was displayed in the Russian Museum. He wrote:

> . . . Not only did The Russian Museum possess copies of the rarest frescoes, but now, for the first time in the last 50 years, an exhibit of these copies had been opened . . . I went at once to the halls where the ancient frescoes were displayed. The more so since the exhibit could close from one day to the next and even from one hour to the next. I had to hurry and I did see the exhibit . . .
>
> . . . And now, dear friends, a dash of bitterness. I noted in this letter that the exhibit hangs by a thread and could close from one day to the next and even from one hour to the next. That's the point.
>
> I must, at the outset, make an unforeseen digression here. Perhaps that which I describe now will be of interest to you but from my point of view it is also useful. This will become clear to you later. In Leningrad, these days, whether you ride in a bus, go by taxi or on foot along the long and straight roads, your gaze is everywhere struck by five heavy, bright-red (fireman's color) stripes—sort of horizontal railroad ties, sort of hot steel bars painted one over the other. Four five-pointed stars of a bright blue color even further intensify the impression of garishness and persistence. The red-hot stripes and blue stars shout from the billboard posters all over Leningrad, urging people to stop, read, and put everything else aside to heed the call as soon as possible. The squeaks of other posters are barely audible and do not sound at all alongside this powerful and alarming cry like the siren of a fire engine. For two days, I looked and looked at the red stripes and the blue stars. On the third day, I decided to get off the bus and read. The text on the poster was laconic to a maximum degree. There were only the two words: "Architecture USA". The address of the exhibit was noted in small type as follows: "Universitetskaya naborcshnaya, Museum of the Academy of Art".
>
> Having discussed this exhibit with my friend, a Leningrad artist, I realized that I was completely backward since for more than a week everyone had been talking only about this exhibit. I jumped up to rush off to Universitetskaya naberexhnaya to make up for lost time, but my friend told me that it was very difficult to get into the exhibit. People waited in line for 5–6 hours, the militiamen were all around and you couldn't walk or drive up to the building.
>
> Having thus alarmed me, my friend took pity on me and gave me a pass to the exhibit.
>
> Passing through a double file of militiamen, I entered the vestibule of the building and mounted the stairs. A visitor's route, of necessity, went past a kiosk in which a charming, young American girl sat. Before her lay reams of brochures, all with the same bright red stripes on the cover. Alongside, was a box full of badges, all with the same relentless emblem. The girl handed each visitor a smile, a brochure, and a badge. Not everyone took a badge, but not a single person refused a brochure. This brochure was a distinctive, comprehensive catalogue of the exhibit. All the best and most interesting that was exhibited in the halls was in the catalogue in the form of beautifully-made, and even more beautifully-printed colored photographs. The explanatory captions in the catalogue corresponded exactly to the captions in the exhibit.
>
> Every day, the charming American girl in the kiosk distributes approximately 8,000 brochures. But since the catalogue shows almost the whole exhibit and since each person who has a catalogue shows it to three and even five of his friends, one can say that, daily, 40,000 people visit the exhibit. But just to five friends? The brochure is printed on beautiful paper so that it won't be worn out for a long time. It's impossible to imagine how many people will look at it in a year.
>
> I'm not lamenting at all that very many people will see the brochure. I simply want to say that this is the way to propagandize one's exhibit. This is the way to propagandize one's art. This is the way to propagandize, in general, all that one has.
>
> Here and there in the flowing stream of visitors at the exhibit there was turbulence and whirlpools, as happens in large rivers when the water flows to a barrier. The nice American young men and girls were, here and there, surrounded by a thick crowd of Leningraders. A lively discussion is proceeding—questions, answers; questions, answers. This means that, in addition to the posters and brochures, for eight hours—from 11:00 a.m. to 7:00 p.m.—live agitators and propagandists hotly propagandize the architectural art of the USA, together with the American way of life and the American world outlook.

No, I'm not sounding the alarm. Let them. In spite of all this, the visitors, at least the majority of them, come out shrugging their shoulders in a puzzled way. This shrugging relates to the architecture itself and to the six-hour patience, thanks to which they got into the exhibit. Still, let it be. These charming young men and girls won't propagandize the Leningraders, but how well the thing was set up!

Now, we'll return to the sad history of the exhibit of ancient frescoes. It's embarrassing even to say that they are more interesting than the American color photographs. However, the exhibit opened without a single poster in the city and without even the cheapest one-page brochure. I won't even speak about young people who, here in the halls, could describe the particulars of the exhibit, could answer questions, could engage the viewers in free and easy discussions.

I ask: how can we allow organized and well-thought-out propagandizing of architectural styles foreign to us (and in general to mankind) to be conducted in Leningrad and fear to popularize, even a thousandth as much, our ancient Russian art? The American exhibit came here in the role of a self-satisfied, well-fed, sleek, but on the whole, commonplace daughter while our native art appeared in the role of a shabby, bedraggled stepdaughter. Young people were found, evidently artists, who took pity on the stepdaughter and even were offended for her. They posted hand-made posters around the city, which announced that an exhibit of ancient frescoes had opened in The Russian Museum. The display of the posters was regarded as unlawful propaganda, as leaflets. Yes, this was really propaganda, but for what purpose? In order that Leningraders visit a regular, functioning exhibit. . . .

Senator Nelson Strikes at the Heart of the Water Pollution Menace

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. REUSS. Mr. Speaker, much has been written about the manifold sources of water pollution that are threatening the existence of both our urban and our rural areas. An excellent article published recently on the subject appears in the February issue of the Progressive. Written by the Senator from Wisconsin [Mr. NELSON], this article, "The National Pollution Scandal," not only strikes at the heart of the problem, but offers numerous constructive suggestions on how to attack this growing menace.

The text of the article follows:

THE NATIONAL POLLUTION SCANDAL

(By Senator GAYLORD A. NELSON)

The natural environment of America—the woods and waters and wildlife, the clear air and blue sky, the fertile soil and the scenic landscape—is threatened with destruction. Our growing population and expanding industries, the explosion of scientific knowledge, the vast increase in income levels, leisure time, and mobility—all of these powerful trends are exerting such pressure on our natural resources that many of them could be effectively ruined over the next ten or fifteen years.

Our overcrowded parks are becoming slums. Our birds and wildlife are being driven away or killed outright. Scenic rural areas are blighted by junkyards and billboards, and neon blight soils the outskirts of most cities. In our orgy of expansion, we are bulldozing away the natural landscape and building a cold new world of concrete and aluminum. Strip miners' shovels are tearing away whole mountains and spreading ugly wastes for miles around. America the affluent is well on the way to destroying America the beautiful.

Of all these developments, the most tragic and the most costly is the rapidly mounting pollution of our lakes and streams.

Perhaps the pain is more intense for a Senator from a state like Wisconsin, bordered on three sides by the Great Lakes and the Mississippi, blessed wtih 8,000 inland lakes and hundreds of rivers and trout streams. Actually, our state seems rather fortunate at the moment. A yachtsman on Lake Superior can raise a bucket of water still crystal-clear and cold enough to drink with delight. Canoeists on the St. Croix or Wolf Rivers still shoot through frothing rapids of sparkling water, and catch fish in the deep, swirling pools.

But the bell is tolling for Wisconsin just as for all the nation. A recent survey of twelve major river basins in southeastern Wisconsin found not a single one fit even for the partial body contact involved in fishing or wading. A competent governmental agency concluded that 754 miles of rivers in this region had been turned into open sewers. Beaches along Lake Michigan, a vast blue sea with seemingly limitless quantities of fresh water, are being closed to swimmers. A sordid ocean of pollution is pouring into the Mississippi from the Minneapolis-St. Paul urban complex. The first serious signs of pollution are soiling Lake Superior, and our small inland lakes are, one by one, becoming murky and smelly and choked with algae.

Elsewhere, all across the nation, the same tragedy is being enacted, although in many areas the curtain already has come down. The waters are already ruined.

Every major river system in America is seriously polluted, from the Androscoggin in Maine to the Columbia in the far Northwest. The rivers once celebrated in poetry and song—the Monongahela, the Cumberland, the Ohio, the Hudson, the Delaware, the Rio Grande—have been blackened with sewage, chemicals, oil, and trash. They are sewers of filth and disease.

The Monongahela, which drains the mining and industrial areas of West Virginia and Pennsylvania, empties the equivalent of 200,000 tons of sulfuric acid each year into the Ohio River—which in turn is the water supply for millions of people who use and re-use Ohio River water many times over.

National attention has been centered on once beautiful Lake Erie, the great lake which is the recreational front yard of Buffalo, Cleveland, Toledo and Detroit, and which supplies water for ten million Americans.

A Public Health Service survey of Lake Erie made the shocking discovery that, in the 2,600 square mile heart of the lake, there was no dissolved oxygen at all in the water. The lake in this vast area could support no desirable aquatic life, only lowly creatures such as bloodworms, sludgeworms, sowbugs, and bloodsuckers.

Along with the germs and industrial acids which pour into Lake Erie are millions of pounds of phosphates, a major ingredient in detergents. Each pound of phosphate will propagate 700 pounds of algae. Beneath the waters of this great lake, largely hidden from sight, a hideous, cancer-like growth of algae is forming. As algae blooms and dies, it becomes a pollutant itself. It robs the lake of still more oxygen—and it releases the phosphate to grow another crop of algae.

Lake Erie is a product of its tributaries. A Public Health Service study of these American sewers is horrifying to read.

The Maumee River flows from Fort Wayne, Indiana, through Defiance and Napoleon, Ohio, and on to Toledo, where it joins the lake. Even as far upstream as Fort Wayne, the river has insufficient oxygen to support anything but trash fish and lower organisms, and as it flows toward Lake Erie conditions get steadily worse. The count of coliform bacteria runs as high as 24,000 times the allowable maximum under Federal drinking water standards. The concentration of carbolic acid, a byproduct of steelmaking, runs up to 137 times the allowable maximum. A packing company dumps 136 pounds of oil per day into the Maumee River. A plating company dumps thirty-eight pounds of cyanide per day. Defiance, Ohio, closes its sewage plant entirely for one to two months each year, and all its raw sewage goes directly into the Maumee.

Below Defiance, a foundary dumps cinders and ashes into the river. The Maumee is joined by the Auglaize River, which is even more polluted than the Maumee, and is especially rich in ammonia compounds.

At Napoleon, Ohio, the city draws its drinking water from the sordid Maumee, and a soup company draws off ten million gallons a day for soup processing. (The firm assures me that its modern water treatment plant, complete with carbon filters, can "polish the water to a high quality.")

Below Napoleon, things get really bad. Forty per cent of samples taken by the Public Health Service showed presence of salmonella, an intestinal bacteria that can cause severe illness. As the Maumee flows into Lake Erie at Toledo, it gets its final dose of pollution—the effluent from the Toledo sewage plant and what the Public Health Service describes as "oil, scum, metallic deposits, and toxic materials."

Another Lake Erie tributary—the Cuyahoga—which flows into the lake at Cleveland, is described by the Public Health Service as "debris-filled, oil-slicked, and dirty-looking throughout." It is loaded with coliform bacteria and salmonella. It is so polluted with oil that it frequently catches fire. Structures known as "fire breaks" have been built out into the river to fight these blazes. In the Cleveland harbor, the Public Health Service could find virtually no conventional aquatic life. However, the sludgeworms which thrive on organic matter were well represented—400,000 per square meter on the harbor bottom.

That is the story of Lake Erie, and although it is so shocking and disgusting as to deserve urgent national attention, it is not unique. Southern Lake Michigan, ringed with ol refineries, steel mills, and municipal sewage outfalls, may be even worse. Scientists estimate that it would take 100 years to replace the polluted water of southern Lake Michigan, and some consider the pollution in this area irreversible.

We have our own Wisconsin pollution scandal in Green Bay, a magnificent recreational body of water in northeastern Wisconsin, widely known as a yachtsman's paradise and site of a multimillion dollar resort industry. This "Cape Cod of Wisconsin" is threatened with ruin by a tide of pollution which is moving up the bay at the rate of more than one mile per year. The pollution comes from rivers such as the Fox, the Peshtigo, the Oconto, and the Menominee, which drain large areas of Wisconsin and northern Michigan.

The experience in Lake Erie, Lake Michigan, and Green Bay has convinced many experts of this chilling fact: It is a definite possibility that the Great Lakes—the greatest single source of fresh water in the world—could be effectively destroyed by pollution in the years ahead. If this were to happen, it would be the greatest natural resource disaster in modern history.

That is the outline of this new American tragedy. The obvious question now is, what can be done about it?

First, I think we must learn what a complex and widespread problem we face in water pollution. Like crime, like death on the highway, pollution is a social problem which extends throughout our society. There is no single villain, and there is no simple answer. It must be attacked for what it is—a sinister byproduct of the prosperous, urbanized, industrialized world in which we live.

We must take care not to ride off in pursuit of just one villain—such as city sewage, or industrial waste, or detergents, or toilet wastes from boats; this is a battle which must be fought with skill and courage on many different fronts. Nor should we be fooled by the strategy of many polluters, who argue, in effect: "The pollution which we cause is minor compared to the big, nationwide problem. Why not leave us alone and go after the big offenders?" Even some of the lesser offenders in the pollution crisis could ruin us in time.

The primary sources of pollution are these:

MUNICIPAL SEWAGE—Despite heroic efforts and heavy investments by many cities, our municipal sewage treatment plants are woefully inadequate. Some cities have no treatment at all; others remove only part of the pollutants found in sewage. As a result, the effluent discharged by our cities today (treated and untreated) is equivalent to the *untreated* sewage from a nation of seventy-five million people.

INDUSTRIAL POLLUTION—is roughly twice as big a problem as municipal sewage. Despite tremendous investments in research and treatment plant construction by some industries, the overall record is terrible. Some industries feel they cannot remain competitive if they spend heavily for treatment plants. Communities and States are reluctant to push them too far. As a result, industrial wastes (treated and untreated) now discharged into our waters are presently equal to the *untreated* sewage of a nation of 165 million people.

SEPTIC TANKS—Vast sections of the nation have no sewer collection or treatment system at all. In such areas, underground septic tanks, often poorly made and undersized, are expected to distribute wastes into the soil. They overflow into natural watercourses, they leak bacteria and detergents into underground wells, and they are destroying lakes by filling them with nutrients that foster heavy growths of algae.

SHIPS AND MARINE TERMINALS—In selected areas, the discharge of toilet wastes, oil, garbage, and rubbish from ships and shoreline installations is a major problem. For some reason, this form of pollution is widely tolerated and enforcement of laws forbidding it is virtually nonexistent.

PESTICIDES—The terrifying prospect of spreading poison all over the globe confronts us. We now use more than 700 million pounds a year of synthetic pesticides and agricultural chemicals of 45,000 varieties. This volume is expected to increase tenfold in the next twenty years. Many of these poisons persist forever in the environment, and their concentration builds up geometrically as they progress through the food chain (water, seaweed, fish, birds, mammals). DDT residue has been discovered in penguins in Antarctica, in reindeer in Alaska, in seals, and in fish caught in remote areas of the Pacific Ocean. One part of DDT in one billion parts of water will kill blue crabs in eight days.

SILT—One of the most serious pollutants all over the world is the dirt which washes into our waters from off the land. This somewhat natural problem is disastrously aggravated by contemporary trends—widespread clearing of land for subdivisions and shopping centers; construction of highways and parking lots (which cause rapid runoff) and the intensive development of lakeshores and riverbanks. Controlling surface runoff and the siltation which it causes is complicated by our patchwork of political boundaries and the lack of coordinated government planning.

DETERGENTS, FERTILIZERS, AND OTHER CHEMICALS—Some of these commonly used substances pass through even good waste treatment systems and become persistent pollutants. Such pollution can be eliminated only by changing the composition of such substances, regulating their use, or devising new removal techniques.

Obviously, any nation-wide problem made up of so many elements is extremely difficult to attack. Yet I believe that the rapidly accelerating destruction of our natural resources is our number one domestic problem, and the greatest of all our resource problems is water pollution. If we are to meet this pollution threat, if we are to save the waters of America and preserve this most indispensable part of our natural environment, we must make the war on pollution a high priority matter at every level of government—local, state and Federal—and we must insist that private industry do likewise.

Baffling and complicated as the pollution problem is, it is not insoluble. There is no reason in the world why a great and prosperous nation, with the money and know-how to shoot man to the moon, cannot prevent its lakes and rivers from being destroyed and its life-giving water supplies endangered.

Just as there is no single cause of pollution, so is there no single solution to the problem.

Consider the question of what to do about municipal sewage and industrial wastes. Why do we tolerate a situation where these two sources alone pour into our waters each year the equivalent of the completely untreated sewage of a nation of 240 million persons?

In the case of municipal sewage, it is largely a matter of lack of money, aggravated in some cases by a shocking lack of public concern. There are now more than 1300 communities which have sewer systems but discharge their wastes into the waters without any treatment at all. These communities have a population of more than eleven million people. How such a condition could exist in the year 1966—when it is generally illegal to throw a gum wrapper out of a car window—is inconceivable.

We have another 1300 communities—with almost seventeen million population—which treat their wastes but in a completely inadequate manner. In most cases, these are communities which use what is known as "primary" treatment. They screen their sewage and let the solids settle out, but they do not remove dissolved solids, salts, chemicals, bacteria, and special problems such as detergents. Every community should have what is known as "secondary" treatment, under which sewage—after primary treatment—is held in holding tanks, brought into contact with air and biologically active sludge, so that bacteria have a chance to consume the pollutants.

The Conference of State Sanitary Engineers estimates that it would cost $1.8 billion to provide adequate sewage collection and treatment for these communities which now have no treatment or completely inadequate treatment.

But even this would still leave us with a massive municipal pollution problem. Even good secondary treatment removes only eighty per cent to ninety per cent of the pollutants. Chicago, for instance, with a good secondary treatment plant, discharges treated effluent which is equivalent to the untreated, raw sewage of one million people. It dumps 1,800 tons of solids per day into the Illinois waterway. At the rate the pollution load is increasing it is estimated that even if all communities have secondary treatment plants by 1980, the total amount of pollutants reaching watercourses would still be the same as today. Obviously, we need a massive program to build highly effective city sewage treatment plants.

It is also obvious that local property taxes cannot support such a gigantic investment, and that if we wait for communities to do this on their own, it will never be done. Most state budgets also are severely strained, so much of this burden is going to have to be borne by the Federal government—if we want the job done early enough to be effective.

The Senate Air and Water Pollution subcommittee estimates that it will cost $20 billion to provide secondary treatment in plants serving eighty per cent of the population and more advanced treatment in plants serving the other twenty per cent. We have had a Federal program to assist communities in building such treatment plants for the past ten years, but it has been inadequate. It has recently been greatly improved, but it is still inadequate. In the past it has provided grants of up to thirty per cent within the limits of available funds. The most recent act—the Clean Waters Restoration Act of 1966—authorizes a total of about $3.6 billion over the next five years ($150 million in 1967, $450 million in 1968, $700 million in 1969, $1 billion in 1970, and $1.25 billion in 1971). A community can get a grant for up to fifty percent of the cost of a project, provided the state pays twenty-five per cent and provided water quality standards have been established.

New York needs an estimated $1.7 billion for new sewage plants. The new law would give it a total of only $307 million. Ohio needs $1 billion and would get $180 million. Wisconsin needs $286 million and would get $75 million.

If we are serious about the Federal government paying fifty percent of the cost of eliminating municipal pollution, then Washington must provide $10 billion—not $3.6 billion—and even then we will be expecting our hard pressed states and communities to come up with another $10 billion.

Personally, I think it is unrealistic to expect the states and localities to assume a burden of this size. And I do not think the nation can sit by and wait while its communities struggle to build up the financial resources and the political courage needed to do the job. I think we should get sewage treatment plants built the way we are getting interstate highways built—by offering ninety per cent Federal financing. I have introduced legislation which would establish such a program.

The municipal sewage problem is complicated by another problem—combined storm and sanitary sewers. By combining storm water and human wastes in one sewer system, many cities build up such a tremendous load during rainstorms that their sewage treatment plants cannot handle it. They have had to install automatic devices which divert the combined sewer load directly into lakes or streams whenever it gets above a certain level. In this manner, sixty-five billion gallons of raw, untreated sewage goes into our lakes and rivers each year.

Most cities are separating storm and sanitary sewers in new subdivisions, but the task of separating the sewers in the older areas is a staggering one. Complete separation would cost an estimated $30 billion. It would cost $160 per resident in Washington, D.C., $215 in Milwaukee, $280 in Concord, New Hampshire. It would cost Wisconsin an estimated $186 million, Indiana $496 million, Michigan $970 million, New York and Illinois about $1.12 billion each. These are only general estimates of the direct costs and they do not take into account the disruption of traffic and the local economy caused by ripping up miles of underground sewers.

In the hope af avoiding such costs, the Federal government has underwritten several research projects to see if this problem cannot be met in some other way—through temporary underground storage of sewer overflows, for instance, or by building smaller sanitary sewer pipes inside existing storm sewers.

The staggering problem of *industrial* pollution is virtually untouched today by our Federal anti-pollution programs, even though industry contributes twice as much pollution to our waters as do municipalities. If we do not step up our industrial waste treatment plant construction, the pollution effect of industrial wastes alone by 1970 will be equal to the untreated, raw sewage from our entire population.

Industries are widely criticized for dumping wastes into our waters, and this criticism is often justified. They are pressured by local, state, and Federal officials. But some industries are able to avoid a serious crackdown against them by threatening to move. Most industries argue—sometimes effectively—that they cannot be expected to make massive investments in treatment plants if their competitors—often in different parts of the country—are not forced to do so.

I have come to the conclusion that the threat of enforcement alone is not going to solve our industrial pollution problem. We must provide direct financial assistance to see to it that the plants are built. I have introduced legislation to provide both loans and grants of up to 50 per cent to industries whose size and economic circumstances prevent them from assuming the full burden of providing their own facmilities. I think such assistance should be carefully limited and should be for a short period, but I do not think we can avoid it. We are going to pay the cost of industrial pollution in one way or another—in the cost of the manufactured product, in taxes, or in ruined water resources.

But massive construction programs alone are not going to solve our municipal and industrial pollution problems. We need a tremendous expansion of Federally supported research to find completely new answers. Our whole waste disposal system, from the household toilet to the municipal sewage treatment plant, is a holdover from another era. The system should be studied and redesigned, using the latest scientific techniques, and fitted into a coordinated, nationwide system of waste disposal. Research grants should be made to private industry and universities to develop new methods and devices to refine, use, neutralize, or destroy pollutants. We should compute what our present waste disposal systems are costing us—including the loss in natural resources destroyed—and what alternative systems would cost.

Compared with municipal and industrial pollution, the other pollution problems I have mentioned are statistically small. For that reason, they are often ignored. But we cannot safely do that. Even if we managed to contain the flood of municipal and industrial pollution, the other sources could do fatal damage to our environment.

Septic tanks must be controlled at the state and local level, and in many areas I think we must forbid new installations and work to replace existing ones with sewer systems. For instance, once an inland lake is ringed with cottages with septic tanks, it is doomed. Septic tanks must drain somewhere and in most lakeshore settings the natural drainage flow is into the lake. At the very least, this drainage will fertilize the lake, cause the rapid growth of algae, and turn the lake into a murky, foul smelling mess.

Ship pollution is certainly serious enough to justify Federal action, even though such suggestions cause howls of protest from those who insist it "isn't practical." Why is it practical to install retention facilities on buses, house trailers, and aircraft but not on boats and ships? Obviously, we are willing to allow wastes to be dumped into our water supplies which we would never tolerate being dumped onto the land. We need Federal laws to require suitable facilities on all vessels using our navigable waters, and we need a better enforcement system to crack down on such disgraceful practices as dumping oil and pumping out oily ballast tanks on the Great Lakes and in our rivers.

The siltation problem can be controlled only through strict zoning and land use controls. We have got to prevent intensive development of our shorelines if we are to save our waters. Once a large portion of the natural vegetative cover is destroyed, the water resource is in danger. I believe that the Federal government should provide financial assistance to those willing to carry out soil conservation practices along our lakes and streams on a scale large enough to be meaningful.

Pesticides, detergents, and exotic new chemicals will plague us for years to come. New treatment systems may offer some hope for removing these substances, but I think they must be controlled directly. Those which cannot be removed safely in normal treatment processes, and those which have chemical structures which cause them to persist in our environment and to threaten fish, wildlife, and human health, should be banned or their use strictly regulated.

In speeches in some twenty-three states in the past four years, I have called for an emergency, crash program to fight water pollution. I have offered my estimate of the cost of conquering water pollution as $50 to $100 billion over the next decade. It now appears I may have been conservative. The Public Health Service now estimates that it will cost some $20 billion to clean up the Great Lakes alone, and the total national cost is now estimated at $100 billion.

But everywhere I have gone I have found the public willing to pay this cost to save their waters. In fact, I think the public is far ahead of local, state, and Federal officials in facing up to this crisis. I think that citizens in most communities would support a sharp crackdown on local polluters of every variety. I think they want their states to establish high water quality standards, and then enforce them. I think they can be shown the need for bold regional action to deal with those vast interstate pollution problems (such as on the Mississippi and the Great Lakes) which obviously are too big for any community or any state to handle.

And I think that the citizens of America now recognize that the destruction of the major river networks of the nation, the threatened destruction of the Great Lakes, and the slow ruination of our treasured inland lakes and trout streams is a calamity of such gigantic proportions as to deserve the urgent attention of all citizens and prompt action by the national government.

Colmer's Special Strength Is in Grassroots

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. TEAGUE of Texas. Mr. Speaker, the Washington Sunday Star, January 22, 1967, carried an article written by Benjamin Forgey entitled: "Colmer's Special Strength Is in Grassroots." Bill Colmer is one of the quieter and most effective legislators in this body. He completely lacks the bombast displayed by some of our profession. Since he was first elected to the U.S. Congress in 1932, Bill Colmer has contributed a great deal to this body and to our country. I am pleased have this article printed in the Record:

COLMER'S SPECIAL STRENGTH IS IN GRASSROOTS

(By Benjamin Forgey, Star staff writer)

William Meyers Colmer likes to remember himself as an ambitious young boy in the Mississippi sawmill town of Moss Point, just four miles up the river from the little Gulf port of Pascagoula.

It was there that he first learned the value of a dollar—an indelible impression that became a credo in his ultra-conservative political faith. As he has said of his fellow congressmen on many occasions, they should appropriate money "as if it were coming out of their own pockets, which some of it is."

In Moss Point, his father was a member of the laboring elite—as a saw filer at the mill, Colmer says, he was "the first or second highest-paid man there—he got up to $5 a day. I don't want to make this sound too log-cabiny," Colmer said while reminiscing with a reporter in his House office the other day, "but I worked 12 hours a day for 50 cents when I was 10 years old."

EARLY AMBITIONS

It was in the early Moss Point days, too, that Colmer first felt the pull of political ambition. "I guess I was ambitious. The presidency wasn't beyond me at that age. Even in grammar school I thought I'd be governor of Mississippi," he said. After a pause he added with a typical touch of good humor, "I'm happy to say I never got that job."

Although the governorship and even a senator's seat—for which he made one try, his only losing electoral effort ever—remained beyond his reach, time has been good to the 76-year-old congressman from Mississippi's Gulf coast. Time, one-party politics in his home state, and the seniority system in the House of Representatives elevated him to the position of second-ranking Democrat on the powerful House Rules Committee.

When Virginia Rep. Howard Judge Smith, chairman of the committee since 1955, lost his 8th district seat in a startling primary upset last summer, Colmer was first in line for the chairmanship. In spite of various efforts by House liberals to prevent it, Colmer's election as chairman is now just a matter of form for the first committee meeting.

Colmer and Smith are not exactly a study in contrasts. The Mississippian's eyebrows are not so dramatically bushy, nor his face as narrow and craggy with age. But in their tall, slightly bent, graciously patriarchal presence, in their mild folksy demeanor, in their laconically sarcastic inquisition of committee witnesses—in all these things they are very much alike.

AGAINST THE TIDE

Both are arch conservatives and arch southerners. Both resent the change that has swept the country and both feel that government—because of "expediency and the current political situation," Colmer said—has dirfted away from the "constitutional" principles on which it was founded.

Where Smith, however, was the conservative Virginia gentleman from the beginning of his long sojourn in Congress, Colmer was a New Dealer when first elected to Congress in the Roosevelt landslide of 1932. "I went along with those things," he said. "We had to do something to get the country out of the economic morass it was in."

COMES THE CHANGE

But when the depression began to disappear in the years before the United States entered World War II, Colmer, along with a goodly number of fellow southerners and fellow Democrats, began to shift to the conservative side of the fence.

Today, Colmer's credentials for all-out conservatism are impeccable. He was one of 13 representatives in the second session of the 89th Congress to get a 100-percent rating on his voting record by the conservative Americans for Constitutional Action. As might be expected, in a comparable rating the liberal Americans for Democratic Action gave Colmer a zero.

Colmer and Smith even have cigars in common. Asked if he employed the same brand of cigar as the former chairman, the new chairman allowed as how he'd "have to say" he did, since he "bummed enough" from Smith. In their 26 years of friendly cooperation in what Smith called a "rear guard action" against the New Deal, the Fair Deal, the New Frontier and the Great Society, that's a lot of cigars and a lot of smoke.

MAJOR DIFFERENCE

If there is a major difference between Colmer and Smith however, it is in the caliber of their legislative leadership. Smith is not an easy man to follow. Rep. Richard Bolling, a liberal Democrat (and Rules Committee member) from Missouri who has been an opponent of Smith and Colmer in many a legislative battle, commented that when Smith left Congress he left as "the ablest legislator in the House—I didn't say ablest conservative, I said ablest legislator."

Though few House members are willing publicly to make the comparison, there is no doubt that Colmer is not in Smith's league as a legislative strategist or tactician. Then, too, things have changed on the Rules Committee since the days when Smith, Colmer and four conservative Republicans could combine to block many liberal domestic bills before they could reach the House floor for a vote.

In 1961, however, things began to change. That was the year the late Speaker Rayburn mustered a five-vote majority to enlarge the committee from 12 to 15 members, and the resulting 8-to-7 liberal majority was much more favorably disposed to liberal bills.

Liberals continued to peck away at Rules with the aim of converting the committee back to its old role as an arm of the House leadership. The 15-member committee was made permanent in 1963, and in 1965 triumphant liberals added another tool to their bag when they adopted the 21-day rule. Under this rule used successfully six times in 1965 and twice in 1966, the Speaker could pry legislation loose from Rules after it had a bill for 21 days or more.

LIGHT OF PUBLICITY

These semi-annual battles served to turn the spotlight of publicity on the Rules Committee. This year was no exception. For the second time (the first was in 1961) liberals attempted to purge Colmer from the committee on the grounds of party irregularity. Colmer emerged safey, if not entirely unscathed, on both occasions. This year, in fact, liberals lost a little ground when a resurgent conservative coalition in the House rescinded the 21-day rule.

Even so, the liberal pressure was not without effect. Smith frequently was quite loose about calling the committee together for a meeting and on at least one occasion he simply left town (for his dairy farm in Warrenton, some said). Congressional facts of life make it very difficult for a committee to meet when the chairman is not around. This year, however, liberals managed to squeeze a pledge from Colmer that he would hold meetings regularly, probably once a week.

And liberals feel last week's appointment of two new Democratic members to the committee (replacing Smith and moderate Rep. James Trimble of Arkansas, who also lost) more than compensates for the loss of the 21-day rule. The new members give administration forces a 9-to-6 committee majority.

So Colmer, as chariman, won't have the horses Smith had in the heyday of the conservative coalition, and he probably won't be as skillful as Smith in bending to his will the arcane procedures of the House. But, he promises, he'll work hard—it was as chairman of the House Postwar Economic Policy Committee (which he regards as his best work in Congress) that Colmer learned "it's one thing to be a member of a committee and another to be chairman."

AFFABILITY ABOUNDS

Expectably, the Mississippi congressman with a penchant for bow ties is in private conversation a very affable man. Perhaps less predictably, as a public campaigner his style can be eloquent but is far from the fire-eating and often race-baiting oratory employed by several of his state's famous politicians through the years.

Though he supports segregation of the races, Colmer says proudly he's "never made an anti-Negro speech." He refers to civil rights bills that pass his way as "those civil wrongs things."

GULF COAST GROWTH

Colmer's special political strength has been the thoroughgoing way in which he reflects—and looks after—the wishes of a majority of his constituents in the 16-county district he represents. The other day in his well-appointed office he cited—though he did not try to take credit for—the changes that have signalled prosperity for Pascagoula since World War II.

The town is now "one of the most industrialized" in Mississippi, he said, counting off the signs of its progress: A giant ship-building corporation which gets a sizeable amount of Navy business; a large grain center which loads the grain onto ships at a rate of about "three to four shiploads a week;" a big oil refinery, a large paper mill and about 40 smaller industries.

Much of this, of course, is due to geography and to natural economic growth. But Colmer is known to get as much as he can—and it's been a lot—in the way of federal money for public works and schools in his district. This fact tends to incite liberals almost to apoplexy as they point to Colmer's doctrinaire opposition to federal spending and increasing federal power.

THE SENATE RACE

In fact, Colmer's ambitions seem rarely to have strayed from the boundaries of the district he's represented for 34 years. On one occasion, in 1947, he made a foray into the factional strife of statewide politics when he reached out for higher office. It was a Senate race in which, as he put it, "the long pole got the persimmon."

In 1947 the state's most powerful political personality, the demagogic Sen. Theodore Bilbo, died and five ambitious Mississippi Democrats jumped into a free wheeling free-for-all for the remainder of his term. Because it was a special election, only a plurality was required to win and the now-Sen. John Stennis won with just over 29 percent of the vote. Colmer was a close second.

Colmer said he lost mainly because the state's present governor, Paul Johnson, also was a resident of Colmer's district. Johnson—"who is my good friend—now," Colmer remarked—joined the race and siphoned off some of Colmer's support on his home grounds.

THE CLOSEST RACE

Within the confines on this district, however, Colmer has been unbeatable. The closest race he ever had was the first, when he came in first in a five-man primary and then bested the incumbent in a runoff by about 1,500 votes.

He's only had Republican opposition twice in 18 House elections. The last time was last November, when he defeated James Maye, an optometrist who tried to convince the voters it was something of a sin even to be in the same party as Lyndon Baines Johnson.

Walter Batson, a lean Mississippian and graduate of George Pierce Baker's famous Yale drama school (Batson: "I didn't have the slightest idea of getting into politics") who has been Colmer's chief congressional aide from 1933 on, commented with obvious justice that an attempt "to hang LBJ around our necks" was "ridiculous on the face of it." Colmer got 70 percent of the vote. And he remarked, last week, "You know, 30 percent's a prety big vote for a Republican in Mississippi."

THAT "SHRIMPY" KID

Besides Batson, Colmer also brought another Mississippian to Washington in 1933. This was an ambitious young boy who used to work as a part time soda jerk across the street from Colmer's law offices in Pascagoula. Colmer liked the boy, and let him drive the candidate's car during that first campaign.

The new congressman got his favorite a patronage job in the House post office. Friends said the boy was a "shrimpy" kid at the time, and since on the Gulf, shrimp is fishbait, in the natural course of events the youth acquired the sobriquet "Fishbait." He prospered in the political atmosphere of the House and rose from post office clerk to become William P. "Fishbait" Miller, now something of a fixture as House doorkeeper, with an annual salary of something like $28,000.

Before he made the plunge to run for national office in that House race 34 years ago, Colmer built up political support in the Fifth district with 10 years of successful campaigning first as Jackson County attorney and then as District Attorney for five Gulf counties.

Before that, he worked as a teacher after he graduated in 1914 from Millsaps College, a small Methodist school in the state capital. "A fine school, with an excellent academic reputation—to which I added nothing," the congressman remarked with good humor. In his hard years as a teacher, Colmer read law on his own and by the early 1920s was ready for private law practice and the long political career.

AND ONE YANKEE

In 1917 the congressman married Ruth Miner, a "small-town girl" who lived in Lumbarton, where he was teaching at the time. They have three sons: Bill, Jr., a gynecologist in Pensacola, Fla.; Jim, a lawyer in Pascagoula, and Tom, the youngest, who attended the Corcoran School of Art here for three years, then went to Duke, and then "went Yankee on us" according to his father. Tom is in advertising, in Chicago.

With Colmer, as one can readily see, almost every facet of his life is tied in some way to the district he's represented all these years. Even his favorite sport—fishing—is a natural for the local boy made good. He is said to have caught the largest tarpon ever snagged along the Gulf coast. In a recent magazine article, Colmer's perennial Rules Committee foe—Bolling of Missouri—quipped that he and Colmer share at least *two* things: They're Democrats and they both love fishing.

In Washington, Colmer and his wife live in a Wisconsin Avenue apartment and in Pascagoula, in a comfortable white frame house overlooking the Gulf. Although he admits to having wanted to "give up this business" almost every other year for the past 20, Colmer looks to be completely set in his prestigious Rayburn Building office with its view of the Capitol.

And soon Colmer will be taking his seat as chairman at the first 1967 meeting of the House Rules Committee in its atypically cozy meeting room.

The ambitious Moss Point boy has attained a position of national power—albeit a somewhat diminished power. All that time and faithful work for his one-party district at last have landed him a really big job.

Patent Infringement

EXTENSION OF REMARKS
OF
HON. THOMAS G. MORRIS
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1967

Mr. MORRIS of New Mexico. Mr. Speaker, I have recently introduced H.R. 2898 which provides for according greater recognition to a patent owner in Government procurements. The need for such legislation is great and extends nationwide. Today I wish to present, for your consideration, an excerpt from an article which appeared in the October issue of the Notre Dame Lawyer and which gives an excellent historic insight to the entire problem of patent infringements in Government procurement. I will later present other portions of the same article which provide a critique of our present laws and of the reforms which have been attempted.

The excerpt follows:

PATENT INFRINGEMENT IN GOVERNMENT PROCUREMENT: A REMEDY WITHOUT A RIGHT?

(By Gerald J. Mossinghoff, Member, District of Columbia Bar, Missouri Bar; B.S., St. Louis University, 1957; J.D., George Washington University Law School, 1961; attorney, Office of General Counsel, National Aeronautics and Space Administration, and Robert F. Allnutt, Member, District of Columbia Bar, Virginia Bar; B.S., Virginia Polytechnic Institute, 1957; J.D., George Washington University Law School, 1960; LL.M., George Washington University Law School, 1962; Assistant General Counsel, National Aeronautics and Space Administration.)

(NOTE.—The opinions expressed in this article are those of the authors and are not necessarily those of the National Aeronautics and Space Administration.)

INTRODUCTION

Since World War II government contracting has formed a substantial part of the business of most large corporations and all or most of the business of many small concerns. While government purchases include many of the most sophisticated devices known to modern science and technology, they also include thousands of everyday items, running the entire gamut of American manufacture.

In many ways the government supplier or contractor finds that the normal rules of the market do not apply to his government sales. Among the differences between commercial practice and government contracting, few if any are more striking than that arising when a prospective contractor owns, or is licensed under, a patent.

Although in the commercial realm it has been said that "within its domain, the patentee is czar," [1] under present rules a patent owner finds that his patent, even if valid, is irrelevant to his bid to furnish the patented items or services to the Government. And a licensee under a valid patent finds that he is actually at a disadvantage compared to his unlicensed competitor.

Prior to 1910, it could be said that a patent owner whose patent was infringed by the Government had a right without a remedy. The patent owner's "right" to damages for past infringement or an injunction was negated by sovereign immunity—immunity which had not been waived by the United States.[2] After 1910 for direct infringement by the Government, and after 1918 for infringement for the Government by its contractors, a waiver of immunity [3] and an assumption of liability [4] by the Government provided a remedy of reasonable compensation. More important to the typical businessman, who is far more interested in sales than in lawsuits, governmental contracting practices [5] afforded a preferential position to patent holders when the Government purchased their patented supplies or services. However, under a series of Comptroller General decisions beginning in 1958,[6] this right to a business preference had been held to be destroyed by the remedy provided generations before.

How this complete departure from normal commercial experience came to pass is often not fully understood. Dissatisfaction with the present state of affairs is widespread, and a variety of cures, both administrative and legislative have been suggested in recent years. This article reviews the steps leading to the anomaly and analyzes various proposed solutions. The authors conclude that an appropriate change is needed and that the necessary elements of such a change can be determined and defined.

THE EVOLUTION OF 28 U.S.C. § 1498

A valid United States patent grants to the owner "the right to exclude others from making, using, or selling the invention throughout the United States" and its territories.[7] The district courts have jurisdiction both to award damages for past patent infringement and to "grant injunctions in accordance with the principles of equity" to prevent future infringement.[8] The patentee, therefore has virtually absolute control over the patented invention. He may or may not practice the invention himself; he may or may not license others to practice the invention either exclusively or nonexclusively; [9] and within the framework of antitrust principles, if he grants licenses, he may dictate their terms and conditions.[10] These rules apply only to commercial use of a patented invention, and when a patent is practiced by, or on behalf of, the Government, an entirely different set of rules and policies controls.

Prior to 1910, when the Government utilized an invention covered by a privately owned patent, it committed a tortious infringement of the patent. However, no suit could lie for this infringement, not due to any inherent right or license to practice the patented invention, but due to the United States' not having consented to be sued for patent infringement.[11] To alleviate this situation and to afford the patent owner an opportunity to assert his patent against the Government, Congress passed the Act of June 25, 1910, which provided that whenever a patented invention was "used by the United States without license of the owner . . . such owner may recover reasonable compensation for such use by suit in the Court of Claims." [12] The scope of this act was defined by the Supreme Court in *Crozier v. Krupp*,[13] decided in 1912, and in *Cramp & Sons v. International Curtis Marine Turbine Co.*,[14] decided in 1918. *Crozier* held that under the act an officer of the United States, as an individual, could not be enjoined from infringing a privately owned patent while acting in his official capacity. If the patent owner's right had been infringed, his only remedy was an action against the United States in the Court of Claims for reasonable compensaion.[15] On the other hand, in *Cramp* the Court concluded that the *Crozier* interpretation did not extend to work by a government contractor, and that a patentee could enforce his rights, including, presumably, his right to injunctive relief, against the contractor in the district courts.[16] The *Cramp* ruling was based upon the view that a private party "is not vested with the powers to take the property of others upon the assumption that . . . he enjoys the right to exercise public and governmental powers possessed by the United States," [17] merely because he is a contractor of the United States.

Concern that the precedent established in *Cramp* would impair the war effort prompted enactment in 1918 of an amendment extending the act's provisions to the manufacture or use of patented inventions "by *or for* the United States.[18] (Emphasis added.) As explained by the Supreme Court in *Richmond Screw Anchor Co. v. United States:*

"The purpose of the amendment was to relieve the contractor entirely from liability of every kind for the inrfingement of patents in manufacturing anything for the Government and to limit the owner of the patent and his assigns and all claiming through or under him to suit against the United States in the Court of Claims for the recovery of his reasonable and entire compensation for such use and manufacture. The word 'entire' emphasizes the exclusive and comprehensive character of the remedy provided. As the Solicitor General says in his brief with respect to the Act, it is more than a waiver of immunity and effects an assumption of liability by the Government." [19]

The provisions of the Act of 1910, as amended in 1918 have remained substantially unchanged.[20] It was judicially determined at an early date,[21] and it is now specifically set forth in the statute, that the assumption of liability by the Government for infringing acts of its conractors obtains only if these acts were performed "with the authorization or consent of the Government." [22] In view of this requirement, it is standard practice for federal agencies to include "Authorization and Consent" clauses in their contracts to insure that the provisions of 28 U.S.C. § 1498 will apply to the contract work and, at the same time, to specify the limits of the authorization and consent granted.[23] And it has been held that such clauses are effective, even though the contractor may be contractually obligated to indemnify the Government for any patent infringement liability incurred as a result of the contract work.[24]

THE CHANGING IMPACT OF 28 U.S.C. § 1498

State of the law

In practical effect, section 1498 insulates the Government and its contractors against being enjoined from patent infringement. Although the Act of 1910 was essentially a remedial measure enlarging a patentee's rights by permitting infringement suits against the United States, as amended in 1918, the act took on the aspects of an eminent domain statute under which the Government and its contractors could utilize privately owned patented inventions, subject to the payment of reasonable compensation to the patentee.[25] This did not mean, however, under policies prior to 1958, that government agencies were to disregard private patent rights in awarding contracts for patented items. To the contrary, in a 1933 decision, the Comptroller General, after reviewing the history of the governing statutes, concluded that:

"Where it is known with certainty that patents are involved, bidders may properly be required to show legal right to manufacture thereunder, or the United States may directly obtain such right for its own use or use through its contractors . . ." [26]

Footnotes at end of speech.

Similarly, in *Switlik Parachute Co.*,[27] it was held that "sound practice" required an agency to consider the possible infringement liability of the Government in evaluating bids of competing concerns to supply patented items. The Comptroller General stated:

"Obviously, in such circumstances [*i.e.*, when a patent owner submits a bid higher than the low bid] sound practice would require a determination as to the possible liability of the United States for patent infringement. A determination that a bid submitted by the patent owner—under which the total cost to the United States was definitely established—although not the lowest bid as to price, represented the bid most advantageous to the United States, clearly would afford justification for the award of a contract to such patent owner . . ."[28]

Thus, after 1918 not only was a patent owner afforded a remedy where his patent had been infringed by the Government or its contractors, but more importantly, he also enjoyed a preferential position in the award of contracts to supply the patented goods or services to the Government.

In recent decisions of the Comptroller General, however, this earlier interpretation of section 1498 has been rejected in favor of the present policy under which patent infringement liability is not considered in evaluating bids or proposals. This later policy was first formulated in 1958 in *Herbert Cooper*,[29] which held that in a formally advertised procurement where all bidders agreed to indemnify the Government for any patent infringement liability, the contract should be awarded to the low bidder without regard to whether he was a licensee under the patent covering the items to be purchased.[30]

The *Herbert Cooper* case involved the procurement by the Air Force of tube assemblies for oxygen masks. The Herbert Cooper Company submitted the lowest of seven bids but was not licensed under patents determined by the Air Force to cover the manufacturing methods and construction of the assemblies. Since three of the bidders were licensed under these patents, the Secretary of the Air Force requested the Comptroller General's advice on whether it would be proper to reject the Herbert Cooper bid and award the contract instead to a licensed concern. In his decision, the Comptroller General concluded:

"In our opinion, to reject the low bid and make an award to one of the licensees for the purpose of enforcing and protecting the rights of the patent owners and their licensees would constitute an improper restriction of competition under the circumstances, and would not serve the interest of the United States which 28 U.S.C. 1498 was intended to secure, but would limit the application of the provisions of that statute."[31]

Following receipt of this opinion, the Secretary of the Air Force requested clarification of what he felt were the "broader implications" of the opinion on the Government's policy of procuring patented articles. In response to this request, the Comptroller General explained his position at some length, answering the charge that section 1498 was not intended to permit knowing infringement of privately owned patents where a patentee was willing to supply the needed items to the Government at a reasonable price. He stated:

"It is suggested that the indiscriminate use of the right afforded to the Government under 28 U.S.C. 1498 would be inimical to and destructive of the public policy considerations underlying the patent law. It is our view, however, that section 1498 appears clearly to constitute a modification of the patent law by limiting the rights of patentees insofar as procurement of supplies by the Government may be concerned, and by vesting in the Government a right to the use of any patents granted by it upon payment of reasonable compensation for such use. We believe that the statute is not consistent with any duty on the part of a contracing agency of the Government to protect the interests of patentees or licensees with respect to articles, which it proposes to purchase, since the statute itself defines and provides an exclusive remedy for enforcement of the patentee's rights as to the Government. Any other interpretation would appear to us to impose an impossible burden upon Government procurement officials to determine the applicability and validity of any patents affecting any articles desired.

"Where the procurement is to be made by formal advertising, it is our opinion, notwithstanding what was said in 13 Comp. Gen. 173, that there is no alternative to the securing of the maximum amount of competition from firms qualified and willing to undertake the production of the articles, subject, of course, to their willingness and ability to indemnify the Government against claims of patentees."[32]

This latter qualification, requiring an unlicensed supplier to indemnify the Government before the ruling could be applied, was subsequently dropped by the Comptroller General. In effect the *Herbert Cooper* ruling was extended to apply to all procurement situations, including cases in which an unlicensed supplier was not required to indemnify the Government for infringement liability.[33] The rationale underlying this expanded doctrine was summarized by the Comptroller General in *General Dynamics Corp.*:

"Regarding your [General Dynamics'] contention that if patent indemnity is not provided in the invitation possible patent infringement liability must be provided for in the evaluation of bids in accordance with 10 U.S.C. 2305(c) providing for consideration of "price and other factors" in ascertaining the low bid, we concur with the Bureau [of Ships] that patent infringement liability is not for evaluation in the consideration of bids. The matter of infringement and the ultimate fixing of a reasonable compensation therefor is for ultimate resolution by the Court of Claims as provided by 28 U.S.C. 1498, with the possible exception of an administrative settlement under the authority of 10 U.S.C. 2386. Until a settlement is reached the matter is speculative . . . ."[34]

[17] *Id.* at 43.

[18] 40 Stat. 705 (1918), 14 U.S.C. § 1498(a) (1964). The concern is evident in a letter signed by the Acting Secretary of the Navy, Franklin D. Roosevelt, on April 20, 1918:

"My Dear Senator Tillman: This department is confronted with a difficult situation as the result of a recent decision by the Supreme Court affecting the government's rights as to the manufacture and use of patented inventions, and it seems necessary that amendment be made of the Act of June 25, 1910, entitled 'An act to provide additional protection for the owners of patents of the United States, and for other purposes.' The case in which the court's decision was rendered is that of William Cramp & Son's Ship & Engine Building Co., Petitioner, v. International Curtis Marine Turbine Co. and Curtis Marine Turbine Co. of the United States, and the decision is, in effect, so far as it is of importance here, that a contractor for the manufacture of a patented article for the government is not exempt, unless he is only a contributory infringer, from injunction and other interference through litigation by the patentee.

"A prior decision of the Supreme Court, that in the case of Crozier v. Krupp, had been interpreted as having the opposite meaning, and the department was able up to the time of the later decision, on March 4 last, to proceed satisfactorily with the procuring of such patented articles as it needed, leaving the matter of compensation to patentees for adjustment by direct agreement, or, if necessary, by resort to the Court of Claims under the above-mentioned act of 1910. Now, however, manufacturers are exposed to expensive litigation, involving the possibilities of prohibitive injunction[,] payment of royalties, rendering of accounts, and payment of punitive damages, and they are reluctant to take contracts that may bring such severe consequences. The situation promised serious disadvantages to the public interests, and in order that vital activities of this department may not be restricted unduly at this time, and also with a view of enabling dissatisfied patentees to obtain just and adequate compensation in all cases conformably to the declared purpose of said act, I have the honor to request that the act be amended by the insertion of a proper provision therefor in the pending naval appropriation bill."

Letter from Franklin D. Roosevelt to Senator Benjamin R. Tillman, April 20, 1918, set forth in Wood v. Atlantic Gulf & Pac. Co., 296 Fed. 718, 720 (1924).

Similarly, in a statement to the House of Representatives on the 1918 amendment, Congressman Padgett declared:

"It makes only a slight change in the existing law, but the urgency and necessity of it were such that the Senate deemed it proper to place it on the bill . . . . [I]t would prevent the injunctive process from the courts being used to prevent private manufacturers doing government work. That is the whole change made in the law and the conditions are such as to require that it should be done." 56 CONG. REC. 7960–61 (1918).

[19] 275 U.S. 331, 343–44 (1928).

[20] 28 U.S.C. § 1498(a) (1964).

[21] Wood v. Atlantic Gulf & Pac. Co., 296 Fed. 718, 719 (1924).

[22] 28 U.S.C. § 1498(a) (1964).

[23] For the Department of Defense, the Armed Services Procurement Regulation [hereinafter ASPR], prescribes the use of "Authorization and Consent" clauses of two types, a broad form for research or development contracts, ASPR § 9–102.2, 32 C.F.R. § 9–102.2 (Supp. 1966) and a limited form for supply contracts, ASPR § 9–102.1, 32 C.F.R. § 9–102–1 (Supp. 1966). While the broad

clause authorizes and consents to all infringement in the performance of contract work, the supply contract clause authorizes and consents only to infringement (1) embodied in delivered items that are accepted by the Government, or (2) otherwise necessary to performance of the contract. Of identical effect is the corresponding regulation of the National Aeronautics and Space Administration [hereinafter NASA], at NASA Procurement Regulation 9.102(a) (supply contracts) and 9.103(b) (research, experimental, design, engineering, or developmental contracts). 41 C.F.R. § 18–9.103 (Supp. 1966). Other agencies follow similar, if not identical, procedures.

See generally Dykman; *Authorization and Consent Clause—What Does It Do?,* 45 J. PAT. OFF. SOC'Y 784 (1963); Henderson, *Government Authorization and Consent to Infringe: Problems in Defense Procurement,* 23 FED. B.J. 134 (1963); TeSelle, *Authorization or Consent to Infringe Patents in Production for the Government,* 26 GEO. WASH. L. REV. 583 (1958).

[25] For a perceptive outline of 28 U.S.C. § 1498 *qua* eminent domain taking, see Denney, *Eminent Domain Aspects of 28 U.S.C. 1498,* 43 J. PAT. OFF. SOC'Y 526 (1961).

[26] 13 DECS. COMP. GEN. 173, 176 (1933).

[27] B–77738 (Jan. 10, 1944).

[28] *Ibid.* Concerning such practice, see the statement by G. C. Bannerman, Director of Procurement Policy, Office of Assistant Secretary of Defense (Supply and Logistics), which included the following pertinent information:

"It was our practice over quite a few years when faced with the situation where it was necessary for us to buy an item which was patented, and where we had determined, first, that the patent was valid and, second, that our requirements necessitated an infringement . . . to buy either from the patent holder or one of his licensees."

Hearings on Proprietary Rights and Data Before Subcommittee No. 2 of the House Select Committe on Small Business, 86th Cong., 2d Sess. (1960).

[29] B–136916 (Aug. 25, 1958).

[30] *Ibid.*

[31] *Ibid.* The patentees in the *Herbert Cooper* case sought to enjoin the Secretary of Defense on the ground that, as long as the Defense Department could procure the patented hose assemblies from qualified licensees at a reasonable price, the provisions of 28 U.S.C. § 1498 could not be invoked. This suit was dismissed. F. T. Roberts v. United States Civil No. 1878–58 (D.D.C. 1958) (unpublished).

[32] 38 DECS. COMP. GEN. 276, 277–78 (1958).

[33] Globe Indus., B–148135, 133 U.S.P.Q. 496 (1962); Pfizer Co., 39 DECS. COMP. GEN. 760, 125 U.S.P.Q. 477 (1960) (*semble*). The *Pfizer* ruling provided more impetus to attempts to overrule the Comptroller General than possibly any other. This case involved a protest by the Charles Pfizer Company of a Defense Department decision to procure tetracycline hydrochloride tablets from an Italian drug company that had submitted the lowest price proposal. The Pfizer Company had patented this drug in the United States, but because Italy does not permit the patenting of drugs, the company could not patent its invention there. The Comptroller ruled—even though the procurement was negotiated rather than formally advertised (see note 91 *infra*) and there were no patent indemnity provisions in the contract (this is not apparent in the *Pfizer* opinion, but is spelled out in the discussion of this opinion in the *Globe* case, 133 U.S.P.Q. at 498)—that it would be improper to consider the Pfizer Company patent in evaluating the competing proposals. As a result of the ruling the Italian concern could manufacture the drug in Italy and although it could not market the drug commercially in the United States, it was free to sell it to the United States Government, the largest single domestic user. *Hearings on S. 1047 Before the Subcommittee on Patents, Trademarks and Copyrights of the Senate Judiciary Committee,* 89th Cong., 1st Sess., 14–24, 37–53, 84 (1965) [hereinafter cited as *Hearings on S. 1047*].

Co., 40 DECS. COMP. GEN. 294 (1960); P. Wall Mfg. Co., 39 DECS. COMP. GEN. 6 (1959).

The Economist of London Surveys Congressional Proposals To Give Unrestricted Federal Aid to States and Localities

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. REUSS. Mr. Speaker, the Economist of London, published as the lead article in its "American Survey" section of January 7, 1967, an excellent report on "Statesmanship"—the current concern of scholars, administrators, and Members of Congress about how best to reinvigorate our federal system and to modernize State and local government.

After reviewing the work of economists Walter W. Heller and Joseph A. Pechman in analyzing the mounting financial problem of State and local governments, the Economist cites several solutions proposed by Members, including the draft—which I circulated in November 1966, to 300 Governors, mayors, economists, political scientists, and national organizations, seeking their comments—of the State and Local Government Modernization Act of 1967. I introduced it last week as H.R. 1166.

If H.R. 1166 were enacted, each State would first receive Federal funds—at least $250,000—to prepare within 18 months its own modern governments program, setting forth plans for modernizing both its State and local governments. Such plans would have to include specific proposals for dealing with interstate regional problems, for strengthening State governments, and for strengthening and modernizing local rural, urban, and metropolitan governments—for example, by reducing the number of counties, eliminating inefficient local governments, reforming personnel practices, and strengthening local governments in metropolitan areas.

Each State modern governments program would then be reviewed by one of the four regional coordinating committees—to be set up under H.R. 1166 by the participating Governors in each of four regions: eastern, southern, midwestern, and western—and by the existing Advisory Commission on Intergovernmental Relations. Those States with plans designated as reflecting sufficient creative State initiative so as to qualify that State for Federal block grants would begin receiving, in 1970 or at the latest by 1971, unrestricted Federal grants.

These grants would come from the 3-year, $5-billion-a-year authorization. Funds would be distributed according to population, with not to exceed 20 percent for supplements to those States having a low per capita income; a high degree of poverty, dependency, or urbanization; and an adequate State tax effort, as indicated by the amount of State and local taxes relative to personal income. At least 50 percent of the money going to a State would be earmarked for its local governments.

The text of the Economist's article follows:

STATESMANSHIP

This week in many states Governors went through the ceremonies inaugurating their new terms, some of them with brave promises of retrenchment, some defending the rights of states to solve their own problems without federal interference, some reproaching Washington with doing so little to help. Almost all face the same problem, that the demands on the state governments rise remorselessly while their revenues, relatively to their needs and to the country's prosperity, are inherently sluggish. This is the common experience of American state and local governments and is the reverse of that of the federal government.

For the past ten years, economists in and out of government have been pondering over the disorder in state and local government financing and over possible remedies for it. Their ideas tend to crystallise around variants of a scheme to distribute a share of the federal tax revenues to the states in the form of block grants with a minimum of strings attached. Although the costly Vietnam war stands immediately in the way of this, as of any other reform involving money, the subject looks like getting more attention in the new Congress than it has had before.

Mr. Walter Heller, the Minneapolis economist who was chairman of the Council of Economic Advisers under Presidents Kennedy and Johnson, has done more than anybody to disentangle the subject of fiscal realignment from the arid and often muddled ideological dispute about states' rights. Pressure for unrestricted grants to the states out of federal revenues came in the nineteen-fifties largely from conservative Republicans and a commission appointed by President Eisenhower turned the idea down. But Mr. Heller, a liberal economist and a Democrat, espoused it in a speech in 1960. Not long afterwards he joined the Administration. In the period of fast economic growth and buoyant federal revenue that followed, and not knowing what lay ahead in Vietnam, he and other economists in the Administration began to worry about the drag on the economy if the Treasury found itself persistently taking in more money than it could reasonably spend. One way to avoid deflationary surpluses when they were not wanted was to reduce taxes and this was, indeed, done. Another way was to pass on money to the states, counties and cities where it was needed. Following a recommendation from Mr. Heller, President Johnson appointed one of his policy task-forces in 1964 to study this possibility, under an economist at the Brookings Institution, Mr. Joseph Pechman.

The Pechman report has never been published and on occasion President Johnson has denied its existence. It proposed that a fixed percentage of the receipts from the federal income tax be put into a trust fund and allocated to the states as general aid, largely on a *per caput* basis but with an "equalising" provision to give extra help to the poorer states. After the 1964 election the Administration's economists began to prepare the public for the possible adoption of the scheme as official policy by the normal method of explaining to press correspondents the kind of thing that they had in mind. It was at this point, December, 1964, that President Johnson, who had spoken approvingly of the plan in a statement before the election, decided abruptly to shelve it. Some people got their first insight into the flaws of the Johnson Presidency at that moment. The official explanation was that the premature publicity had mobilised the opposition, but the accepted belief is that Mr. Johnson was angry that the scheme should be talked about before he had given his assent.

On one occasion since then the President has seemed to throw the State Governors a crumb of encouragement that their pleas for the Heller-Pechman plan would get a sympathetic hearing. But, with that one exception, the White House has maintained a heavy silence on the subject. It is true that opposition exists and that Mr. Johnson has to pay some heed to it. After all, a large part of the federal executive machine exists to do things on the assumption that the states cannot be trusted to do them for themselves. Fields in which the states (or rather, some of them) are particularly distrusted are labour standards and civil rights; thus the trade unions and the Negro groups are either suspicious or downright hostile. The big cities, as rivals of the state governments for direct access to federal money, have expressed a guarded hostility which the latest version of the plan, assuring the cities a guaranteed share, may remove. Some Democrats in Congress and elsewhere are more interested in promoting forms of government for metropolitan areas, in disregard of traditional boundaries, than in helping the states to revive.

Mr. Heller, out of office and back in his professor's chair, has not allowed the subject to drop. In a lecture at Harvard University last March, now published as part of a book,* he urges the need for sharing revenues and outlines how this might be done. His argument is that "the federal government simply cannot carry out large segments of its responsibilities at all—or at all efficiently—without strengthening the states and localities." Some three-quarters of all the money that is spent on civil government is spent by them and the kind of services which they provide—education, roads, sanitation, amenities—are in constantly greater demand as the economy grows and society becomes more demanding and more mobile. "The growth that confers such a bountiful harvest of revenues on the federal government leaves the states and their subdivisions a bitter harvest of air and water pollution, disappearing green space and urban rot."

The ten years from 1955 to 1965, which saw a growth of 70 per cent in the gross national product, saw an expansion of federal spending of rather less than that, 65 per cent, but an expansion of 125 per cent in state and local spending. The states are, however, inhibited in their tax policies (as the federal government is not) by their competition to attract industry and wealth and their fear of losing them to other states. The source of revenue on which they mostly rely, sales taxes, is of the kind that responds sluggishly to general economic growth in contrast to the progressive income tax—almost a federal monopoly—the yield of which rises faster, proportionately, than the national income.

Naturally enough the State Governors, of both parties, have had no difficulty in coming out in support of the Heller-Pechman plan. At the Governors' Conference last month they endorsed the principle and instructed a committee to produce a detailed proposal. For the parties in Congress it is more difficult, since such plans run counter to the belief of the average member of Congress that he must be able to control what is done with the money he votes. The Republican Conference of the House of Representatives ordered a study of the subject last summer by another economist now at Brookings, Mr. Richard Nathan, and the Republican leaders are brooding over the policy paper which he produced. On the basis of the same study a New York Republican, Representative GOODELL, has submitted a report of his own proposing an interesting variant.

Mr. GOODELL's General Aid Tax Sharing Fund would start by receiving 3 per cent of the federal revenue from the tax on individual incomes; this would mean $1.8 billion if the scheme were in force in the next fiscal year (which, of course, it will not be). In subsequent years the payment into the fund would rise to 5 per cent. Of this money, one half would be paid to the states for their own purposes; 45 per cent would be paid to them for obligatory redistribution as general aid to the local governments; 5 per cent would be subject to the condition that the states should use it to improve the staffing and management of their own governments. Thus it is hoped to reconcile the cities to the scheme by assuring them of their share and to meet some of the objections of the critics who argue that state governments are too archaic and incompetent to be trusted with good federal money.

One of these critics on the Democratic side, Representative Reuss of Wisconsin, has submitted a Bill of his own to provide $25 billion over five years to states which take steps to modernise their governments. Mr. Reuss observes that Mr. Heller and Mr. Pechman are on the right track, but that to help the states without insisting on their modernisation would be "pouring federal money down a rathole." A Bill already before the Senate, which is sponsored by Mr. Javits of New York, would earmark the money generally for health, education and welfare purposes.

The federal government already helps the states and the local government to the tune of $14.5 billion a year, through grants for specific purposes. One of the most striking pieces of testimony on the defects of this system was given by President Johnson's Director of the Bureau of the Budget, Mr. Charles Schultze, to a Senate subcommittee in November. Mr. Schultze called the existing system "overly complex." He mentioned a figure of 162 major programmes involving grants of federal money to the states, under 399 separate authorisations or subcategories of authorisations. Many of these, he added, overlapped in time, space and function. The "fragmentation" of federal programmes made it difficult, he said in effect, for either the federal or local governments to know what they were up to. It made it hard for Governors and Mayors to control their own budgets; to synchronise their actions or relate one part of a policy to another part; and to make the choices required by their local conditions and problems rather than by the ease or difficulty of getting a proposal approved by Washington. Mr. Schultze was, in short, appallingly frank. He wanted to see the state and local governments reformed so that they could be equal to their tasks, but he did not want them "placed in an organisational strait-jacket" because he did not believe that Washington could do their work for them.

To Mr. Schultze's testimony should be added that of Mr. John Gardner, the Secretary of Health, Education and Welfare, at the same hearings. As the Cabinet member most involved with local government, Mr. Gardner insisted that the federal government should play its part through partnerships rather than through self-aggrandisement and self-sufficient operations. These men are two of the intellectually more eminent members of Mr. Johnson's Administrations; both made evident their sympathy with the general idea of the Heller-Pechman plan.

Declaration of Freedom

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. FASCELL. Mr. Speaker, 1 year ago today 1,500 patriotic and free Cubans gathered together in Key West, Fla., in the San Carlos Club and proclaimed the "Declaration of Freedom." Their declaration is a reaffirmation of faith in the principles of liberty which once before inspired the people of Cuba to throw off tyranny. In the very same San Carlos Club Jose Marti proclaimed Cuba's independence from Spain in 1893.

The declaration of freedom embodies the great principles which have guided Cubans in their struggles for liberty, first in the fight against European imperialism and today in their fight against communism.

Those who conceived and adopted the declaration of freedom are a group of intelligent, dedicated men who see the declaration of freedom as today's answer to Jose Marti's eloquent statement:

> When a people are called to war, they have to know after what they are going, where they are going and what is going to come afterwards.

The men who met 1 year ago today at Key West are the same kind of men as those who demanded the Magna Carta; the same as those who gathered at Philadelphia to draw up our own Declaration of Independence, and the same as those Cubans who gathered in Key West almost 75 years ago to declare their country's independence. These are men who know the importance and strength of ideas. They are the kind of men whose determination and own strength will one day restore liberty to Cuba.

Mr. Speaker, on this first anniversary, I wish to call the declaration of freedom to the attention of all my collegaues:

DECLARATION OF FREEDOM

In the City of Key West, Monroe County, State of Florida, United States of America, we, the Cuban exiles of the United States, in the name of God Almighty, and speaking both for ourselves and the oppressed people in Cuba, the Martyr Island, do say:

That on January 1st, 1959, the slavery yoke that came from Europe and was extinguished in Cuba at the end of the 19th century, was resumed.

That those responsible for this high treason to our Fatherland and to our People are just a score of traitors who, usurpating the Government of the Country have been acting as mercenary agents for the Sino-Soviet imperialism, and have surrendered to that imperialism our Freedom and our Dignity, also betraying the American Hemisphere.

That as a consequence of this high treason, those who are usurpating the Power in Cuba (as they were never elected by the People), are imposing a regime of bloodshed, terror and hate without any respect or consideration to the dignity of the human being or the most elementary human rights.

That in their hunger for Power, these traitors, following the pattern of totalitarian regimes, are trying, within Cuba, to separate the Family, which is the cornerstone of actual society, and at the same time, are poisoning the minds of the Cuban children and youth, in their hope of extending the length of time for this abominable system.

That the rule of the Law has been wiped out in Cuba, and it has been replaced by the evil will of this score of traitors, who are acting under orders from their masters, the Sino-Soviet imperialists.

In view of the aforegoing,

WE DECLARE

First: That the actual Cuban regime is guilty of high treason to our Fatherland and to the ideals of the Freedom Revolution which was started on October 10th, 1868.

Second: That this score of traitors who have committed treason against our Fatherland, in case they survive the downfall of their regime, will have to respond, even with their lives before the Ordinary Courts of Justice of Cuba.

Third: That as the Noble Cuban People will not ever surrender, because that Nation was not born to be slave, we, the Cuban People, hereby make the present

DECLARATION OF FREEDOM

We hereby swear before God Almighty to fight constantly, until death comes to us, to free Cuba from communism.

The fundamentals of this Revolution for Freedom are:

First: God Almighty, above all things, in Whom we believe as the essence of Life.

Second: The Fatherland, with all of its Laws, traditions, customs and history as a spiritual value, only surpassed by the concept of God.

Third: The Family, as the cornerstone of the Human Society.

Fourth: Human Rights, for each and every citizen, regardless of race or creed.

Fifth: The Law, as the foundation for the proper development of the Human Society.

Sixth: Democratic Government, with its three independent branches: Legislative, Executive and Judicial.

Seventh: Representative Democracy, through the exercise of Universal Suffrage, Periodically, Free and Secretive, as the expression of Popular Sovereignty.

Eighth: Freedom of Worship, Freedom of Teaching, Freedom of the Press and Free Enterprise.

Ninth: Private Property and Ownership, as the basic expression of Liberty.

Tenth: The improvement of living conditions for both rural and city working masses, with the just and necessary measures, keeping in mind the legitimate interests of both Labor and Capital.

Eleventh: The derogation and eradication of anything which is opposed to the political and religious fundamentals. aforementioned, and specifically, the abolition of Communism and any other form of totalitarian manifestation.

Signed and sealed in Key West, Florida, on the 23rd day of January, 1966.

Hon. John E. Fogarty

SPEECH
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1967

Mr. RHODES of Pennsylvania. Mr. Speaker, I take this opportunity to join with my colleagues in expressing the deep sense of loss felt by the people of Rhode Island and by every Member of this body with the death of Representative JOHN E. FOGARTY.

He was a moving force behind legislation for medical research, for hospitals, for institutions to aid the mentally ill and the mentally retarded. No one in the history of this land has done more to promote more and better health services, more and better health facilities than Congressman FOGARTY. His list of accomplishments and awards for services have justly earned him the title "Mr. Public Health."

I had the benefit of his advice, cooperation and valuable assistance when I served as a Member of the Health and Safety Subcommittee. JOHN deserved much credit for favorable action taken by the Congress when it first brought needed assistance to the schools of public health which provide vital help to the Nation and its people.

He ennobled our Nation, the House of Representatives, and the citizens of Rhode Island whom he so faithfully served. Aside from his awards and accomplishments, JOHN FOGARTY will be remembered for the man he was and as his friends knew him—kind, understanding, and completely unassuming. I deem it an honor to have served with him and to have considered him a personal friend.

I am sure every Member of the Congress joins me in extending our deepest sympathy to his wife and family in this time of sorrow.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Fiftieth Anniversary of the Signing of the First National Vocational Education Act

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. PERKINS. Mr. Speaker, on February 23, 1967, vocational educators throughout the United States will commemorate the 50th anniversary of the signing of the first National Vocational Education Act by President Woodrow Wilson. I request unanimous consent that the information supplied me by the American Vocational Association regarding the growth of the vocational education program and regarding the observance of the 50th anniversary of the Smith-Hughes Act be placed in the RECORD at this point:

FIFTIETH ANNIVERSARY OF THE SIGNING OF THE FIRST NATIONAL VOCATIONAL EDUCATION ACT

February 23, 1967, will be the fiftieth anniversary of the signing of the first National Vocational Education Act by President Woodrow Wilson. Its passage brought into being Federally supported programs of vocational education conducted by the States as an integral part of public education.

Public vocational and technical education was created to train young people and adults for the industrial revolution taking place in the United States and to help develop an improved agriculture. Included in its objectives was the improvement of home and family life. A major purpose of the 1917 Act was to prepare youth and adults for employment and to assist employed workers gain advancement. It was recognized that there was a need for the development of the highest degree of efficiency in manufacturing, processing, and marketing so that the nation could compete successfully in the world markets. Provisions were made for the establishment of programs of State supervision and for teacher education.

Since 1917 public vocational education has been a cooperative effort between the Federal government and the States. The Federal government has provided additional funds and helped promote, develop, and improve programs, but operation has remained with the States.

Through a series of enactments begun fifty years ago, Federal aid has made possible the development of vocational education to serve people who seek employment or are already employed in the trades and industries, agriculture, distribution, and marketing, home and office, health and technical occupations. During the two World Wars, vocational provided training programs to help increase production, and afterward aided veterans preparing for employment.

Through public vocational education programs, counseling services have been provided to both youth and adults preparing to enter the work force. Programs have been designed to retrain individuals who are underemployed or unemployed. Youth organizations such as the Future Farmers of America, the Future Homemakers of America, the Distributive Education Clubs of America, the Vocational Industrial Clubs of America, and office occupations clubs have been developed by vocational educators to help motivate students and develop leadership abilities of those enrolled in vocational and technical education.

Since the first National Vocational Education Act was signed in 1917, Congress has passed a number of laws designed to improve existing programs and to develop new ones. Among the more recent are the Manpower Development and Training Act and the Vocational Education Act of 1963. These Acts made possible the extension and expansion of vocational and technical education programs to serve training needs in all occupational fields not classified as professional or requiring a college degree.

A number of thorough evaluations of vocational and technical education have been made at the request of the President or of the Congress. An evaluation was made at the request of the late President John F. Kennedy. A Panel of Consultants made a careful review of vocational and technical education and submitted major recommendations to the Congress which led to the passage of the 1963 Act which was signed by President Lyndon B. Johnson. This Act made possible great expansions in public vocational education programs. It is the intent of the new Act to make vocational education available to every young person and adult who needs to prepare for employment or improve his skills. One of the significant developments helping to make this possible is the construction of additional area vocational schools. In this anniversary year there are about one thousand area schools in operation or under construction. It is expected that within the next ten years an additional one thousand will be provided. This should help to place vocational programs within reasonable reach of every person in the United States who needs and wants such training.

The new Act also provides for the improvement of instruction and the development of adequate research programs which are designed to develop new and better ways of providing vocational education.

During the past fifty years vocational educators in the United States have rendered distinguished service. The firm foundation which was established by the passage of the first National Vocational Education Act and the signing of the Act on February 23, 1917, by Woodrow Wilson made possible the creation of practical vocational education programs which are proving to be of greater and greater service to the people of the Nation.

MANPOWER DEVELOPMENT AND TRAINING PROGRAMS

The Manpower Development and Training Act in 1962 authorized State vocational education agencies to provide occupational training under Agreement with the Secretary of Health, Education, and Welfare. The Act was designed primarily to help unemployed heads of household to receive training necessary for full time employment. The Division of Manpower Development and Training administers the program for the U.S. Office of Education.

Each Manpower training project is set up at the request of the State employment service. That State vocational education agency is responsible for selecting the public or private educational or training institution and for approving the training plan and budget. Representatives of the DMDT finally approve the projects for funding. During the 1967 fiscal year, the State vocational education and employment service agencies may approve small projects costing up to $50,000 in total.

Major amendments were made to the basic Act in 1963, 1965, and 1966. Basic education, prevocational training, special programs for older workers, correctional institutions programs, and broadened trainee benefits are provided. Special youth programs have been part of the program from its inception. The development of multioccupations projects and skill centers has been a major achievement of the Manpower program. Individual referrals are often made to private schools.

Over a half million out-of-school youth and adults have been approved for Manpower institutional training, with 450,000 enrolled by September 30, 1967. In addition, State vocational education agencies are providing related instruction for many thousands of on-the-job trainees and many others in experimental and demonstration projects. The leading occupational areas have been in office, health, and trade and industrial occupations.

SUGGESTED ACTIVITIES FOR OBSERVANCE OF 50TH ANNIVERSARY OF SIGNING OF FIRST NATIONAL VOCATIONAL EDUCATION ACT, FEBRUARY 19–25, 1967

Obtain a proclamation by the governor and/or resolution by State Legislature. Such a pronouncement should include important information about the vocational-technical education program of your State. The proclamation should be made available to all the news media.

Plan for school assembly programs to feature vocational education during the anniversary week. This might be planned in cooperation with guidance counselors, and/or other school activities that focus on employment, and planning for future careers.

Encourage Parent-Teacher groups, service clubs, and others to feature vocational education in their February meetings.

Build exhibits featuring vocational-technical education for school bulletin boards, or other exhibit areas. Business groups, and others should be encouraged to have exhibits during this week.

Encourage youth organizations to hold their annual banquets or other meetings to feature the 50th Anniversary.

Sponsor a visitation day for parents, friends, and others who may be interested, to visit vocational education programs.

Plan for and encourage radio, newspaper, and television features which emphasize vocational education. Pictures of students, schools, and teachers should be provided together with information on vocational programs. If you have new facilities for vocational education in your State or community, could you arrange for a dedication ceremony during February 19–25, 1967?

Develop a theme around which publicity might be developed. Suggestions:

"A Look at the Next 50 Years."

"Vocational Education—Looking Toward the Future."

"Vocational-Technical Education—A Program for the Future."

50th anniversary of the signing of the First National Vocational Education Act, 1917–67—Information [1]

Statement by Rabbi Morris Sherer Before the Board of Education of the City of New York

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. MULTER. Mr. Speaker, this Congress passed legislation during the first session of the 89th Congress to provide assistance to elementary and secondary education for all children whether in public or nonpublic schools.

Some people have disagreed with that policy and on the local level some of the opponents have taken it upon themselves to implement that policy very narrowly.

Rabbi Morris Sherer, executive vice president of Agudath Israel of America, believes that no child should be denied the benefits of this act because he happens to attend a nonpublic school.

I commend to the attention of our colleagues Rabbi Sherer's statement supporting his position before the board of education of the city of New York on November 14, 1966:

STATEMENT BY RABBI MORRIS SHERER, EXECUTIVE VICE PRESIDENT OF AGUDATH ISRAEL OF AMERICA, TO THE BOARD OF EDUCATION OF THE CITY OF NEW YORK, NOVEMBER 14, 1966

Mr. President and Members of the Board:

My name is Rabbi Morris Sherer. I am the Executive Vice-President of Agudath Israel of America, a national organization that was deeply involved in Washington in the day-to-day developments of the Elementary and Secondary Education Act of 1965, from the planning board stage to its ultimate passage. I speak to you today for our New York City membership, which includes many thousands of parents of the Jewish faith whose children attend non-public schools.

Frankly, we are deeply distressed over the fact that it has become necessary every few months to mount the barricades against unrelenting attempts to constantly narrow down the benefits that non-public school children in New York City should receive from the federal education programs. Every few months the non-public schools are called upon to retreat to new lines of defense. We had hoped that the August decisions of the Board would be sanforized; instead, the proposals continue to shrink every few months to a point where they now directly contravene the intent of Congress to benefit *all* school children without discrimination.

May I quickly note that there were some aspects of the August decisions of the Board that we felt were unfair and should have been vigorously contested. For example, to service the non-public schools "primarily" with inexperienced teachers singles out the poor children attending a religiously-oriented school for unfair treatment. It is not only discriminatory but educationally unsound to let the non-public school children instinctively feel the humiliation that they alone, among all the city's students, must serve as the training-ground for novice teachers.

However, the non-public schools acted in good faith and adopted a "wait and see" attitude to these August decisions, without raising any meaningful hue nad cry. The "reward" for this "good behavior" are these new proposals: even the benefits conceded in August are to be denied in November.

What is most disturbing is the proposal to reduce the amount of corrective reading teachers in non-public schools, by altering the ratios from one teacher for every 100 students to one teacher for every 230 students. The Board officials themselves had explained in August that it would be unfair to assign corrective reading teachers to non-public schools on the same ratio as public schools, because the public schools have already been meeting their problems over the years through special service schools and parallel classes. What happened from August to November to refute this logical explanation?

When Congress legislated and mandated comparable funds for poor students or non-public schools, they were not concerned with technical ratios. They were concerned with human beings, with the future of all the underprivileged school children all over the nation. What is important is that we should not engage in numbers games, but try to achieve the one and only meaningful goal: a youngster who needs a corrective reading service must be helped, whether or not the technical computations of ratios would harshly deny him a benefit which could change his entire pattern of life.

We urge the Board to consider this proposal and reinstitute the minimum ratio originally decided that every 100 children in a non-public school be provided with a corrective reading teacher.

In the final analysis, this issue of ratios for corrective reading teachers is merely symptomatic of an attitude by the Board which we respectfully urge you to revise. These continuous hearings on the same issues are a harassment of the non-public school officials and a deprivation of the rights of the children attending non-public schools. Unless a halt is put to these ongoing attempts to defy the intent of Congress by restricting within absurdity narrow confines the federal benefits for non-public school children, the only logical next step would be a public Congressional investigation and hearing.

It is our hope that such a step will not be necessary, so that our educators, instead of wasting their energies in endless public debates, will be permitted to concentrate on their calling: the provision of quality education to our city's children.

Washington: Johnson's Administrative Monstrosity

EXTENSION OF REMARKS

OF

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. RUMSFELD. Mr. Speaker, Mr. James Reston recently described, most aptly, the chaos that exists in the administration of many Federal programs. The Federal-State partnership is still developing, and is in serious need of attention.

Mr. Reston's comments follow:

WASHINGTON: JOHNSON'S ADMINISTRATIVE MONSTROSITY

(By James Reston)

WASHINGTON, Nov. 22—As President Johnson starts his fourth year in the White House, one fact is not only clear but undisputed: his Administration is poorly organized to administer the domestic programs he has introduced, and the administrative chaos of the state and local governments is even worse.

The reasons for this are fairly clear. The Administration has put through more social and economic programs in the last two years than it can absorb. The 89th Congress alone passed 21 new health programs, seventeen new educational programs, fifteen new economic development programs, twelve new programs for the cities, seventeen new resource development programs, and four new manpower training programs.

HELP! HELP!

These programs are administered by such a variety of different Federal agencies that, as Senator Robert Kennedy of New York remarked here this week, it is almost impossible for small town officials to know what money is available for what purposes or even where to go for information.

Senator Edmund S. Muskie of Maine, who is exploring this thicket, recently observed that Federal aid expenditures to the states and municipalities have risen from $1 billion in 1946 to $15 billion this year and are expected to go up to $60 billion by 1975. There are now, he noted, 170 different Federal aid programs on the books, financed by over 400 separate appropriations, and administered by 21 Federal departments and agencies aided by 150 Washington bureaus and over 400 regional offices empowered to receive applications and pass out money.

This has created something almost unheard of here. Criticism of the system, cries of growing domination by the Federal Government, complaints about administrative confusion and waste are now coming not alone from the Administration's critics or from observers in the state capitals but from leading officials of the Johnson Administration itself.

"In almost every domestic program," Secretary of Health, Education and Welfare John W. Gardner told the Muskie committee, "we are encountering crises of organization. Coordination among Federal agencies leaves much to be desired. Communication between the various levels of Government—Federal, state and local—is casual and ineffective. State and local government is in most areas seriously inadequate."

THE LOCAL MESS

Washington obviously cannot solve this problem by itself. There are now over 80,000 separate local governments in the United States, few of them large enough in population, area, or taxable resources to get adequate personnel or funds to apply modern methods in solving present and future problems.

Overlapping layers of local government, ineffective popular control, weak policy-making mechanisms, antiquated administrative machinery and underpaid and undertrained personnel—all these are keeping the state and local governments from forming an effective partnership with the Federal Government, which now provides 20 per cent of the total annual revenues of the states.

Yet it is probably unrealistic for Secretary Gardner to call on "the American people" to correct these deficiencies. The remedy must begin in Washington. The interdepartmental committee system, designed to coordinate the activities of the various departments and agencies in the poverty program—to take just one example—has not worked.

"We have a President who is keenly interested in the problem," Secretary Gardner told the Muskie committee. But we also have a President who is poorly organized himself, reluctant to delegate power over these home-front activities to the Vice President or anybody else, and suspicious of political institutions of any kind.

THE ONE-MAN BAND

He did not work easily with the Democratic caucus when he was in the Senate. He has not made an effective instrument out of the Cabinet or the National Security Council. He all but wrecked the Democratic National Committee after he got into the White House, and he is still trying to run the Presidency as if it were a Senator's office on Capitol Hill.

The problems, however, are monumental. They are getting bigger and more complicated all the time, and while the President talks about creating a new partnership with the states and municipalities and expounds on what he calls "creative federalism," the fact is that he has not created the machinery to carry this out. He has an administrative monstrosity on his hands, and even his own people are beginning to criticize it in public.

Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. COLLIER. Mr. Speaker, last Sunday was the 49th anniversary of Ukrainian independence. It was on January 22, 1918, that Ukraine declared its independence from Russia.

Prior to the declaration of independence, the Ukrainians were under the domination of the czars. The Romanoff dynasty was overthrown in 1917; eventually Russia was taken over by the forces of communism.

The freedom of Ukraine was shortlived. Whether the larger country was run by the czars or by the commissars made no difference to the Ukrainian people, who were once more, in 1920, taken over by the Russians.

Since the end of World War II, no less than 61 nations have gained their independence. Forty-three of the 61 are smaller geographically than Ukraine, which is 232,046 square miles in area.

Only 3 of the 61 countries have populations that exceed Ukraine's 45 million. The Maldive Islands, which achieved independence in 1965, have 115 square miles of territory and 97,000 inhabitants.

Certainly, like all lovers of freedom, liberty, and independence, I have rejoiced when the peoples of new nations severed the ties that had previously bound them to colonial empires such as those held by Belgium, France, Great Britain, Italy, the Netherlands, and Portugal. I was pleased when the Philippines were granted their independence by the United States.

We hear a great deal these days about more treaties, increasing trade, cultural exchanges, increased communication and travel, a lessening of tensions, and coexistence with the Soviet Union. If the past has any meaning, most of these supposedly reciprocal agreements will turn out to be one-sided affairs.

The next time the Soviet Union asks us to sign any sort of treaty, convention, or other agreement, let us insist, as part of the bargain, that she demonstrate her good faith by granting independence to Ukraine. As President Lyndon B. Johnson told the Congress in his state of the Union message in 1966:

> The . . . most important principle of our foreign policy is support of national independence—the right of each people to govern themselves and to shape their own institutions . . . We follow this principle by encouraging the end of colonial rule.

Under leave to extend my remarks, I include a table which lists the countries that have secured their freedom since World War II, together with the dates of independence, areas, and populations:

Nation	Date of independence	Area (square miles)	Population
Algeria	1962	919,591	[1] 12,000,000
Botswana	1966	275,000	559,000
Burma	1948	261,789	24,732,000
Burundi	1962	10,739	[1] 2,780,000
Cambodia	1953	69,898	[1] 6,200,000
Cameroon	1960	183,591	5,150,000
Central African Republic	1960	241,313	1,352,000
Ceylon	1948	25,332	11,600,500
Chad	1960	490,733	4,000,000
Congo (ex-Belgian)	1960	905,562	15,625,000
Congo (ex-French)	1960	134,749	[1] 826,000
Cyprus	1960	3,572	591,000
Dahomey	1960	43,483	2,244,000
East Germany	1949	41,816	17,065,600
Gabon	1960	102,317	465,000
Gambia	1965	4,361	330,000
Ghana	1957	92,100	7,740,000
Guinea	1958	94,925	3,500,000
Guhana	1966	83,000	636,000
Indonesia	1949	735,268	160,000,000
Israel	1948	7,993	2,561,400
Ivory Coast	1960	124,502	[1] 3,750,000
Jamaica	1962	4,232	1,800,000
Jordan	1946	37,737	1,935,440
Kenya	1963	224,960	9,365,000
Kuwait	1961	5,800	567,422
Laos	1949	91,428	3,000,000
Lesotho	1966	11,716	858,000
Libya	1951	679,536	1,617,000
Malagasy Republic	1960	230,035	6,262,000
Malawi	1964	45,747	4,000,000
Malaysia	1963	128,338	[1] 9,245,491
Maldive Islands	1965	115	97,000
Mali	1960	463,947	4,576,000
Malta	1964	122	319,476
Mauritania	1960	397,683	1,000,000
Mongolia	1946	604,247	1,087,200
Morocco	1956	174,471	13,323,000
Niger	1960	459,073	3,328,000
Nigeria	1960	356,669	[1] 56,400,000
North Korea	1948	46,540	[1] 10,900,000
North Vietnam	1949	60,156	17,700,000
Pakistan	1947	365,529	102,876,000
Philippines	1946	115,707	32,345,000
Rhodesia (de facto)	1965	150,333	4,216,000
Rwanda	1962	10,169	2,903,071
Senegal	1960	76,124	3,490,000
Sierra Leone	1961	27,925	[1] 2,200,000
Singapore	1965	225	1,844,000
Somalia	1960	246,155	2,500,000
South Korea	1948	38,004	28,754,000
South Vietnam	1955	66,280	16,124,000
Sudan	1956	967,491	13,540,000
Tanzania	1961	362,844	10,578,100
Togo	1960	21,853	1,642,000
Trinidad and Tobago	1962	1,980	975,000
Tunisia	1956	63,378	4,675,000
Uganda	1962	91,134	7,551,000
Upper Volta	1960	105,869	4,858,000
Western Samoa	1962	1,097	130,000
Zambia	1964	290,587	3,710,000

[1] 1964; all others 1965, except Indonesia, Jamaica, Lesotho, and Mauritania which are 1966.

Dr. Edward G. Locke, Director, Forest Products Laboratory, Madison, Wis.

EXTENSION OF REMARKS

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. LAIRD. Mr. Speaker, Dr. Edward G. Locke, internationally known research administrator and director of the U.S. Forest Products Laboratory in Madison, Wis., since 1959 passed away last December 19. He had been ill for the past year.

Dr. Locke was a frequent visitor to Washington, a man I knew as a friend and as an eminently qualified director of the outstanding Forest Products Laboratory in Madison. He was the sixth Director in the 56-year history of the Laboratory which is maintained in Madison by the Forest Service, U.S. Department of Agriculture, in cooperation with the University of Wisconsin. Mr. Speaker, Dr. Locke was a tireless worker and lifetime friend of the wood and paper products industry. Death cut short his career at the time he neared attainment of one of his most cherished goals—a goal that brought him to Washington and to Congress on many frequent occasions—the first major expansion of the world-famed Laboratory's physical plant in 35 years.

Mr. Speaker, to the many friends and relatives whom Dr. Locke has left behind, I extend my deep condolences.

Time for a New Hoover Commisison

EXTENSION OF REMARKS

OF

HON. JOHN M. ZWACH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. ZWACH. Mr. Speaker, for nearly 12 full months I have been telling the people of Minnesota's Sixth Congressional District that the Congress must insist upon getting more mileage out of every single tax dollar before we agree to any new tax that might be proposed by the Johnson administration. I promised the people in Minnesota that if I were elected I would take immediate action to tighten up the expenses of running this Nation.

Today I am introducing a bill which I expect to help achieve that important goal.

I have proposed that we establish a commission of the executive branch to make a comprehensive study of all Federal operations. It is clear that the population explosion coupled with the rapid pace of technological change, especially in the fields of transportation, communication, and production, have expanded the duties and functions of government. But it is imperative that a constant and sincere reevaluation of these functions be pursued. This commission, modeled after the two successful Hoover Commissions, would make such an evaluation and propose recommendations for change wherever appropriate.

The commission would be authorized to determine the amount of duplication and inefficiency in any area of government; to study the problem of communication among the various units; to examine jurisdictional conflicts and inconsistencies; and to recommend ways to coordinate programs and policies among units with similar responsibilities, suggesting redefinitions of those duties wherever they are required.

The growth of bureaucracy in the past 25 years has been astounding; today there are over 2½ million employees under civil service. Today there are about 215 grant-in-aid programs administered by more than 20 different Federal departments and agencies. The cost of these programs alone has tripled in one decade.

It is incumbent upon the Congress to demand the highest degree of efficiency possible in the operation of our Government. This commission, composed of 14 members, would gather the Nation's best experts to make recommendations toward that goal. It would include two Congressmen, two Senators, two Governors, two members from the executive branch, and six from outside the Government.

Passage of this bill would prove to the American citizen that we intend to streamline Government organization, and will reduce duplication and inefficiency. It could put our Government once again on a sound businesslike basis.

Tribute to Judge Minard E. Hulse

EXTENSION OF REMARKS

OF

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. McCLORY. Mr. Speaker, this past December, Judge Minard E. Hulse, one of Illinois' great jurists, retired from the Lake County circuit court.

Judge Hulse occupies a high place in the hearts and minds of all of us who have known him. My association with Judge Hulse has been both personal and professional and spans many years. I knew him first as a family friend and fellow member of the bar; then, as a jurist, before whom I frequently appeared as a practicing attorney. And, again, when I was a member of the Illinois State Senate and he came to me with recommendations for changing the laws affecting his court.

Judge Hulse's primary concern is with people, knowing that only by helping the individual is it possible to benefit society itself. He has always recognized the institution of the American family as the basic ingredient to the successful development of the individual and the community, and the need to rehabilitate wherever possible the young people who are the victims of poor judgment or poor environment, or lack of parental supervision and advice. He backed legislation—now law in Illinois and in some other States—permitting husbands and fathers to be released from custody during daytime hours for full-time employment, returning to custody at night to fulfill their sentences, thus contributing not only to their own welfare but to that of their families and society.

A great lawyer and a great judge, yes—but, above all, Judge Hulse is a great humanitarian, a man of the big heart and of the wise decision. He is a man of the firm resolve that the key to improved human behavior lies in human decisions for the right, and that in all things, divine guidance alone can enable man to attain a higher place in the esteem of his fellowman and his Creator.

This is the place Judge Hulse occupies today. In that high estate, I salute him, his faithful and beloved Evelyn, and their wonderful family.

Mr. Speaker, I am proud to pay this tribute to Judge Hulse in the House of Representatives, and to call to the attention of my colleagues the high regard in which he is held by the citizens of Lake County and of Illinois.

The 49th Anniversary of Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. WYDLER. Mr. Speaker, today when many speak of building bridges between the East and the West, establishing further contacts with East European nations to induce their further liberalization and their faltering, hesitant expression of limited independence from Soviet control, it is easy to become discouraged by the minimal effectiveness of such a policy. Far more frustrating however, is the realization that some of the Captive Nations are beyond the reach of the engineers of these bridges. I wish to call attention to one of those nations in particular which lay beyond the bridge span possibilities—the Ukraine. For the Ukraine and other nations like it have fallen prey to the direst Soviet colonialization. The Soviet Union has incorporated the Ukraine within the geographical boundaries of the Soviet Union, as though to obliterate from history the previous existence of the Ukraine as a nation. Thus the Soviet Union has eliminated any possible contact, any possible construction of bridges, between the West and the Ukraine as a national entity. The Soviet Union denies national identity to the Ukrainian people, claiming they form an integral part of Russia.

Yet the Soviet Union will never succeed in erasing the memory of national existence from the hearts of the Ukrainian people. Nor will it ever succeed in extinguishing the fervent passion for independence which smolders in Ukrainian souls. Proof of these two statements lies in the previous failure of the Russians' attempt to incorporate the Ukraine. For this is the second Soviet-executed tragedy to befall the Ukraine. The first Russian incorporation attempt with regard to the Ukraine covered a period of nearly 250 years, ending with the Ukrainian declaration of independence on January 22, 1918. On that glorious date in Ukrainian history, the Ukrainian people seized upon the opportunities afforded them by Russian internal strife to achieve the restoration of their own independence.

However the Ukrainian nation was to have only a brief respite from Soviet domination. Within barely 2 years the Soviet Union had reconquered the

Ukraine. Again the Ukrainian people were to be subjected to Russian incorporation efforts.

Today on the anniversary of Ukrainian independence, we as Americans wish to extend moral encouragement to the Ukrainian people in deepest respect for their commitment to the principles of freedom and liberty they have so undeniably demonstrated throughout their history.

The Dedicated Service of Ronald Gall

EXTENSION OF REMARKS
OF
HON. CHARLES S. JOELSON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. JOELSON. Mr. Speaker, I was pleased to learn that the Navy Department has awarded a Certificate of Appreciation to my distinguished constituent, Ronald Gall, for his outstanding service to the U.S. Navy.

Formal presentation of the commendations to Mr. Gall was made on Tuesday, January 10, by Rear Adm. B. M. Strean, Deputy and Assistant Chief of Naval Personnel at the Navy Department in Washington.

The work for which Mr. Gall was cited was his support, as corporate director of public relations of the Curtiss-Wright Corp., of Navy recruiting advertising and publicity programs. It covers the period of the last 5 years.

In an accompanying letter of commendation, Adm. B. J. Semmes, Chief of Naval Personnel, said:

> You have devoted your time, energy, and ability to create and to place a series of Navy recruiting advertisements of sustained excellence. The response to these advertisements has been outstanding. The Recruiting Aids Division has received over 4,000 replies to the advertisement sponsored by Curtiss-Wright in 1965. In response to this year's advertisement, the Recruiting Aids Division has received over one thousand inquiries during the first week of its exposure.
>
> I want to commend you for the warm hospitality and personal attention which you have given to the young naval officers who worked with you during these years. You have acted as their mentor and have given freely of yourself and your vast knowledge of advertising and the media.
>
> Thank you for your devoted public service to the U.S. Navy and I know that you have achieved genuine satisfaction in accomplishing a job well done.

Mr. Gall has been active for years in the Navy support programs. He is a long-time member of the Navy League of the United States and presently is a vice president and director of its Passaic-Bergen Council. Recently, he served on the Advisory Committee of Adm. John Bergen, chairman of the Committee of the New York Navy League Council which commemorated the 50th anniversary of Naval Researve Aviation at a dinner held on October 26 at the Waldorf-Astoria, attended by approximately 1,500 people.

I am proud that he is my constituent and my friend.

Is the United States Too Involved in the Far East?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. MULTER. Mr. Speaker, the question is often raised, Is the United States too involved in the Far East?

The following revealing interview with Philippine President Ferdinand Marcos, which appeared in the January 6, 1967, edition of New York World Journal Tribune, answers that question strongly in the negative.

The article follows:

IS UNITED STATES TOO INVOLVED IN FAR EAST?

(By Carl T. Rowan)

MANILA.—I asked Ferdinand Marcos, the president of the Philippines, the question that bothers many Asians and gnaws at the consciences of millions of Americans:

Is the United States too deeply involved in the Far East today—that is, isn't there a latent resentment of his big Anglo-Saxon country invoking its power to settle the affairs of Asians?

The impressive young leader, who has been struggling to build a reputation as an Asian nationalist who is not a puppet of Uncle Sam, replied:

"We can start with the admitted fact that independent Asian nations must themselves initiate efforts for their economic development and military security. But we must also admit that Asians alone, whether they band together or not, would still be deficient in the resources required for either economic development or military security.

"We Asians admit that the principal source of danger is Red China, because Peking is not committed to any of the accepted principles of international law. It openly espouses war as an instrument of international policy.

"Taking that fact into account, and the fact that no Asian nation today, even joined with others, can balance the military power of China, you will understand why the presence of another strong power in the area is accepted by most countries in Asia, especially those in danger."

Marcos added that the American military presence not only restrains Red China by forcing it to defend its own borders, but it has enabled other Asian countries "to contain the subversive elements within our own jurisdictions."

"But what about the Asians I've heard deploring the fact that a big, rich, white nation is dropping tons of bombs on the colored people of a tiny Asian country?" I asked.

"The men who have expressed moral scruples against bombing North Viet Nam are probably men who don't have to make any decisions, any hard choices," Marcos replied. "The situation in South Viet Nam has opened the eyes of most Asians to the ambitions of Red China."

He said the suspicions and fears of Asians were further confirmed by "China's attempt to take over Indonesia."

"The fact that they failed," he continued, "proves that the Communists are far from infallible, that they can be defeated, broken, even in our own jurisdictions."

In this exclusive interview, Marcos had summed up three of my most conclusive observations on this Asian tour:

1. Talks with the prime ministers of Korea and Malaysia and the foreign minister of Indonesia, as well as the Marcos' interview, showed that the fear of Communist China is far greater in Asia than most Americans realize. It is a fear manifest not only in international actions, but in almost psychotic distrust of, and brutal discriminations against, the Chinese residents of Southeast Asia.

2. These outspoken advocates of a U.S. military presence in Asia are convinced that the Japanese, Indians and even the utterly neutral Burmese share their fears—of China, and of the possibility that the U.S. will give up the fight in Viet Nam and withdraw.

3. The horrors of the Viet Nam war that arouse American and European sentiment or intellectual revulsion mean nothing to these Asian leaders. They figure their countries' independence, and their personal necks, are at stake, and the hard, practical question of how to preserve them is all that matters.

Kiddie Car Corps

EXTENSION OF REMARKS
OF
HON. EDWARD J. GURNEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. GURNEY. Mr. Speaker, with the great number of Federal programs to care for our citizens during most of their lives, I knew it was only a matter of time until someone would realize that the stroller and carriage set have been grossly neglected.

I was right, and I want to share with my colleagues the comments of the man who discovered this flaw in the Great Society. Ormund Powers, writing in the Orlando Sentinel on January 15, 1967, has given this matter the attention it deserves. I hope my colleagues will take the time to do likewise.

Mr. Power's column reads as follows:

KIDDIE CAR CORPS?

The President is asking to have the Head Start program expanded so that it will take in all kids from 3 to 5 years of age. When this is done only those from birth to age 3 will be without a federal program providing for them. As a former two-year-old, I resent this.

If we're going to achieve true cradle-to-grave care, something must be done for the wee ones in their formative years or they may grow up to be 3 unprepared to participate in the host of delightful and busy federal programs ahead.

The way it is now, there isn't much for a kid in a bassinet to do but lie flat on his back and look at the ceiling. Parents do their best, but facial grimaces and cries of "Goo, Goo," are not likely to help a youngster face the federal forms he must fill out in future years.

We must have Baby Corps, trained and alert, to visit these infants regularly and teach them how to do more than spit cereal at their fathers. Retraining of a confirmed cereal spitter is not only a tedious task but a messy one. The Baby Corps could head him off at the pass and teach him to swallow the cereal in the first place. A very handy lesson, particularly if he is going to be a heavy cereal eater throughout life.

For the crawling stage we will need a Crawling Corps to teach the kids not to chew on the dog's bones and toys, and not to jerk the ashtrays off coffee tables. A crisis is reached in many homes when the toddler stage arrives and the youngster starts grabbing martini glasses out of papa's hand, deliberately turning on the dishwasher when there's nothing in it, and pulling the cat's tail. We will need a Crisis Corps for the toddler.

I have figured out the cost of these various programs designed to keep babies from acting like babies, and it comes to roughly $3½ billion. Cheap at twice the price, I'd say.

—ORMUND POWERS.

Prof. Stanley Anderson, Reviewing Worldwide Interest in Ombudsman Idea, Predicts Widespread Adoption Soon

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 11, 1967

Mr. REUSS. Mr. Speaker, the December 1966 issue of Public Affairs Report, the bulletin published six times annually by the Institute of Governmental Studies of the University of California, Berkeley, "to contribute to informed discussion of public affairs based upon recent research or upon a long-term specialization of the author" carries an article by an authority on the ombudsman idea, Stanley V. Anderson, associate professor of political science, University of California, Santa Barbara.

The large number of ombudsman proposals noted by Professor Anderson "indicate that the idea is undergoing a process of legitimization, and one can hazard the prediction that in the institution will soon break through, leading ultimately to widespread adoption." I introduced yesterday H.R. 3388, to provide for a congressional ombudsman.

The text of Professor Anderson's article follows:

OMBUDSMAN PROPOSALS: STIMULUS TO INQUIRY

(By Stanley V. Anderson, associate professor of Political Science, University of California, Santa Barbara)

In the Scandinavian countries and New Zealand, citizens with specific grievances against government may turn to the Ombudsman, an official appointed by parliament to make independent inquiry into allegations of bureaucratic misbehavior.[1] The Ombudsman's investigations have an impact at three different but related levels: on the citizenry, the administration, and the legislature.

GOVERNMENT OF THE PEOPLE

Like ripples spread from pebbles cast in a pond, satisfaction gained from Ombudsmanic inquiry is diffused among the populace. The most immediate gratification is felt by aggrieved citizens who secure redress. Others may appreciate advice as to where else to turn, and still others may be mollified by the Ombudsman's explanation of the basis for agency action. But all are secure in the knowledge that there is a place to which they can turn. In addition, then, to the righting of individual wrongs, there is a general improvement in the atmosphere of government.

In the year ending March 31, 1966, for example, the New Zealand Ombudsman, Sir Guy Powles, found 45 complaints to be justified out of 272 which were investigated. Another 401 complaints were rejected without full investigation, most often because they were beyond the Ombudsman's jurisdiction. Although the Ombudsman cannot compel an agency to accept his views, remedial action was taken in all of the above 45 cases. Indeed, the agencies acted spontaneously in 33 of them, obviating the need for a formal recommendation.

BY THE PEOPLE

As the climate of opinion surrounding government is softened, integrity and efficiency within government are also enhanced. The stultifying traces of unresolved accusations are dispelled by the Ombudsman's reasoned opinions—rendered much more often than not in favor of the challenged civil servant. Even when censured, the offending agencies or officials will have been given an opportunity to present their case. Moreover, government employees themselves are among "the people" who may complain to the Ombudsman.

At the same time, complaints are marshalled for feedback into the system, instead of being discharged ineffectively and acrimoniously. Superiors within a given agency learn what is going on, and each agency learns from the experience of others. Following established due process, an erring official may be reprimanded, discharged, or prosecuted. (In more than three years of operation, the New Zealand Ombudsman has never had to suggest the institution of criminal proceedings.) Of its own volition, an agency may rectify inequitable or cumbersome procedures. As Sir Guy Powles asserts, "it seems clear that the Office has made a significant impact upon public administration."[2]

AND FOR THE PEOPLE

At the third level of impact, the annual reports of the Ombudsman are a tool which the legislature can use in supervising administration, as a searchlight on inadequacies and distortions of legislative policy. In candor, it must be admitted that legislators have seldom made effective use of these reports. They are not a substitute for a well-staffed body of able lawmakers, and the Ombudsman office itself is not a panacea for deficient bureaucracy.

As an alternative receptable for complaints, however, the Ombudsman lessens the load of errands which legislators carry. He thereby frees them for more dignified and appropriate tasks, and spares them the dilemma of partisanship in choosing between implications of favoritism and charges of inaction. Equally important, the Ombudsman serves the complaint-handling function in an even-handed and expert fashion, minimizing the otherwise unavoidable variations caused by differences of interest, ability and influence among elected representatives.

WORLDWIDE INTEREST

Because of its beneficial, albeit moderate, impact on all of these levels, the Ombudsman institution has commended itself to politicians across the democratic spectrum in western industrialized societies. With sponsorship ranging from conservative to liberal and labor, Ombudsman proposals have been put forward in Australia, Canada, Ireland, Holland, Switzerland, and the United States.[3]

The office of Ombudsman was established in New Zealand in 1962 by the National Party Government, with Labor support which has since become more enthusiastic. In August, 1966, the Labor Government in Great Britain announced the forthcoming appointment of a Parliamentary Commissioner, who is to investigate complaints transmitted to him by Members of Parliament.

STATES AND PROVINCES

Eight out of ten provincial legislatures in Canada have considered Ombudsman measures, in addition to proposals at the federal level put forward in Ottawa.[4] During the past two years, Ombudsman bills have been dropped in the hoppers of the legislatures of California (Assembly Bill 2956/1965), Connecticut (House Bill 3194/1965), Illinois (House Bill 1773/1965), New York (Assembly Bill 2105/1965; Senate Bill 2833/1965), Rhode Island (Senate Bill 62/1966), and Utah (Senate Bill 140/1965), and serious interest has been expressed in Colorado, Indiana, Maryland, Missouri, New Jersey, Ohio, Oregon, and Pennsylvania—a total of fourteen states.

To single out one state for illustration, the California proposal was introduced in the Assembly on April 22, 1965, by Speaker Jesse M. Unruh. It was designated an emergency measure by Governor Edmund G. Brown, and received a bipartisan favorable vote of two-thirds of the Assembly. Emergency status and a two-thirds majority are required of bills containing an appropriation when passed prior to approval of the Governor's budget. The Bill was killed by the Senate Committee on Governmental Efficiency on the ground that the Ombudsman would be an intrusive layer between legislator and constituent. Hearings have since been held in Sacramento and Los Angeles by the Assembly Interim Committee on Government Organization, and the proposal will be reintroduced in the 1967 Session.

COUNTRIES AND CITIES

Proposals for municipal Ombudsmen have been made in Edmonton (Province of Alberta) and Laval (Province of Quebec), Canada, in Rotterdam, Holland, and in Philadelphia, New York City and Washington, D.C. Gotham proposals are gaining broadly based support following the defeat by referendum of the Civilian Police Review Board in the November, 1966 elections. In the United States Senate, S. 3783, "To establish the Office of Ombudsman in the District of Columbia," had sponsorship from both parties when introduced in August, 1966.

By Executive Order in Nassau County, New York, the Commissioner of Accounts was vested with Ombudsman-like functions on May 31, 1966, simultaneously with introduction in the Board of Supervisors of a proposal for the creation of a Public Protector. Even with this tentative status, Judge Samuel Greason, the Commissioner of Accounts, may well claim to be the first official American Ombudsman.

At the national level, proposals for an Administrative Counsel of Congress have been introduced by Congressman Henry S. Reuss of Wisconsin (H.R. 7593/1963; H.R. 4273/1965) and Senator Claiborne Pell of Rhode Island (S. 984/1965). In June, 1965, hearings were held by the Joint Committee on Congressional Organization, which "decided against recommending creation of such an office at this time" on the ground that "casework is a proper function of the individual Member of Congress."[5] Renewed interest in the institution grew out of the March, 1966, testimony of the Swedish Ombudsman, Judge Alfred Bexelius, before the Subcommittee on Administrative Procedure, chaired by Senator Edward V. Long of Missouri.[6]

PROPOSALS STIMULATE INQUIRY

Except for New Zealand and, imminently, the British Isles, no legislative body outside Scandinavia has yet created an Ombudsman. The score or more of proposals which have just been enumerated indicate that the idea is undergoing a process of legitimization, and one can hazard the prediction that the institution will soon break through, leading ultimately to widespread adoption. The Institute of Governmental Studies is making a comprehensive study of American proposals—chronology, analysis, and appraisal—but this investigation can at best be preliminary to the study of Ombudsman offices in operation.

Under the auspices of the Institute's Ombudsman project, Professor Gerald R. McDaniel headed a team in the office of Governor Brown during the summer of 1965, carrying out a time-and-motion study of mail-handling procedures. The report presently under preparation reveals that the

---

Footnotes at end of speech.

large volume of mail places an undue burden upon hard-worked executive assistants, and that there is a built-in tendency toward agency self-protection. This leads to the consideration of complaints partly on the basis of their potential political impact, instead of solely on the basis of merit. This is not intended as a criticism, but rather states an unavoidable fact of life. Any agency must look to its own image. The primary responsibility for administrative fairness and efficiency must continue to rest with the executive branch of government. The Governor's office does a good job, and should continue to do so. It is not, however, a substitute for an impartial and expert external arbiter.

Currently, the Institute is investigating the complaint-handling functions of California lawmakers. Supervised by Professor Dean E. Mann of the University of California, Santa Barbara, a half-dozen interns have been placed in the local offices of State Assemblymen and Senators. Assemblyman Winfield A. Shoemaker, co-author of the Unruh proposal, points out that interns placed in his office have permitted him to do a better job of servicing complaints. If legislators are going to intervene on behalf of constituents, they need staff assistance sufficient to that purpose. And the lawmakers should publicize their availability. Shoemaker concludes that "an Ombudsman would make government more responsive to the people and increase the effectiveness of the legislative branch of government."[7] The Ombudsman is not meant to replace the elected representative, but to assist him and to provide an alternative avenue of redress.

Additional inquiry of this sort across the nation would be helpful, both for the insight into existing mechanisms it will afford, and for its implications as to the need for Ombudsmen. In Canada, however, protracted study has been used as much for delay as for enlightenment. Other questions can be answered only with the help of experience. Can a single Ombudsman, with a small staff, handle the workload of California's, New York's, or Canada's respective populations of 18,000,000 inhabitants? Or will these jurisdictions require plural Ombudsmen, whether regional or functional?[8] The best way to find out is to try.

An equally difficult question has already been answered through experience: Ombudsmen can control judicial behavior without sacrificing judicial independence. Through its Commission on Judicial Qualifications, California has demonstrated that rudeness and delay from the bench are discouraged by confidential recommendations flowing from the investigation of complains.[9] Other states are already copying this judicial Ombudsman.

CAMPUS OMBUDSMEN

Academic freedom is to college faculties what judicial independence is to the courts. The Senate of the Associated Students of the University of California, Berkeley, has recently recommended the establishment of an "investigator of student grievances."[10] Stanley Scott, Assistant Director of the Institute of Governmental Studies, suggests that such an Ombudsman might make professors and administrators more responsive to their constituencies without undercutting essential responsibility. In 1965, the students of Simon Fraser University in Vancouver elected one of their number to attempt such a job.

Perhaps a tenured professor, with an established reputation for receptiveness to student complaints, could be most effective. He would appreciate the value of academic freedom, and would be conversant with the labyrinths of administration. If he found an instructor to be remiss in teaching, whether through inadequate ability, or poor preparation or frequent tardiness or absence, or in counselling, whether through indifference or unavailability, he could report that finding to the instructor, and, in his discretion, to department heads and chief administrators. If he found an administrator to be unfair or wrong in a decision affecting a student, he could report that finding to the administrator and his superiors. As against administrative activities, he ought to have the right to compel testimony and the production of files. In carrying out his investigations, the professorial Ombudsman would have to be independent of students, faculty, and administration alike.

CONCLUSION

Problems of communication are inherent in representative government. They grow geometrically with increased size and complexity and the consequent rationalization of procedures. Burgeoning bureaucracy is only a reflection of the depersonalization caused by scale and complexity. And depersonalization, in turn can be considered almost a synonym for the rule of law. If the rule of law is not to be harsh and unfair through remote and automatic application, it must be humanized. One important institution for the humanization of government is the office of Ombudsman.

Lois M. Watson Receives South Carolina Chemical Award

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. McMILLAN. Mr. Speaker and Members of the House, I take great pleasure in inserting in the CONGRESSIONAL RECORD a news items concerning Mrs. Lois McKay Watson, a teacher at Latta High School, South Carolina, which is located in my congressional district.

You will note that Mrs. Watson has been selected to enter competition with eight southern States for an award in chemistry.

Latta High School is considered one of the leading high schools in my State and we are extremely proud of Mrs. Watson's accomplishments and her outstanding work in the field of chemistry.

LOIS M. WATSON RECEIVES SOUTH CAROLINA CHEMICAL AWARD

Mrs. Lois McKay Watson, chemistry teacher at Latta High School, received the "outstanding" awards of the South Carolina Section, American Chemistry Society, Tuesday night.

Mrs. Watson received the "Outstanding High School Chemistry Teacher Award."

Following the presentations, members of the chemistry society heard a lecture on "Solar Energy" by Dr. Clark Bricker of the University of Kansas.

Dr. Davis, now dean of the College of Arts and Science at USC was named outstanding chemist "in recognition of his contributions and influence in the field of chemistry."

The citation noted, among other things, that while he was head of the USC department, it developed from a small department "into one which has received recognition."

He was further cited as "an inspiring teacher," an "organizer and leader" and "successful administrator." Davis is chairman of the Oak Ridge Institute of Nuclear Studies.

Mrs. Watson, a teacher in Latta for 16 years, was honored for the "effectiveness of her teaching and the encouragement she gives to her students."

She has sponsored the science fairs in her school for seven years during which many of her students have won major awards for their exhibits.

Before she entered the teaching profession, Mrs. Watson was an industrial chemist for four years.

The South Carolina Section of the American Chemical Society is privileged to present its 1966 Outstanding High School Chemistry Teacher Award to Mrs. Lois McKay Watson, Teacher of Chemistry and Other Sciences at the Latta High School, Latta, South Carolina, in recognition of her outstanding work as a teacher in Latta High School for sixteen years.

The effectiveness of her teaching and the encouragement that she gives to her students is demonstrated by the list of those who have excelled in college and in graduate school and are now having successful careers in various fields of science.

She has sponsored the Science Fairs in Latta High School for seven years; and because of her inspiration and interest, her students have won grand prizes, many first places in the junior and senior divisions, and a number of special awards at the Regional Fair.

The South Carolina Section recognizes that by her participating in the National Science Foundation Institutes in recent years at the University of North Carolina and at the College of William and Mary and in the Interamerican Institute for Space Science Education at the University of South Florida, she continues to keep abreast of developments in science and in education.

Her background for teaching has been improved by working as an industrial chemist for four years prior to entering the teaching profession and by extensive travel. She is a member and leader in civic organizations which serve to promote a desirable relationship between the classroom and the homes from which the students come.

J. W. BOUKNIGHT,
Awards Committee.
JOHN C. EDWARDS,
Awards Committee.
CHARLES E. DURKEE,
Chairman, South Carolina Section of the American Chemical Society.

Older Americans

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. ALBERT. Mr. Speaker, yesterday the President recommended that we raise social security benefits, that we improve and extend health care available to the elderly, that we attack unjust job discrimination due to age, and that we expand programs designed to bring meaning to those living in retirement. I am confident that most Americans share these goals and this dream.

The Washington Post, in a thoughtful editorial in today's issue, urges quick action on these proposals. I include the Washington Post editorial in the RECORD at this point:

[From the Washington Post, Jan. 24, 1967]

OLDER AMERICANS

The President's proposals for legislation to improve the lot of Americans over sixty-five reflect a national concern for the plight of the aged. The poverty of more than five million aging Americans is a reproach to our society that ought to be removed if it is within the capacity of government to remove it.

One may hope that education and training of the young will diminish poverty of the aged in decades hence. But the vast expansion of educational facilities, producing an increasing proportion of literate and trained youths cannot be made retroactive. The opportunity to lead rewarding and useful lives within the framework of our society declines rather than increases for those already in the older age brackets. They cannot be retrained, re-educated and reconditioned for successful competition in a world that so differs from the one for which their training prepared them.

The changes in the security payments recommended by the President are not extravagant or reckless. They will leave millions of aged still in difficulty. But they advance the national policy in the direction it ought to go. Perhaps, in another generation, poverty and aging will not so frequently be found together. But there seems to be no solution now for the problems of the aging poor but the largesse of government or the help of private charity. The President's proposals ought to receive the support of all thoughtful and compassionate people.

Fino Urges Troop Withdrawal From Europe

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. FINO. Mr. Speaker, today I have reintroduced my resolution, last year the first in the House of Representatives, to declare the sense of the House that American military commitments in Europe be revised so as to enable the withdrawal of such American troops as might be withdrawn consonant with national security.

I originally introduced this resolution in February 1966, out of concern with the U.S. war effort and the U.S. balance-of-payments position. It is likely that the Senate will pass some resolution regarding our European troop strength during 1967.

Passage of my resolution would lead to freeing more troops for service on the home front and in southeast Asia. I am not urging escalation or de-escalation. I am proposing measures which show Europe that we mean business. I hope that the House will not default to the Senate in such vigilance.

Our European commitment clearly interferes with our troop rotations in Vietnam. I would also hasten to point out that our European military commitment is very costly. The billions we are spending in Europe could be trimmed to bring our budget closer to balance, and help head off the need for the proposed 6-percent tax increase.

Not only is our commitment costly in budget terms, but it is costly in balance-of-payments terms. In 1965, in the middle of the administration's much heralded war on balance-of-payments difficulties, this country lost $1.6 billion in gold. This was the biggest loss of gold since 1960. France, Germany, and Spain, directly or indirectly, have bilked us of $5 billion worth of gold since 1960. Now France is after gold again. We have almost 300,000 troops stationed in Germany and Spain, and the dollars paid to support these troops, many of which wind up in French hands, constitute a high proportion of the dollars traded in for U.S. gold.

The American military commitment keeps our taxes high and holds out the promise of even higher taxes. But what does it do for Europe? It keeps European taxes low. It eases the strain on European budgets through minimizing defense expenditures. The reduced European taxes subsidize European industry, making European exports more competitive with American exports. This hurts our trade situation.

Another reason to reduce U.S. troop commitment in Europe is the fact that some of our NATO allies are trading with North Vietnam. How can we expect diplomats to take our war effort seriously while we tolerate a heavy strain in keeping up the military protection of those who encourage or trade with our enemies?

If we shift some troops from Europe to Vietnam, we can meet our heavy military needs in Vietnam without resort to the draft of college students and other young Americans in unusual number. As long as we are keeping troops in Europe that could better be used on behalf of American interests in Vietnam, we are making our boys face a military draft so that America can protect Europe, while Europe's youth escape the service Europe might otherwise require of them. I do not want American students in rice paddies while American soldiers keep Europe's young people free for wine, women, and song.

What exactly is wrong with Europe protecting Europe? Our strategies which say otherwise are based on postwar military pschologies which have ceased to be realistic now that the great Communist threat is China—at least for the moment. I do not urge the withdrawal of any troops in Europe who are clearly protecting our interests. Let us withdraw those who are protecting European and not American interests.

The President's Program for Older Americans Deserves Support

SPEECH
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1967

Mr. COHELAN. Mr. Speaker, President Johnson is to be highly commended for the constructive, forward-looking message he has sent to the Congress to improve the lot of Americans 65 and over.

The elderly have all too often been a neglected segment of our society. All too many of them live on totally inadequate incomes, some five million below even the poverty level. All too many bear a disproportionately heavy burden of rundown housing, of discrimination in employment and of inferior recreation and rehabilitation services.

Our goal should be nothing less than a life of dignity and self-respect for all of our older Americans. To this end we surely can agree with the President's call to raise social security benefits to a level which will better meet today's needs, to improve and extend the health care available to the elderly, to attack the roots of unjust job discrimination and to renew and expand our programs to help bring fulfillment and meaning to the retirement years.

The President's recommendations are certainly not excessive. Clearly more still could be asked and done for the millions of our older people who live in difficulty and despair. But this is a practical and a timely proposal which the

President has sent to Congress. I hope that it will receive the early consideration and approval which it deserves.

Thompson Pays Tribute to Atlanta Gas Light Leadership

EXTENSION OF REMARKS

OF

HON. FLETCHER THOMPSON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. THOMPSON of Georgia. Mr. Speaker, I ask for permission to address the House for 1 minute, to revise and extend my remarks and to include extraneous matter in the RECORD.

Mr. Speaker, one of the oldest, most substantial and largest business firms in the city of Atlanta, which is within my district, is the Atlanta Gas Light Co. Since its founding 110 years ago, the company has developed into a $100 million a year business serving more than a half-million customers. One of the reasons for the company's success has been its enlightened corporate leadership.

Recently, Col. Hubert F. Lee, editor of Dixie Business magazine, published in the winter, 1966, issue an article paying tribute to leadership of this fine company and I ask that the article be printed in the RECORD so that others may have the benefit of knowing about this outstanding corporate leader.

The article referred to follows:

MEN IN THE NEWS

(By Hubert F. Lee, editor)

The year 1966 has been a busy year for Wallace L. Lee, president of the 110-year old Atlanta Light Co.

On January 31, 1966 his firm merged with Savannah Gas Company.

Atlanta Gas in 1966 gained extended service to 21 incorporated communities, bringing to 158 communities served.

On April 20, Mr. Lee was elected president of the Southern Gas Association, the trade association of natural gas distribution, pipe line and production companies in 14 states.

Construction was started on the Gas Tower at 235 Peachtree Street, the first office building in Georgia with natural gas turbines as its exclusive energy source. The 25-story, $10-million office building will be owned by John Portman, Atlanta, and Trammel Crow of Dallas, developers of the Peachtree Center.

Atlanta Gas just missed the mark in total revenues for 1966, the total was $99,092,894. The company passed half million mark in customers.

NINETIETH ANNIVERSARY

This Week, by Hubert F. Lee, a weekly newspaper column, was encored in the Winter 1946 issue Dixie Business, the world's foremost small magazine.

Here are a few paragraphs:

One of the most impressive dinners we have attended in a quarter of a century as a newspaperman and editor was one given last week (Oct. 31) by the Atlanta Historical Society in honor of the 90th birthday of The Atlanta Gas Light Company.

It was a proud moment in the life of Rock G. Tabor, president of the Gas Company, when he heard his firm dubbed "a symbol of what makes America great." Henry A. Alexander, president of the Atlanta Historical Society paid tribute to one of Atlanta's oldest business Corporations when he declared it always has stood for "permanence, enterprise, well-balanced judgment, integrity and success."

Rock Taber told the distinguished gathering, what he had previously told me, that it was the first time in his 40 years in the public utility industry that the people of a community had gathered to pay tribute to one of its utilities. He also told the story of the Gas Company and how it was founded to light Atlanta's streets on Christmas Day, 1855. Said Mr. Taber, "it has progressed with the community, and planned with the community for the growth and expansion that has taken place during the years."

The Gas Co. received its charter in February 1847.

H. Carl Wolf, who left the Gas Company a year ago to become Managing Director of the American Gas Association, sounded a keynote when he said that "only by a balanced combination of the service and profit concepts can we have American industry as we know it today."

Without profit there can be no service, he might have added.

It was fitting and appropriate that Mr. Taber on that historic occasion paid tribute to other public utility officials who have played an important part in Atlanta and Georgia's growth, including Hal Dumas, president of the Southern Bell T & T Company; J. Fred Tuner, vice president of the Telephone Company, Preston S. Arkwright, chairman of the Georgia Power Company and W. E. Mitchell, president of the Georgia Power Company.

Probably no city or state in the nation has so many public utility officials who have served their city or state so well as have the men Mr. Taber mentioned. Particularly Preston S. Arkwright and Hal S. Dumas. I know of things Mr. Arkwright has done for Georgia, had they been done by anyone other than a public utility official, would have caused the people of the state to draft him for Governor or Senator. And had they done so, he would have made a good one.

Jewish National Fund

SPEECH

OF

HON. GEORGE E. SHIPLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. SHIPLEY. Mr. Speaker, on January 31 the Jewish National Fund is honoring Samuel Shapiro with the Keter Shem Tov Award. Mr. Sam of Illinois, as he is popularly known, is most certainly deserving of this honor, which means "Crown of a Good Name."

Samuel Shapiro has made an outstanding record as Lieutenant Governor of the great State of Illinois and has gained great stature as a leader and as a humanitarian. He is truly a special kind of person who spends virtually all of his time in doing things for other people. He has worked unselfishly and untiringly in behalf of others and his contribution to the people of Illinois cannot be measured.

It certainly is most appropriate that Samuel Shapiro be given the Crown of a Good Name.

War Against Graft Needs Escalation

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. CHAMBERLAIN. Mr. Speaker, if there were ever a place where we needed a fully effective showplace foreign aid operation it is South Vietnam. Unfortunately, this has not been the case, as has been recently acknowledged in a report by the Agency for International Development's Saigon director, Donald G. MacDonald. While it may be that graft and corruption are age-old problems and that the Vietnamese program by its very scope and complexity presents special problems, that is no reason, I feel, to justify official tolerance of the diversion of as much as 6 percent of our aid assistance to the Vietcong or for other illicit purposes. Certainly any aid the Vietcong derives from this source can only do damage many times over to the efforts of our fighting men to defeat the enemy and pacify the country. If our Government with all the talent and material it has invested in the Vietnamese undertaking cannot achieve a better record than this, we may well wonder about the efficiency and effectiveness of our other, lower priority, aid programs throughout the world.

A recent editorial in the State Journal of Lansing, Mich., appearing Tuesday, January 17, entitled "War Against Graft Needs Escalation" offers a cogent statement on this question and I commend it to the attention of my colleagues:

[From the State Journal, Jan. 17, 1967]

WAR AGAINST GRAFT NEEDS ESCALATION

President Johnson's call for a $5.7 billion tax boost partly to help pay the soaring costs of the war in Vietnam imparts a special significance to a shocking new report on graft and corruption in connection with the American economic aid program in the embattled Asian country.

In our opinion the report was highly disturbing because of the amount involved and also because of the seemingly casual attitude of the U.S. officials in charge.

According to a recent dispatch from Saigon, the U.S. Agency for International Development (AID) estimates that in the neighborhood of $25 million worth of economic assistance commodities delivered to South Vietnam "was stolen or otherwise diverted" in 1966.

Last November two Associated Press writers reported after a two-month AP survey that profiteering, graft and corruption were costing American taxpayers at least half a million dollars a day in the country the United States is defending against Communist aggression at a steadily rising cost in lives and money. They cited numerous examples of stolen or diverted goods and currency speculation.

After the articles were published officials in Saigon and Washington announced a number of measures designed to reduce or investigate the losses.

Donald G. MacDonald, director of U.S. aid in the South Vietnamese capital, and other AID officials said recently that massive American economic assistance was poured into Vietnam last year to help curb inflation and expand economic development.

The statement on illegal diversion said in part: "There were increased opportunities for pilferage, theft or improper application of AID supplies, especially in the ports and in provincial programs."

"On the basis of recent rates or loss, U.S. AID estimates that no more than 5 to 6 per cent of the U.S. economic assistance commodities delivered to Vietnam was stolen or otherwise diverted in recent months from their intended uses," the statement added.

Although MacDonald denied an intent to minimize such losses he said: "AID believes that the estimated overall loss rate of 5 to 6 per cent of U.S. AID goods cannot be regarded as highly unusual in a wartime situation as complex as that in Vietnam."

Trying to prevent graft and corruption under the conditions prevailing in Vietnam obviously is a difficult task but the importance of the effort increases with the expansion of the economic assistance program.

Perhaps the effort would be more effective and the costs borne by American taxpayers would not be as great if the losses were regarded as highly unusual and if there were greater determination to halt the activities which sap the effectiveness of the aid program that is supposed to be a vital part of U.S. policy in Vietnam.

It is necessary for the United States to engage in two wars in Vietnam—one against Red military aggression and the other against corruption and theft. The American people have every right to expect a maximum effort by the officials in charge of each of them to make them as effective as possible.

Hon. John E. Fogarty

SPEECH

OF

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. PERKINS. Mr. Speaker, I would certainly like to associate myself with the remarks of our colleagues concerning the Honorable JOHN EDWARD FOGARTY. This truly great Rhode Island legislator has erected a towering monument to his memory through the leadership he has provided in the building of programs and institutes to develop and protect the human resources of this great Nation.

History records he was a bricklayer. The bricks and mortar laid by JOHN FOGARTY can be discerned in the expanding institutions of higher education affording new and improved learning opportunities for our citizens resulting from his guiding hand on appropriation measures to fund meaningful programs. They can be seen in those national institutes which are effectively coping with the disease and infirmity which collects an exorbitant toll from the human resources of our Nation.

His lifelong campaign, directed by his intense compassion, to improve opportunities for people to participate and share in the great affluence of our democracy, was conducted with great modesty and with what will be recorded by history as almost legendary legislative skill. Indicative of his humility is the fact that the current Congressional Directory—of all the great things that may be said about him—carries only this line: "JOHN EDWARD FOGARTY, Democrat, of Harmony, R.I., elected in 1940; reelected to succeeding Congresses."

The Honorable JOHN FOGARTY was, indeed, a representative of his constituents, and the Nation will harvest for a long time to come the seeds sown by his great statesmanship.

Adam Clayton Powell

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. HOLLAND. Mr. Speaker, in a recent edition of the Pittsburgh Catholic, there appeared an article by Msgr. Charles Owen Rice, commenting on our colleague, the gentleman from New York [Mr. POWELL]. Monsignor Rice's article does not seek to excuse or even to discuss at length the charges that have been leveled at the gentleman from New York. He discusses, instead, the reasons why the House took its action of January 10.

The article speaks for itself, and I can neither improve upon it, nor adequately summarize it. But one point which Monsignor Rice makes is worth singling out.

> It is worth nothing that the man is not accused—

Says Monsignor Rice—

> of selling his influence, of taking pay for pushing or blocking legislation or legal restraint. I happen to think the worst a politician can do is sell himself to the mighty, those unspeakable oil millionaires, for instance. I would prefer even a common thief to such—

Continues the monsignor.

Mr. Speaker, under unanimous consent, I include the full text of Monsignor Rice's column following these remarks in the RECORD:

ADAM CLAYTON POWELL

(By Msgr. Charles Owen Rice)

It is most difficult for the white mind to understand Adam Clayton Powell. He seemed deliberately to make it easy for his enemies to get him as he left his flank unprotected. Not only has the white mind difficulty in understanding Powell or finding sympathy for him, it is puzzled that the Negro community has not repudiated the "bounder" and opted for respectability.

There are explanations for the Powell phenomenon but they are not at all simple. Much, much more is involved than delight at a glamorous gadfly. That by itself would not have won the support of nearly all American Negroes. Pro-Powell feelings are deep, and they are broad. I am convinced from personal investigation that even the apathetic Negroes, the ones who pay little attention to civil rights and anti-poverty, these would take to the streets for Adam Clayton Powell. He has got through to them. They understand him and his, "Keep the faith Baby."

To the white mind, a man in Powell's position should have been super cautious and should have protected himself. He should have labored to be above suspicion. Whites also would prefer a man like Powell to demonstrate by a sensitive regard for their opinion the fact that subtly he "knows his place." We would like all Black leaders to adjust to our world and our thought processes.

Powell's strength with Negroes comes precisely from his refusal to be a white man's Negro. He is attractive to Negroes because he will not stay in the place the white man has marked out for him, and he is determined the white man will take or reject him as he is.

Other men might have said to themselves, I am a Negro and I had better play it cagey or I will not last. Other men would have bent over backward and would have covered up. Not Powell. He is what he is, and he makes no defensive moves.

If Powell were a calculating and circumspect political operator, he would still have a certain appeal to his constituents, but cutting, as he does, a flamboyant and masterful figure, he is irresistable and unbeatable.

He makes white men bristle, and Negroes rather like that too.

In that the Powell misunderstanding widens the gap between white and Black, I regret it. But we must realize that the misunderstanding could not have been so monumental in the first place if a tragic gap had not already yawned at our feet. Negroes are almost a separate nation. Each nation has its special heroes. A subjugated nation values rebellion and defiance in its heroes, and it loves panache. Powell fits every requirement.

Powell had natural enemies. Everyone knows that the Southerners are infuriated at his swagger. They dislike uppity Negroes, and to them Adam Clayton is the essence of uppityness.

The rural and respectable Northerners, who are larger in Congressional number than they should be, dislike the openness of the man. Appearance is so important to them. They affect humility and publicly they play it small. Powell plays it big, and would not know how to affect a simpering smallness.

Then there are the hidden rascals. The ones who milk their jobs of every advantage, who hit the expense account hard, and fill the payroll with relatives and other drones. They do not want this sort of behavior flaunted, and they deeply resent the one who blows the whistle, who says I am merely doing in the open what others do covertly.

In addition, the labor establishment has been anti-Powell since he used his position as chairman of the Labor and Education Committee to harass certain labor unions for their de facto discrimination against his Negro people.

It was an ill assorted pack of baying dogs but it had teeth. Noisy dogs of the news media joined the chase and tried Powell in public. They made sure that every charge and innuendo was spread abroad. When they went into full cry it was too late for their quarry to attempt to outbark or to evade them.

The charges are serious, but we have not the background facts to judge the case. We need a complete investigation of Powell's allegation that similar conduct has been condoned in other Congressmen. He is a sufficiently important member of Congress to have his counter charges examined rather than ignored.

Finally, the charges, strong as they are, fall in the lesser category of abuse of privilege. It is worth noting that the man is not accused of selling his influence, of taking pay for pushing or blocking legislation or legal restraint.

I happen to think that the worst a politician can do is sell himself to the mighty, those unspeakable oil millionaires, for instance. I would prefer even a common thief to such.

Adam Powell was no thief, but he was careless in the grand manner. His people want him to keep on being their Congressman, and they will elect him again and again. Congress will be doing wrong, if it dare deny him his seat, because it will be depriving his constituents of their right to be represented by the man of their choice.

"Ready Now Ranger" Victim of Nontruce

EXTENSION OF REMARKS
OF
HON. CLARENCE D. LONG
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. LONG of Maryland. Mr. Speaker, the tragedy of losing a son in Vietnam was compounded for Mr. and Mrs. Bernard C. Kramer, of 5007 Chalgrove Avenue, Baltimore, by the fact that it occurred during the New Year's truce. Pfc. Howard Morris Kramer was killed just 6 weeks after arriving in Vietnam as a member of the "Ready Now Rangers." The following article from the Baltimore Sun summarizes the abbreviated life of a victim of violated unkept "truce."

Pfc. Howard Kramer Killed During Truce in Vietnam

Pfc. Howard Morris Kramer, a Baltimore serviceman who had been in Vietnam for only six weeks, was killed by hostile fire while he was on security patrol at his base near Saigon. He was 20 years old.

A native of Baltimore and a graduate of Forest Park High School, Private Kramer enlisted in the Army May 26, 1966, and did his basic training at Fort Gordon, Georgia. He arrived in Vietnam November 19 and was stationed at Di An, near Saigon.

The time and exact circumstances of his death were unknown, but Rabbi Harry Mezei, a chaplain at Fort Meade, informed Private Kramer's parents that their son was killed during the New Year's truce.

TRUCE BEGAN SATURDAY

The truce began at 7 A.M. Saturday.

A Defense Department telegram to Mr. and Mrs. Bernard C. Kramer, 5000 block Chalgrove avenue, said their son died from "wounds received while on security patrol when hit by hostile small arms and automatic weapons fire."

Private Kramer was attached to the 16th Infantry, 1st Division, in the province of To Duc. His unit was called the "Ready Now Rangers."

In a letter sent to his parents the day after Christmas, Private Kramer said he enjoyed a "delicious" Christmas dinner; he expressed surprise that such good food could be prepared under wartime conditions.

He described the Vietnamese civilians as "nice" and said they were grateful when American soldiers smiled at them and displayed friendly feelings.

While in high school, Private Kramer was selected for a Junior Achievement, Inc., program—an extra-curricular activity in which students form miniature companies and make products or perform services to learn business techniques.

He was elected president of his company, which made hotplates one year and bulletin boards the next.

INTERESTED IN RARE BOOKS

Private Kramer attended Bailtmore Junior College for a year before enlisting in the Army.

A collector of foreign paper money, he was also interested in rare books and was a member of the National Rifle Association.

Law Enforcement Manpower Needs

EXTENSION OF REMARKS
OF
HON. WILLIAM R. ANDERSON
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. ANDERSON of Tennessee. Mr. Speaker, on the opening day of the 90th Congress I introduced a bill, H.R. 188, the law enforcement education bill, which would establish broad new avenues of educational opportunity for the law enforcement and corrections professions. It can be demonstrated that we are on the point of requiring the American law enforcement agencies to police a society to which they are educationally inferior. It is my contention that this could only contribute disastrously to the erosion of respect for the law and the men who administer it.

The tremendous need for college level education for law enforcement professionals, and their enthusiasm for such education is forcefully presented in the excellent article, "Are We Aiming Too Low in Recruitment," from The Police Chief magazine, January issue. The author, Mr. George H. Shepard, is qualified both as a police officer and a scholar, having served 23 years on the New York City Police Department, and been associate professor and chairman of a college police science department.

Are We Aiming Too Low in Recruitment?

Across the country, personnel recruiters are facing a scarcity of technicians and professionals to fill their growing labor needs. Increased technology and automation, and the emphasis on planning and research, while parodoxically replacing the unskilled and semi-skilled worker in the factory, have in turn created a demand for highly skilled and educated people, the "brain" workers.

Industry recruitment for these professionals has turned to the colleges and universities. Every graduating class is visited by recruiters who hire the promising students.

Police administrators, faced with growing numbers of vacancies in their forces, are now striving to compete with industry as well as other governmental agencies for these young candidates. Unfortunately, they are becoming increasingly frustrated in their efforts. Familiar questions are: "Why should college men come into our department for a starting salary of less than $6,000 per year, when they can earn more in other jobs, and be lots safer?" "Why should college men come to us as lowly patrolmen, when with their education, they could get jobs as supervisors?"

Where does this leave the college candidate? More importantly, what happens in those departments which make no attempt to recruit college-trained men? Are they successful in attracting high school graduates in sufficient number to satisfy their needs? A canvas of most police agencies would result in a negative reply. This acute shortage of trained, better-educated officers is making itself particularly felt in areas such as juvenile work, technical laboratory assignments, and in planning and research units, not to mention the vital police patrol area itself.

The literature on personnel in juvenile delinquency services is replete with suggestions for curricula, standards, in-service courses, workshops, institutes and seminars. Almost without exception, professionals in probation, detention, institutional treatment and parole emphatically stress the baccalauerate degree as a minimal educational requirement for their staff workers, and they prefer a graduate degree in social work.

Yet, in police work, educational requirements beyond the high school level are conspicuous by their absence. For example, the literature in the field of police work with children has few references to the necessity of college training for police juvenile specialists.

Commenting upon the dynamic changes in police work and the need to professionalize, Frank Day observes:

"Today if a police officer is to carry out his duties efficiently and intelligently, he must be a social scientist. It is necessary to get a complete man who has an understanding of his society and its people—a sense of perspective that can come only from a broad, general education. And the higher he goes in rank, the more he needs to know about people and their institutions."

Why are some police administrators avoiding the basic requirement of education for police officers? Is this happening because they are passive toward the shortage of college-trained eligibles for police work? Are they dropping their sights too low in trying to be practical, or are they apathetic about their responsibilities to the community?

Mirich and Voris think the lack of professional education in law enforcement is partially due to the expectation by the *citizenry* that local law enforcement will always recruit its manpower from the ranks of the unqualified due to apathy, lack of interest, neglect, and a serious lag in communications between law enforcement and the public.

Although I do not attempt to criticize noncollege police officers or the agencies which employ them, and although I am fully aware of the thousands of dedicated, sincere, and capable police officers without college educations, I am allied to the premise that if we cannot obtain the better-educated man, then we must promote higher education within our own circles.

Police officials have often prescribed higher education for their personnel, as the August, 1966 issue of *The Police Chief*, almost entirely devoted to police training and education, shows. But the gap between "wanting" and "doing" is still very wide.

Every police administrator, every bureau, division, and unit within a police agency, wants its share of the "best" available. Police agencies have established standards for police appointment in their jurisdictions which include mental, physical and, in some cases, psychological testing for candidates. These standards and qualifications, however, vary from locale to locale. When the need for recruits arises, and the supply is low, some agencies will temporarily raise their entrance salaries a bit; others will lower their physical requirements, trusting that highly qualified young men, shorter in stature, will apply in large numbers.

Does this mean, then, that we should settle for less and lower our standards, so vital for police practitioners, and open police employment to all? Such policy would be unthinkable.

RAISING OUR SIGHTS

I feel that this shortage of college-educated recruits stems from police recruiters failing to see the problem from a higher perspective. When are they going to realize that we are not now even competing with industry and other public agencies? Of course we must raise police salaries; of course we must offer fringe inducements. But we must also stop our negative thinking and learn to approach the problem positively: *We must offer education as an inducement to employment.*

We must attract the man who has not had the opportunity of securing a college education, and make it possible for him to come to work after training as a police officer and continue his education—basically at community expense.

Recognizing that the lack of inducements is draining potential police manpower, O'Connor and Watson state:

". . . The only solution is better selection procedures with emphasis on upgrading the entire police operation. In fact, ultimate licensing of men for police jobs on the basis of education and other qualifications is a desirable goal for the future. Improvement in beginning salaries and in working conditions are matters which must receive simultaneous attention in order to attract suitable candidates."

And, we should go one step further as Berkeley, California has done. There the non-college police officer is encouraged to acquire college credits while fully employed by giving him financial and promotional inducements.

California began its state-wide system of police training in 1931, and by 1959 with the inception of its Peace Officers Standards and Training Commission (POST), had legal standards for recruitment and training of local police officers. The program allocated funds to those agencies which participated by paying one half of the salaries of trainees.

Farris has shown how the growth of two-year community colleges has helped police education move from the realm of terminal-vocational education into the sphere of true higher education. And California junior colleges contributed largely to the standardization of police education. The two-year colleges are accessible to almost every locale; the facilities, for the most part, are free for residents and include curricula of interest to all members of the community; and the range of subjects offered encompasses almost every known field. It is natural that police education should come into its own in such an atmosphere.

This marriage of higher education and police training in the West has already borne results. O'Connor and Watson learned that in the Pacific Region (California, Washington and Oregon) 55.5 per cent of the police force attend or have completed college courses, with 18.6 per cent having one or more college degrees, while in the Middle Atlantic States (New York, Pennsylvania, and New Jersey) 17.6 per cent attended or completed courses, with only 4.1 per cent having one or more degrees.

Other states have also enacted legislation, voluntary or mandatory, regulating the minimum hours of recruit training, curricula, and other guides for police recruits which has served to encourage the growth of college programs in police education.

In New York State, police education at the community college level is also making strides. In 1964, the writer helped to inaugurate the first pre-service police science program at the college level. So popular and appealing has it become that, as of June 1966, the school received over 250 applications for the 50 available seats for the fall semester.

This growth has been planned and is not just accidental. The success of a police science college program must be attributed to police *and* community acceptance of the necessity for *financial* support. When a community will pay for at least half, or better still, the *full* cost of tuition and books for police officers at the community college, attendance is stimulated.

Effective in September 1966, the Rochester, New York, Police Bureau, in cooperation with the Monroe Community College, inaugurated a work-study trainee program to span a period of three years. About twenty selected young men, aged 17 to 21 years, physically, educationally, and mentally eligible for police work and college entrance, were appointed after preliminary examination as police cadets. They attend college for twelve credits per semester and work 20–25 hours per week at selected clerical tasks in the Rochester Police Bureau. The trainees are paid for their work, have their tuition expenses and fees paid, and will be required to work in the Bureau full-time during the summer school recess. Upon attaining an Associate of Applied Science Degree in Police Science, the trainee will be required to work for at least three years in the Bureau as a police officer. If a trainee fails to stay with the program, or for any reason fails to complete his contractual obligation, he will be required to return the money spent on his education.

But what about the student who studies at the two-and-four-year colleges in police science at his own expense? Communities may find it less expensive to offer these graduates positions on their police forces at the third, fourth, or even higher steps in the salary schedule than to pay the costs of their pre-schooling. If they are to attain professional status for their police officers, if they truly believe that police work is a skilled occupation and a technical craft—then they must find a way to employ trained educated people.

Lateral entry has been suggested as another means to obtain professional personnel. Although I realize that this idea is repugnant to some police agencies, they and state civil service bodies would do well to consider revising existing regulations to promote "open" entry by qualified applicants. If adopted, such a procedure might well open the way for the hiring of experts and technicians from other agencies. It might also become a stimulus for existing personnel to upgrade and advance themselves in situations where intra-departmental advancement is otherwise blocked.

ACTING TOGETHER

The experience of the Police Science College of the City University of New York, just concluding its first academic year as an independent senior college of a university, is proving that an interplay between the academic and police community can make possible the professional development and testing of educational theory. That police officers of all ranks are going about their daily tasks in the department and continuing their education at the same time is (1) helping to destroy the myth that the college man will not come or stay in police work, and (2) helping to develop more understanding for both participants. Similar goals are, of course, being reached on the West Coast in the program already discussed.

The modern police administrator has the responsibility of "selling" his community on this concept of higher education for police personnel. A. F. Brandstatter states:

"The message is becoming quite clear that traditional practices are considered to be inadequate; the police, the schools, and other agencies must act together in bold imaginative ways, if they are to be successful. The police are in a unique position to provide leadership to develop creative new programs, consistent with police goals. The role of the police in its relationship to the community regarding crime is to give leadership and be the positive force around which the rest of the Community rally."

The need, then, for more education for police work is apparent. Indeed, if professionalization is to be achieved in police work, the higher education of police officers becomes obligatory. And the way is clear to utilize the growing orbit of the two-year community college as the fulcrum of police education. When we raise our sights, we can raise our standards. When we promote police education, we promote community service.

The police administrator must seize the initiative and make education work for and within his department. When a community pays for the education of its police officers, young men and women will readily grasp the opportunity. No longer will police departments have to vie with industry and other public agencies for the college man; no longer will these departments have to resort to hiring "cast-offs;" and no longer will they deplete their patrol forces of the "best" to fill vacancies in their specialist services like youth divisions, research and planning sections, or technical laboratory bureaus.

One Thousand Jobs for Kilmer Corpsmen

EXTENSION OF REMARKS
OF
HON. EDWARD J. PATTEN
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. PATTEN. Mr. Speaker, a notable and proud milestone was reached a few weeks ago at the Kilmer Job Corps Center in Edison, N. J., when the 1,000th corpsman was placed in employment.

As the following article from the Evening News, of Perth Amboy, N.J., disclosed, Earnest Jackson, a high school dropout and former laborer, joined the Job Corps in June 1966 and graduated from the center's automotive school. He is now employed by the Ford Motor Co.'s Edison assembly plant as a metal finisher and is earning up to $225 a week.

Earnest is only one of the 1,497 young men who graduated from the center since February 1965—proof that if a disadvantaged youth is given a fair and decent chance to learn a trade, he will usually succeed and become a useful citizen.

I think it is very important to recognize the many achievements of the war against poverty, instead of merely singling out the problems and inevitable misfortunes of this vast and challenging battle against deprivation. The war against poverty has not failed; it is succeeding, but is a war that cannot and will not be won overnight. It will take years before total victory is achieved and I have faith in it.

The article follows:

[From the Evening News, Perth Amboy, N.J., Dec. 29, 1966]

ONE THOUSAND JOBS FOR KILMER CORPSMEN

EDISON.—A 22-year-old corpsman from Miami, Fla., is the 1,000 corpsman placed in employment by the Kilmer Job Corps Center, Center Director D. L. Webber announced today.

Earnest Jackson who just graduated after completing a course in the center's automotive school, has been hired by the Ford Motor Co. here and began work immediately.

One of Kilmer's outstanding auto body repair students, Jackson has been hired as a metal finisher in the local plant which assembles 400 Mustangs per day.

His "touch for metal" has enabled him to turn an avocational interest in designing and making rings and jewelry into a lucrative sideline which has earned him extra money at the center and in New York's Greenwich Village during his stay at Kilmer.

Earnest, whose dependability led to his becoming a lead corpsman and assistant instructor, lives up to his name in his daily activities.

Married and the father of two-year-old Earnest Carl, Jackson turned to the Job

Corps to find a trade which would enable him to support his family. His wife, a nurse, remained in Florida to work in a local hospital when Earnest came to Kilmer.

Earnest arrived at Kilmer on June 12 and enrolled in the office machinery operator's course at the center's commercial technology school. He soon switched to auto body repair and learned his new trade under the tutelage of instructor Goodrow Ryans.

He developed an interest in making rings, although he had never worked with metals prior to coming to Kilmer, and soon became a nightly visitor to the arts and crafts shop, working with sterling silver in making custom rings and jewelry.

Robert Rosenstein, supervisor of arts and crafts, noting the deft way in which Jackson worked with silver, interested him in a parttime position in Greenwich Village working in a jewelry shop. The owners were so impressed with him that they offered to send him to school to learn the trade.

Jackson thought it over, but the offer from Ford was too good to pass up, so he accepted his present position, where he works the night shift.

With his overtime and night differential, Earnest is making more than $225 per week.

Robert Wilson, paint department superintendent at Ford, said, "The skills Earnest acquired at Kilmer Job Corps are of great value to us. By joining the Corps, he demonstrated he had a real desire to learn.

"This, plus his newly acquired knowledge, makes it appear that he will be a real asset to Ford."

Jackson dropped out of school in the 11th grade and worked as a laborer for Miami Shores, Fla., before deciding to "step up to Job Corps."

Earnest lived in Goulds, Fla., south of Miami, with his grandparents, Mr. and Mrs. Erkelee Mabry, before marriage. He has three brothers and three sisters.

A total of 1,497 Corpsmen have graduated from Kilmer's six schools since the center opened in February 1965.

The six schools are food service, commercial technology, transportation, electrical-electronics, building and metal trades and automotive.

Man of Year Award

SPEECH

OF

HON. KENNETH J. GRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. GRAY. Mr. Speaker, it is a real privilege to join my colleagues from Illinois in congratulating our outstanding Lt. Gov. Sam Shapiro on being selected to receive the Man of the Year Award by the Jewish National Fund. Mr. Sam as we affectionately call Lieutenant Governor Shapiro, is a man of rare talents. He has proven ability to represent Illinois in the finest tradition. Sam has been a great leader in the field of mental health. He has led the fight for many pieces of progressive legislation both as a lawmaker and as presiding officer of the State senate.

Mr. Speaker, as my esteemed colleagues from Illinois have pointed out, Sam Shapiro is highly deserving of this signal honor being bestowed upon him by the Jewish National Fund in Chicago on January 31. I want to add my congratulations to Mr. Sam and wish for him many more healthy, happy years of dedicated service.

American Medical Association Volunteers for Vietnam

EXTENSION OF REMARKS

OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. WILLIAMS of Mississippi. Mr. Speaker, a group of dedicated American physicans are applying their professional skills in a unique project designed to ease the acute medical care crisis in Vietnam. In the best tradition of their profession, they are bringing aid, comfort and hope to a beseiged people—the victims of the miseries and horrors of war.

Malcom E. Phelps, M.D., of El Reno, Okla., the distinguished field director of the American Medical Association Volunteers For Vietnam, outlined the accomplishments, challenges and sacrifices of these volunteers in a thought-provoking speech to the House of Delegates at the Clinical Convention of the American Medical Association at Las Vegas, Nev., on November 29, 1966. His highly cogent observations, moreover, contained a warning of the pitfalls which accompany any signs of appeasement by our leaders toward the Communist aggressors. I hope all Members will read the address of Dr. Phelps, which follows:

Mr. Speaker, Mr. President, distinguished guests, fellow delegates, ladies and gentlemen: Since the days of Aesculapius, the practice of the art and science of medicine has been a most rewarding profession.

The relief of suffering . . . the prolonging of life . . . the mending of broken bodies, and spirits as well . . . is a primary concern to all of us—one which regulates our daily lives.

Often in the past, it has been the physician to whom people have turned in their darkest hour. And . . . the true physician has never failed to respond. History records many such occasions where physicians . . . often through much personal sacrifice . . . justified the faith, confidence and trust accorded him by those who looked to him for help.

In the past few years . . . it seems . . . there has been an organized and studied campaign to destroy the image we have inherited and have tried to preserve. I think we will all have to admit this campaign has met with some success . . . at least in certain quarters.

At times . . . some of us have aided and abetted this movement because we were lax in preserving our deals. Some thoughtless or ill-considered action by a single member of our profession often reflects discredit on all of us and destroys the image that has taken years to create.

For the past five months I have had the privilege of serving as your representative . . . co-ordinating the work of more than 80 of our colleagues who are . . . I believe . . . doing more to restore our image than perhaps any other group in existence today. I include . . . also . . . the 120 doctors who participated in the program before the American Medical Association assumed responsibility for administration of the project.

For those who might not be aware of the effort . . . may I explain:

Beginning in September 1965 . . . under the People-to-People Foundation . . . American doctors volunteered two months of their time and skills to help the civilian population in a land that was under Communist attack and infiltration. I refer to the struggling new nation of Vietnam. With the sanction of this House of Delegates . . . at the June 1966 meeting in Chicago . . . the American Medical Association assumed direction of this undertaking as of July of this year under contract with the Agency for International Development of the U.S. State Department.

There are some 16 million persons in Vietnam who . . . until this program started . . . had about 100 doctors available to treat their many ills and injuries.

Public health services . . . preventive medicine . . . and ordinary sanitary measures were largely non-existent.

Add to all this the tremendous number of civilian war casualties and you may get a faint inkling of the great need for modern medical care in this country.

These past few months I have been privileged to visit practically all of the hospitals throughout this colorful country and personally witness conditions as they exist.

For those of you who have not personally seen Vietnam . . . it is almost impossible to imagine conditions as they are today. Most of the hospitals are at least 50 years old and were built by the French during the 86 years in which they dominated this country.

Until recently . . . when the United States became involved . . . most of the hospitals had no electricity . . . no running water . . . and no sanitary facilities.

At least . . . in part . . . some improvement has been made. Now . . at least . . . most of the hospitals have a reasonably modern surgical suite.

But . . . the hospitals still are appallingly overcrowded. For example . . . it is usual and customary for two and at times three patients to occupy a single bed. I visited one 1300-bed hospital which had 1800 patients. And . . . compounding this situation . . . was the fact that the hospital's entire medical staff consisted of two Vietnamese physicians who were doing what they could to render care.

It was to this setting that the American Medical Association Volunteer Physicians for Vietnam brought and is bringing its dedication . . . knowledge and skills to serve humanity . . . with no thought of personal gain or reward. And . . . this service is offered at personal hardship and privation and at times personal danger. Supplies and equipment often are meager or nonexistent. The only things never in short supply are patients in dire need of attention.

Vietnam is a medical museum. Tuberculosis is the biggest problem. Typhoid is rampant. Intestinal parasites are universal. Leprosy . . . plague . . . cholera . . . smallpox . . . tetanus . . . and diptheria . . . are not uncommon.

Add to this the tremendous number of war injuries from which this civilian population is not immune . . . and you may get a faint idea of the demands on the doctor who goes to this area.

War casualty admissions in some of the hospitals run from 75 to 90 per cent. As a case in point—early one morning the day after four of the volunteer physicians arrived . . . 181 casualties were brought into one hospital. These dedicated doctors worked for almost 36 hours . . . without rest . . . and saved many lives and limbs by their efforts.

Upon completion of his assignment . . . the Government of Vietnam present the doctor with a beautiful certificate, acknowledging his contribution to the people and thanking him . . . in behalf of the government . . . for his service.

To show their appreciation . . . many of the communities also present plaques, gifts or other tokens of gratitude to doctors who have done so much in the short two months they have served the villages.

One town . . . for example . . . renamed its hospital for a doctor whose contributions were especially appreciated. The entire community gathered at the airport to see him off and then met every incoming plane for the next several days to welcome his successor.

These American doctors . . . truly . . . have made a tremendous impression on the people of this war-torn nation. So much so . . . that it is not at all uncommon for a member of a family to carry an ill member of the family as much as 50 miles . . . on their backs. . . . in order to be treated by an American doctor.

Yes . . . the American physician has made . . . and is making a tremendous impression on these people and helping them in their fight against their oppressors.

It is a most rewarding sight . . . one that the departing physician will always remember . . . when hundreds of villagers gather to bid him farewell. As he boards the departing plane he can see his many grateful patients . . . and their loved ones . . . who have come to thank him in the only way that they know—by waving their hands and wiping the tears from their eyes as he leaves them behind.

It is not necessary to understand or speak their language. The look on their faces says much more than words ever could. These are faces which tell a story of reverent adoration for a stranger who brought so much to them in the short time in which he lived and was a part of their community.

Before I close . . . I must tell you the war in Vietnam is not a civil war. It is aggression and subversion by the Communist oppressors who desire to control the lives and property and enslave the people of this land.

Unless you could see . . . as I have seen . . . you would not believe that a human being could be capable of committing the acts of savage butchery that the Reds are committing daily in this land.

The acts of torture of innocent women and children they inflict never could have any military significance. They are inhumane acts . . . the sole purpose of which is to create terror in the countryside.

Our gallant troops are doing a marvelous job in assisting the Vietnamese to remain free and the master of their own destinies. Their lot is difficult and dangerous and is made more so by talk of compromise or cessation of bombing of the supplies and lines of communication of the aggressors.

Each demonstration by the bearded beatnik and his stupid followers encourages the enemy and prolongs the conflict and is . . . in a sense . . . responsible for the sacrifice of American lives and the butchery of countless women and children in a land of people whose only desire is to be left alone to live their own lives without being enslaved.

The hope of the Communist is that we will become weary of war and that they can enslave Asia and . . . eventually . . . the world.

Anti-military demonstrations in the United States add to the Communist ardor and encourages them to continue their oppression.

In closing . . . I would again like to doff my hat to the individual American physicians who are living up to the highest ideals of our profession in their service in Vietnam.

And . . . too . . . may I offer my congratulations to this House of Delegates of the American Medical Association for its foresight in instituting a program of such magnitude. Not only is the program providing direct medical aid . . . it also is . . . through the resources of American medical educational institutions . . . providing technical advice and assistance to the medical schools in Vietnam so that they might support and develop their own programs, personnel and facilities toward meeting the accelerated health requirements of the people of Vietnam.

Again . . . you have met the challenge of aiding the cause of humanity.

Because of the actions of the individual doctors who are serving the cause so magnificently in Vietnam . . . because of the actions of men like you in this House of Delegates in providing such a program . . . I am indeed proud to be called a doctor and a colleague of such dedicated men.

Thank you.

New York State Legislative Program, 1967, Affiliated Young Democrats, Inc.

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks, I am pleased to submit the legislative program for 1967 adopted by the New York State Affiliated Young Democrats, adopted December 22, 1966:

AFFILIATED YOUNG DEMOCRATS, INC., OF NEW YORK STATE, ADOPT LEGISLATIVE PROGRAM FOR 1967 AT THEIR STATE MEETING HELD AT THE HOTEL PICCADILLY, NEW YORK CITY, DECEMBER 22, 1966

The Affiliated Young Democrats of New York at their State Legislative Committee meeting held last evening at the Hotel Piccadilly, 227 West 45th Street, New York City unanimously endorsed their State Legislative Program for 1967, which Program will be introduced and advanced in the State Senate by their 20 members, under the Chairmanship of Samuel L. Greenberg of Kings County; and in the State Assembly, by their Chairman, Dorothy H. Rose of Erie County, with their 45 members in the Assembly.

AFFILIATED YOUNG DEMOCRATS STATE LEGISLATIVE PROGRAM FOR 1967

1. Bill requiring State-Wide Primaries for all State Offices.
2. Raise drinking age to 21 years.
3. Change Condon-Wadlin Law with no strike clause, and to settle all strikes by impartial Arbitrators agreeable to both sides.
4. Lower voting age to 18 years.
5. Stronger Code of Ethics.
6. Bonus for Korean and Vietnam Veterans.
7. Study cost and financing of all Political Offices and a bill for this solution.
8. Tighten Laws to combat air and water Pollution.
9. Strengthen Law to ehforce Compulsory Auto Insurance Law.
10. Raise the Juvenile Jurisdiction of the Courts from 16 to 18 years. All youthful offenders should be put in different Institutions than adults.
11. Law to enforce sale of purchase of cigarettes, tobacco, and cigars to anyone under 18 years of age.
12. Raise minimum wage to $1.75 per hour.
13. Outlaw Boxing.
14. Permanent Spring Primary Election day in June.
15. Mandatory free tuition at all State and City Universities and Community Colleges.
16. A printed Record of all proceedings verbatim of each State Legislative Session be made available to the public.
17. Bill to create three day-week-end plan to celebrate all Holidays, except Religious Holidays, on Monday.
18. More incentive Scholarships to assist needy students to go to College.
19. Bill for permanent Personal Registration be made State-Wide; and changed to have less congestion in New York City.

A. Do not have to Register if a person moves in same County of New York City, only have to mail notarized change of address to Board of Elections of that County.

20. Bill for State-Wide Recreation Department to be created.

Richard H. Wels, Chairman of the State Legislative Committee of the Affiliated Young Democrats of New York presided at this important meeting.

Tourism Rough, One-Way Street in Red Countries

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. DERWINSKI. Mr. Speaker, with Americans embarking on a naive and dangerous drive for coexistence with Eastern European Communist governments, the following article by Copley Press Columnist Dumitru Danielopol, which appeared in the San Diego Union on January 3, 1967, is especially kindly:

TOURISM ROUGH, ONE-WAY STREET IN RED COUNTRIES

(By Dumitru Danielopol)

This is to be "International Tourist Year."

It was proclaimed by United Nations Secretary General U Thant.

The idea is to encourage travel throughout the world—even in the Iron Curtain countries. Or, perhaps, especially in those countries.

Undersecretary of State Eugene Rostow has asked the 21-nation Organization for Economic Co-operation and Development to explore extended tourism in Communist lands.

President Johnson said in his Oct. 7 speech that "the American government took additional steps to liberalize travel to Communist countries in Europe and Asia. We intend to liberalize these rules further."

The Communists are eager to help. Their governments are hungry for hard currencies that the Western tourist brings with him.

But before everyone rushes off to Minsk or Pinsk or Mamaia or Sophia, they might pause and ponder. Anyone who was once a citizen of an Iron Curtain country should bear in mind the risks involved.

The Communists often do not recognize the new nationality of their former citizens. These people can be arrested on any excuse.

Remember Czech-born American Vladimir Kazan-Komarek, who was arrested at the Prague airport when his Russian airliner made an unscheduled stop on a "nonstop" flight from Moscow to Paris.

The man is a travel agent. He was invited to Moscow for a conference. If anyone was immune, it should have been Kazan-Komarek. But he's sitting in a Prague prison, accused of espionage and anti-government activities.

"Any person who escaped from behind the Iron Curtain must be crazy to go back," remarked Al Mikulik, an Aurora, Ill., businessman who also escaped from Czechoslovakia some years ago.

Other former East Europeans also have found a strange brand of hospitality.

The exile newspaper BIRE of Paris recounts the adventures in Romania of one Mrs. Rothman, nee Neuman, an Austrian, who lives in Vienna.

Lured by the ads of the Romanian tourist office "Carpati" in Vienna, she decided to drive to the Transylvanian town of Orades to visit her brother, Gabor Neuman.

She got her papers, loaded her car with presents for her family and set off for Romania.

As soon as she reached Orades, the exile paper states, she was arrested along with her entire family and taken to the security police building. The whole family was stripped and searched.

Two policemen stayed at her brother's residence and arrested everyone who came to visit.

The family's "interrogation" lasted several days. Finally they were released, minus the presents Mrs. Rothman has brought from Vienna. A police captain called Mocanu, who is chief of the economic department of the security police, got those.

Mrs. Rothman was ordered to leave the country immediately. She was escorted to the frontier. At the border her luggage was taken out of the car. When she protested, her car was taken apart piece by piece.

Mrs. Rothman's case was an extreme example of the "attention" foreign visitors receive from the Romanian ministry of interior affairs. But no one escapes notice.

Tourists and businessmen returning from Bucharest invariably report some form of police surveillance.

The United Nations' tourism promotion is based on the theory that travel increases understanding. This is true when travel is free and reciprocal.

But how many people of the Communist lands are going to get the dollars or pounds or francs necessary to travel in the West? And how many will get passports?

As with everything, the Communist looks on tourism as a one-way street.

The Next Move Is Up to Hanoi

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. MULTER. Mr. Speaker, our Government has done everything possible to open negotiations for a peaceful settlement in Vietnam. We have met with nothing but rebuffs. This is clearly pointed out in the following editorial from the January 5, 1967, edition of the New York World Journal Tribune, the next move is up to Hanoi.

The editorial follows:

THE FOUR SHARP POINTS

Harrison Salisbury's interview with North Viet Nam's Premier Pham Van Dong could be important—more so than the same correspondent's account of the effects of American bombings, which caused such a stir.

That is why it is difficult to understand the New York Times' effort to keep the story for its very own, until it was pried loose, not by American news agencies, but Tass.

The potential significance of the interview lies in Premier Dong's assertion that the "four points," which have been the war aims of North Viet Nam and the Viet Cong, were not pre-conditions for negotiations, but "valid conclusions for discussion."

The four points require American withdrawal and the acceptance of the Viet Cong as the voice of South Viet Nam. The United States naturally cannot accept what is in effect surrender in Viet Nam, but it has expressed its willingness to have the four points laid on the conference table.

Since the four points are thus no obstacle to beginning negotiations, (even though they may well hinder a settlement), why not sit down and talk?

The premier says the "party which has to make first steps is Washington." If he means diplomatic initiatives, Washington has made all of them, through every possible avenue. If he implies an end to the bombing, that is another matter. The United States has opposed it without some balancing action, or promise, or at least direct contacts to discuss the question, by the other side.

But the premier also says there is no hurry about negotiations. "Let the situation ripen," is his conclusion.

Meanwhile, of course, men, women and children are dying in Viet Nam. To what end? The premier, who, with Ho Chi Minh, could stop the fighting and begin the talking, does not say. Possibly he is too busy issuing public rebuffs to those who are trying to bring about negotiations. The next move is obviously still up to Hanoi.

Retirement of Mrs. Dorothy Heller, Director of the Junior Red Cross Program, Cleveland, Ohio

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. VANIK. Mr. Speaker, over 2 million young people in my city of Cleveland, Ohio, and the metropolitan area have directly benefited from the dedicated work of Mrs. Dorothy Heller, director of the Junior Red Cross program in the Cleveland chapter of the Red Cross.

Mrs. Heller's activities are renowned not only in Cleveland, but throughout the country and in many parts of the world. Mrs. Heller has served as adviser and consultant to educational and youth programs not only directly through her own contact but through the hundreds and thousands of young people who have benefited from her guidance. We in Cleveland are indeed grateful for Mrs. Heller's work and wish to her every happiness in her future endeavors.

I wish to introduce at this point in the RECORD an article which appeared in the Cleveland Press by Bob Seltzer entitled "One-Year Job Spreads Into 30."

The article is as follows:

ONE-YEAR JOB SPREADS INTO 30

(By Bob Seltzer)

Mrs. Dorothy Heller was invited to become director of the Junior Red Cross early in 1937. She took the post on Feb. 1 and vowed she would remain only one year.

Thirty years later, with her program grown from 12,779 children in 36 schools in 1937 to 407,700 children in 587 schools in Cuyahoga and Geauga counties today, under the new title of Red Cross Youth, Mrs. Heller will retire Feb. 1.

Her retirement will create a void for about 2,000,000 students in her Red Cross programs since 1937. On a desk in her office and in cabinets are graduation photographs of many boys and girls. They write and visit her. They invite her to their weddings, and later bring in their babies. She was their good friend and counselor.

"The Red Cross asked me to develop a program in 1937," said Mrs. Heller, a jolly woman of 62, with lively blue eyes and gray hair. "I stayed on because I saw many challenging needs.

"Our program saved many from becoming school dropouts. It enable me to help children learn the joy of giving of themselves and helping others. It taught the motivation of learning, and unearthed interests and talent and developed leadership.

"The students developed a respect for personal and community health. They gained a better understanding of international relations. Recently they filled 5000 gift boxes with crayons, paper pads, tooth brushes, soap and toys for children in foreign lands. They sent health and stationery kits and school chests to children of South Vietnam."

Mrs. Heller's program, part of school curricula and guided by educators, teaches first aid, home nursing, art, disaster training, water safety and swimming, recreation, sewing and other subjects.

Junior and senior high school students paint facets of American life for distribution in foreign lands and exchange albums with children of other nations. They bake cookies for patients at veterans hospitals. Last Christmas they decorated a tree, the windows and walls of Wade Park VA Hospital.

Sewing classes make layettes, stoles and adult bibs of terry cloth. Kindergartners now are making valentines. College students sing folk songs, help feed and wheel patients at Wade Park VA Hospital. High School girls volunteer on the Red Cross Blood Mobile, work at the canteen and in the office at Greater Cleveland chapter headquarters at 1227 Prospect Ave. Others assist shut-ins at institutions.

In 1959 Mrs. Heller and another adult leader were chosen to escort 14 American high school students on a six-week international study mission in Europe.

Mrs. Heller graduated from West Tech High School, and earned a bachelor degree in education and a master's in musical education at Western Reserve University School of Education. She is a talented pianist.

She taught two years at Memphis School, then had to resign because she had married. Invited to a summer session at WRU as a music teacher, she accepted a post in teacher training and served six years, until Red Cross lured her away. Her husband, Otto, has been an accountant for the U.S. Steel Corp. for 33 years. They live at 6807 Ackley Rd., Parma.

Lt. Gov. Samuel H. Shapiro

SPEECH

OF

HON. DANIEL J. RONAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. RONAN. Mr. Speaker, it is a pleasure to join with my Illinois colleagues in extending congratulations to our distinguished Lieutenant Governor of the State of Illinois, Samuel H. Shapiro, upon being named as the Man of the Year by the Jewish National Fund. Sam will be the guest of honor at the Jewish national fund testimonial dinner on January 31, at which time he will be awarded the Keter Shem Tov—the Crown of a Good Name.

Having known Sam Shapiro for many years including service together in the Illinois State Legislature, I can easily attest to the fact that there is no one more deserving than he for this high honor. He will wear well this symbolic crown. I am certain that he will continue to epitomize those qualities and characteristics for which he was chosen and for which he has long been recognized, and thereby add new luster to this coveted award.

It is my earnest hope that Sam will enjoy his newest honor in good health and that we may all continue to be beneficiaries of his good work for years to come. I also with to express my best wishes to his family who undoubtedly are rightfully proud of him on this august occasion.

Texas Partners of the Alliance

EXTENSION OF REMARKS

OF

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. PICKLE. Mr. Speaker, I would like to call the attention of my colleagues to the splendid work being accomplished by the Texas Partners of the Alliance, a private program aided by the U.S. Agency for International Development.

The Texas Partners of the Alliance program, which is attempting to foster trade and industry between the United States and Latin America, has met with marked success.

I feel that the program's noteworthy benefits and a glimpse of its great potential received excellent treatment in three recent articles appearing in Texas newspapers.

I commend these articles to the attention of our colleagues.

The articles follow:

[From the Austin American, Nov. 29, 1966]

Ambassador Speaks at Session Here: Peru's Stability, Development Posibilities Cited

(By Kaye Northoott)

The Peruvian ambassador to the United States told Texas and Peruvian businessmen Monday that his country's monetary stability, economic freedom and incentives for new industries insure Peru a "diversified and sound development."

Ambassador Celso Pastor spoke during the morning session of the one-day conference originated by Speaker of the House Ben Barnes and sponsored by the Texas Partners of the Alliance and the Texas Industrial Commission. Six Peruvian businessmen accompanied the amabassador. Approximately 100 men attended the conference.

Pastor emphasized Peru's 6.5 per cent growth rate, its burgeoning industries and "great maturity in development planning."

Peru is rich in minerals, he said. "It will surely become the primary producer of silver in the world and the third or fourth most important supplier of copper."

The country is launching a large irrigation project to convert tropical deserts into productive land, Pastor said. He pointed out that roads are being built to overcome isolation of many communities and that the marginal forest highway being cut through the Andes "will be for Peru what the conquest of the far West was to the United States."

The ambassador also cited growth of Peru's fishing, oil, petro-chemical, and agricultural industries.

"The great projects of irrigation, maritime and river ports, airports, popular housing, roads, waterworks, electrification and schools and education . . . represent an accelerated development process," Pastor said.

Peruvian President Bellaunde Terry, a University of Texas graduate, has "instilled a mystique of development and a profound sense of human solidarity," he said.

"Internaional communism tried to strangle development in Peru," Pastor said. The country "rejected and completely defeated the subversive action of guerrillas in the Andes" and "offered the free world an example of what the faith and hope of a people can do," he said.

Harding L. Lawrence, president of Braniff International, told the group after lunch that north-south trade routes, heretofore overlooked, are opening up.

Within the next few years, "while passenger traffic doubles, we expect the volume of air cargo will far exceed the passenger traffic increase," Lawrence predicted.

He said traffic to and from South America has been limited to passengers because of lack of cargo capacity, but new aircraft, which will carry up to 200,000 pounds of cargo, will change the picture.

"We see Peru as a focal point or hub for economic development in South America both from the standpoint of tourism and of industry," Lawrence said.

He attributed Peru's importance to the following factors:

—An "extremely stable government" and rapidly rising standard of living.

—An aggressive governmental program to develop tourism facilities including skiing, hunting and trout stream fishing and to provide a favorable atmosphere for foreign capital investment and industrial development.

—A friendly and highly cooperative attitude on the part of Peruvian businessmen.

Braniff will participate in the construction of a beach facility, an international market and a restaurant and night club area in Lima, Lawrence said.

During the morning session, Ray Horton, chairman of the Texas Industrial Commission, said Peru and Texas have similar problems. Both are changing from agricultural and mining economies to industrial economies and both have need for more educational and more jobs for young people.

Edward Marcus, executive vice president of Nieman Marcus of Dallas and president of the Texas Partners of the Alliance, explained that the partners program is not a government operation, but a private program aided by the U.S. Agency for International Development, attempting to foster trade and industry between the United States and Latin America.

Thirty-one states have similar affiliations with Latin American countries, Marcus said.

Afternoon sessions were devoted to group discussions in the areas of chemical industry, food processing and agricultural products, banking and finance, hotels and tourism, and seafood and citrus industries.

Gov. John Connally, scheduled to welcome the Peruvians, was not present at the conference. He spent the day in bed, drinking milk every 30 minutes to soothe a stomach ulcer, Speaker Barnes said. Barnes, who recently made a trip to Peru in conjunction with the partners program, presided at the conference.

Another expected dignitary, Sixto Gutierrez, Peruvian minister of development and public works, also missed the meeting. He sent a telegram explaining that government matters detained him in Peru.

[From the San Antonio Express, Nov. 29, 1966]

Air Transport Boom To Hike North-South America Trade

(By Jon Ford)

Austin.—A boom in air transport during the next five years will greatly speed growth of trade between North and South America, a top airline executive predicted at a Texas-Peru trade and investment conference here Monday.

Peruvian Ambassador Celso Pastor assured a group of Texas business and industrial leaders foreign investors in his country enjoy economic and political stability.

"Latin America is entering a new stage in its economic integration," Pastor said. "We need new capital and technical assistance. Nothing would be more beneficial to the U.S. and Canada than to seek hemispheric integration," the ambassador told conferees.

Texas Speaker of the House Ben Barnes called the conference following an extensive tour of Peru last June with a Texas Partners of the Alliance team assessing areas in need of development aid. Texas Partners of the Alliance with Peru and Texas Industrial Commission were co-sponsors of the Monday sessions.

About 100 Texans attended day-long talks here with Pastor, six Peruvian bankers and industrialists, U.S. Agency for International Development and Stanford Research Institute representatives. Barnes presided.

Pastor and Braniff International Airways President Harding L. Lawrence were principal speakers at meetings in the House chamber and a downtown hotel.

Lawrence predicted passenger traffic between North and South America will double within the next few years, and that volume of air cargo will increase even more.

"It is a solid belief on our part that in the next five years air transport will greatly accelerate the growth of trade between North and South America," Lawrence said.

"Confidence in my country is attracting new domestic and foreign investment, both in the private and public sectors," Pastor said.

"Peru maintains one of the highest growth rates in the world, exceeding 6 per cent," the ambassador maintained. "Of all the Latin American countries, Peru shows the highest development rate during the last five years, greater even than those of Mexico and Venezuela. Some see Peru as the showcase of the Alliance for Progress."

Pastor said ultimate development of Peru's marginal forest highway down the eastern slope of the Andes Mountains—one of the most ambitious public works projects in Latin America—"will be for Peru what conquest of the far West was to the U.S." He said the highway would double productive land use by making a wealth of resources accessible and increasing mobility of products to markets.

The ambassador cited such Peruvian natural assets as silver and copper, oil and gas, agriculture products including cotton and sugar, and reported substantial expansion of the petrochemical, fish meal and auto assembly industries.

Other Peruvian leaders reported on investment opportunities in the areas of food processing, hotels and tourism, seafood and citrus industries and land development.

The visitors included Alfonso Montero, chemical industrialist, Lima; Tulio de Andrea and Guillermo Wiese, Lima bankers; Dr. Orlando Olcese, Lima food retailer and educator; Guillermo Ganoza, Trujillo banker and agricultural industrialist, and Juan Bazo, director of Peru's National Industrial Promotion Institute.

"My business investments there (in Peru) have been safe and profitable," said Houston business tycoon John Mecon, "and I can't say that about some in other parts of the world."

George Phillips, AID industrial development adviser in Peru, Robert J. Burnand, Stanford Research Institute Latin American expert, and Dr. Edwards Irons of AID's Washington investment survey division were among program participants.

Barnes reported two Texas concerns—Shamrock Oil and Gas Co. and Harvest Queen Mill and Elevator Co. of Dallas and Plainview—plan chemical and fertilizer plants in Peru partially as a result of discussions leading to the conference.

Lawrence viewed Peru "as a focal point or hub for economic development in South

America both from the standpoint of tourism and of industry."

He said this is due to the country's "stable and highly respected government," steady rise in the standard of living there, aggressive governmental programs to develop tourist facilities, industry and foreign capital investment opportunities and cooperation by Peruvian businessmen with foreign investors.

The airline executive said his company is aiding in developing Peruvian tourist facilities including additional hotels, beaches, and international market, restaurants and night clubs, outdoor recreational facilities, a new advertising concern and research and advisory data for other U.S. investors.

Lawrence said merger between Braniff and Panagra airways will increase the number of airline seats between North and South America to 22,500 a month.

Texas Industrial Commission Chairman Ray Horton of Houston said Texas and Peru are in similar stages of transition from an economic base of agriculture and mining to industry.

Edward Marcus, Texas Partners of the Alliance chairman and executive vice president of Neiman-Marcus, Dallas outlined work of the partners group. U.S. Rep. J. J. Pickle of Austin was one of the speakers at a noon luncheon.

Seminar sessions of chemical, food processing, agriculture, tourist, and seafood and citrus products industries as well as banking and finance were held during the afternoon.

[From the Houston Post, Nov. 29, 1966]

PERUVIANS EYE TEXAS BUSINESS

(By Neil Addington)

AUSTIN—Texans or anyone else desiring to help Peru develop industrially can obtain financing up to 50 per cent of the total amount needed to launch new industries, Peruvian representatives said here Monday.

Tulio deAndrea, speaking to about 100 Texas businessmen attending the Texas-Peru trade and investment conference in the House of Representatives, invited them to invest in his country's industrial development and said, "We are prepared to finance 50 per cent of the total amount needed."

Andrea, president of the Industrial Bank of Peru, was introduced as "a strong representative of the new generation."

He was one of more than half a dozen Peruvian emissaries here for the day-long conference sponsored by the Texas Industrial Commission and the Texas Partners of the Alliance with Peru.

Peruvian Ambassador Celso Pastor led the visiting speakers here for the conference called by Texas House Speaker Ben Barnes to explore the trade and investment opportunities in Peru.

Braniff International President Harding Lawrence, the main speaker at a luncheon for the group, predicted that air transport would accelerate the growth of trade between North and South America within the next five years.

"I believe the north-south trade routes, overlooked up to this point, are opening up," said Lawrence.

"We see Peru as a focal point or hub for economic development of tourism and of industry," he said, because of the stable and respected government of Peru, the rapidly rising standard of living, an aggressive governmental program to provide a favorable atmosphere for foreign capital investment and industrial development and to develop tourism facilities, plus the friendly, co-operative attitude of Peruvian businessmen.

Ambassador Pastor pointed out that Peru maintains one of the highest growth rates in the world, exceeding 6 percent. He said of all the Latin American countries, Peru has shown the highest development rate during the last five years, greater even than those of Mexico and Venezuela.

"Some see Peru as the showcase of the Alliance for Progress," he said.

Pastor said confidence in his country is attracting new domestic and foreign investment, both in the private and public sectors, and predicted that Peru would become the primary producer of silver in the world and the third or fourth most important supplier of copper.

He said natural gas appears extremely promising, with the petrochemical industries expected to thrive.

As an incentive, tax-free programs exist for the establishment or expansion of new industries, the Texas business representatives were told.

Juan Bazo, director of the National Industrial Promotion Institute, told the group there are numerous opportunities open for those interested in producing beef. An estimated 25,000 tons of beef is imported annually, which is about 20 percent of the total consumption in Peru.

"We need someone with know-how," Bazo said. "It could be a very interesting venture . . . and very profitable."

Other Peruvian delegates included Alfonso Montero of Lima, who represented the chemical industries; Guillermo Ganoza of Trujillo, an agriculture industrialist; Giullermo Wiese of Lima, a banker; and Orlando Olcese, also of Lima, a food retailer and educator.

Governor Connally, who was to have delivered the welcoming address, was unable to attend. The governor's recently discovered stomach ulcer forced him to remain at the mansion Monday.

Monday afternoon, the conference broke up into a series of seminars where specific industries and opportunities in those fields were discussed.

Introductory remarks were delivered by Edward Marcus, chairman of the Texas Partners, and Ray Horton, chairman of the Texas Industrial Commission.

Hon. Samuel H. Shapiro, Man of the Year

SPEECH

OF

HON. WILLIAM T. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. MURPHY of Illinois. Mr. Speaker, I join my colleagues from Illinois in commending the Committee of the Jewish National Fund for designating the Honorable Samuel H. Shapiro, Lieutenant Governor of the State of Illinois, as their Man of the Year.

I can readily understand this designation because of the outstanding work performed by Governor Shapiro in the field of mental health as indicated by a record of his performance in this field such as being cosponsor of the Illinois mental health code, the mental deficiency code, and other progressive mental health legislation, and also because of his chairmanship of the Mental Health Commission established in 1955.

I congratulate Governor Shapiro on being the recipient of this high honor.

I regret my inability to be present in Chicago on Tuesday, January 31, to witness the presentation of the special "Keter Shem Tov Award" to him.

Secrets of the Supersonic Transport

EXTENSION OF REMARKS

OF

HON. HERVEY G. MACHEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. MACHEN. Mr. Speaker, one of the most highly respected commentators in the Nation, Mr. Edward P. Morgan, and one of our leading newspapers, the Washington Evening Star, have directed their thoughts to the question of the supersonic transport and the apparent aura of secrecy that surrounds many aspects of it.

Mr. Morgan stated in a recent broadcast that "some backers of the SST, in and out of Government, appear to be proceeding on the theory that what the public does not know will not hurt it, especially if the damage—from the sonic boom—is soft pedaled until the public gets used to it."

In a recent editorial, the Star mentioned that a series of expensive studies on the SST is under wraps. The reason the studies are under wraps, according to news reports, is their highly unfavorable comments on the plane. If true, this is an information blackout not calculated to win support in Congress for the project.

For the elucidation of my colleagues, Mr. Speaker, I include the following in the RECORD:

[From the Evening Star, Jan. 14, 1967]

PIG IN A POKE

Judging from the noisy defense of the supersonic transport heard in Washington these days, one would think federal agencies were unanimously in favor of this $4.5 billion project to hurry up and get passengers to Europe a few hours faster.

But a report in the Wall Street Journal the other day seems to suggest not all is harmony behind the bureaucratic walls. In fact a number of economists in the Budget Bureau, Defense Department and elsewhere seem disenchanted, if not downright dismayed, by the plane's drawbacks. There's so much criticism that some observers think the President may well pigeonhole the thing or delay it indefinitely.

The Federal Aviation Agency confirms that it has now received four studies made by independent firms on SST development and costs. Although these cost the taxpayer $663,190 the results are being kept secret. Even one United States Senator interested in the program hasn't at this writing been able to get his hands on one of the documents. And there are other studies on sonic booms and comparative air fares also still classified.

The reason the studies are under wraps, according to news reports, is their highly unfavorable comments on the plane. If true, this is an information blackout not calculated to win support in Congress for the project. Lawmakers can hardly vote intelligently on appropriations where so many facts are being withheld.

One report from Interior Secretary Udall, not kept secret, noted the other day that sonic booms, presumably from military planes, already have caused damage to prehistoric cliff dwellings and geological formations in national park areas. Will there be any place to hide from aviation "progress," even in cliff houses, if the SST adds its booms over our heads?

Let's get the studies out in the open where everybody can see them. If the SST is being financed by taxpayers, they have a right to know what kind of pig is inside the poke.

If it isn't one thing, it's another. Here Lyndon Johnson has just done a good deal to fill in the credibility gap by the restraint and candor of his State of the Union Message, and now we find that the sonic boom is creating new gaps in the nation's scenery and threatening to fill in some old ones, like the standard beauty mark of Bryce Canyon.

Sometimes one has to wonder what price progress. And in so wondering the realization strikes that a liberal is not a liberal unless he is willing on occasion to become a conservative, or at least a conservationist.

The sleek, swift devil in this piece is something that does not now exist but is pushing the sinister echo of things to come ahead of it—the SST, which means, of course, the supersonic transport, a trifling piece of potentiality airworthy hardware with, the experts say, a four-and-a-half-billion-dollar price tag on it before it goes into commercial service—if it does. President Johnson has not yet answered the 50-billion-dollar question. The Federal Aviation Agency has approved the Boeing design over Lockheed's for the SST but the President has not yet given Boeing the green light to go ahead and build this 1800-mile-an-hour, 300-passenger aircraft. If and when he does, Boeing is expected to accumulate between 30 and 50 billion from sales of the plane to airlines all over the world by the year 1990. The first American SST would be ready, theoretically, by 1974.

A couple of days ago, the director general of the International Air Transport Association, Khut Hammarskjold, said neither the Boeing model nor its British-French competitor, which is farther along in construction by many months—and may be ready in 1971—met the association's economic criteria. In other words, he said, present designs will have to be further refined before either plane would be considered a profitable thing to fly.

But now the question is raised in rather vivid form of whether *any* SST would meet what might be called the public criteria. The more than ear-splitting issue here is the sonic boom. This, as any aviation buff knows, is the noise an aircraft makes when it pierces the sound barrier, the invisible boundary of the speed of sound at 660 miles an hour. But the explosion of a shock wave of air compressed by such a flight can do light or serious damage on the ground, depending on its strength. It can rattle dishes or break windows and destroy buildings.

On Wednesday the National Park Service added another classification to the inventory of damage: natural beauty. It reported to Secetary of the Interior Stewart Udall that sonic booms made by military aircraft have caused damage to prehistoric cliff dwellings in Canyon de Chelly National Monument in northeastern Arizona and to rare geological formations in Bryce Canyon National Park in Utah. Furthermore, it is possible damage has been done in other national outdoor preserves which has not yet been discovered.

Nobody knows how much damage the sonic boom of an SST would cause because no such giant has ever flown and nobody knows either, obviously, how or whether the boom problem can be solved. The prospects don't look very bright at the moment which, it might be observed, is the time to ponder the problem. Once the government and industry have jointly invested billions in the experiment, it would become more than a little difficult to ground the whole operation to preserve window panes or some historic relic of the nation's scenery.

Indeed some backers of the SST, in and out of government, appear to be proceeding on the theory that what the public doesn't know won't hurt it especially if the damage is soft-pedaled until the public gets used to it. Play that backwards and it comes out this way: if instead of being insidiously conditioned by stages the public had known in advance the dangers and nuisance of, say, pollution, the bedlam of a traffic jam and the flight-path scream of jet planes over cities, it might have demanded some built-in safeguards as the price of "progress".

A leading conservationist himself, Secretary Udall is worried about the apparent cynical approach by some SST enthusiasts to the public welfare. It has already been suggested that because of the sonic boom, the SST may not be fit for transcontinental travel, will be limited to intercontinental routes over water. But there will be great pressure—and not air pressure either—for SST rights-of-way over land too. Udall fears a suggested "solution" may be zigzag routes over open spaces avoiding metropolitan areas and crossing, thereby, most of the American scenery, National Parks and all. The problem may solve itself, however. A two-hour SST flight from New York to Los Angeles would be a little like riding in a pneumatic tube. Most of the 300 passengers would enjoy the advantage of not being able to see out. They could watch an old color movie of the Grand Canyon and be spared the spectacle of the landscape crumbling beneath them.

This is Edward P. Morgan saying good night from Washington.

Shall the Draft Be Abolished?

EXTENSION OF REMARKS

OF

HON. DONALD RUMSFELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. RUMSFELD. Mr. Speaker, with the expiration of the Universal Military Training and Service Act next June 30, the question of how best to provide for our future military manpower needs will be under discussion in the coming months. The Congress has the responsibility of deciding whether to revise and extend the present draft system or to adopt a new method of procuring military manpower.

The December 17, 1966 issue of the New Yorker includes a timely article by Richard H. Rovere on the Universal Military Training and Service Act and alternative plans that are being proposed. I believe this article merits special attention and submit it for inclusion in the RECORD.

The article follows:

LETTER FROM WASHINGTON

DECEMBER 8.—Sometime in the next six months, Congress will vote to extend and extensively amend the Universal Military Training and Service Act of 1951, commonly known as the draft. The action will be preceded by a debate, already in progress, that may turn out to be as interesting and important as any other current controversy—partly because most of the other controversies, including those on Vietnam and the state of the economy, are closely connected with it. In the recent past, congressional debate on military conscription has been desultory and largely limited to real and imagined inequities in the operations of the Selective Service System. There has been broad, bipartisan agreement that the draft is necessary, democratic, and, with a few lamentable exceptions, equitable. Fundamental changes have seldom been discussed, or even proposed, and hardly anyone has questioned the institution itself. (In their Presidential campaigns of 1956 and 1964, Adlai Stevenson and Barry Goldwater urged abolition of the draft, but neither kept the issue alive after the elections.) Now, though, there is widespread—indeed, almost universal—dissatisfaction with the way the institution works and fails to work. For the first time in the nearly sixteen years since Congress established the present draft, radical proposals for reform have come from within the government, and some congressmen are raising the question of whether conscription is today an acceptable means of procuring manpower to meet our military needs. Outside the government, there have been several calls for early repeal of the act and a reliance on voluntary enlistments. Last week in Miami Beach, the National Council of Churches passed a resolution calling for abolition of the draft. At a national conference on the draft held this week at the University of Chicago, sixty of the hundred and twenty delegates signed a petition urging repeal; the rest, it is reported, favor retention with drastic reform. Evidently, no one—with the possible exception of the director of the Selective Service System, Lieutenant General Lewis B. Hershey, who took office in 1941—is satisfied with things as they are.

Anticipating dissent and discontent, the President last July appointed a National Advisory Commission on Selective Service, and made Burke Marshall, a highly respected former Assistant Attorney General who is now a corporation executive, its chairman. Catching up rather late in the day, the House Armed Services Committee yesterday announced the formation of its own advisory group, which will be headed by General Mark Clark. The President's commission is to report to him—and, presumably, to the public—by January 1st. So far, nothing is known of its findings; its meetings have been closed, and speculation has been discouraged. "Until you see the final report, all bets are off," a spokesman told the press a few days ago. There is a suspicion here that if its findings displease the White House, copies of the report will be very hard to come by. General Clark's committee is not expected to submit its findings in time to have any bearing on public discussion of the matter. Meanwhile, though, a self-appointed ad-hoc commission has made a study of its own and issued a report that is not only bold, partisan, and specific in its recommendations but at the same time uncommonly lucid and vigorous. The Ripon Society, an organization of Republican intellectuals loosely affiliated with several of the leading universities on both coasts, last week released a study entitled "Politics and Conscription" that urges speedy abolition of the draft and total reliance on a professional military establishment.

It is an uncompromising document, contemptuous not only of the draft in its present form but of the principle of conscription itself, and of such proposals for change as the lottery system, which has been frequently endorsed by Senator Edward Kennedy, and of the "national service" proposal made last May by the Secretary of Defense. Senator Kennedy's scheme, the study says, would be one of "planned capriciousness," leaving all questions of justice and injustice to Lady Luck rather than to the four thousand fallible but indisputably human, and frequently humane, draft boards across the country. As for the McNamara plan, under which every young American, or at least every young American male, would be drafted to serve the republic in one or another of a variety of ways deemed by the government to have some measure of social utility, martial or not, the report says that it would merely "universalize inequity" and create a "gargantuan Brook Farm built on compulsion." It adds, "People in our diverse society would be just as misused by national service as by the draft, and maybe more so." The authors have no doubt about the feasibility, as well as the desirability, of getting rid of the draft and entrusting the national security to a force of professionals drawn to the armed services by attractions of the sort that draw other men to other professions. What is more, they urge their fellow-Republicans to take a straightforward political approach to the matter, making conscription a partisan issue in the next session of Congress and accepting without qualm any political benefits that may accrue from standing in opposition to an unpopular institution. They concede that in ordinary circumstances an issue of this nature should not be handled in a partisan manner or exploited for partisan gains. "But," they write, "despite the essentially libertarian and nonpartisan character of the case for a volunteer military, it unquestionably has been a Democratic Congress that has stymied reform in recent years and a Democratic President who has manipulated the issue in ways apparently calculated to prevent thorough debate." (This charge of Presidential manipulation refers to a Pentagon study of the draft that has never been fully disclosed; it is widely believed here that it leaned to the abolitionist side and was withheld because of fears that it would have an adverse effect on national morale at a time when we were embarking on a large-scale intervention in the ground war in Vietnam.) "The Republican Party," the authors conclude, "has a good foundation for reform; it need only build upon it." Some of the younger Republican congressmen intend to follow the report's advice.

The Ripon Society holds the draft to be morally repugnant and militarily unnecessary. Things being what they are, not much attention is likely to be paid to the moral argument, which, as it happens, is less than persuasive. It rests on the premise that compulsion is inherently wicked and undemocratic. "A draft by definition, is antithetic to a free society," the report asserts. No doubt, but we live with many institutions of which this may be said—the income tax, for instance, makes conscripts of us all—and professional armies, which the authors think well of, have been the undoing of several free societies. The strength of the authors' position lies in their demonstration that there is nothing "universal" in the Universal Military Training and Service Act and in their argument that this country, including its armed services, would be better off in many ways if the draft were abolished and military recruitment placed on a volunteer basis. The draft is universal only in the sense that every young man must contend with the possibility of having to spend two years of his life in uniform. But for roughly two out of three young men the possibility never materializes. The anxieties are shared by all, the sacrifices by relatively few. If all men who are qualified for service even under present physical and mental standards—which the Ripon Society believes are absurdly high—were to serve a two-year hitch, we would have a military establishment several times as large as any military man thinks necessary. Even with the demands of the war in Vietnam, all current and anticipated requirements can be met by using only about a third of the men available. In 1967, somewhat over 1,800,000 males will turn eighteen, and if the present system remains in operation, they will be subject to the draft until 1975. About a third of them will be rejected or exempted. Of the remaining 1,200,000, about half will at some time or other be inducted for a two-year term. The others, equally qualified, will simply never be needed. This makes Universal Military Service a fifty-fifty proposition—"semi-universal" at best, and, if not immoral in principle, grossly and indefensibly inequitable in practice.

Equity and necessity are the only justifications for conscription. No one has maintained that it is a desirable way of organizing a military force. The generals dislike it as much as the conscripts, particularly when the period of service is for anything less than the duration. With a two-year term, about fifty per cent of the Army—the only service that uses draftees in any numbers—has had less than one year's experience. (Even before Vietnam, the figure was forty-three per cent.) The equivalent of ten divisions is always in training. Ten years ago, a commission appointed by President Eisenhower to study the draft and related problems reported, "We must devote twenty-five per cent of our military effort to training men who don't stay. The trainers are discouraged. They resemble the poor teacher, whose every class flunks." Somewhere between ninety and ninety-five per cent of draftees serve their two years and get out. The dropout rate among first-term enlistees is also high—approximately seventy-five per cent. The Pentagon dislikes the draft but, citing figures such as these, insists that necessity demands it. Some people, however, hold Pentagon policy—or policy made for the Pentagon by the President and Congress—responsible for the necessity. In terms of motivation, there is not much difference between draftees and one-term enlistees; the latter enlist because they expect to be caught up in the draft anyway and reason that the greater freedom of choice and opportunity available to those who enlist is worth the extra year or two of service required of them. The Ripon Society report notes that after the first term the dropout rate declines to about fifteen per cent—approximately what is considered normal in such countries as Canada and England, which rely entirely on volunteers.

In recent years, in other words, several million young Americans, free of all compulsion, have found the military life rewarding enough to make a career of it—and this despite the fact that the tangible rewards have been meagre by almost any relevant standard. "Today," the report says, "an entering private in our military makes slightly more than a Rumanian peasant on a collective farm: $90.60 per month." This is well below the pay of his counterparts in Canada, England, and West Germany—and "the difference in pay is magnified in each of these cases by the gap in standards and costs of living between other nations and ours." The authors of the report insist there is plenty of evidence at hand to demonstrate that we can meet what the military planners tell us are our needs without compelling anyone to serve against his will. Even under present conditions, our armed services do about as well in attracting long-term volunteers as those in other countries, many of which do not have "the great productive margin of the United States to support its military financially." An increase in pay that would make the life of an Army mechanic and his family as agreeable as that of a garage or factory mechanic should bring, in men already trained. It would thus enable the Army to cut down on its programs to train men who after two years take the skills they have acquired at the Army's expense back to the factories and garages.

Pay increases are by no means the only reforms urged by proponents of a voluntary system. Present military policies, it seems clear, are designed to discourage men in the lower ranks from marrying and raising families. The Ripon Society proposes the reversal of these policies and of others that have made American military life needlessly drab and boring, even in appearance: "Whether from ignorance of modern planning techniques or from some misguided worship of the Spartan mystique, the military has constructed some of the most sterile and unæsthetic communal agglomerations in the country."

Even before McNamara's day, the military establishment always talked cost factors when it was confronted with criticism of this kind. Obviously, a decently paid and attractively sheltered military would cost more than an ill-paid and drearily housed one; there is no easy way to reckon the differential. Indeed, when the Secretary addressed himself to the problem—as he did on two occasions last year—there was a huge differential in his own differential. Before a congressional hearing in February, he estimated the cost of a voluntary system at four billion dollars a year; ten months later, in a newspaper interview, he put it at twenty billion. Even the lower figure, which is the one that a number of experts in and out of the Defense Department seem to agree on, is bound to make Congress shudder. It is, however, an estimate of costs alone and ignores the savings, which would surely be large. The machinery of conscription is expensive, and the policy is uneconomic. The draft absorbs men with highly developed skills for which the Army has no use. It rejects millions of men who are unproductive in civilian life but might undertake any number of military tasks. The whole economy, civilian and military, might profit greatly by the more reasonable allocations that would be made under a voluntary system. A large part of training costs could be written off over lifetimes rather than over two years. And there might be a large and gratifying saving of a kind not mentioned by the Ripon Society or other recent critics. If a professional military is really more efficient than a conscripted one, and if a major part of our military effort is now devoted to training men who will not put their training to use, then it would seem reasonable to think that we could get along with a smaller military establishment. If this were the case, the saving would be in something more precious than money. It might be seen by the world as a step toward the reduction of tensions. For us to present it in this light would, of course, be dishonest; in actuality we would only be getting, as a former Secretary of Defense used to say, a bigger bang for our buck. However, it would not be fostering an illusion to cite it as evidence that the United States wants no more military power than it needs to defend its present interests. Since many people doubt this, the assurance would be welcome.

In any debate over conscription, both sides are likely to agree that the only legitimate purpose a military establishment can serve is national defense. This is certainly what most people believe they are buying when they foot its enormous bills. In other countries, particularly smaller and less developed ones, armies are used for a variety of different purposes, some of them beneficent. The government of Israel boasts of using its armed forces as an educational institution. Armies have been used to relieve unemployment, to build public works, and to institute various kinds of social change. This government has occasionally used military men and facilities for disaster and salvage missions, and the Army Corps of Engineers has worked at the development of rivers and harbors, but the idea of using our military for any social or political end is one that would scandalize most congressmen and most voters. Nevertheless, our armed forces have served other than military ends, and have occasionally served them quite well. Military funds have been used to subsidize a great deal of scientific and social research, and the United States Army has served as a school for millions of men, especially Negroes, who in civilian life would have gone unschooled. It has never been politic for the Defense Department to say very much about this, but the Secretary of Defense has encouraged the use of the military in this way and has sought to make its educational services efficient instruments in combating poverty and illiteracy. If the draft were abolished and the higher costs of a professional army assumed, this function would in all probability come to an end. The test of military effectiveness would be more rigidly than it is today; military education would surely be curtailed to serve the rather narrow needs of professional soldiers and technicians.

The proponents of a professional army are unlikely to be moved by such considerations, for those of them who acknowledge that there have been some useful by-products of the draft can quite reasonably maintain that furtive use of military agencies for non-military ends is unworthy of a rich and free society. Nor, it seems, are they much impressed by the ancient arguments against professional armies. The Ripon Society points to Canada and England and lets it go at that. It does not weigh the dangers, well known to the French in recent years, of military establishments alienated from the societies and governments that support them. It points to our ready acceptance of professionalism in services like the police without noting the alienation experienced in most large cities between professional policemen and the civilians they serve. It may well be that opponents of the draft would have the better of the argument even if they weighed these factors in. Taken together, the war in Vietnam and the draft have already alienated a considerable part of an entire generation. Assuming it to be impossible to end the war, if its continuation involved only those who wish to be part of it, some of the terrible tensions within our own society might be relieved.

—RICHARD H. ROVERE.

Dr. Herndon's Laurels

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. MINSHALL. Mr. Speaker, we in the Cleveland area are proud that our city ranks as one of the foremost centers of medical science.

Another laurel was added recently when our distinguished Dr. Charles H. Herndon was elected the next president of the American Academy of Orthopedic Surgeons.

The Plain Dealer has paid tribute to Dr. Herndon in an editorial which I think will be of interest to the many Members of the Congress who know him and who are familiar with the brilliant work he is doing in the field of orthopedic surgery.

The editorial follows:

DOCTOR'S LAURELS

At its convention in San Francisco the American Academy of Orthopedic Surgeons this week chose a Cleveland physician, Dr. Charles H. Herndon, as its next president.

Dr. Herndon's honor brings honor also to the University Medical Center and to Western Reserve University, where he heads the teaching and practice of orthopedic surgery.

Dr. Herndon and three colleagues of the University Medical Center delivered an impressive research paper on bone grafts at the San Francisco meeting. All of them deserve congratulations. They add luster to Cleveland's fine reputation as one of America's first-rank centers of medical science.

Across the River, Part IV—The Star Documents a Civic Crisis

EXTENSION OF REMARKS

OF

HON. HERVEY G. MACHEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. MACHEN. Mr. Speaker, the fourth article in the excellent series, "Across the River," by Haynes Johnson, published last week in the Washington Evening Star, examines the schools in the area east of the Anacostia River which have been struck by spreading lawlessness and apathy among the younger generation.

In this situation—

Writes Mr. Johnson—

the schools are expected to assume the responsibilities of the parents, and the community. But obviously, the schools cannot. They are doing everything that can be done, given things as they are today.

This article, published on Thursday, January 19, 1967, in the Star, follows:

ACROSS THE RIVER—4: CROWDED SCHOOLS AND THE LURE OF THE STREETS

(By Haynes Johnson, Star staff writer)

During school hours, when the weather is fair, groups of teen-agers can be seen walking the streets Across the River. They congregate on corners, sit on cars, and move idly through the neighborhoods. If you stop and ask one what school he goes to, often the answer will be:

"I go to the twilight school."

The truth is, their school is the school of the streets. It teaches hard lessons.

Truancy is common Across the River. Take the modernistic Ballou High, in the Congress Heights section of the far Southeast, where juvenile vandalism has been examined in earlier articles. Absenteeism there runs from 15 to 20 percent of enrollment. That means 250–300 teen-agers from that school out on the streets every day.

They are unsupervised—and uneducated. Their futures are bleak. Inevitably, they are the students who finally drop out of school entirely to become the core of tomorrow's adult problems.

Like Washington in general, the schools Across the River are for the most part overcrowded and understaffed. In the far Southeast, in fact, the schools are the most overcrowded in the city. They have been that way for some years. They cannot keep pace with the increasing population.

Figures from the Congress Heights section provide a quick picture of the problem. Hart Junior High School has nearly 2,000 children in classrooms designed for 1,443. Hendley Elementary School has almost 1,500 in space for 1,056 (including four classes in the auditorium). Ballou has 1,430, when it should have no more than 1,187.

In addition, the schools experience a constant turnover of pupils, another reflection of the social turmoil of the area. New families move in, others leave, adding to disruptive influences in the classrooms. In the first eight weeks of this school year, for instance, more than 700 students were affected by moves at the Hendley School alone.

Two hundred fifty students left; some 500 entered.

What these figures only indicate are the problems of discipline and behavior which place tremendous burdens on teachers and pupils. The behavior of the streets carries over to the classrooms and corridors.

An incident this month at Hart Junior High was illustrative.

After class one day, a 14-year-old girl entered the lavatory there. She was accosted by five or six older girls, who took $1 and slashed her arm with a razor blade. Last October, in the same school, a 13-year-old girl was stopped on her way to class by a youth demanding money. He got none, and snapped the girl's arm. Last month, a group of teen-age boys and girls swept down 4th Street SE, knocking down every smaller child they met. One boy tells of being kicked and having his glasses smashed. Others tell of beatings.

And every day at Hart, by the pupils' own accounts, older youths shake down smaller ones for a quarter or a dime, threatening beatings if their demands are not met.

Windows are broken, lockers are looted, walls are decorated with profane "Magic Marker" graffiti.

Like the stores of the troubled neighborhoods, many schools bear the physical evidence of vandalism. Pieces of cardboard replace the broken window panes. In the fall of 1965, 280 broken window panes had to be replaced at Hart before school opened. Last fall, the figure had risen to 350, and vandalism in general is "the worst ever," according to the head custodian.

None of this means that the schools Across the River are part of some vast "Blackboard Jungle." The point must be emphasized that the troublemakers are only a very small percentage; that teachers and students are working together; that hope has not ended for today's youth. Still, the problems exist.

Teachers, understandably, single out control and discipline as key factors.

"I ask a student as nicely as possible to bring up her paper," says one teacher, "and she tells me to go to hell. And the rest of them laugh. What can I do? I can't send 37 kids to the office."

A DIFFERENT PERSPECTIVE

Students, also understandably, see it from a different perspective.

"The teachers pick on students," said a girl who attends the Roper Junior High School in the Far Northeast.

"When they know the student won't say anything, they pick on them. So the child fights the teacher and gets suspended. The principal doesn't pay any attention to the students, just to the teachers."

Such expressions of mistrust barely begin to illuminate the alienation and anger and often overwhelming sense of inadequacy felt by so many children from large, and poor, families. A psychologist may say they have no sense of identity; that, by their actions, they are craving recognition, demanding to be noticed.

In their own words, the children often express the same thought.

"You know," said one youth, when asked why fights occur, "you walking down the street with your girl or some other boys, and one of them say, 'Hey, man, I bet that little kid can beat your ——.' So, maybe you had a little drink and you don't know right then what to say, and your girl's laughing and so you gotta hit this little kid. I mean, how else you gonna show her?"

And, a girl, 13:

"Some girl, she say, 'Ain't you had your baby yet?' And all the other girls, they laugh. So she says it some more times and you gotta show her you a woman."

Students, particularly those from broken homes and low-income housing, often reveal a feeling of inferiority toward their more fortunate classmates. One teacher tells of students coming to her and whispering "I haven't got a father," after she asks the pupils to invite their mothers and fathers to the school. A mother in the Valley Green public housing development, put it another way:

"My girl doesn't even want to go to McCogney (the elementary School) because they tell her, 'Your mother is on the welfare.' They go to school with the middle class and the upper income and they laugh at your coat."

And a poorly-dressed teen-age boy, when asked if he had enough warm clothes for winter, laughed, and said sharply:

"No, I don't need that damn' jacket. I got two others."

Those children are still in school. Then there is someone we shall call Jimmy. That is not his real name, but his experience is all too real.

Jimmy is 18 now, an attractive looking young man. He had attended school in Congress Heights, and dropped out of junior high. When asked why, he said:

"The teacher kept throwing a whole lot of things in my face. They talk a whole lot of trash. They had to keep on talking."

On further questioning he said the teacher had threatened to tell the students "about how I got locked up, how bad I was, how I was locked up for being bad."

"Tell the truth, Jimmy," his mother interrupted, and then explained, "My husband beated me and he (Jimmy) accidentaly killed him."

QUIETLY AND CASUALLY

In fact, Jimmy had stabbed the man to death. Jimmy was 13 at the time. The man was his stepfather; his own father died years ago and he has no memory of him. Now a dropout at age 18, Jimmy lives in a family of eight other children. Two of the older children are in jail—one charged with bank robbery, the other with rape. And Jimmy tells you he doesn't like to go to downtown Washington because, he says, a friend of his was shot and killed by police there. Another friend, aged 16, also was shot and killed by police, Jimmy says, because "they thought he had a gun and it turned out to be a pipe."

Jimmy told his story quietly and casually, as if acts of violence were ordinary events, In his life, they have been. Yet Jimmy also says that he doesn't like hearing that Congress Heights is a bad place to live (he said that before these articles began appearing).

With a sense of pride, Jimmy says:

"Congress Heights is a nice place to live."

The schools did not fail Jimmy, but Jimmy is nevertheless a failure before he is out of his teens.

Another boy, also 18, gave this picture of his life:

"The trouble is, like I'm a young boy. If I had some place to go. Like a pool room, like downtown to play, but what we got to do but drink more and go to D.C. jail. How would you like it if you was stuffed down like a top on a garbage can?

"Like today, I goes downtown to the employment office to see about plumbing work and the woman says I got four (police) records. So I told her, 'no three of the records was beat.' 'They may be beat, but you still got four records,' she says. So everywhere you go you can't get no job."

He returned to his neighborhood Across the River, and spent the afternoon inside a laundromat with other boys and older men, "because," he explained, "it's warm." The rest of the day, he stands on the street corner waiting, he says, to be hired for odd jobs in the neighborhood.

"How you going to get a job if they run you off the corner," he remarked, after police told him and others to move on. "And you got a record. I'd like to go back to school and take up a trade, to tell you the truth."

One of the problems, nearly everyone will agree, is that the Jimmies of Washington, and other cities, have not been successfully reached by anyone—not their teachers, their counselors, and most certainly not their parents. In this situation the schools are expected to assume the responsibilities of the parents, and the community. But obviously, the schools cannot. They are doing everything that can be done given things as they are today.

Last month, for instance, the Congress Heights principals wrote an appeal to D.C. Superintendent of Schools Carl E. Hansen requesting a full-time nurse for each elementary school, a full-time psychologist, and one or more social workers for each school.

Hansen would be only too happy to fill the request, but there one comes back to the old Washington cycle of responsibility: Money wasn't available.

After talking to many children visiting schools Across the River in preparation for these articles, one of The Star's reporters was strongly reminded of a passage in "David Copperfield," where David says, "day after day, week after week, month after month, I was coldly neglected."

TEACHERS, REPORTER MEET

The neglect is present Across the River, and what makes it worse is that it is not intentional. No one is more aware of this than the teachers. An incident yesterday sharply underscored that fact.

A teacher from one of the schools there had called The Star to say that while what was being reported was "sad but true," she would like to arrange a meeting between a reporter and other teachers. The meeting was held yesterday afternoon with eight teachers and the principal present. It was understood neither the school nor the teachers would be identified.

After an hour of discussion, several points of agreement emerged. First, everyone felt that whatever troubles existed stemmed from only a very small percentage of the children, and that these problems could be duplicated in other areas of Washington—and in every other city in the United States. What intensifies the problems, however, in such an area Across the River, is the high concentration of public housing units with so many large families.

"Do you think that a child who has been kept up all night from loud talking or other behavior, will come to us the next morning smiling and happy?" asked one teacher.

The more they talked, the more the conversation turned to the problems lying outside the school—the problems of jobs, housing, poverty, automation, attitudes, prejudices, stereotypes, lack of communications. To illustrate, the principal told of an incident that occurred last year. The school was being painted, he said, and the painters all were white men, all from outside the area. By his account, they did a slap-dash job. While they were painting that school, Negro men were standing idle on the streets outside.

"They would have done a beautiful job," one teacher said, "because they live here, and they do have a sense of pride in their community."

She also said:

"I have taught in schools throughout Washington. I have taught the privileged, as well as the underprivileged, and I can say one thing about them all—at the age of 4 or 5, when they first come to us, they all start out the same way. They are happy and they are full of love. It is society that changes them."

As the conference ended, and the teachers and the reporter left, the sound of lusty young voices rang through the first-floor corridors. Third-grade students, 75 of them, were singing together in their joint classroom in the school auditorium. They were singing "Washington," from the first verse down to through the chorus. They sang it twice, loudly, beginning with:

"Washington, the fairest city in the greatest land of all."

THESE PEOPLE FEEL COMPLETELY TRAPPED BY LIFE

Julia Hill is the principal of the Gladys K. McCogney Elementary School in Washington's Far Southwest. It is a new school, having opened for classes last September. It was built for a capacity enrollment of 1,050 pupils; it already has 1,400. Before coming to McCogney, Mrs. Hill had been principal of the Cleveland Elementary School in the Cardoza area of Northwest Washington. She tells here, in an interview, of her experiences Across the River:

"I thought I had had all the problems, that I knew about all the problems, but I found out when I came here that I didn't know what problems were. It's a little bit like seeing the boat beginning to sink before you can fix it up.

"Here's an example of what I mean. We are now serving from 500 to 700 children lunch every day. In some Northwest schools all children go home for lunch. At least that gives you an hour to breathe, but here from 12 to 1 is the most difficult period of the day.

"You know, it's tremendous what we're trying to do for the children in the schools, but from the standpoint of what we ought to be doing it's still not enough. Every day we have new children moving into the area, and so many of them are moving into public housing.

"These projects are terrible. I look out at those tenements and I have the feeling they are houses in a desert, and school is the oasis. You know, I've often thought that it's easier to get rid of poverty than the culture of poverty—and out there is the culture of poverty.

"Certainly, we've had problems. We have tremendous disciplinary problems and we have problems of overcrowding. Our class average is 40 pupils, and in one class there are 47 students.

"YOU HAVE TO MODULATE"

"You know, it's very important how you talk to children. It doesn't do any good to shout or raise your voice or get angry or emotional. You have to modulate your voice, and speak softer. Softer. That's the only way to speak. It's got to be one to one, just you and the pupil. You've got to get through to them.

"Something else. The community itself baffled me when I first came here. You always start trying to coordinate the positive influences in a community—the PTA, the civic associations, the churches. But out here there's nothing to coordinate. Nothing. You're just out here. It disturbed me when I first came. It really disturbed me.

"What do I do with all these children? Fourteen hundred children and not one extra penny to spend on them. I'm beginning to feel better now. I guess I'm settling down, and I've come to know some wonderful people in the community.

"You will find that the big children have no respect for you at first. Well, what do you do about that? You must be firm, but quiet. I would say to one, 'I don't like that glassy look in your eye.' But if you don't want every window broken out, you've got to be one to one, and you can't be tired, and you can't be frustrated, and you can't be discouraged. You've got to be satisfied with a little bit of progress.

"We could have a thousand people in here doing what's needed. A thousand people. Well, that's an exaggeration. But many, many more."

Mrs. Hill told of an incident in which a bigger boy took a quarter from a smaller one. When she talked to the older student about the incident, he answered:

"Yes, I took that quarter off him. A man stopped me in the alley and took a dollar off me, and it was my mother's, and I'm going to get it back."

PICKING A PRINCESS

Then Mrs. Hill continued:

"We work every day. We do what we can. Some we save, some we don't. Generally speaking, these people feel completely trapped by life and anything they can grab, they grab. And how do you change this?

"I'll tell you something interesting that happened in one of our classes. They were going to pick a princess for a play, and one of the girls who had dark skin and kinky hair said to the teacher, 'Oh, I can't be the princess. She's got to be the princess.' The other child, you see, had light skin and long hair, so naturally, she *had* to be the princess. Here, the teacher intervened and had the children think about the important qualities of being a princess.

"It's really amazing how many of these people feel about their race. So many have no pride in being a Negro. So we have to try to build that pride.

"We can't get to the parents. We've got to get to the children. Our job is to convince them, really to *convince* them, that they can get out of the slums, that it's a new day. And it *is* a new day—if they believe it is."

New Ski Domains in New Hampshire

EXTENSION OF REMARKS

OF

HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. CLEVELAND. Mr. Speaker, New Hampshire is famed as a leader in skiing throughout the Nation and indeed the world. A list of New Hampshire firsts in the field would indeed be impressive. It would include such landmark events as the formation of the Nation's first ski club, the venerable Nansen Ski Club of Berlin, formed in 1872 and still going strong; the first winter carnival in the Nation, held at Dartmouth College in Hanover in 1909 and now world-famous; and America's first aerial lift, which was installed at Cannon Mountain in Franconia in 1938.

Yet New Hampshire skiers and ski operators have not rested on their laurels. Each year brings more innovations in the State, which in turn soon become standard operating procedure for the rest of the Nation.

And even this year many innovations in technique and new ski areas are to be found in the vast, yet easily-accessible ski playground of New Hampshire.

These were clearly and interestingly outlined in a fine article in the New York Times of January 1 by Michael Strauss. The author is noted as a fine sportswriter of long standing and one of the Nation's true authorities on skiing. I commend his excellent article, which follows, to my colleagues:

New Ski Domains in New Hampshire

(By Michael Strauss)

Lincoln, N.H.—A former New Hampshire Governor, an American Olympic skier and an Austrian baron are the leaders in a movement to make the central part of this state a major ski area.

The former Governor is Sherman Adams, who has fostered and directed the construction of the Loon Mountain area here in Lincoln. It made its debut last month.

The Olympian is Tommy Corcoran, who finished fourth in the giant slalom in the 1960 Olympics at Squaw Valley, Calif., and who recently unveiled the re-created Waterville Valley center. And at Franconia, the baron, Hubert Von Pantz, has installed a new chairlift at his castle-like Mittersill resort.

To give impetus to the entire program, the three men have been prime movers in the development of the Ski 93 Association. The 93 in the name represents the number of the Interstate highway which, when completed, will provide an express route between metropolitan Boston, this region and points north. The other ski areas on the association's roster are Tenney Mountain at Plymouth and Cannon Mountain in Bethlehem.

SKIING FIRSTS

New Hampshire boasts more skiing firsts than any state in the nation. The first ski club, the Nansen, was founded in Berlin in 1872; the first winter carnival was held at Dartmouth College in Hanover in 1909; America's first aerial lift was installed on Cannon Mountain in 1938, and the first compulsory lift-inspection program was adopted in Concord just six years ago.

And when not scoring firsts, ski areas here are not loath to pick up a good idea used someplace else. For example, the Ski 93 Association has approved programs that originated in Vermont several years ago, such as a midweek lift ticket good for use at any of five areas, and a central clearing-house for taking reservations.

About 10 miles of new lifts are scheduled to go into operation in the state this winter, and most of this mileage will be accounted for in the Ski 93 region. Mr. Adams, Mr. Corcoran and Baron Von Pantz are responsible for more than $4-million worth of facilities.

LOON MOUNTAIN

Mr. Adams, a woodsman in his youth, helped in developing the state's recreation industry when he was Governor. Now, his interest in Loon Mountain seems certain to make Lincoln, a small, sleepy lumbering town, more involved in tourism. Lincoln lies at the western end of the 35-mile scenic wilderness road known as the Kancamagus Highway, and Loon Mountain is about a mile and one-half from the center of the town.

Nearly two years have been spent by Mr. Adams and his associates in planning and building the Loon area. During its construction, it was not unusual to find the former Governor hiking up the mountain a few times a day to check the progress being made. At one point, Mrs. Adams noted, "I have lost my husband. He's fallen in love with dynamite."

Now, with most of the essential phases of the development completed, Mr. Adams points with pride to a strikingly pretty, octagon-shaped base building, to the two chairlifts and to the bright-orange, four-passenger gondola cars that can whisk tourists and skiers 7,000 feet to the top of the mountain.

EIGHTY-TWO CHALETS

At Mittersill, Baron Von Pantz has developed a huge resort complex that has 82 privately owned chalets clustered on the side of 4,000-foot-high Cannon Mountain and around the luxurious main building, the Mittersill Inn. The innovations there this year includes a 4,000-foot double chairlift, and a large new dining room and bar in the inn.

The new lift opens up entirely new terrain and provides another access to the large number of descents available on that part of the mountain operated by the state-owned Cannon Mountain ski area.

At Waterville Valley, Mr. Corcoran and his personnel have transformed a lovely two-by-six-mile valley surrounded by 4,000-foot-high mountains into one of the largest ski complexes ever built in a single year. Already installed are four chairlifts, a J-bar, snow-making machines, a base building and a summit cafeteria. These supplement facilities existing at the century-old Waterville Inn, across the valley, which already has two T-bar lifts near its main building.

AREAS RIM ROUTE

The Ski 93 Association appears to be a natural marriage of the ski areas that are members. The areas flank a 40-mile stretch of the interstate highway, and with 23 major lifts already set for operation, represent one of the largest concentrations of lift facilities in the United States.

Also important in New Hampshire's ski picture this year is the new Wilderness ski center at Dixville Notch, in the northern part of the state.

To the east of the Ski 93 region, Mount Cranmore at North Conway, Black Mountain at Jackson and Wildcat Mountain at Pinkham Notch are again offering a combined ticket to skiers. In contrast, Mount Attitash at Bartlett is continuing its plan of weekend skiing by "reservation only."

Skiers who have not made reservations are permitted to use the chairlifts on weekends, provided the lifts are not "sold out." However, the ski area's T-bar is available without reservations at all times.

SMALLER RESORTS

Skiers from the Boston, Hartford and New York areas will find that New Hampshire is liberally sprinkled with smaller ski centers along its southern borders, especially in the Monadnock region. The Brookline ski center at Brookline has a T-bar, and a chairlift. Temple Mountain at Peterborough offers a Platterpull and a T-bar, and Pat's Peak at Henniker and Crotched Mountain at Francestown have a double chairlift and two T-bars.

A bit to the north, Mount Sunapee offers a large assortment of lifts, and King Ridge at New London provides two T-bars to serve two slopes and three trails. Close to the east bank of the Connecticut River, which runs through New Hampshire, are the Dartmouth Skiway at Lyme, Oak Hall at Hanover and Snow Crest at Lebanon.

Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. RHODES of Arizona. Mr. Speaker, 48 years ago on January 22, a nation was formed by the union of the Ukrainian National Republic and the Western Ukrainian National Republic. The Ukrainian people breathed freedom for barely 2 years before falling to the imperialism and tyranny of Communist Russia.

It is fitting during this Ukrainian independence week that the American people rededicate ourselves toward working for renewed freedom of all captive nations.

With Americans dying in the jungles and on the plains of Vietnam, defending those embattled people against communism's terrors, we should vow to regain freedom for the Ukrainians who have suffered so much for so long.

During our efforts, let us recall the words of a great American spoken about our own fight for freedom, for they apply equally to the people of the captive nations:

> For what avail the plough or sail, or land or life, if freedom fail?

Blatnik Salutes Outgoing Cabinet Member Connor

EXTENSION OF REMARKS
OF

HON. JOHN A. BLATNIK

OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. BLATNIK. Mr. Speaker, Mr. President, I wish to add my voice to the chorus of tributes to John T. Connor, the outgoing Secretary of Commerce, that we have heard in public and private in the past several days.

Secretary Connor's outstanding talents as a creative, inspired leader and administrator have been clearly apparent across the broad range of responsibilities entrusted to the Department of Commerce.

Under him, the Department has been a major force in meeting the urgent and diverse problems of our times at home and abroad.

He has played a primary role in keeping the dollar strong as an architect and major participant in President Johnson's balance-of-payments program, under which our bankers and businessmen have made sizable contributions in the past 2 years to supplement the Government's own significant efforts.

He has headed an export expansion program that has helped bring the Nation's overseas trade to historic record levels, with resultant benefits to working men throughout the Nation no less than to their employers and to the Nation's balance-of-payments goals.

He has made farsighted and farseeing contributions to the economic development of the less-developed sections of our own Nation through distinguished and progressive leadership, and the establishment of regional development commissions, within terms of the Public Works and Economic Development Act of 1965.

The related Appalachia program operating through Secretary Connor has, as you know, been highly successful thus far and holds vast promise for the future both in its own 13-State area and as a pioneer effort in the field of cooperative Federal-State regional development.

Another critical problem area for this Nation is automobile and traffic safety, where accidents take far more lives than are lost in Vietnam. Today the Nation's highways and motor vehicles are becoming safer, and will continue to become safer in the years ahead, because of safety programs initiated and inaugurated and now being pursued under Secretary Connor's leadership.

And if safeguarding the lives of Americans must always be our primary concern, the goal of safeguarding the land itself for this generation and for posterity certainly also holds an extremely high priority. Under Secretary Connor, the Department of Commerce undertook an energetic program of landscaping and scenic enhancement of our roads even before passage of the important Highway Beautification Act of 1965, and is now carrying forward this program with distinction.

I believe these few examples of major programs emphasize Secretary Connor's deep involvement and devoted leadership in meeting the problems of our times, ranging from the domestic economy to international affairs to the safety of our people and the quality of our lives.

But the sum of Secretary Connor's contributions in these years is, of course, far greater than simply the sum of these and all the other programs and policies and actions with which he has been concerned.

It lies, in a larger sense, in the qualities he brought to bear through these 2 years in service in an extremely demanding position of public trust: breadth of vision, balanced perspective, seasoned competence, an informed and cultivated intelligence, and most of all, an absolute determination to serve the public good.

One of the most distinguishing attributes of an outstanding leader, it is often said, is his ability to select and train a worthy successor. Clearly, Secretary Connor has done this. Alexander B. Trowbridge, who has served as Assistant Secretary of Commerce and whom President Johnson has now named Acting Secretary of Commerce, is a fine and competent and able successor who will assure continuity in the forward thrust of this important Department. Secretary Trowbridge's appointment underlines once again the extremely high quality of leadership in the executive department in general, and the Commerce Department in particular, under the administration of President Johnson.

As Secretary Connor prepares to leave Washington, I am certain that all of us—and all of the American people—join in wishing him and his family the continued happiness and success they so richly deserve in the years to come.

Secretary Connor has indeed earned a grateful and sincere "Well done" from us all.

Hon. John E. Fogarty

SPEECH
OF

HON. CARL D. PERKINS

OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1967

Mr. PERKINS. Mr. Speaker, I would certainly like to associate myself with the remarks of our colleagues concerning the Honorable JOHN EDWARD FOGARTY. This truly great Rhode Island legislator has erected a towering monument to his memory through the leadership he has provided in the building of programs and institutes to develop and protect the human resources of this great Nation.

History records he was a bricklayer. The bricks and mortar laid by JOHN FOGARTY can be discerned in the expanding institutions of higher education affording new and improved learning opportunities for our citizens resulting from his guiding hand on appropriation measures to fund meaningful programs. They can be seen in those national institutes which are effectively coping with the disease and infirmity which collects an exorbitant toll from the human resources of our Nation.

His lifelong campaign, directed by his intense compassion, to improve opportunities for people to participate and share in the great affluence of our democracy, was conducted with great modesty and with what will be recorded by history as almost legendary legislative skill. Indicative of his humility is the fact that the current Congressional Directory—of all the great things that may be said about him—carries only this line:

> JOHN EDWARD FOGARTY, Democrat, of Harmony, R.I., elected in 1940; reelected to succeeding Congresses.

The Honorable JOHN FOGARTY was, indeed, a representative of his constituents, and the Nation will harvest for a long time to come the seeds sown by his great statesmanship.

Across the River, Part V—The Star Documents a Civic Crisis

EXTENSION OF REMARKS
OF

HON. HERVEY G. MACHEN

OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1967

Mr. MACHEN. Mr. Speaker, this is the concluding article in the series, "Across the River," by Haynes Johnson, which the Washington Evening Star published last week. The five-part series concerned the crisis in the section of the District of Columbia which is located east of the Anacostia River.

The last article points out that while there are efforts to meet head-on the serious problems of this area, it is not enough. Perhaps the two most striking statements in Mr. Johnson's last article—and perhaps in the whole series—come the closest to the core of the problem:

> On one point, there can be no question—virtually without exception those interviewed in the projects Across the River express a sense of isolation and alienation. They do not feel a part of Washington . . .
>
> Time and again during research of these articles, mothers have told of being physically afraid of their own children. Out of the whole experience, that one fact remains the most vivid for this reporter.

Mr. Speaker, this Anacostia River which separates this section of the District from the main section is far more symbolic than real. It could be an inch wide or it could be an ocean across. That is irrelevant. Symbolically it is a gulf in the society and social structure of our whole community. Its lesson is the lesson of John Donne's great poem, "No Man Is an Island." Certainly my colleagues can only wonder, after reading this series, how many such "rivers" are there in the Nation's Capital and the Nation:

ACROSS THE RIVER—5 A CHALLENGE FOR BOTH SIDES OF THE RIVER

(By Haynes Johnson, Star staff writer)

Last month posters appeared on bulletin boards in public buildings throughout the far Northeast of Washington. They began dramatically—"Emergency Flash!!! Mass Meeting"—and concluded with a plea: "Let's

Curb Crime—Necessity for Closing Stores, Threat to Cancel, Deny Insurance Protection and Other Causes of Blight and Wrong Image of Area."

The meeting was held the night of Dec. 14 in Kenilworth Courts, a public housing project near the Maryland line. Representatives from a broad crosssection of the community attended—the police, fire, and sanitation departments; the schools, churches, and civic associations; the District government and public housing; private businesses and public transportation. More than 60 residents of the housing project, both parents and children, also attended.

The gathering demonstrated that some of the people of at least one of the trouble spots Across the River are willing to work on the problems that beset them. But the sparse turnout made it clear that they are a long way from the kind of dynamic community action that would make a difference.

In earlier articles, The Star has pinpointed a number of serious problems in the trouble areas—vandalism, intimidation, and shakedowns; depredations by juveniles; declining community services; difficulties in public housing projects and schools. This concluding article focuses on what is being done about those problems, and what lies ahead.

Two points should be made at the outset. The first is that the two trouble spots—centering on Kenilworth in the far Northeast and Congress Heights in the far Southeast—are by no means typical of the whole area across the Anacostia. The vast majority of the citizens Across the River are law-abiding; they live in pleasant homes in quiet neighborhoods. The second point is that there are many residents of the area who are aware of the problems and who are trying to do something about them. The Kenilworth Courts meeting is an example. It is indicative of the magnitude of the job that they have made so little progress.

Mrs. Ruth Bates Harris, executive director of the D.C. Commissioners' Council on Human Relations, was one who attended the Dec. 14 meeting. She came away struck by the "amiable" spirit there.

Also in the Northeast, an active, integrated business group meets regularly to discuss problems of the community. There is an integrated bank, the United Community National Bank headed by Dr. William Collins, meetings are held there. Citizens and civic leaders also gather in schools and churches to explore common problems.

Mrs. Harris and others make the point that such business-community rapport is not as evident in the far Southeast. One man, a Negro merchant, put it bluntly, "There is a lack of community relations among the citizens out here."

Poverty programs are also at work in both troubled sections across the Anacostia, offering a variety of services to the communities. These programs, too, grew out of grass-roots initiative.

Less than two years ago, for example, the far Northeast Council of Civic Associations, representing 13 civic groups east of the Anacostia and north of Pennsylvania Ave. completed a study calling for aggressive community action to combat poverty. The need was urgent, the Council declared, because:

". . . we have a community which, while not totally poverty-stricken, is headed toward blight, despite strenuous and energetic action by many individuals and groups in the community."

The poverty program in the Northeast has the solid support of its community—from the PTA and the Northeast Business and Professional Association down to the 14th Precinct Crime Council. In the far Southeast, where the Southeast Neighborhood House operates the poverty program, a militant approach has produced some friction between the workers and the businessmen.

But whatever the particular community attitude may be, in both areas Across the River poverty workers are attempting to get at the basic causes of unrest and disorders. There simply have not been enough of them—and now no one is sure how much antipoverty money will be available for the programs in the future.

"They wanted us to fight a war with a pea shooter, and now they're trying to take the pea shooter away," says Ralph Fertig, the director of the Southeast Neighborhood House.

MORE POLICE ASKED

Inevitably, any discussion of the problems Across the River bogs down on one question: What can be done to change things? Many persons interviewed urged more police, better protection. Some advocated a return to the old-fashioned neighborhood foot policeman, with men assigned fulltime to beats in the housing project areas.

There were some charges of police brutality, but the police had many defenders. One recreation department worker said that "police brutality isn't the problem; police protection is the problem. Many of these kids humiliate the police." Others told of incidents when teen-agers, who have been arrested and released, come back to taunt the police to their faces.

The police have their views, too.

"The people brought their complaints to us," said Capt. Bernard E. Carroll, the commander of the 14th Precinct, refering to the mass meeting in Kenilworth last month. "But when we questioned them, it turned out that most of the blame should have been put on the courts here. The courts just aren't giving them the protection they should have.

"They call on us for help and we follow through and then nothing is done in court, and these people see the same man who threatened them or pushed them around going free. Maybe the chief judge should come to some of these citizen meetings."

Carroll then drew out a map to illustrate one of his greatest problems—the size of his precinct. His men on foot patrols—never more than 12—have huge beats to cover. They are lucky to get around once during their shift.

The former commander of that Northeast precinct, Vernon H. Culpepper, now the head of the Police Community Relations Division, was asked his opinion on the reasons for juvenile vandalism.

"I can see why a kid might rob a store, or steal a car," he said, in his southwestern Virginia drawl, "but giving false alarms, and breaking school windows—we get that constantly. When somebody does that he's just hurting himself. He might have to sit in a cold schoolroom the next day, or his home might be the one that needs protection by the fire department. I just don't get it."

Culpepper, who is highly regarded by residents of his former precinct, made clear his conviction that problems of criminal behavior will not be solved by more men or stricter enforcement alone.

He particularly emphasized that by no means all the blame should be placed on children in public housing. Some of the best children he has known, he said, have come from the projects.

NO ONE TO LEARN FROM

Capt. Owen W. Davis, the Negro commander of the far Southeast's 11th Precinct, made the same points—but even more strongly.

No matter how many men and cars are put on the street, he said, the social and economic causes of crime will remain. He also said he feels that jamming the poor together in large public housing projects undoubtedly decreases their chances in obtaining an education in urban living.

"They have no one to learn from," he said. "It's like the 'alley-dwelling' that they had here after the Civil War. The freed slaves came to Washington and lived in the alleys. They were out of sight of the white world. They had their own little world."

Housing comes up again and again in discussions.

Most of the problems appear to stem from the large projects—from a very few in those projects. The most notable example is the Valley Green project, on Wheeler Road.

The National Capital Housing Authority executives have been well aware of the troubles there, and have attempted to do something about them. Their largest effort so far has been to move nearly everyone involved in the authority's social service unit to full time duty at Valley Green. Of 12 staff members in the unit, 11 were stationed at Valley Green two months ago.

That unit is headed by John Staggers, former director of Howard University's Community Service Project. Staggers, who came to NCHA last spring, speaks hopefully. "It's impossible to make inroads overnight," he says, "but we're gratified at the progress we're making."

His first order of business was to conduct a "social inventory of the tenants" to determine needs. Now, he says, that data is being tabulated. The next step will be "mobilizing the resources of the community" by organizing tenants and bringing the services of other agencies into the development.

Candor compels one to say there is little evidence that the social service unit is making dramatic progress. Its "social inventory" was taken some weeks ago, and that appears to be the only contact many families have had with Staggers' staff. During six weeks of research for these articles Staggers himself had little direct contact with Valley Green. He has been busy, he said, arranging "a mammoth pageant" that will involve the participation of teen-age girls from all 40 NCHA projects. The pageant is scheduled for Feb. 10.

YOUTH WORK PLAN

Housing officials have several other ideas they want to try. One would be to hire teenagers in the projects for maintenance jobs now done only sporadically. The youngsters would work 16 hours a week, and be paid $1.25 and hour. Three or four project adults would be hired to supervise the youth work.

Such steps may help to instill pride and responsibility and provide needed income. But, as one housing official commented, "That's first aid. What Valley Green needs is surgery."

Looking further into the future, NCHA points toward two relatively new and promising programs. One involves placing tenants in rehabilitated houses in existing neighborhoods. NCHA first buys the houses, and then, on contract, has them renovated for tenants. The agency now has the authority to rehabilitate 240 of these houses. In its second program, it is currently leasing 110 units for tenants and has authority to lease 240 more.

"These units are in all quadrants of the city," said Edward Aronov, NCHA's acting director, "but there are none west of Rock Creek. We can't get any to sell or lease at a price we can afford."

There, the housing agency runs into its old dilemma of finding suitable, reasonably priced sites outside of the present concentrations of housing projects. NCHA has been offered enough land for 1,000 to 2,000 units—but the land is adjacent to existing projects.

SENSE OF ISOLATION

On one point, there can be no question—virtually without exception those interviewed in the projects Across the River express a sense of isolation and alienation. They do not feel a part of Washington. Also there was almost unanimous agreement among both parents and children that they were happier in other sections of the city.

When you ask why, the answer varies. To a boy who had lived previously in Southwest, he had "more fun." To a boy who had lived behind Union Station, he could play the pinball machines in the game rooms there. To still another who had lived on North Capitol Street, there were more lights in this old area.

The suggestion often is made that the projects do not provide enough community services—recreation, shopping, entertainment, even close schools; that future planning would dictate smaller, more homogeneous units. In fact, as a general rule, the behavioral problems increase with the number of people in a single building; the row-type dwellings show far less evidence of vandalism than the four-story walkups.

One way to attack the problems on a massive scale would be to make the two areas part of Federal Demonstration Cities projects, and thus pour substantial Federal resources into the troubled communities. Officials here have indicated such a proposal might be viewed favorably.

But it would be naive to suggest that merely building better units is going to resolve the problems. Behind the mortar and bricks lie the more difficult problems of family structures and attitudes of inferiority and hopelessness which contribute toward acts of vandalism and worse.

FRUSTRATED AMBITION

During the interviewing for these articles, the mother of a 13-year-old boy in Kenilworth spoke of only her son's experience, but his frustration is shared by many more. Her son, she said, is "very ambitious," and he was working hard at delivering papers. Then she said:

"He didn't make a penny. People just wouldn't pay him."

His frustrations, and the frustrations of others like him, signal trouble ahead—more trouble for more youths. For, as has been shown, Across the River today the problems are primarily juvenile problems. Already, a number of youths have police records. Some see arrest as a mark of distinction.

A school crossing guard, who lives with her children in one of the large projects surveyed, spoke angrily about some of the youths. But most of her scorn was directed at the parents.

"If these parents would take the time and be near the kids," she said, "there would not be as much trouble. But a lot of parents are living with stolen goods themselves. You see a boy walking around here with fine clothes, then find out where they came from. The parents know the kids don't work. Yet they walk around with fine $34 shoes. It's not only the kids' fault. The parents are involved, too. How many mothers ask their kids where they got things?"

One explanation for the behavior she described is singularly disturbing. Time and again during research for these articles, mothers have told of being physically afraid of their own children.

Out of the whole experience, that one fact remains the most vivid for this reporter.

One comes away from this study convinced that, in the long run, all other problems are secondary when placed beside the unmet needs of the youths. If real changes are to come soon, they must come through programs designed to reach the young people.

There are youth programs functioning now Across the River. There are dedicated people who devote their time and talents to helping erase the bitterness and the despair felt by the young and draw them back into the community. Many more are needed. Many more facilities were required.

This Across the River study was born last Dec. 7 when a group of businessmen from east of the Anacostia came to The Star and told of vandalism, extortion, fear and destruction.

Their troubles continue. The Kenilworth and Congress Heights areas are still beset by lawlessness, destruction and declining business.

As has been shown, the merchants do not bear these burdens alone. The entire communities involved are paying the price in the breakdown of community services and morale.

Nor is the problem something that rests with those troubled neighborhoods alone. It must be shared by the rest of Washington, which, for the people east of the Anacostia, is also Across the River.

DOES WASHINGTON REALLY KNOW?

Robert and Maxine Boyd, who for years have been deeply involved in efforts to build a better far Northeast, met with Haynes Johnson two nights ago to discuss the past, the present, and the future for their section Across the River. Here, in a partial transcript of a tape-recorded interview, Mr. Boyd comments on The Star's series, and discusses what might be done to correct conditions:

"All of us who live out here at one time or another have admitted the facts which were reported in the articles. We did become very much concerned as to whether or not these facts, couched in the particular light in which they were reported, could possibly set a behavior pattern for the community.

"Sort of a thing that if you tell people they're lousy, they may begin to act lousy. And these youngsters have already been hurt quite a bit. We felt that the community itself had begun to make inroads into the problems of the youngsters, the problems of the poor in general, that we just kicked off, about a year and a half ago, a poverty program for the community which the community itself proposed and had built a corporation to handle, and we had just brought in to that program a neighborhood youth development program designed to reach the very problems which were highlighted in the articles contained in The Star. And here, when we had just gotten started, we got the impression that we really hadn't done a thing.

ARE THEY RECOGNIZED?

"There is no question of the difficulties of the problems faced by the people in the community. There is some question as to the recognition or understanding of the City of Washington, as a whole of the existence of these problems.

"The only time we have really felt that the City of Washington knew that these problems existed was the time of the Benning Road bus boycott, when the maids and the government workers and the other 20-odd thousand that live out here couldn't get to work. And comments appeared in the newspapers about the reaction of mothers who couldn't get their children to school or go to work because their help hadn't arrived.

"It showed up the night of the Kenilworth riot last summer when the 70 thousand-odd cars which normally pass the Kenilworth housing projects daily and never see them, didn't even know this Kenilworth project existed, suddenly found out that it certainly did exist, because the rocks were dropped into their windshields. And all of a sudden, Washington knew about Kenilworth. Maryland did not know about Kenilworth until the cinders from the dump began to drop on Cheverly, Md.

"We who live out here have known for a long time that we had problems. We've been working at them. We've been telling the District of Columbia. We have a number of papers, reports, statements, testimony that's been made at hearings in my own knowledge, since 1951; in the history of the Northeast council, since 1932; in the history of particular civic associations in Northeast boundaries, since about 1905. We have been going down to say, 'Look you've got a community out here. It's growing an average of two to four thousand people a year. You aren't doing anything for it. You are pushing people in, and pushing them in from Southwest, and every place you clean out elsewhere, when you bring them in, you failing to bring the services with them. We have told you repeatedly that trouble is coming.

"I feel that when I talk to people at meetings in the city, and we suggest, 'Let's have the next meeting in the Northeast,' they say that is too far. For approximately 250,000 people in the Northeast-Southeast community, it's just as far for us in town—and we do represent more than one-fourth of the city's population. The first indication from the general citizenry who live in the Northwest section is that this area is too far to travel to.

SOCIOLOGICAL QUESTION

"The Star and the Post, in the summer after the riots, documented very clearly the history of the Anacostia region, how it grew and what has happened to it in terms of community leadership. It's really not fair for me to comment on the Southeast area. In looking at it and preparing our own statistics on, say, the number of public housing, I think that there is perhaps half again as many public housing units in the Southeast as in the Northeast. This raises a very interesting sociological question. How much public housing can any particular community of varied economic background absorb and remain a healthy, viable community? Your article on housing describes how these people are poor, and they only see more poor people. Where are they going? How do they grow?

"I do think the relationship between here and downtown has improved in many areas.

In schools, the problem is that the number of schools unfortunately has not kept pace with the growth of population in the community, and the types and kinds of services which should be in these schools have not kept pact. I don't think that this is a problem of planning on the part of the Board of Education.

The Board of Education has consistently requested additional schools, and these things have been pushed back and pushed back and pushed back.

"We do feel that, had we been able to voice our needs at the polls, we might have gotten quicker redress for our needs. I would like to see a situation in which we could actually control the city leaders, have a voice in the spending of the tax dollar, have a voice in deciding where the city shall go.".

On the question of The Future, he said:

"I've read the proposals of the District public works program; I've read the 1985 report, I've read the 2000 year report, I've read plans A, B, and C of community renewal—and if any of those things are followed, I see a rather bleak future in which these people, more and more, have less and less chance to survive. Because, in none of those programs were there proposals designed to attack directly the needs highlighted in your articles. . . . You don't see social programs designed to help people stand on their own two feet. If that is the path the city fathers of the District of Columbia wish to take, then I see a bleak future.

"But if you take the assumption which we have had for years out here, that you can do something, that the people are not completely helpless, that this area doesn't have to go into blight, then you begin to develop master programs—through the Demonstration Cities projects, through special education proposals . . . and then I think that a tremendous future can develop for these children—in fact for all of us."

EARLY WARNINGS

A community leader. Across the River summed up much of the frustration of civic leaders there when he said "we've told you, and we've told you, and we've told you" of *the problems there. Here, chronologically, are some of the things one civic group, the Far Northeast Council, has been saying to the District government over the years:*

IN 1954

". . . Although the juvenile delinquency problem is not as pronounced in this area as in other areas of the city, a notable increase is reported in offenses and arrests of juveniles in the area. Adequate health facilities, recreation facilities, social service, schools, and police protection can do much to prevent the upsurge of crime in this community."

IN 1957

". . . It is high time that all who are concerned with the welfare of Washington, as a whole, recognize that one section of the city, as large as ours, cannot be neglected without eventually bringing harm to the city as a whole. The Far Northeast's needs are dire and immediate. They must be attended to."

IN 1960

"The recorded history of our request for a public health center begins with the period just prior to 1954 when our minutes show increasing concern over the health problems in this area; the increasing number of public housing projects being built in the area. . . ."

IN 1960

"Despite the excellent efforts of the staff of the 14th Precinct to control crime in this area, it must be pointed out that crime has been on the increase in this community for the last five years.

IN 1965

"We feel, strongly . . . that community needs have become so neglected, and that the civic voice has been so ignored that it is incumbent upon us to bring these matters to the attention of the Board of Recreation. . . ."

The 90th Congress

EXTENSION OF REMARKS

OF

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. QUILLEN. Mr. Speaker, today I am inserting for the information of my colleagues and the readers of the RECORD the Knoxville News-Sentinel's editorial on the 90th Congress:

THE 90TH CONGRESS

At its outset, at least, House Republican Leader Gerald Ford's description of the new 90th Congress as a "new direction Congress" seems apt.

For it certainly is a "new direction"—and highly laudable—to have a majority of House Democrats finally use a good-sized shillelagh on Adam Clayton Powell, the man whose blantant use of the public purse to lead the good life was just too, too much.

The new 90th has a long way to go, of course—two years. But developments at the outset are encouraging. The action on Powell seems to indicate the members of the House, at least, are interested in keeping faith with the taxpaying American public. Let's hope they don't get out of this mood and will go on, including the Senate, to so police themselves as to restore the nation's faith in the honor and integrity of the legislative branch of our Government.

The mood of keeping faith with the taxpaying public, if it proves durable, almost certainly means the new Congress will be a thrifty one. It must be if we are not to pay the mounting costs of the Vietnam war with printing press money. And it should be in the mood to raise taxes to pay for the war and to fight inflation.

We hope the new Congress also will be in the mood to continue to support to the fullest the war in Vietnam. We hope it keeps ever before it the understanding of what would happen at home and to free nations everywhere if the Government took the advice of some and tucked tail and ran out of Vietnam.

We also hope members of the new Congress will be in the mood to dampen the ardor of their constituents, their colleagues and the Federal bureaucrats to extend the hegemony of the Federal Government over matters the states and cities should control.

If these hopes are fulfilled, the new Congress will be a good one, possibly a great one.

The nation needs a great Congress at this time.

J. Edgar Hoover: 50 Years of Public Service

EXTENSION OF REMARKS

OF

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. MARSH. Mr. Speaker, stop any man on the sidewalks of America and ask him to name the most dedicated and respected public servant in the United States and the chances are he will reply, "J. Edgar Hoover."

Why is this? Well, for one thing, Mr. Hoover has served his country for almost half a century—he will complete 50 years of service on July 26 of this year. But a person does not gain admiration and respect by long service alone. His actions, his contributions to the betterment of society are more important gauges of his worth.

Mr. Hoover's record of accomplishments and contributions is well known. But one thing stands out above all others—the basic achievement for which this Nation will forever remain in Mr. Hoover's debt. In 1924, Mr. Hoover took command of a small, ineffective, discredited investigative agency in the Department of Justice. Through his dedication, his determination, his unwavering devotion to principles, he moulded this group into the world's greatest, most respected, and, in some quarters, most feared, law enforcement agency—the Federal Bureau of Investigation. And in the process, his influence spread throughout law enforcement, raising and enhancing its status as an honorable profession.

On January 18, 1967, the New York World Journal Tribune published an article by Jim Bishop which is a fitting tribute to Mr. Hoover, I request permission to have this article printed along with my remarks in the RECORD. As my colleagues know, Jim Bishop is a syndicated columnist. I am inserting his column as it appeared in the World Journal Tribune, of New York, on January 18, 1967:

J. EDGAR HOOVER COMPLETING 50 YEARS WITH FBI

(By Jim Bishop)

The granite bulldog, J. Edgar Hoover, completes 50 years of service to his country this July. He was 22, fresh out of George Washington University in 1917, when he got a job clerking in the Department of Justice. In seven years, he was director of the Federal Bureau of Investigation. Hoover didn't merely work at it. He married it.

No department in the federal government has been as free of scandal and corruption as the FBI. No department has more enemies in high places. No department has compiled a record of quiet efficiency to match Hoover's.

Some Presidents, and quite a few attorneys-general, have plotted ways and means of retiring J. Edgar Hoover. Good writers have taken hard swings at him. Lyndon Johnson saved him from automatic retirement at the age of 70. He will probably do it again.

In age, Hoover has grown to a stature which, like it or not, approaches the reverence accorded the American flag. It seems unpatriotic to fight him on any public issue. Privately, he has lost battles in every Administration—from that of Warren G. Harding through Calvin Coolidge, Herbert Hoover, Franklin D. Roosevelt, Harry Truman, Dwight Eisenhower, John F. Kennedy to Lyndon Johnson.

Someday, he will lose the final one. So far as I know, Hoover never lost for lack of courage and intelligence. He continues with his work, which is to fight interstate lawlessness and international communism. This makes him the most feared man in America, a title no man relishes.

Last year, his bureau located 15,000 fugitives, an all-time record, and recovered 22,000 stolen cars. The FBI, where agents are attorneys, racked up 12,000 convictions in federal courts and more than $275,000,000 in fines. The fiines represent $1.50 for every dollar spent on the Bureau.

In the Chicago area alone, local police, acting on tips supplied by the FBI, have conducted over 100 successful gambling raids. Hoover's men covered the Communist party convention in New York, last June. The new swing, he reported, is toward a "People's Party" fighting for civil rights, peace in Viet Nam, and labor unions. The American Reds favor Moscow over Peking.

The Communist party also decided to run members for public office. They do not expect to win anywhere, but, by argumentative campaigning, expect their opponents to be forced to adopt platforms more favorable to the Soviet Union. Dorothy Healey tried it. She ran for Tax Assessor in Los Angeles.

She didn't win. But America didn't either. She polled 86,000 votes, the highest number given a Communist in 16 years. The Reds are now taking dead aim on American youth. They staged a two-week educational forum at Wingdale, New York, and are working hard on student strikes protesting the military draft, and demanding more student freedom.

One of J. Edgar Hoover's greatest services to his country was the establishment of the FBI National Academy. Here, law enforcement officers from Maine to Hawaii, from Florida to Alaska, study modern police procedure. Last year, the 5,000th officer graduated from the academy. More than one-quarter of all policemen who have taken this course of study, and remained in police work, are now executive heads of their own departments.

The fingerprints of 79,000,000 Americans are on file at FBI headquarters in Washington, and 28,000 new sets are processed each day.

The granite bulldog isn't a smiler. He will win no beauty contests. But he is, without challenge, the greatest law enforcement officer in all history. The cop's cop . . .

Time for Space Decisions

EXTENSION OF REMARKS
OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. TEAGUE of Texas. Mr. Speaker, an editorial in the Industrial Research magazine of January 1967 examines the problems of delaying a decision on the future of our national space program. This editorial examines this issue in the context of our national security needs and other public programs. I commend this brief, but informative, editorial to your reading:

TIME FOR SPACE DECISIONS

The monetary needs of the Vietnam War and the various "Great Society" programs are having an adverse effect on the growth of the nation's research and development expenditures. Although R&D spending is likely to climb from $23- to $24-billion in 1967, it appears that many vital scientific and technological programs will not receive the funding they deserve because of the war and other demands on the federal budget.

It is evident—from the public declarations and proposed budget—that the Johnson Administration is delaying action on the post-Apollo space program, the supersonic transport, the Nike-X antimissile system, the 200-bev proton accelerator, and other major R&D programs because of the shortage of funds.

We realize that the nation's war needs should receive first priority and that some steps should be taken to implement civilian needs. However, at the same time, we cannot let important R&D programs—especially on-going ones—languish from the lack of adequate support. Research and development have become the keystone of our national economy and a necessity in our rapidly changing world.

We are particularly concerned about the future of the space program, which has surpassed all expectations in performance and is on the brink of one of the greatest technological achievements in history—manned exploration of other worlds. There are increasing signs that the federal government is preparing to downgrade the space program.

The National Aeronautics & Space Administration budget, which has been around $5-billion, is facing drastic curtailment. Some government officials and space critics are talking about a reduction of $1- to 3-billion upon completion of the Apollo Project.

The failure of the Johnson Administration to adopt post-Apollo goals is another indication of space deceleration. Until new objectives are forthcoming, it is doubtful if Congress will appropriate the level of funding needed to maintain the space program.

We believe it is imperative to retain and to take advantage of the momentum of the space program. It would be ludicrous to forsake further exploration at a time when the secrets of the universe are within grasp, and earlier expenditures are beginning to pay off commercially as well as scientifically.

In a series of articles titled "The Case for Going to the Moon," *Industrial Research* outlined some of the principal reasons for manned lunar exploration. It was pointed out that even more important than the prestige and military advantages were the scientific research, vacuum manufacturing, astronomical observations, lunar mining, economical spaceport facilities, and technology transfer that could result from the program.

Similar arguments could be given for further space exploits, such as orbiting laboratories, deep space probes, and manned exploration of Mars and Venus. The scientific knowledge, the economic benefits, and the excitement of exploring the universe and creating a new world certainly should be worth the investment. Space exploration is a challenge rather than a burden. The costs are well worth the potential returns for mankind.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington, D.C., 20402, at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective departments or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in room H–112, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

Senator Randolph Focuses Attention on National Crime Wave—Effort To Combat Crime Stressed by President Johnson—Report of the President's Commission on Crime in the District of Columbia Cited

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 25, 1967

Mr. RANDOLPH. Mr. President, much attention has been given to the ever-increasing crime rate in the United States—particularly in large metropolitan areas. The figures show, regardless of the causes, that the national crime wave is nearing alarming proportions. Major crimes are on a continuous increase, and, during the first 9 months of 1966, the Nation's crime index rose 10 percent over the corresponding period in 1965.

Equally disturbing is the fact that law-enforcement officials estimate that a large percentage of the crimes committed in the United States each year go unreported. In the report of the President's Commission on Crime in the District of Columbia, it was stated that the unreported offenses were not trivial; 33 percent were housebreakings and 15 percent were larcenies.

According to the report, certain crimes are more likely to go unreported:

> . . . It is generally believed that many rape victims, because of embarrassment, shame or a fear of publicity, do not report the assault to the police. Many thefts of property of little value, frequently involving housebreakings, go unreported; the victim feels the police will not be able to do anything about the crime. Nevertheless, if people fail to report crimes, no matter how minor, the police can neither apprehend offenders nor effectively mobilize men and equipment to combat future offenses. The public will remain ignorant of the true severity of its crime problem, and will make its own protection more difficult—we are informed.

It was gratifying to hear the President, in his state of the Union address, declare firmly that:

> This Nation must make an all out effort to combat crime.

He said he would recommend to the 90th Congress the Safe Streets and Crime Control Act of 1967, which will enable States and cities to utilize more effective means of combating crime.

FBI Director J. Edgar Hoover has continued to express his concern over the convicted criminals who are turned loose and again terrorize society. Mr. Hoover has cited a study showing that 75 percent of the 93,000 criminals arrested in 1963 and 1964 had been arrested previously.

Citing the Commission report again, observations are made about offenders in the District of Columbia:

> The adult offenders are predominantly Negro, male, poorly educated, youthful, products of broken homes and large families, unskilled and erratically employed.
>
> This description of the offender population serves to outline the dimensions of the problems which the community confronts in trying to reduce crime. The criminal, so portrayed, represents a major social and economic failure of the District of Columbia.

Mr. President, I cite two informative and provocative editorials concerning crime problems from the August 27, 1966, issue of the Intelligencer, Wheeling, W. Va., and from the December 30, 1966, issue of the Huntington, W. Va., Advertiser. I ask unanimous consent to have them inserted in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Wheeling (W.Va.) Intelligencer, Aug. 27, 1966]

EXAMPLE: WE MIGHT TAKE A LEAF FROM BRITISH BOOK IN MEETING CRIME SURGE

At a time when the United States is preoccupied with the protection of persons accused of crime and in the process making the job of the policeman more difficult, England seems to be moving in the opposite direction.

Jolted by a sharp rise in the crime rate—a trend that has become chronic in our own Country—the British Government has inaugurated or proposed major changes in criminal procedure, including:

Substitution of a 10-to-two finding for a unanimous vote of guilty in jury trials;

A requirement that a defendant planning an alibi defense in a criminal prosecution give advance notice, with appropriate detail, to the prosecution so that the police will have ample opportunity to investigate;

Abolish the requirement that the police caution a suspect before questioning that anything he says may be used as evidence against him;

Stiffer penalties for crimes of violence and a requirement that a defendant take the stand for questioning by the prosecutor.

In defense of these and similar revisions designed to crack down on the law breaker, British Home Secretary Roy Jenkins is quoted by the U.S. News & World Report as saying:

"In all too many cases, particularly those concerning the most vicious forms of organized crimes—the really big criminal conspiracies—the scales of justice are now weighted all too heavily in favor of the accused."

It is laudable, of course, and in accordance with the American tradition and the sentiments of the American people that those accused of crime be accorded every reasonable right of defense, to the end that punishment of the innocent be avoided. But it seems apparent that we already have gone much too far in fashioning these safeguards; that in our zeal to protect the innocent we are helping too many of the guilty escape the consequences of their acts, and encouraging those with a criminal bent to take a chance with the law.

If England, which has a much less serious crime problem than ours, now finds it necessary to stiffen the rules in behalf of society, the least we can do is take some sober second looks at the recent trend of judicial decisions in the area of criminal procedure.

[From the Huntington (W. Va.) Advertiser, Dec. 30, 1966]

SOARING CRIME RATE PUTS RESPONSIBILITY ON CONGRESS FOR PROVIDING STRONG CURBS

A headline over an Associated Press story from Washington, D.C., on Jan. 28, 1962, declared, "U.S. Crime Rate Has Zoomed Since End of Second World War."

The story referred to statements of Robert F. Kennedy, at that time U.S. attorney general, and FBI Director J. Edgar Hoover saying that crime ranked high among the nation's major domestic problems.

Since then the rate of offenses has continued to climb. When Nicholas deB. Katzenbach was U.S. attorney general in 1965, he warned:

"Crime is fast becoming one of America's major problems and is costing us tens of billions of dollars annually. It is time that we took practical and positive steps to deal with the situation."

These views have been echoed by police officers, criminal court judges and high federal officials.

They are supported by reports of the Federal Bureau of Investigation. In July of this year statistics from the FBI's Uniform Crime Reports disclosed that serious offenses in 1965 increased six per cent over those of 1964.

Proof that the rate is still rising alarmingly was presented by the FBI only a few days ago. This report said the increase during the first nine months of 1966 over the rate for the corresponding period of 1965 amounted to 10 per cent.

No doubt many factors have contributed to the rising wave of violence.

But statistics as well as statements of trial judges, police officers and prosecuting attorneys indicate strongly that one of the major factors in recent years has been a series of decisions by the U.S. Supreme Court.

The first of these decisions was in the case of Andrew Mallory, who had been convicted in the Washington, D.C., District Court of rape in 1956.

The conviction was based on a confession. It was upheld by the District Court of Appeals. But the next year it was annulled by the U.S. Supreme Court because Mallory had been held for seven and a half hours between his arrest and his arraignment, that is, his appearance before a court official to be formally charged and advised of his rights.

There was no argument in the appeal to the Supreme Court that the man was innocent or that the police had used force in obtaining the confession.

The only issue was the length of time he was held before being formally charged and advised of his rights.

Mallory's release made possible his later rape of a Philadelphia woman. For that he was sentenced to a Pennsylvania prison.

One serious effect of the decision releasing him was the confusion it caused among police and trial judges. The Supreme Court did not say how long a suspect could properly be held for questioning before being formally charged, and there is nothing in the U.S. Constitution to provide guidance.

A short time after the decision Robert V. Murray, Washington chief of police, testified before a congressional hearing that, in his opinion, it would greatly hinder law enforcement.

Statistics strongly support his statement. In 1957, the year of the decision, the number of serious crimes such as rape, robbery, criminal homicide and aggravated assault in Washington reached 15,554.

In 1958 the number rose to 17,047. The increase continued each year until in 1961 the total was 21,802. In 1962 an enlarged police force was able to hold the number down to 21,534.

Another possible serious consequence of the Mallory decision is made clear by the length of time Lee Harvey Oswald was held before his arraignment after the assassination of President Kennedy.

The report of the commission headed by Chief Justice Earl Warren said Oswald was brought to the Dallas Police Department Building about 2 p.m.

He was not formally charged with the murder of Policeman J. D. Tippitt until 7:10 p.m. This was five hours and 10 minutes after his arrival at the building.

After much more questioning and even an appearance before newsmen, the prisoner was finally charged with the assassination of President Kennedy at 1:30 a.m.

This was 11 and a half hours after police began questioning him.

The Dallas case differed from Mallory's in that Oswald made no confession. Apparently there was sufficient evidence to convict him without his admission of guilt.

Even so, if Mallory's constitutional rights had been violated by his being held for seven and a half hours before his arraignment, it would seem that Oswald's had been even more seriously breached by his being held four hours longer while evidence was being accumulated against him.

The Mallory decision of 1957 was followed by others in 1961, 1963 and 1964 affecting police in their efforts to combat crime. Then this year a 5–4 decision read by Chief Justice Warren applied even more rigid restrictions on the questioning of suspects in custody.

Over heated protests of minority members the court majority held that the Fifth Amendment's protection against testifying against oneself applies as soon as police arrest a suspect.

Before questioning of a prisoner begins, the court ruled, he must be clearly warned that he need not answer, that anything he says may be used as evidence against him and that he has a right to the presence of a lawyer during the interrogation.

If the prisoner asks for a lawyer but lacks the money to employ one, the questioning must wait until one appointed by a court is present.

If the police obtain a confession without the presence of a lawyer, they must be able to prove at the trial that they met all the court-imposed requirements and that the prisoner was fully aware of the consequences when he waived his rights.

The 1966 decision reversed four convictions. In one of the cases Ernesto A. Miranda had been convicted in Phoenix, Ariz., of rape.

Miranda not only had confessed but had been identified by the victim.

This has raised the serious question of whether justice is done when a conviction is reversed on a newly created technicality even though the evidence strongly indicates guilt.

The constitutional rights granted Miranda in the 5–4 decision had not been recognized by any Supreme Court before, and the police could not have been expected to abide by them.

Although the victim had identified the defendant as her attacker and could have testified against him in a new trial, court officials say that a second conviction is difficult to obtain after the first has been set aside by the Supreme Court.

Even more important than justice in this particular case is the speculation of attorneys that the rigid restrictions on questioning suspects may have opened a new avenue of escape for criminals.

Some attorneys believe that conviction of a guilty man may be prevented by sending him into a police station to blurt out a confession before officers can give him proper warning.

It is even possible that an attorney might build up a strong case of insanity as a defense by taking advantage of the new court-created rights.

He could tell his client in advance that he would advise him during the interrogation not to answer any questions but that in spite of this the prisoner should confess.

Certainly no sane prisoner not tormented by conscience would admit guilt under the conditions laid down by the Supreme Court if his lawyer advised him against it.

The difficulty that the Miranda decision has placed before trial courts has been emphasized by the bitter comments of judges when forced to free obviously guilty defendants because police had questioned them before the ruling and had not advised them of their rights.

A Supreme Court decision limiting the application of a new right to subsequent cases seems also to grant less lenient justice to those tried and convicted before.

This applies specifically to seven confessed murderers who sought release in California.

The controversy over the court's series of decisions and their effect on the rising crime rate revolves around the contention that the poor man has not been properly protected in courts.

Washington statistics show that 80 to 85 per cent of the violent crimes there are committed by residents of the pockets of poverty but that 80 to 85 per cent of the victims are residents of the same areas. The poor who are not criminals need protection too.

A great many critics of the Supreme Court's decisions contend that the first responsibility of government is to protect the public.

This view has been urgently expressed by members of the court who opposed majority opinions.

Unquestionably there is urgent need for solution of the complicated problems through thorough discussion in Congress and in public forums throughout the country.

If the principles of democracy are sound, such debate should bring forth the right answers.

By burying proposed constitutional amendments intended to meet the difficulties congressional committees have discouraged open discussion.

We do not know whether adopting one of the proposed amendments is advisable or not. But we strongly believe that bringing one or more of them to the floor for extended debate would materially help toward the best solution.

The rate of crime in Washington is a national disgrace. The violence in major cities and even in suburbs is a serious threat to law and order.

The entire problem confronts the next session of Congress with a grave responsibility for prompt, thorough and effective action.

Hon. Dean Rusk Addresses International Panel on Science and Technology

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. FULTON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Record, I include the following:

Keynote Address to the International Panel on Science and Technology, House Committee on Science and Astronautics, Tuesday, January 24, 1967, Hon. Dean Rusk, the Secretary of State

Thank you Chairman Miller, Mr. Speaker, members of Congress, distinguished guests of the Committee, and ladies and gentlemen. It is an honor to be here.

The uncharted region where the interests of science and foreign policy meet is of great import in a world increasingly devoted to understanding and control of our total physical environment. The United States is one of several nations trying to chart that region, and until it is mapped we cannot intelligently choose our routes. In foreign affairs we pool our knowledge of history, politics, economics, science and technology to arrive at new syntheses.

Science and technology are, in the United States today, a part of the fabric of life itself. We have, in the past twenty years, entered a new phase of the great American adventure. Throughout the world, technology, and the science which supports it, have provided new means of education, new sources of power, new ways of processing data, and fast, reliable transportation and communications. Man is extending his reach beyond this earth and into the vast reaches of space. The new knowledge and concepts, even the very tools of the new technology, promise ever more intensive investigations in the years ahead. We have learned how to pool our resources in coordinated efforts to develop new devices and to exploit new fields. We are supporting science and technology on a scale undreamed of even two decades ago.

We are all familiar with the so-called culture gap between science and the humanities, and more recently with the "technological gap" between the United States and Europe. Last year, Vice President Humphrey said to this Committee:

"I think there is danger of another gap—a gap between public policy and advancing science and technology. It is in government that we must face the task of closing that gap. . . . It is only in recent years that we have really understood the close relationship between public policy at the governmental level and science and technology."

In the interest of closing that gap, the Department of State began a program at the Foreign Service Institute, in 1965, designed to equip Foreign Service Officers with some competence to handle science as a part of foreign affairs. For the most part, we selected officers who will be assuming the foreign affairs burdens over the next decade. We followed this with a program for the exchange of officers with the scientific agencies to provide direct experience in scientific programs.

We have been holding a series of science briefings and more informal "science luncheons" for high level Department officers. Our last science briefing was on the implications of the world-wide use of nuclear power. The latest science luncheon was held yesterday, and it was my pleasure to host this Committee's distinguished guests from abroad. Dr. Hornig, who will speak to you tomorrow, was also our guest at a recent science luncheon, and our subject was the impact of computers on society. I have found these discussions with eminent men of science to be invaluable.

For any American involved in public affairs today, scientific literacy is a must; and that is particularly so in foreign affairs. We are firmly convinced that the Foreign Service Officer should be familiar with the ways, the concepts and the purposes of science. He should understand the sources of our technological civilization. He should be able to grasp the social and economic implications of current scientific discoveries and engineering accomplishments. I think it is feasible for non-scientists to be, in the phrase of H. G. Wells, "men of science" with real awareness of this aspect of man's advance.

But the burden is not all on one side. Scientists and engineers must, of course, recognize very real progress in many fields outside their own specialties, and they should be conscious of the difference between the values of society and the vertifiable truths of the natural sciences. For such men there is a role in the foreign policy process. I think that perhaps scientists have been a little more willing to wade in the turbulent pond of foreign policy, and that we in foreign affairs must be more willing and better prepared to dip in the waters of science. That science is international in character has come to be regarded as a truism, but it is no more true of science than it is of the humanities or the social sciences. The larger truth is that billions must live together successfully on this planet, and that we are making common cause in vast areas of human competence and search for knowledge.

This Committee has pioneered in equipping men of public affairs to deal intelligently with policies involving science and technology. As a by-product of that goal, scientists and philosophers of science have also had their horizons stretched, not only through presence at these seminars—the Committee's reports are widely read. A valuable new channel has been established between public affairs and the scientific community with this Committee at the crossroads.

We have, in the State Department, a small group of scientists and Foreign Service Officers working with the science agencies and with the scientific community on policies and programs for international scientific and technical cooperation. We do not administer those programs; but we guide them and retain the foreign policy decisions. The Department's International Scientific and Technological Affairs Bureau has the resources of the government at its disposal in the United States, and a network of Scientific Attachés in 17 capitals on the other end. At some major posts, our science agencies support their own representatives to assist in specialized cooperative programs. It is not a question of preparing to move in new dimensions; science and technology are already important elements in our international relations, and indeed, have emerged as instruments of foreign policy.

To some extent, we can extrapolate from politics, economics and science in projecting future policy. In a way, science is the least predictable of these three major fields. There are few "breakthroughs" in politics and economics; these are evolutionary fields. Broad patterns, such as a United Nations Organization, the rise of nationalism in Africa, and the movement of Europe toward economic integration, are discernible far in advance. To a lesser degree this also holds for the products of known technology. We foresee the wide use of nuclear electric power and satellite communications, and we can predict some of the uses to which computer technology will be put, for example.

However, we cannot foresee the breakthroughs in basic understandings to come. Let me illustrate this point. Thirty years ago, President Roosevelt established a blue ribbon Science Committee to look into "technological trends and their social implications." The Committee was accurate in predicting increased development and use of helicopters and conventional aircraft. Autogiros and dirigibles were reported as on the way out. The Committee predicted color television (and commercials), stero FM radio, our modern highspeed highway system and urban traffic congestion. Air conditioning, plastics, frozen foods, infrared and radio air navigation, microfilm and accounting card machines were also predicted. All of these extrapolations were based upon then-known technology. But where were the microcircuit, the computer, radar and sonics, the jet engine and rocketry, radioactivity, and underwater breathing gases? The top three scientific and technical fields of major foreign policy interest today were almost completely ignored by that eminent Committee. Space technology, or even rudimentary investigations of our solar system, were not mentioned. In oceanography mention was made only of the possibility of extracting minerals from seawater. In spite of predicted future needs for oil, none of these experts considered the continental shelves as new sources. Investigation of the sea as a source of fresh water, for fish protein or simply because of man's native curiosity was not considered. The sole reference to the third area, nuclear energy, was by a chemist of some vision in these words:

"Much has been said and written about releasing atomic energy and utilizing the vast forces that it represents. While we see no immediate possibility of doing this economically, who shall say that it will not be achieved, and once achieved, how shall we estimate the social implications resulting from the use of such energy?"

How indeed? This same man of vision advised that:

"It is the unexpected turn, when some little detail has been perfected after long search, that brings such things to pass, just as occasionally a promising development must be dropped when some unexpected defect develops. These are what make prophecy difficult."

And so they do. The year after that report was written nuclear fission was discovered and, in four years more, the world's first nuclear reactor reached criticality in Chicago, opening the nuclear era. In our turn, we cannot now predict if we will harness the thermonuclear reaction nor would we be able to gauge its social and economic implications.

Nevertheless, an occasional look ahead is of great value. Although the President's *ad hoc* Science Committee back in 1937 did not foresee some major innovations soon to come, it was fairly successful in predicting the future uses of technical devices and methods then known or just coming into use. The value of this type of forecasting to policy judgments is obvious. In most cases a true technological innovation does not reach full bloom for some years—the first basic patent on the transistor was, after all, issued in 1930. Sometimes it may be telegraphed in advance, as are the new energy storage devices, but in these cases the specifications for an end product are set forth in the beginning; it is directed research.

Congressman Daddario recently called for consideration of an "early warning system" to apprise us of the potential dangers of certain technologies. If this call is heeded, as I hope it is, we can be better prepared to cope with the problems posed by our advancing technology. The system could perhaps even be extended to provide useful forecasts for the foreseeable future. I would think that a distinguished committee, drawn from the natural sciences, the social sciences, and industry, could be impanelled about every five years to explore our technological future. This could satisfy the need for expert opinion on the directions of science and technology so far as it can be foreseen, within acceptable time limits and without a permanent "watch dog" group. After all, technological forecasting is much more sophisticated than it was in 1937, and we should take advantage of the new techniques.

Although scientific prediction seems to me to remain a chancy business, we can usefully examine some aspects of the changing modern environment which are of direct concern to foreign affairs, many of which can only be dealt with internationally.

The increasing pollution of our atmosphere, particularly in large urban complexes, is of common interest to the advanced nations. The industrialization and urbanization of the developing nations will further contaminate the atmosphere. An international cooperative effort to cure our air, followed by international conventions to keep it clean, would be a long step toward meeting our responsibilities to our own future.

Population pressures can be relieved by means more civilized than war, disease or famine. Recent discoveries make possible effective population control; and information and assistance for family planning are widely available. The barriers are those of conviction and communication. The governments of the world must first be convinced of the necessity for a program of concerted and immediate action. They must act in time to prevent the mass starvation predicted within the next fifteen years. We shall need more food, but more food is not the long-term solution. We must continue development of better instrumentalities for population control; we need better means for reaching billions of people; and we must recognize that a crisis is at hand. Changes in mores are in process in many parts of the world, and the approach is becoming international. In the President's words: "Every member of the world community now bears a direct responsibility to help bring our most basic human account into balance."

The spread of nuclear power reactors requires reliable and credible safeguards over the use of nuclear fuels and equipment, to prevent their diversion to military uses. The further proliferation of nuclear weapons' programs not only increases the hazard to peace, but diverts material and human resources from more constructive goals. We have a good beginning on effective international safeguards, but much remains to be done. Some of the remaining tasks are political and some are technical. We must act in good faith and with resolution to try to assure the world that the doorway to nuclear warfare can be locked. A cooperative assault on the treasure chest of the seas would prevent the waste of talent and money through unnecessary duplication.

The challenges of our space environment require a truly international response. It is already clear that there are benefits to be derived from the use of space which are world-wide in application. The agreement last month on a draft treaty on the peaceful use of outer space makes this a propitious moment to consider again whether we cannot respond even more effectively to this challenge.

All of these possibilities for cooperative programs with other nations call for an advanced technology. But we have not forgotten our own growing pains.

Most of the world's population live in the developing nations, and not all of these are making sufficient material progress. There is an ever-widening gap between the advanced and those struggling to keep their heads above water. The advanced nations must assist the developing countries in building a base for technological competence. We cannot overlay advanced technology on an insufficient base. That base must first be prepared through intelligent planning toward rational goals.

Our world has acquired a new orientation over the past twenty years. Science and technology are advancing the clock of civilization at an ever-increasing rate. Science has become accustomed to its place at the frontiers of man's knowledge. But we do not forget the older frontier where man meets man, and we welcome the alliance of the natural sciences with the social sciences in meeting new facets of old problems in the world laboratory.

The political significance of strong national programs in science and technology expands steadily. Political-scientific areas such as disarmament, nuclear safeguards, ocean exploitation, space technology and communications, and water management are areas in which the natural and the social sciences meet, and they offer major opportunities for international programs. Wider use of forums, such as this today, to bring the international problems of science and technology before learned men from both broad areas can assist in finding the solutions.

As to our approach to this kind of international cooperation, my points were three. We can make better use of new techniques for technological forecasting as an input to foreign policy judgments. New understandings and mutual respect between the physical sciences and the social sciences are prerequisites if the gap between them is to be completely closed. We must have programs of international scientific and technical cooperation on two levels: with the advanced nations in understanding and controlling the total environment; and with those nations in assisting the material progress of the developing nations.

Our future no longer stands in the wings. Man's needs and his competence have both reached dimensions which can no longer be ignored. The scientific revolution has arrived—live, and in color. We cannot clearly foresee the advances, discoveries and innovations which lie ahead, but the uses to which we put the new knowledge and our human relationships may well be critical.

Governor Shafer's State of the Commonwealth Message

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1967

Mr. SCOTT. Mr. President, Pennsylvania's new Governor, Hon. Raymond P. Shafer, in his first state of the Commonwealth message to the general assembly yesterday, outlined a challenging and forward-looking program to make Pennsylvania the Commonwealth of excellence. I ask unanimous consent that a selected text of Governor Shafer's message be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

GOVERNOR'S STATE OF THE COMMONWEALTH ADDRESS TO THE LEGISLATURE

One week ago today, I asked the people of Pennsylvania to begin a quest for excellence that will make our State the leader of the Nation.

Today, I am before you as Governor of the Commonwealth to set some of the priorities I believe are essential to the building of a new statehood.

CONSTITUTIONAL REVISION

First among these is the final achievement of a modern constitution for Pennsylvania.

To do this, I have proposed a limited constitutional convention.

First, it meets the pledges of both political parties to oppose the imposition of a graduated income tax.

Second, the convention will consider the four major subjects remaining to finish the job: the judiciary, local government, reapportionment, taxation and finance.

GOVERNMENT MODERNIZATION

We are operating a billion-and-a-half dollar business each year too often at the green eyeshade level, while business and industry are humming along at a computer-age pace.

This must be changed in the next four years. It is basic if the State wishes to supply those services needed by our people with efficiency and understanding.

To begin this, I will submit two pieces of legislation.

The first bill would deal with conflicts of interests by requiring, among other things, that State employes and legislators disclose financial interests in business that deals with or is regulated by the State.

The second bill would require stricter regulation of lobbyists, including disclosure of financial contributions made to influence the defeat or passage of legislation.

In the executive branch, we will push to accelerate a program to apply modern business techniques through machines and upgrading of State employment.

To continue the improvement of our employment practices, I will submit legislation that will expand civil service coverage to employes to technical positions in the Department of Highways, Revenue, Property and Supplies, and the State Workmen's Insurance Fund.

EDUCATION

Pennsylvania, if she is to lead the Nation, must commit herself now to spending the money required to give all our children a quality education from preschool through post-graduate studies.

Nothing is more critical to securing our future.

That is why I am reserving much of my Administration's education program for a special message that will deal with graduate-level study, public and private colleges, increased aid for the scholarship and loan program, community college expansion, and improvement of basic and secondary education in both rural and urban areas.

But there are some things we can do immediately.

We can begin by strengthening our State colleges—the backbone of our State system.

Two bills are ready for your consideration.

The first would establish a single, Statewide board of trustees for State colleges, replacing the individual boards.

The second would provide the colleges, especially their presidents, with more autonomy in administration, something that has long been needed.

The Administration will submit to you in about three weeks the State Board of Education's plan to establish intermediate public school units to replace the county superintendent system.

This plan will not only improve the efficiency of administration, it will provide many services for our children that poorer districts cannot now afford.

Another improvement I seek is the final enactment of legislation providing for the nonpartisan election of school boards.

This long-sought measure would remove from the political arena those who serve our children's education. School boards should be removed from the pressures of partisan politics.

JOBS, LABOR, INDUSTRY

Our employment picture has so improved in the past four years that it might cause some of us to put less emphasis on our industrial development program. We cannot afford any let-up.

Our thrust will be to attract the industries with a future, such as research and development industries, atomic energy, computer application, new industrial materials, the manufacture of mass and high-speed transportation equipment.

We will improve conditions for our workers who are at the low rung of employment and for those who suffer from the loss of a job through no fault of their own.

The Administration will ask you to:

Increase the maximum weekly benefit from unemployment and workmen's compensation to $60.

Reform the State's minimum wage laws and increase the minimum wage to $1.50 an hour in steps that conform to the Federal minimum wage laws.

These steps to improve the protection of our workers will be accompanied with programs to attract new industry, including:

State matching funds for development of industrial sites specifically for access roads, water and sewer lines.

A municipal industrial authority revenue bond act to permit local government to finance industrial development, if the Johnson Administration does not outlaw such acts throughout the United States, as I have requested.

And continuation of the State's participation in the development of our sea and air ports.

The success of our industrial development program through the Pennsylvania Industrial Development Authority has won the envy of all other States.

So successful has it been during the past year that it has now run out of money to operate for the next six months.

Unfortunately, we do not have any surplus funds available to keep PIDA functioning. So I must ask you to approve an emergency transfer of $15 million from the State employes' retirement fund to keep PIDA going.

Investment in graduate technical programs is especially timely now as the Nation turns in a major way toward creating new technology in mass transit, intercity transportation, air and water pollution control, medical engineering and a whole list of new ideas. We must get in first if we want a modern Pennsylvania in the next decade.

I propose we do this by establishment of a Pennsylvania science foundation which will help us invest properly in graduate education.

This foundation will bring together business, industry and education for producing the brainpower we need.

TRANSPORTATION

Our sights should be set high toward the development of a master plan for transportation.

This is so essential that I will propose establishment of a new Department of Transportation to carry it out.

But the ramifications of such a department are so great that I do not want to propose it to you before getting the best counsel available.

That is why I am now in the process of asking outstanding transportation experts in the State to serve on a Governor's Committee for Transportation. It will be announced soon.

CONSERVATION

As we consider the priorities needed to develop Pennsylvania now and for the future, there is nothing that is more apparent than the need for conserving our great natural resources and beauty—precious assets that are second only to our human resources.

Of paramount importance is the need for passage and voter acceptance of the proposed $500 million constitutional bond issue.

If approved, the Administration will ask for approval of legislation to implement spending to include:

$200 million to develop new recreational lands.

$100 million to provide additional aid to smaller communities for sewage treatment facilities.

$200 million for the restoration of lands and waters ravaged by mining operations that were abandoned.

In addition, the Administration seeks approval of legislation to strengthen Pennsylvania's air pollution control laws to bring them in conformity with Federal laws covering automobile exhaust that chokes our urban citizens; to provide stricter control of billboards and junkyards along our highways; during critical drought times; and to bring a new awareness of preserving our resources to our school children through the mandatory study of conservation in public schools.

WELL-BEING, PROTECTION

Our priority here must be set on the state of each citizen's well-being, not on his state of welfare. It must provide help to those who need it and opportunity to those who want it.

To do this, the administration proposes:

To seek approval of a constitutional amendment that would exempt persons over 65, who earn less than $3500 gross income annually from the payment of certain local real estate and per capita taxes.

To implement the Pennsy-care program of medical assistance for public welfare recipients.

To provide for comprehensive health planning to improve health service at the state and local level.

To seek immediate approval of a codification of the State's scattered welfare laws for more efficient operation of the Welfare Department.

While we act to improve the health and well-being of those who need help, we must also give new meaning to the rights of citizens who suffer the pains of discrimination.

We must provide leadership that takes us down the road between the extremes in the civil rights movement.

It will take much courage, but it is the only right thing a just society can do. I will submit to you a civil rights package that will include legislation to eliminate discrimination in housing and employment.

This package will also include bills to transfer the Human Relations Commission to the Justice Department; better injunctive relief in fair housing cases and relief for those persons who wish to open their businesses on Sunday because their day of worship falls on another day.

Essential to the well-being of all our citizens, regardless of their economic status, is the way we protect them from the modern criminal through law enforcement.

Specifically, the Administration will ask you to approve:

Establishment of a Commonwealth Advisory Commission Against Crime.

Amendment of the State's wiretapping law to make the use of any electronic "eavesdropping" equipment illegal, except by police officers in certain crimes under the strict control and supervision of the courts.

Abolition of the Philadelphia magistrates' system by constitutional amendment.

Abolition of the Philadelphia county courts and the addition of seven new courts of common pleas of three judges each.

A yearly increase in the number of State troopers in the next four years.

This Administration intends to make highway safety a priority that is second to none. I will ask you to consider legislation aimed at eliminating the drunken driver and at improving the driving skills of everyone who wants a Pennsylvania operator's license by making driver training mandatory.

And as we protect the citizen from the criminal and highway accidents we also must give new attention to protection of Pennsylvania consumers from the unscruplous, especially in the field of insurance.

I have ordered a complete review of the operation of our State Insurance Department. Once that review has been completed, there will be specific reforms sought through legislation. These reforms will be the subject of a special message, as will the problem of milk control.

REGIONAL URBAN AFFAIRS

I have saved to last our need to set new priorities for our regional and urban areas.

To solve these problems we need a new partnership between local, State and Federal governments.

That is what this new Administration wants to accomplish through our new Department of Community Affairs.

We will propose:

—A Neighborhood Assistance Act to put all the weapons in the State arsenal to work on the problems of our disadvantaged citizens.

—More assistance for mass transportation facilities and inter-city rapid transportation systems, plus the development of new regional and local mass transit authorities.

—Better coordinaion of all the urban efforts now being made by Government and private organizations and business.

—Adoption of a new Pennsylvania municipalities planning code to help our communities plan better for the growth that is coming.

The time has come to put our commitments on the line for the people of Pennsylvania.

The time has come for an excellence of leadership from all of us in State Government.

HIGHLIGHTS OF GOVERNOR SHAFER'S ADDRESS TO PENNSYLVANIA LEGISLATURE—"WORK TOGETHER"

Leadership—"Let us work together in an atmosphere of rational debate, disdaining acrimony . . . if we are unable to act responsibly and responsively to the needs of our people in the halls of Harrisburg in the next four years, then you and I will be held accountable for the demise of State government."

Constitution—"A limited Constitutional convention makes sense . . . It meets the pledges of both political parties to oppose the imposition of a graduated income tax . . . The convention will consider the four remaining subjects to finish the job: the judiciary, local government, reapportionment, taxation and finance. This is not a partisan proposal."

Ethics—"State employes and legislators to disclose financial interests in business that deals with or is regulated by the State . . . Require stricter regulation by lobbyists, including disclosure of financial contributions made to influence the defeat or passage of legislation."

Education—"Pennsylvania, if she is to lead the Nation, must commit herself now to spending the money required to give all our children a quality education from pre-school through post-graduate studies."

Benefits—"Increase the maximum weekly benefit from unemployment and workmen's compensation to $60."

Transportation—"Our sights should be set high toward the development of a master plan for transportation. This is so essential that I will propose establishment of a new Department of Transportation to carry it out."

Judiciary—"Eliminate the Philadelphia magistrates system by Constitutional amendment . . . consolidate the Philadelphia Common Pleas and County Courts, by abolishing the County Court and creating seven new Common Pleas Courts with three judges each."

Wiretapping—"Make the use of any electronic 'eavesdropping' equipment illegal, except by police officers in certain crimes under the strict control and supervision of the courts."

Insurance—"I have ordered a complete review of our State Insurance Department. Once that review has been completed there will be specific reforms sought through legislation."

Tribute to Clay Cowgill Blair

EXTENSION OF REMARKS

OF

HON. DURWARD G. HALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. HALL. Mr. Speaker, the Missouri House of Representatives recently approved a resolution honoring the late Clay Cowgill Blair, Sr., chairman of the board of the Joplin, Mo., Globe Publishing Co.

A nationally known newspaperman, farmer, and banker, "Cog," as he was known, brought great distinction to his beloved city of Joplin, and to the profession of journalism. In spite of the many demands upon his time, and talents, he also gave unsparingly of himself to civic endeavor and to helping build the industrial economy of the region he loved.

Under unanimous consent I include in the CONGRESSIONAL RECORD the following article and editorial from his paper, the Joplin, Mo., Globe.

MISSOURI HOUSE PAYS TRIBUTE TO MR. BLAIR

JEFFERSON CITY, Mo.—The Missouri House of Representatives Thursday unanimously approved a resolution honoring the late Clay Cowgill Blair, Sr., chairman of the board of The Joplin Globe Publishing Company at the time of his death last Saturday.

The resolution, which extends sympathy to Mr. Blair's family, was introduced by Rep. Raymond J. Birk, Rep. Robert E. Young and Rep. John W. Webb, all of Jasper county.

The resolution follows:

Whereas, the House of Representatives has learned with deep and sincere regret of the sudden death on December 31, 1966, of Clay Cowgill Blair, Sr., age 77, a prominent and nationally known newspaperman, farmer and banker, of Joplin, Missouri; and

Whereas, Mr. Blair was a native and lifelong resident of Jasper County came from a pioneer Missouri family on both the maternal and paternal sides; and

Whereas, from a cub reporter and later having the rare privilege of studying journalism under the later Dean Walter Williams, founder of Missouri University's internationally famous School of Journalism, he experienced a meteoric rise and was at the time of his death chairman of the board of the Joplin Globe Publishing Company and the dean of Missouri daily newspaper publishers in a singularly distinguished newspaper career spanning more than half a century; and

Whereas, Mr. Blair lived a busy, full gratifying and very productive life, achieving many awards, honors and citations in outstanding service in his chosen profession of journalism and in the fields of business, industry, education, agriculture, and in civic progress and political affairs, of his beloved community and the great state of Missouri; and

Whereas, among his many outstanding achievements, Mr. Blair held the distinction of having established in the Joplin Globe the first farm department of a daily newspaper in the United States and as first editor of the department, he laid the foundation which has served as a guide to other newspapers and he thus contributed immeasurably to the growth and progress of agriculture in his area and indirectly throughout the United States; and

Whereas, as perhaps the crowning event of a long and distinguished newspaper career came in 1960, when he was awarded the Honor Medal distinguished service in journalism by the University of Missouri and thereby his picture was placed in the school of journalism "hall of fame," along with some of the greatest and most outstanding newspapermen in the world; and

Whereas, Mr. Blair served on the board of curators of the University of Missouri as a member of its board of visitors, and was a past director of the board of the school's "Missourian"; and

Whereas, his other public services on the state level included past membership on the Governor's Advisory Board for the State Unemployment Commission and publication director of the Missouri Alumni Assocation; and

Whereas, through the Globe, he developed Joplin's first radio station, and in conjunction with others gave the district its first television station, and for years was a senior director of the First National Bank of Joplin; and

Whereas, in his chosen profession he always sponsored those services, principles and programs which promoted all worthwhile civic enterprises, progressive agricultural operations, public improvements and cultural growth; and

Whereas, in the passing of this outstanding and nationally recognized newspaperman, progressive farmer and civic benefactor, one who in contributing so many enduring achievements in a long, illustrious and useful career of exemplary service to his community, state and nation, not only his family but all have suffered a great loss;

Now, Therefore, be it resolved that the members of the House of Representatives of the 74th General Assembly extend to the widow, two sons and one daughter their sincere and heartfelt sympathy; and

Be it further resolved that the Chief Clerk of the House of Representatives be instructed to send suitably inscribed copies of this resolution to: Mrs. Marva Thompson Blair at the home in Joplin, and to Cowgill Blair, Jr., Joplin, Charles David Blair, Joplin, and to Mrs. Fred Hughes, Joplin.

CLAY COWGILL BLAIR

His family, which includes this newspaper and its workers in the region it served under his skilled stewardship for nearly half a century, were the deep and devoted loves of Clay Cowgill Blair. His concept of a daily newspaper was to humanize it in a very real sense, and to dedicate it to a responsible public service and courageous leadership, while performing its basic function of chronicling the news. This is precisely what he did with The Globe and News Herald in keeping with the finest traditions of the American free press.

"Cog" Blair, as he was affectionately known by his close associates, combined exceptional talent with a rare quality of incisive perception to rise from a schoolboy cub reporter in his native Carthage to become a successful newspaper innovator-publisher, and regional builder. He also contributed distinguished service to his beloved state, independent of politics.

Mr. Blair experienced the good fortune in youth to have had his academic, professional training under the master, Dean Walter Williams, world renowned founder of the School of Journalism at the University of Missouri, of which school the student later was to become a Curator.

From this rewarding base grew Mr. Blair's long and beneficent career as the operating head of these newspapers. At one time a farmer-newspaperman by reason of his interest in pure-bred livestock, Mr. Blair founded the farm department of The Globe, the first among daily newspapers in the nation, and through it helped to build the agricultural economy of the region when the mining industry waned. He also gave unsparingly of his time and talents to civic endeavor, and to investment with faith, confidence and vision to help soundly build the industrial economy of this region, including the founding of the Joplin Stockyards.

Believing that a newspaper also should contribute to the moral and spiritual as well as to the material development of community life, another innovation of Mr. Blair was to establish the policy of publishing a religious or moral lead editorial each Sunday morning in The Globe. He dedicated this to his mother, who suggested the idea.

On the sentimental side, too, Mr. Blair was unfailingly a thoughtful, sympathetic and understanding employer, sharing the joys and sorrows of his employes, a quality that won deep respects and intense loyalties.

Mr. Blair generously gave but never sought, in fact shyly evaded, personal accolades. But there came to him late in his career, in 1960, a signal and richly earned recognition when he was awarded the University of Missouri's coveted honor medal for distinguished service in journalism, and his picture was permanently enshrined among those other noted journalists in his Alma Mater's hall of fame.

Mr. Blair's guidelines for excellence in journalism were honesty, integrity, loyalty, accuracy and fairness in unsparing devotion to duty in the profession he honored. By these precepts Clay Cowgill Blair was every inch an exemplary newspaperman and a faithful public servant.

The Garrison Diversion Irrigation Project—Address Delivered by the Honorable Floyd E. Dominy, Commissioner of Reclamation

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1967

Mr. YOUNG of North Dakota. Mr. President, on January 16, Mr. Floyd E. Dominy, Commissioner of Reclamation, addressed a joint session of the North Dakota Legislature in Bismarck, N. Dak.

Commissioner Dominy appeared at the invitation of the North Dakota Legislature and spoke on a subject close to the hearts of all North Dakotans—the Garrison diversion irrigation project. This able, dedicated proponent of reclamation deserves great credit for the effective work he has done in making possible the great wealth-producing irrigation projects all over the western part of the United States.

Mr. President, I ask unanimous consent that Mr. Dominy's speech to the joint session of the North Dakota Legislature be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF FLOYD E. DOMINY, COMMISSIONER OF RECLAMATION, DEPARTMENT OF THE INTERIOR, BEFORE THE JOINT SESSION OF THE NORTH DAKOTA LEGISLATURE, BISMARCK, N. DAK., JANUARY 16, 1967

The opportunity to speak before a joint session of the legislature of North Dakota is an honor and a real pleasure. In meeting with you today, I would certainly be remiss if, in my opening remarks, I failed to congratulate this legislative body for its many years of intense concern regarding the water problems and needs of this State and Nation. This assembly has done much more than talk emotionally about the growing list of issues associated with water. The actions you have taken not only go hand-in-hand with the progress of our times, but also retain the stability and security found in blue-chip investments.

Your Governor, Bill Guy; Senator Milton Young; Senator Quenton Burdick; and Congressman Mark Andrews are to be congratulated for the wisdom they have displayed and the leadership they have provided in the unified effort that has taken place for conserving and utilizing the State's land and water resources. I am proud to say that I think North Dakota has been a leader—not only in facing up to the issues posed in the proper conservation of their water resources, but in meeting the challenge of the future. The willingness of the people of this State to accept and resolve the problems inherent in water development is an assurance that North Dakota won't be trapped because of shortsightedness or laxity.

North Dakota has always been near the top among the western states in the matter of providing adequate legislation in the field of water resource development. Many actions have established patterns that provide goals for states that have lagged in this critical area of responsibility for State legislators. Past accomplishments are serving to urge states with archaic and ineffective measures on their books to institute corrective statutes in order to adequately meet today's requirements. For example, the design and establishment of the unique and highly effective Garrison Diversion Conservancy District serve as a model for the advancement of water resource development for many of our western areas to follow.

Our work for the authorization and start of construction on the Garrison Diversion Unit is concluded. Just this week I performed one of the most enjoyable jobs of the Commissioner of Reclamation. I have issued orders to move forward with construction, and I am happy to announce that invitations will be issued next month to bid for the manufacture of the pumps and motors that are part of the Snake Creek Pumping Plant. Specifications for the plant itself will be disseminated in May, and it is expected that award of the construction contract will take place in late summer. I have also put the machinery in motion to initiate action for purchasing rights-of-way for parts of the canal sections of the unit. It is my hope that we can conduct a groundbreaking ceremony marking the start of construction during September of this year. The promises held by the Garrison Diversion Unit have begun to materialize, and it appears there are no further hazards blocking the social and economic progress to be garnered through this development—that is, there are no hazards that you, the people of North Dakota, are unable to prepare for.

A strong and close partnership between North Dakota and the Bureau of Reclamation has been developed during the long struggle for the Garrison Diversion Unit. Now that the word is "go" and construction is underway, there can be no letdown in our efforts or breakdown in this cooperative spirit. Our concern and endeavors must not only be directed toward the successful development of the project, but we must heed the continually growing need for water associated with all areas of our country. There can be no slackening of pace allowed to develop if we are going to do our share in creating a bright national water supply and development picture. It is certainly clearcut that all of our water resources must be developed to the fullest extent permitted by good conservation and preservation practices if we are to achieve success. It makes no difference whether we are speaking of water for agricultural, industrial, or municipal purposes—our attack on the problems facing us must take place on a comprehensive and coordinated basis.

There is a water crisis in the world. Water and where it is going to come from is one of the greatest concerns confronting our Nation today. This isn't a revelation—it is a well-known fact. All of the studies concerning water use and development conducted during recent years have resulted in the conclusion that the situation is urgent and critical. The scarcity of water on a national scale makes it imperative that you do all possible to conserve, develop, and utilize your surface and underground water resources. Now, I don't mean to imply that North Dakota itself is undergoing a crisis—much to the contrary, in this State a crucial situation is being avoided because you have been moving in the right direction to withstand and conquer the challenges presented in the national water dilemma we are faced with. The highly commendable action of the North Dakota Water Commission in embarking on an inventory of the State's surface and groundwater supplies is typical of your awareness to the pressing requirements of our society on water.

As demands continue to soar upward, so has the pitch of the battle tempo for a bigger share in the available water supply increased. In relating North Dakota's position to other parts of our western United States, I find that you are in an enviable spot. This is due in part to your ample water resources—but when you look at other areas, even those that are not in short supply, you can see the big dissimilarity lies in the fact that while others bicker, fight, and move in confusion, you people confidently and enthusiastically move forward. You have displayed complete disregard for political differences and conquered selfish interests in the formation of a united front when it comes to making use of your water.

In some areas interbasin diversion, transbasin diversion, and a host of schemes to solve the problem are in various stages of discussion—but again, in North Dakota you are way out in front—you have already experienced success in this area. The Garrison Diversion Unit itself is a transbasin diversion of water—moving a huge supply from the Missouri River through a tremendous canal system and putting it into the basin of the Red River of the North.

Most of you know there are studies being made concerning diversion of water from the Mississippi to the high plains of Texas. You are apprehensive concerning this subject and rightfully so—but let me assure you that, even though national needs have outgrown state and regional boundaries, there will be substantial study and discussion before such diversion takes place. Even then I am certain the Congress of the United States would never allow one drop of water being put to beneficial use in the Missouri Basin to be exported to another major river basin. If diversion did transpire, it would only be that water surplus to the needs of the basin. Furthermore, I have enough faith in mankind to believe that no area—including the water-hungry Southwest—covets water that is necessary to the social and economic progress of the Missouri River Basin. What North Dakota has to do is to continue to strive for wise utilization in order to reap the greatest good for the State and the Nation.

I never cease to be amazed at the unanimity of support concerning water resource development continually demonstrated in North Dakota. During the planning and legislative periods leading up to authorization of the Garrison Diversion Unit, the people of this State established an enviable record of imaginative cooperation and assistance. Your farsightedness and perseverance, which prompted you to pursue and obtain this unit of the Missouri River Basin Project, are constantly being reinacted. Just the other day, State and Federal agencies and private interests met in Carrington, North Dakota, for the purpose of forming an irrigation development council for coordinating the efforts of all entities involved in construction and development of the unit. This type of continued action will bring about an orderly, efficient, and successful transition to irrigated agriculture and will assure the fruits of prosperity for your future and for succeeding generations.

It is going to take a lot of planning and hard work to prepare for the expansion that will accompany the State's progress in irrigated agriculture. In addition to the increase in commercial and industrial processing plants that are going to be needed, you will also require schools, roads, and a host of other public accommodations and services. A measure of the impact of irrigation upon an economy is reflected in a recent study conducted on the Columbia Basin Project in Washington. When an area of 10,000 acres irrigated through the facilities of that project was compared with 10,000 acres of dryland farm operations, a 17 to 1 ratio not only in population density, but in business establishments, postal receipts, retail sales, tax collection, and Federal income tax payments existed.

From the very beginning we must enter into development of the Garrison Diversion Unit in an orderly fashion. Costly duplication and uneconomic operations must be avoided. We must be able to provide the technical assistance the farmers will require, and we must have these answers as the project unfolds. Only then will we fully realize the gains to the State and the Nation—not only from the irrigation that will develop, but from the expanding benefits as our project matures.

The research and preparatory work being done by the Carrington Experiment Station in the field of irrigated agriculture is an example of State action that will lead to a successful project. You have—to a great degree—been pioneers in providing leadership for water resources legislation. If we are to reap the social and economic benefits possible in the years ahead, more trailblazing work will be in order. The people of North Dakota must be provided the technical assistance and the know-how gained through research and an adequate examination of all facets of development. If the transition from dryland farms to a well-settled, abundantly productive region is to be achieved, then the advantage of good leadership in the form of knowledge, planning, and guidance must be established. Effective State agencies financially and competently equipped by their legislators can get the job done. Actions of today will be the basis of success on the Garrison Diversion Unit tomorrow.

At this time I am going to take the liberty of strongly endorsing three items of legislation that are now being urged by water resource agencies. The first of these will permit the Garrison Diversion Conservancy District to administer State lands beneath navigable waters within its boundaries. This will allow the Conservancy District to make the contributions to recreation and fish and wildlife developments which are contemplated by the Federal Water Project Recreation Act of 1965. It will thus assure the optimum development of this potential in North Dakota's portion of the Missouri River Basin Project.

The second item is legislation which will permit counties and townships to exercise State authority in relocation and vacation of their roads. Authorization will assure accommodation of the Garrison Diversion Unit canals and waterways to your fine system of highways. Future problems of conflict between the highway and the waterway rights-of-way will also be prevented. This is of critical importance to resource development in North Dakota.

Perhaps of less immediate urgency is item three—but nevertheless, it is legislation which will soon be required. This proposal will permit irrigation district directors to redivision their areas. A number of North Dakota districts have been organized to include all the lands to be served under the ultimate plan for development of the 1-million-acre Garrison Diversion Unit. However, under the initial 250,000-acre stage of the unit authorization, one or more of the areas will not be served at first. Under existing laws, directors must be elected, notwithstanding the fact that there will be no irrigated or assessable acreage within such divisions in the beginning. This circumstance creates an awkward and unworkable situation. Correction can easily be accomplished by authorizing the irrigation and district directors to reshape the district divisions periodically, so that each one shall cover a certain area of irrigated and assessable land. Such legislation is strongly endorsed.

At the last session of your legislature, a bill was introduced which was intended to limit the time within which claims may be made against irrigation districts. Similar legislation is in effect in other Reclamation states, and it may be that you wish to reconsider this action in North Dakota. Without it, a district may not be apprised of a condition which could deteriorate into liability, until long after such a problem develops. If the claim and notice are not filed until a considerable time following damage, a determination of the cause and the cure becomes extremely difficult. Physical solution may become infeasible, and financing to handle such claims becomes difficult to program. Therefore—in the interest of sound irrigation management—I strongly endorse legislation which would require the prompt filing of claims.

North Dakota has put forth superior efforts in providing adequate legislation and State support in the field of water resources. Even so, there are areas that should be improved. In this case, I refer to the safety of dams.

The State Water Commission does provide printed regulations and requires a license for all dams above 12½ acre-feet. It also requires approval of the plans and specifications for new dams, and inspection and approval of the completed structure before it is put to use. However, the State reports about 2,500 dams under its jurisdiction, and an annual budget of only about $2,000 for supervision—this hardly seems sufficient. Under the present law, design by a registered professional engineer is not necessary, and no onsite inspection by the State is required during construction. Furthermore, there is no provision for routine periodic inspections. Under these conditions it is very possible many of the dams which are old could be unsafe without detection. A rigid campaign to inspect all dams by experts for safety, such as California is undertaking, would be in order. Dams that are old, have inadequate spillways, or show other signs of distress should be reconstructed or removed from service. I think it would be wise to initiate actions to insure safety by providing sufficient financing to carry out proper inspection for determining the adequacy of water storage structures.

Before closing I want to say that the Bureau of Reclamation and the State of North Dakota have had a long and productive relationship. The impact of the Reclamation program upon the State has had far-reaching effect. Developments such as the Lower Yellowstone Project; Dickinson, Heart Butte, and Jamestown Dams; and the substations and more than 2,000 miles of transmission line carrying Missouri River Basin power to the people of North Dakota have all made their mark in lasting benefits. The future also holds promise. In addition to Garrison, we plan to initiate surveys to determine requirements for recreation facilities at various installations in the State. We will also install additional transformers and associated equipment at the Jamestown substation and make additions to the Watford City installation. A contract will be initiated on the 141-mile Jamestown-Forman-Summit 115-kv transmission line.

The Garrison Diversion Unit is a new resource for the entire State, but the future is not limited to this alone. Over in the eastern part of the State the Federal Water Resources Council has recommended establishment of a basin commission. This means a comprehensive study of the Red-Souris-Rainy River Basins should be underway in the near future. Pumping from the Missouri River holds promise for additional irrigation development in western North Dakota. About 50,000 acres in this area lends itself quite favorably to future development. There are other potentials—such as Broncho Dam and Reservoir on the Knife River, and Mott Dam on the Cannonball River—that might someday become feasible as the value of water increases. Great economic assets are locked in the vast coal deposits and the water supply in this western area. The key to opening an industrial future may lie in the proven imaginative talents of North Dakotans. If so, then the costs of developing multipurpose water projects that are now infeasible because of the high costs involved in developing storage for only limited use can be shared and paid in part through the sale of industrial water.

There is a need for everyone—the individual—the State—the Federal Government—working together to obtain maximum accomplishment. I pledge myself and my staff to carry out this objective to the highest degree permissible.

Fino Introduces Bill To Deny Federal Funds to Honor System Local Welfare Programs

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. FINO. Mr. Speaker, today I have introduced legislation to establish a new condition of Federal aid to help pay for local welfare programs. Under my bill, localities would not qualify for Federal aid in meeting welfare costs unless they required investigation or some corroboration of applicants. New York City is presently quietly shifting to honor system welfare by which clients are accepted on the basis of affidavits. Under my bill, such a welfare program allowing payments on uncorroborated affidavits would cease to be eligible for Federal aid.

I have read recently that a number of cities think that money will be saved if they forego red tape and put welfare on an honor system, whereby one can get on welfare by making an affidavit. This strikes me as absurd. I am willing to grant that overinvestigation is unnecessary and unjustifiable harassment, but I feel that a certain amount of corroboration of need is much in order to justify the expenditure of public funds, particularly Federal funds.

I believe that the Federal Government ought to make sure that lax Federal statutes do not suffer a pipeline to be thrust into our National Treasury by loosely run local welfare programs. The first place to draw the line is in insisting on some corroboration of welfare eligibility before applicants are allowed to draw money from the local authorities.

To me, such a requirement is simple commonsense, but I am aware that among certain groups, it is considered unkind to require welfare applicants to prove their eligibility. The coddling of spongers, glorified in exotic sociological jargon blaming the middle class for the plight of the deprived, has become high fashion these days. It is a fashion I do not subscribe to. I think the taxpayers are entitled to know that welfare applicants have proven their eligibility for payments made.

I have been disturbed to see the great rise in the New York City budget for welfare programs. Honor system welfare will undoubtedly jack up welfare costs still further. As an interesting sidenote, I might add that the welfare rolls have been increasing in direct proportion to New York City poverty program expenditures. The poverty program does not achieve anything, but it stirs up the spongers.

Frankly, I think it is time to draw the line. I know that most Members of Congress agree with me. Unfortunately, most of them do not realize that the backroom social planners over at HEW's Office of Welfare, have been working with a number of cities to try and get welfare on the honor system so that welfare clients can enjoy their rights without undue questioning. This sort of thing has got to stop.

I am proud to represent a district with many poor people who have worked long and hard, often at pay levels little above welfare, to support themselves and keep from being public charges. This is the spirit that made America great. The spirit that the welfare planners are trying to inculcate in this country is the spirit that has brought an incredible suicide rate to Scandinavia and decline and fall to Great Britain.

Coal Research Finding New Ways To Enhance Coal Markets—West Virginia University Conducts Scientific Investigation on Methods of Converting Coal Wastes Into Useful Products

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1967

Mr. RANDOLPH. Mr. President, the vastly expanding efforts in coal research are producing many notable prospects for coal waste products.

Scientific investigation currently being conducted by West Virginia University's coal research bureau, a division of the school of mines, has recently published a preliminary report on the production of mineral wool from coal ash slag. The school has been working in conjunction with the Department of the Interior's Office of Coal Research, and it is hoped that this new method will provide new markets for West Virginia coal.

The Morgantown, W. Va., Dominion-Post, in the January 8, 1967, issue, carried an article on the research being conducted, and I ask unanimous consent to have it inserted in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

West Virginia University Research Tests Value of Coal Slag

Scientific investigation currently is underway at the University to convert a useless waste product of coal into a valuable and important insulating material.

WVU's Coal Research Bureau, a division of the School of Mines has published results of preliminary work aimed at producing mineral wool from coal ash slag. The research, under Director Joseph W. Leonard, has as its major objective "the development of new markets for West Virginia coal, and to enhance its use in existing markets."

One result has been the successful process of making commercial-grade bricks and other building materials from a flyash-based product. Flyash is one waste by-product of coal burning and the WVU process, developed in conjunction with the government's Office of Coal Research, has partially solved the problems of ash disposal. It is hoped the investigation of turning slag into mineral wool will be just as successful. If so, those industries using coal as a major source of energy will eliminate costly waste disposal and replace it with profitable by-products.

The technical report on the slag research was made by Kenneth K. Humphreys, cost engineer, and William F. Lawrence, research assistant, with the bureau at WVU. In the introduction to their report, the two men explain:

"Large tonnages of coal ash are produced by combustion of coal in electric power generating stations. Part of the ash leaves the boilers through the stacks as flyash while the remainder is tapped as molten slag. The slag is generally water quenched and transported either as a slurry or in granular form to disposal areas at substantial cost. This slag, however, is similar in its molten state to blast-furnace slag, the primary raw material used in mineral wool production. If coal-ash slag could be used by this industry, it would become a credit rather than a liability to the use of coal. To investigate this potential application further, the Coal Research Bureau has conducted a preliminary survey of the possible use of coal-ash slag in mineral wool production."

Humphreys and Lawrence go on to discuss the economic advantages that could result if their research makes the new process feasible:

". . . it would be of value to three major industries, the coal industry itself, the electric power industry, and the mineral wool industry. It would make coal more attractive as a fuel and would aid the mineral wool industry in that plants could be established in areas where others suitable raw materials are not economically available . . .

"Mineral wool, in its many final forms, is claiming a large portion of this (insulation) market. Because of mineral wool's light weight and entrapped air spaces, factors which make a good insulating material, it is expensive to transport any distance. In order to compete economically with other insulating materials, mineral wool must be manufactured in the area where it will be used.

"The power generating companies represent the largest single coal market and consequently produce more coal ash than any other industrial group. Power plants are usually located near the metropolitan areas which they serve. Therefore, if coal-ash slag can be used in mineral wool production, the proximity of the power plants to cities could supply a strong incentive for the establishment of mineral wool manufacturing plants."

Two questions, both requiring "yes" answers, cut through the various and complex technical factors involved in the research. First, assuming we know what makes a suitable raw material for mineral wool, can coal-ash slag be used? Second, assuming the slag can be used, will it be of marketable quality? Affirmative answers in both cases appear possible.

Certain types of slag from blast furnaces are now the primary raw material used in manufacturing the insulating product. But even this kind of slag must be subjected to a few modifying procedures before it can be used. The WVU study shows great promise that coal-ash slag, subjected to the same kind of modifications, would also be a good raw material source. If further research confirms the preliminary findings, the first answer would be a definite "yes."

The WVU research team says actual experimentation is needed to determine the second answer, but earlier studies look good. A report written in 1940 states that "an excellent wool was made from bituminous coal ash, but it had a brown color." Later, a similar investigation proved that anthracite coal ash also produced a good wool source.

As to the objection to brown color, WVU's researchers point that it "would be objectionable only if the mineral wool were to be used in an exposed surface such as an acoustical tile. A large amount of the wool currently being sold is dark in color."

The other common complaint about coal-ash slag as a source material for mineral wool deals with the sulfur content and the effect on steel. Sulfur has been blamed for corroding steel through the formation of sulfuric acid which caused "etching" of any steel surface with which it was in contact. This criticism has been voided by research in Germany. There, it has been shown that the corrosion of steel by mineral wool is probably not promoted by its sulfur content. In fact, the sulfur may even delay corrosion by reducing electro-chemical potentials.

On the question of economics, coal-ash slag may have an advantage over the blast-furnace slag in producing the insulating material.

Humphreys and Lawrence emphasize that both sources must be "adjusted" in order to be used and they add, "It is unlikely that the cost of modifying coal-ash slag composition would exceed the costs entailed in modifying blast-furnace slag as the two materials are similar in their initial compositions."

The advantage for the coal-slag lies in the fact it is available in large quantities in many major metropolitan areas of the country. On the other hand, blast-furnace slag is readily available only at major steel producing centers and must be shipped in other areas, thus increasing its delivered cost.

Additional research at WVU is in the offing, as indicated by the concluding paragraphs of the report by Humphreys and Lawrence:

"From the technical and economic considerations discussed, it appears that a great potential exists for the use of coal-ash. Accordingly, the Coal Research Bureau plans to begin preliminary investigation of the potential. The investigations will consist of bench-scale production of mineral wool from coal ash, along with a detailed economic evaluation of this new use of coal waste materials. Results of these investigations will be presented in forthcoming reports."

Although bench-scale work is a far cry from cry from commercial production, it must be remembered that this is exactly the same procedure followed in the WVU work on fly-ash based structural materials—and actual production of those materials will be a reality by this coming June.

Imagination, research, experimentation, application—these are the ingredients being utilized at WVU to expand and increase the uses of coal, West Virginia's most valuable resource.

The prospects for success are favorable enough to have drawn financial support from the Federal Bureau of Mines. A $45,000 grant, to be used over the next three years, will be available to WVU to implement the research.

A Case in Point

EXTENSION OF REMARKS

OF

HON. JOE SKUBITZ

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. SKUBITZ. Mr. Speaker, one thing was made very clear November 8, 1966—the people want priority established in Federal spending. Though some would have you believe that our communities would throw up their hands and rebel if Federal grants-in-aid were withdrawn from their economy, this is not true in many cases. I cite "A Case in Point" as told by Emerson Lynn, Jr., editor and publisher of the Iola Register. I commend the attention of my colleagues to Mr. Lynn's remarks:

[From the Iola (Kans.) Register,
Jan. 16, 1967]

A CASE IN POINT

What is a necessary federal expense? With the federal budget shooting straight up out of sight, this question is bound to get a working over by the 90th Congress.

We can ask this question right here at home.

In today's Register is a description of the Work Study Program to be adopted for the 1967–68 school year. It anticipates a federal expenditure of $14,700 to be matched by $3,570 of local funds.

This money will be paid in the form of wages to 20 students who will work in the college, the high school and the city library.

I recognize that at least some of the work these students will do would not have been done if the federal program had not been available. Thus the program helps provide services in the community which could not be provided otherwise.

No doubt the money paid to the students will be welcome to them and let them live a little more comfortably than they otherwise would. Thus the program helps the students.

But . . .

It would be very difficult to convince me that any of the students in the program would quit school if a federally-subsidized job were not available and I am certain that the schools and library could continue to operate without the program.

It is, in other words, a luxury.

It could be justified if these were depression times and pump-priming were needed. It could be justified if our community was so poor that our youngsters couldn't find a job outside the school and had to have state help to continue their educations. It could even be justified if there were no federal deficit, no threat of inflation and the program was needed to siphon off excess wealth and redistribute it to the young.

None of these conditions exist. Our need is to cut federal spending, not increase it. There is a labor shortage, not a surplus. And we have never had a period in our history when the average Iola family was more able to assure an education for their youngsters.

If it is possible that this program is unnecessary and could be put on ice until and unless conditions warrant it, whose responsibility is it to take the action?

The responsibility lies in Washington, not Iola. Washington gives—it should do the taking. If it doesn't, the communities who refuse the program penalize their own taxpayers.

It is all very well to say that all of us must resist federal spending if it is to be brought under control and that unneeded grants should not be sought.

The fact is that no community is so rich that it can't find a good way to spend more money. There will always be applications for every federal grant-in-aid available.

Since all of us must continue to pay the taxes it takes to support existing programs, we should also take advantage of them to insure that at least some of our tax money is returned to us, no matter how diminished it might be after the round trip.

It is not only human nature to act in this fashion—it is also good economics.

Our only effective weapon for protesting excess federal spending is at the ballot box every two years. In between times we can only make certain those we elect are kept informed as to our opinions of their actions.

So The Register isn't suggesting that our schools or the library withdraw from the Work Study Program. We are suggesting that Congress take a long, hard look at it and see if this isn't one of the places where economy is possible so long as we are fighting a war.

Inaugural Address by Gov. Raymond B. Shafer, of Pennsylvania

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 25, 1967

Mr. SCOTT. Mr. President, on January 17, the Commonwealth of Pennsylvania inaugurated a new State administration. It was personally very gratifying for me to witness the ceremonies that installed Gov. Raymond P. Shafer, Lt. Gov. Raymond J. Broderick, and Secretary of Internal Affairs John K. Tabor.

Governor Shafer set the tone for the occasion with an inspiring inaugural address which proclaimed the objectives of his new administration: to make Pennsylvania a Commonwealth of excellence and to have Pennsylvania lead the Nation.

I ask unanimous consent that this excellent address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

To Lead the Nation

(By Gov. Raymond P. Shafer, Harrisburg, Pa., Jan. 17, 1967)

On January 15, 1963, I stood by the side of a young Governor as he took his oath of office.

As he spoke of his hopes and aspirations for Pennsylvania, the vision of William Penn once more became articulate.

For William Warren Scranton saw this Commonwealth in light of its historic promise.

He urged Pennsylvanians to stand tall and walk proudly.

A few moments ago, the parentheses closed on his Administration, fixing permanently his impress on the span of the past four years.

These years were proud years.

They were tall years.

He gave rich measure to the fulfillment of Penn's vision and Pennsylvania's promise.

With confident certainty that all Pennsylvanians share my sense of appreciation for the man and his achievements, I say:

"We wish you, Governor and Mrs. Scranton, Godspeed."

In 1681, on the eve of assuming the leadership of his new province, William Penn uttered this prayer:

". . . I beseech Almighty God to direct us, that his blessing may attend our honest endeavor and . . . the consequence of all undertaking will turn to the glory of His great name and the true happiness of us and our posterity. Amen."

As the first official act of my Administration, I would like to echo the prayer of the first governor.

For the strength of our people over these centuries has been their faith in God and in themselves.

It is in that spirit that I ask you to join me as we set our faces toward the future.

One chosen for high office is often admonished that history will be looking over his shoulder.

Let me say that I am far more interested in the realization that our children, and our children's children, will be looking over our shoulders in these next four years.

If you and I, working together, can accomplish things that will please them, then history's judgment will take care of itself.

Last fall the electorate of Pennsylvania approved the most remarkable program in the annals of modern politics.

It cast aside the fetters which for too long have bound the major political parties to ancient prejudices.

It beckoned enlightened men and women who wanted a credo that caught the pulse of the times in which we live.

It boldly proclaimed its philosophy under the banner:

"To Lead the Nation."

This is no sunburst of bright words, coined to be tossed into a wishing well.

It is a clear statement of objective.

And this objective is within our reach, if our hands will grasp it and our hearts pursue it.

We are a people blessed with a land whose beauty inspired poets and whose mountains stirred pioneers; whose earth yielded oil to light the lamps of the nation and coal to fire the genius of its industrial might.

But even more, we are a people whose fathers dared to shape the thought of young America, whose State House bell in July 1776 proclaimed, not only the independence of the thirteen states, but the truths embodied in the document which declared it.

Today we commemorate the anniversary of Benjamin Franklin's birth. This Pennsylvanian can point the way to the exciting potential of a creative citizenship we seek in our Commonwealth.

For not only did he pluck the lightning from our skies, he generated the power to move men's minds.

Pennsylvania spoke to the nation in Franklin's day.

It is high time we speak again.

It is high time we reassert the concept of the Republic which was fashioned in Philadelphia in 1787—strong states united in strong partnership with a national government.

There is need for a fresh perspective.

Today we are part of a fragile world that both frightens and fascinates.

Tension, revolution, changing mores, the fear of the loss of individualism in a computerized civilization are shaking ancient beliefs and disrupting the comfort and security of old institutions.

Our youth grow restless in search of new directions.

This is nothing new to man.

Only when men have taken hold of the temper of their times and moved to translate the discord of discontent into harmony through constructive thought and planning, has progress followed.

We Pennsylvanians have much to say to our times, for we have a legacy of leadership.

We are citizens of a proud state, but we cannot rest on this pride.

Our voice will have meaning only if each one of us becomes an active part of the times in which we live.

We must add our contribution of time and talent to the civic well-being of our day through the kind of creative citizenship that Franklin gave his day.

The strength of Pennsylvania, and of America, has always rested in the genius of the individual.

We Pennsylvanians are ready to put that genius to work.

Indeed, we can bring to this precious piece of America, where independence was born, a new statehood—a rebirth of state government—to restore balance and meaning to our federal system.

While we seek a more equitable share of federal revenue raised within our borders to help us help ourselves, we will see to it that we do a better job of helping ourselves.

But we need the vibrancy of creative citizenship.

With it, our horizons are boundless.

With it, we will have a modern Constitution designed to meet the constantly accelerating pace of this century, without sacrificing the safeguards which are an inherent part of our freedom.

We will bring new life to our splendid cities and, at the same time, bring them closer to our superb countryside through new highways and swifter transportation.

We will clean our water and air.

We will utilize our magnificent geographic position to become the dynamic hub of the world's most powerful concentration of people and industry.

We will bring the world closer to us through intensive attention to our land, sea and air facilities.

With advice of outstanding business and labor leaders, we will expand our industrial growth, bringing new markets and new enterprises to our State.

We will provide help to those who need it and opportunity to those who want it.

And our children will find our schools and colleges providing educations second to none.

Pennsylvania will speak with a strong voice.

And the voice will be heard throughout the land.

TO LEAD THE NATION

I ask you to remember this motto.

Let it serve to remind us that we have the opportunity to write a golden chapter in the history of our Commonwealth and our country.

There is no better way to lead than by example.

There is no better way to judge ourselves than through the eyes of our children.

With imagination, with boldness, and with enthusiasm, we shall make Pennsylvania the most envied state in the Nation.

This will not be an Administration of dreams.

It will be an Administration of vision.

I ask your hands, your hearts and your prayers as we set forth on this quest for excellence.

America Is Victim of Mismanaged War

EXTENSION OF REMARKS

OF

HON. ALBERT W. WATSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. WATSON. Mr. Speaker, one of the most forthright newspaper articles that I have read concerning the war in Vietnam appeared in the largest newspaper in South Carolina, the State, last December 8. The article, written by a well-known columnist, Henry J. Taylor, points to the most serious shortcoming of this Nation's efforts in Vietnam—mismanagement. I commend this outstanding article to my colleagues and the citizens of this Nation:

America Is Victim of Mismanaged War—Dreamers Direct Mighty Force

(By Henry J. Taylor)

On December 4, 1965, the enemy shelled Saigon's Tansonhut Airport for two hours with short-range artillery from positions first taken on January 13, 1964, and the United States suffered in the air its most disastrous single day of the war.

The morale of our troops remains magnificent. Our field commanders are superb. But mighty America is the victim of a mismanaged war.

How President Johnson can stand for it, and expect the American people to stand for it, is utterly beyond this writer's comprehension.

These are our men who are dying. This is our nation that is made to look ridiculous in the eyes of the military men of the world. This is our substance that is pouring in to a military budget which drains more than half the total budget and taxes of the nation.

South Viet Nam is only a little bigger than the State of Michigan. Yet the Pentagon confirms that the fire power present is greater than at any time or place in World War II.

President Kennedy committed our first combat troops to Viet Nam after his embarrassing Vienna conference with Khrushchev in 1961. Our men sent have grown from 12,000 to 360,000, exclusive of the great 7th Fleet. The absolute cream of the crop of our Army, Marines, Navy and Air Force is there, at the expense of weakening our military posture throughout the rest of the world.

The First Cavalry Division (airmobile) alone is the most powerful (and expensive) force of its size ever assembled. Even our vast Strategic Air Force, based on Guam and not designed for such missions, is employed nearly around the clock It is America's third largest war.

Yet after five years of all this we have still not built an effective front and we are not secure on our flanks or in our rear. Our great forces are moved in a mass from one place to another without destroying the enemy in being.

We have fought successfully many guerrilla wars and some fundamentals remain in wars, including guerrilla wars. But no war of any kind in the history of the world has ever been successfully conducted like this.

Defense Secretary Robert S. McNamara, his whiz kids and their computers, who began their careers with the Bay of Pigs, have no known competence in military strategy and should not be dominating the strategy and tactics in this war.

As this column has repeatedly stated, a hospital superintendent must run the hospital (the Secretary must run the Department of Defense), but the superintendent must not tell the surgeons when to turn on the oxygen or whether to take out an appendix.

Why has no supreme commander been appointed in the field? No modern war has been successfully conducted any other way. Yet after five years, and to this day, the Viet Nam command has not been unified. No one man is in command.

Gen. William C. Westmoreland commands the Army there, but not the Marines. The Air Force and Navy each has its own command. Military leaders have urged again and again that this glaring weakness be corrected. They shudder to think what would have happened if we had failed to have a unified command in Europe in World War II.

Equally specific, this writer is now completing an investigation of the all-but-incredible misuse of our air power in Viet Nam.

The London dreamers mismanaged the Boer War, issuing Alice-in-Wonderland press releases about local sector victories, similar to those Washington releases today about local sector victories in Viet Nam. Only Lord Kitchener finally salvaged the debacle.

The British-French dreamers mismanaged the 1914 German war, and did it all over again in 1939.

Paris mismanaged the Algerian war. I was in that action, and it was commonly stated at the front that the Algerian war would be won or lost in Paris, not in Algiers.

The Bay of Pigs, in turn, produced its own final product: "See no Cuba. Hear no Cuba. Speak no Cuba."

It can happen. And, on the record, it is happening in Viet Nam. Only a mighty roar of protest from the public against the mismanagement of this horrible war can save our heroes and our substance in today's debacle.

The Late Honorable Charles A. Buckley

SPEECH

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. O'HARA of Illinois. Mr. Speaker, soon after my coming to the Congress my acquaintance with the Honorable Charles A. Buckley commenced and it ripened into a close and treasured friendship. I have missed our frequent chats together since his retirement from the House and now that he has gone and those times of warm companionship have passed forever mine is a poignant realization of the void.

Charlie Buckley and the late beloved Tom O'Brien of Chicago were of the same mold. Neither ever broke his word or forgave when another had broken his word to him. Loyalty was the creed of Charlie Buckley as it was the creed of Tom O'Brien as well as of other leaders of a colorful political era, now closing, during which America marched forward. Loyalty to party and loyalty to friend, such as Charlie Buckley and Tom O'Brien and their kind practiced, surely are not the least of the virtues in a democratic society.

To the loved ones of Charlie Buckley go my deep sympathy.

Record Tonnage for Mississippi

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. SCHWENGEL. Mr. Speaker, the economy in southeast Iowa is growing by leaps and bounds. This is graphically illustrated by the record tonnage which moved on the Mississippi River through the Rock Island district of the Corps of Engineers.

Almost 17 million tons of commodities traveled through the Rock Island district in 1966. This is over 2 million tons over the previous record set in 1964.

The Muscatine Journal has comprehensively recorded the story of freight traffic on the Mississippi in 1966. This story demonstrates why we need a 12-foot channel to increase even more the potential for commerce on the Mississippi and why year-round traffic on the river is becoming more important each year.

[From the Muscatine Journal, Jan. 18, 1967]

Cargo shipments on the Mississippi river on Iowa's eastern border set a tonnage record in 1966, Rock Island district, corps of engineers, reported today.

Commodities amounting to 16,772,138 tons passed through the district in the year. This is over two million tons more than the previous record of 14,412,454 tons set in 1964.

Shipments on the river totaled 14,362,605 tons in 1965, slightly less than the 1964 record, because one month of navigation was lost during the record flood.

At lock 16 near Muscatine, 13,028,501 tons of cargo were recorded as passing through in 1966. Below Muscatine at lock 17 at New Boston, Ill., the tonnage amounted to 13,581,870. At lock 15 at Rock Island the year's cargo total was 12,608,691 tons.

River traffic moving all the way through the Rock Island district during 1966 totaled 10,301,391 tons, an increase of over two million tons more than the 8,248,399 tons of through shipments in 1965. Last year's figure also was well ahead of the 8,988,726 tons on through traffic during 1964.

River traffic originating in the Rock Island district totaled 3,500,928 tons, a slight increase from the 3,437,551 tons originating in the district during 1965. Both of these totals were up from the 3,234,383 tons that originated in the district during 1964.

Cargoes shipped to points in the Rock Island district last year totaled 3,875,132 tons. This was an increase from the 3,568,896 tons shipped to points in the district in 1965 and the 3,113,053 tons shipped during 1964.

Southbound grain shipments totaled 6,029,129 tons in the area during 1966. This was far above the southbound grain of 4,907,250 tons in 1965 and 4,841,130 tons in 1964.

Muscatine is one of the major grain ports on the river.

Northbound coal shipments totaled 5,146,114 tons in 1966, compared to 4,606,210 tons in 1965 and 4,262,288 tons in 1964. Northbound petroleum totaled 3,032,000 tons last year, a slight increase from the 2,720,880 tons of 1965 and down slightly from the 3,151,995 tons tallied in 1964.

Miscellaneous cargoes amounted to 2,564,895 tons in 1966, up from 2,128,265 tons of 1965 and 2,157,041 tons of 1964.

Tonnage figures are highest at the southern end of the Rock Island district as the destinations of many river tows are in the district. Local river traffic also accounts for some variations in the figures for the 12 locks.

In the three months of 1966 the cargo totals in the district amounted to over two million tons. The top months were May, August, and October.

The monthly cargo record in the district was set in August, 1965, when 2,302,280 tons moved on the river in the area. That was the first year that a monthly figure surpassed two million tons.

August was the biggest single month in the district in 1966.

Lock 16 at Muscatine recorded 1,799,653 tons in that period.

What Americanism Means to Me

EXTENSION OF REMARKS

OF

HON. JAMES J. HOWARD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. HOWARD. Mr. Speaker, on Saturday, January 21, 1967, I was privileged to attend the Greater Keansbury Jaycees Americanism Essay Contest in Keansburg, N.J. The chairman for this contest was Mr. John R. Brightman, 289 Main Street, Keyport, N.J., and he is certainly to be commended for his hard work in promoting this extremely worthwhile project among the young people of his community.

I am happy to have copies of the two winning essays for insertion in the CONGRESSIONAL RECORD and I urge all of my colleagues to read them and learn from them of the splendid patriotism of two young eighth graders. The boys winning the contest are John Baldwin of 14 Marsan Drive, Hazlet, N.J., who attends St. Ann's School, and Thomas Kinneman, 131 Park Avenue, Keansburg, N.J., who attends the Keansburg Public School.

These young Americans are to be congratulated most highly on their achievement and I wish them well when they compete in the State contest for the State winner's trip in April. I am sure that all of us will feel a surge of pride in reading these excellent essays, which follow:

WHAT AMERICANISM MEANS TO ME

(By John Baldwin)

Webster's dictionary describes Americanism as, "Attachment or loyalty to the United States, its traditions, interests or ideals." This is, of course, a general definition. To stretch this out and see how this fits (as I believe it does) into the lives of every worker, every housewife, every child, every farmer, every soldier, and even all elderly people is what I have considered.

To do this I asked myself a series of questions, number one—What is the United States? number two—Why should we be "attached and loyal" to our country? number three—How should we show this? As I see it, the answers to these questions are as below:

Answers one and two—From the beginning of its formation as English colonies our country has experienced freedom and mostly good leadership. When Britain threatened this freedom, our fathers created a government where a person's rights would be automatically recognized, where a government would exert all of its efforts on the citizens of the country, and a government where dictatorship and tyranny would be prevented to the ultimate of its power. This government, our government, is, for the most part; that for which our fathers had hoped. To keep this democracy serving the citizen an interest in our country and its affairs is necessary.

Third, apathy is good government's greatest nemesis. People don't have to start rallies to put their mark on the evils that are ever-present in the United States; just the ordinary actions asked by our country are sufficient.

For example, the businessman loaded down with paperwork and the housewife that still has a "million things to do," who are both rushing to the polls to cast their votes, are doing their share. The eleven-year-old who, stopping on the way to the "funnies," looks at some of the headlines that make the history he'll be telling his children and his children's children. Learning current events helps the citizen to make choices later in life. The teenager who begins to understand what the author of his American political history book was talking about is also laying a foundation for his future. The farmer who works long into the night doing his best to give an honest income tax return and the neighbors who are circulating a petition to make that dangerous curve on Jackson Drive a safer place to drive are assuming their God-given responsibilities. It is the everyday things, common confrontations, and such that show our Americanism.

If I ever write a "———'s Philosophical Dictionary" Americanism will be "that attachment and loyalty that people have when they take the time to be Americans."

WHAT AMERICANISM MEANS TO ME

(By Thomas Kinneman)

Americanism's meaning to me cannot be given in a simple and easy dictionary-type answer. To show what it really means to me, I must give examples of things that have been granted to us and how they are connected with Americanism.

It is my belief that to be permitted to enter this contest and, within it, to approve or to disapprove of America, though one of our basic American rights, is more significant than some people think. It shows that when people govern themselves (as Americans do) they are more ready to take constructive criticism. Since the people are the government, this shows maturity of government.

Our freedom to worship as we please, if we choose to do so at all, demonstrates to me that the American system is tolerant.

The right to assemble shows that the government can trust their controlling force (the people) if the American way reigns.

Our right to form and maintain a Militia for the common safety shows not only trust in the people but also, it shows the sensibility of the government concerning defense.

Our right to maintain *private* homes verifies the respectibility of the American way-of-life.

Our rights in regard to arrest, trial by jury, bail, and punishment of criminals demonstrate the fairness and responsibility of the American governmental system.

Our system of checks and balances among the three branches of government gives evidence to the careful planning to prevent a dictatorship from coming into power and to maintain fair laws.

Foresight is demonstrated by the ability of the government to change itself without revolution.

But Americanism does not always produce good. The freedoms and rights given to us are used and twisted by some people. By abusing their rights, they abuse Americanism. For example: they can turn the freedom of speech and press into mud-slinging. They change the right to assembly into demonstrations and gangs on street corners. Both the good and the bad are products of Americanism, because Americanism is only a product of people, people with failings and weaknesses. If we use Americanism for what it was meant, we can gain a better understanding of it. Then, I believe, we can see Americanism as the best way-of-life that anyone can offer.

Kansas Broadcaster Speaks Out in Support of On-the-Air Editorials

EXTENSION OF REMARKS

OF

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. MIZE. Mr. Speaker, broadcasters are alarmed over what they feel will be a move by the 90th Congress to restrict the use of on-the-air editorials. Whether any such movement materializes, an eloquent case has been made for the continuation of the present policy under which broadcasters operate in this respect by Lowell E. Jack, general manager of radio station KMAN, Manhattan, Kans. Under leave to extend my remarks, I wish to call attention to a letter on the subject which Mr. Jack sent me recently. His letter follows:

RADIO STATION KMAN,
Manhattan, Kans., January 12, 1967.

Representative CHESTER MIZE,
1109 Longworth House Office Building,
Washington, D.C.

DEAR CHET: Because of the stir in Congress about placing limitations on broadcast editorials I thought you should have my feelings.

Please understand that I am strongly opposed to the imposition of *any* restrictions on broadcast programming. Any laws or regulations which would, in any way, further restrict editorials would be a basic presumption against the freedom of speech.

Far better than laws to control, is the vigorous competition which has been developing over the years in the broadcasting industry, and between broadcasting and other media.

Because of a lethargic newspaper, the *only* voice in many communities is the radio station. Additionally, in many places in the country the only *other* voice in the community is the radio station. To restrict the *only voice* or the *only other voice* would be to seriously impair freedom of speech.

The present "fairness doctrine" is restrictive enough. It guarantees that the other side shall not be silenced. And in the case of a political candidate, it is spelled out even more explicitly, as you know.

On-the-air editorials are serving an extremely valuable public service. Because of the moving, persuasive qualities of the human voice they often are more stimulating than the printed editorial.

The broadcaster's reputation stands behind every editorial he runs and public opinion soon buries the irresponsible voice!

Yes, existing laws and regulations can adequately resolve disputes relating to broadcast editorials. Please don't let Congress hamstring radio and television with an abridgement of free speech.

All best wishes to you and your family. Good Luck!

Sincerely yours,

LOWELL E. JACK,
General Manager.

Price of Freedom

EXTENSION OF REMARKS

OF

HON. HUGH L. CAREY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. CAREY. Mr. Speaker, President Johnson's budget message makes no bones about the towering costs of the struggle for man's freedom in Vietnam.

But it is a cost that we can and will bear.

Even before the President submitted his budget, the Baltimore News American commented on the advance announcement that some $73 billion would be sought for defense, including the conflict in Vietnam.

No other country could afford to spend anything like the amount we will pay in the coming year to defend a way of life, this Hearst newspaper states on its editorial page. Yet we continue to enjoy an unparalleled level of prosperity while paying taxes far less burdensome than those paid by the citizens of many another land.

In short, the newspaper says, the price of our freedom is indeed great—and worth every penny.

To give this suitable emphasis, I propose to insert the News American's commentary in the RECORD:

THE PRICE OF FREEDOM

On next Tuesday, President Johnson will submit to Congress his administrative budget for the fiscal year 1968, which begins July 1. The all-time record budget, the President has said, will total some $135 billion, of which the staggering sum of $73 billion will be for defense and the cost of the Vietnam War.

To most people, the figure of $73 billion is so huge as to be virtually meaningless. Some idea of its size may be grasped, however, by dividing the annual total by time periods. Put this way, the nation's total defense expenditures for fiscal year 1968 will come to $200 million per day, or $8.3 million for each and every hour.

The proposed budget cost of making the U.S. secure from attack while battling to stem Communist aggression in the Far East exceeds by $11 billion the $62 billion seen as needed for all other costs of administering the federal government. And the defense costs are mounting all the time. For fiscal year 1968, they will be up at least $5 billion over the current period.

No other country in the world could afford to spend anything like the amazing sums this nation will pay out in the coming year for the defense of its way of life. Despite this fact, its citizens will continue to enjoy a level of prosperity that is unparalleled while paying taxes far less onerous than those paid by the citizens of many other lands.

In a word, it is precisely because our way of life is so rich, rewarding, and productive that we are able to afford the astronomical sums required to protect it from would-be destroyers. The price of our continuing freedom is, indeed, great—worth every penny.

The New L.B.J.

EXTENSION OF REMARKS

OF

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. WILLIAM D. FORD. Mr. Speaker, an unhurried appraisal always throws the clearest light on a man and an event.

A recent column in the Detroit Free Press makes that point as it portrays President Johnson and his state of the Union message.

Judd Arnett, the highly regarded columnist, laments the stress of immediate deadlines which led some to report that this memorable address "contained little that was new." On the contrary, Mr. Arnett suggests that it was, in his words, "as 'new' as this minute, delivered by a 'new' President with a 'new' lease on life."

As for the man himself, Mr. Arnett declares the President exuded vitality.

As for the message, he concludes that the President is not going to turn back the clock on social progress—that this is a time for consolidating gains and rooting out weaknesses. Further, he finds a commendable flexibility in the President's position in world affairs and expresses the feeling that eventual peace is building strong roots.

I ask that this entire column be made a part of the RECORD:

IT WAS THE "NEW" L.B.J.

(By Judd Arnett)

While listening to the President's State of the Union address—a remarkable performance by one of the most complex of all our Chief Executives—a few thoughts occurred which will now, after further reflection, be entrusted to the light of day . . .

First of all, it seems to me that all the instant commentators, both on television and in the newspapers, badly miscalculated the main thrust of Mr. Johnson's remarks and the temper and mood in which they were offered.

Under the stress of immediate deadlines there was the tendency, perhaps the necessity, to hastily scan the text, note the paucity of requests for large appropriations and thus come to the conclusion that "the speech contained little that was new."

OH MY

In many respects it was as "new" as this minute, delivered by a "new" President with a "new" lease on life. What he proposed, and what he only half-offered, will be rattling around the world for a long, long time.

In the first place, there was the matter of the President's health. On our television set, which brings us all the great spectacles in living black and white, he exuded the vitality and the raw energy common only to a man who knows that the doctors have finally taken the clinking and the clanking out of his innards.

He looked better—fresher, stronger, tougher—than at any time I can recall since the Bay of Tonkin, so any one who felt he might withdraw from the fray in 1968 for reasons of health was dispelled of a foolish notion. The Republicans will have to whip Lyndon B. Johnson in the streets, on the beaches and in the fields before gaining the White House, and it won't be easy.

For what we saw and heard Tuesday night was the "new" President, as transformed as though he had just graduated with highest honors from a series of lectures conducted by Prof. Henry Higgins. The face was familiar, true, but the attitude, the approach and the language had been drastically altered.

As a public speaker, Mr. Johnson has gone through several cycles in recent years, the most unnerving of which we shall call "Pedernales Piety." When thus inspired, he was sort of a cross between Lum Edderds and a preacher facing a puny collection. You had the feeling that if you did answer his plea to sit down and reason with him, the conversation might become embarrassing, as when Pop tried to tell you about the birds and the bees.

Well, "Pedernales Piety" was missing from the State of the Union, thank goodness. Mr. Johnson simply talked—and he is an excellent talker. He employed the absolute minimum of histrionics, following the text with flowing ease and unstrained style. The address was long, about an hour and 10 minutes, somebody said, but captivating. Not once did this viewer wish for a station break or a commercial with girls.

In approaching this moment, there was three obvious courses open to the President. In view of the election returns, the fiscal situation and the state of world opinion, a weak man would have called a retreat from domestic and international commitments. This he did not do. A reckless man would have charged ahead, defying his enemies. He resisted most of this possibility.

Instead, he moved somewhere in between the outer extremes, taking up a highly defensible position. He is not going to turn back the clock on social progress, as well he shouldn't, but rather his approach will follow the lines of what the Kennedy people used to call "prudent liberalism."

It shall be a time of consolidating gains and of rooting out weaknesses—exactly what the Republicans have been yelping for. In many ways this was a masterful speech, toiled over by experts in the art of politics and soothsaying.

There was little of solace in his remarks for those who would have us leave Vietnam in the dark of night, but what can you say to people who believe that capitulation constitutes a foreign policy? In truth, Mr. Johnson's position in world affairs is now more flexible than that of any of his predecessors since Herbert Hoover, and the feeling grows, at least here, that eventual peace is building strong roots.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. PUCINSKI. Mr. Speaker, this week marks the 49th anniversary of Ukrainian independence and it is important that we take a moment to honor this great anniversary in the annals of freemen.

Independence was declared in the Ukraine on January 22, 1918. Yet barely 3 years were to pass before this newly free land was to be invaded and overrun by the Soviets.

The people of the Ukraine, denied the right of self-determination by their Communist oppressors, were early victims of Soviet colonialism. No one could conquer the Ukrainian free soul, however, and Ukrainians throughout the world continued to commemorate their great anniversary of independence.

Those of us fortunate enough to live in the United States would do well to remember this significant anniversary, and thereby to renew our efforts and our determination to resist further encroachment by the Communists on the territory of freemen.

Our country is fighting today, with the South Vietnamese and representatives of free nations around the world, to secure self-determination for those who would be free to choose their own destiny. It is our hope and fervent prayer that the people of the Ukraine will one day regain their rights. And we take this opportunity today to reassure them that their cause and their struggle will remain ours, as well.

Answering Vietnam Critics

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mrs. KELLY. Mr. Speaker, critics of our Vietnam policy have at times given rather mystifying twists both to history and to our national purpose.

Howard K. Smith comments on several of them in a column which I want to place in the RECORD and to call to the attention of my fellow Members.

Mr. Smith prefers to examine the facts of the situation caused by Communist aggression in southeast Asia.

> We must put a halt to it in Vietnam—

He asserts—

> or run the risk of seeing the world balance go so badly out of kilter as to provoke a large war.

Mr. Smith writes:

> Sometimes a nation must brace itself against outcries of criticism and do what is clearly right.

Certainly there is nothing we want more than peace for Vietnam—peace which will put an end to the terrible tragedy of war and allow the people of Vietnam to work out their destiny without coercion originating in aggression and terrorism. This is our hope and our goal.

The column follows:

[From the Washington (D.C.) Sunday Star, Jan. 22, 1967]

ANSWERING CRITICS OF OUR VIETNAM POSITION

(By Howard K. Smith)

Critics of the American position in Vietnam manifest elemental virtues. They invent new arguments with fertile ingenuity or they cling to old ones with weed-like persistence. Their single vice is, their arguments both old and new get no closer to being relevant to the facts of life,

A new twist the other day was a columnist's plaint that we are offending the very basics of our own history: By rebuffing foreign dissenters we have discarded Jefferson's first imperative in the first sentence of our first state document—namely that we should show "a decent respect to the opinions of mankind."

The columnist misinterpreted Jefferson. In that famous declaration, he did not offer to change our course of action. He merely offered to explain it to those willing to listen, while we forged ahead regardless of how they reacted, which is what we are doing now.

U Thant the other day revived the old domino theory which, one had hoped, the critics had stopped propping up and knocking down. The Secretary General said the U.S. bases its policy on faith in the domino theory, and that the theory is wrong.

I don't know how much history it will take to make the point that our action is not based on theory but on fact; A year ago the Communists nearly took South Vietnam. They have seized two-thirds of Laos and about a fifth of Cambodia. They have attacked India twice to disable that potential focus of resistance. Little over a year ago they shipped 100,000 weapons to Indonesia to enable that Communist party to try to seize the government; the fact that they failed does not blur the clarity of their intention. They announced by radio, and began to fulfill, a plan to take over Thailand. No week passes without the newspapers of U Thant's own Burma recording Communist attacks in that country.

None of this is theoretical; it is what is happening. We must put a halt to it in Vietnam or see the world balance go so badly out of kilter that a big war will result.

U Thant also argued that U.S. interests are not involved in Vietnam. Secretary of State Rusk in response pointed out that the past four American Presidents disagreed. The Secretary might have added the name of a fifth President—Franklin D. Roosevelt. In 1941, when Japan seized what is today Vietnam, Roosevelt deployed our war fleet, absorbed the Philippine army into the U.S. Army and cut off essential exports to Japan. He made all these warlike preparations—over what is today Vietnam—and according to the Gallup poll of the time 96 percent of the nation supported him. His action led directly to Pearl Harbor. So, Vietnam has been an American interest for quite a long time.

Perhaps the most ingenious recent argument is one invented by the editorialists of the New York Times. They have argued that we should make unilateral concessions (like stopping the bombing without reciprocal concessions from the Communists) because we are a big nation, and they are small.

The principle that effective military action must be related inversely to size is certainly something new under the sun. It would give a blank check to any client state, or client front, of every international aggressor. It would have been our undoing in Greece or Turkey or Korea. The relevant facts are that we escalated in Vietnam because they had escalated enough to take over the country. When we experimented twice in de-escalation, they used the lull to escalate faster. There is no way of measuring how many additional casualties we suffered because of ceasing the bombing twice. In any case, our present offer to stop the bombing if they will use the infinite channels and ways of diplomacy to promise some reciprocal de-escalation is both generous and sensible.

The hoariest of arguments now enjoying a revival in the academic community is that by thus hitting back at a small nation we are making ourselves the world's pariahs; we shall end up with the world refusing to associate with us and we shall hate ourselves.

We have heard that argument a dozen times, most loudly in 1956, when the Russians stifled rebellion in Hungary by brute force. Well, instead of being outcasts, the Russians are being sedulously courted by everybody including us. If the Russians got by with a bad case, we shall do all right with our excellent one.

It is a fact of life that sometimes a nation must brace itself against outcries of criticism and proceed to do what is clearly right. That is what we are doing.

National Wildlife Conservationist of the Year

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HARSHA

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. HARSHA. Mr. Speaker, yesterday a singular honor was bestowed upon a close friend of mine and I would like to offer my sincerest congratulations to him and call to my colleagues' attention the outstanding record of this great American.

John H. Dunlap, Jr., was selected as National Wildlife Conservationist of the Year, in the second annual nationwide conservation achievement program conducted by the National Wildlife Federation in conjunction with the Sears-Roebuck Foundation.

His selection was made by an impartial review board of professional conservationists. The review board made this selection from the most outstanding candidates in the Nation representing each of the States.

John Hyde Dunlap, Jr., of Williamsport, in Pickaway County, Ohio, whose Virginia forebears settled in the Scioto River bottoms north of Chillicothe after the Revolutionary War, is a seventh-generation central Ohio farmer.

A 1928 graduate of Ohio State University, he and his wife Ellen were married when she graduated from OSU in 1929. They have three children, Shirley Anne—Mrs. Clifford Bowser—also an OSU graduate; Gail Ellen Dunlap, a Vassar alumna, and a married son, John H. Dunlap III, who attended OSU. There are three grandchildren, Anne and Lee Bowser and John H. Dunlap IV.

An active farmer, Dunlap, age 61, manages 31 farms encompassing 13,000 acres in Pickaway, Ross, Madison, Franklin, and Clark Counties. He owns outright 11 of these farms, containing over 4,000 acres, an implement business, hardware, and general supply store in Williamsport, and two elevator and feed businesses in Pickaway County. He operates under the name of the Dunlap Co., which also builds levees, ditches, ponds, and the like. He started this type of work on his farms and now does it for others.

He is considered a pioneer in the building of farm ponds and their proper management for conservation purposes. He has constructed hundreds of farm ponds and the 14 ponds he has built on his own land are stocked with game fish and personally regulated by him for production and longevity of the species. Each pond contains duck boxes and aquatic plants for ducks and other wildlife.

A bass fisherman from way back, Dunlap admits that his first loves are fishing and hunting. He was 7 when he did his first hunting for birds. Then it was quail, followed by pheasants, the latter which he prefers now. For several decades he has personally purchased, raised and turned out annually hundreds of pheasants, quail and wild ducks in the county in which he resides. His father early taught him the wise use of natural resources. Probably his first lesson, he thinks, was when his father made piles of brush or cover for rabbits, and the likes. Today he accomplishes this with the planting of miles of multiflora roses and thousands of mountain olive and coniferous trees.

He is the chairman of the recreation and resources commission, a lay advisory group to the Ohio Natural Resources Department. In this capacity he has been instrumental in carrying forward the policies and suggestions of the department of better use and conservation of the State's natural resources and recreational facilities.

It is only fitting that John Dunlap should hold this chairmanship as he was the organizer of the Citizen's Committee for Ohio Parks and Water Development. He subsequently spearheaded the committee's recommendation which urged the Governor and the general assembly to provide a minimum of $50 million "to start and expedite the development of our parks and water resources." The outcome of this untiring work with this committee was State issue No. 1 on the ballot in 1963, which permitted the State to borrow $250 million for capital improvements and issue bonds for same. The portion of this voter-approved bond money allocated to the natural resources department was the start of the department's current $100 million capital improvements plan for outdoor recreational facilities—more money for conserving the State's natural resources than has been cumulatively expended in this field since Ohio became a State, in 1803. The many improvements now completed and underway will be living mementos to this public-spirited conservationist, yet, he neither receives—nor would accept—1 cent for his never-ceasing efforts on behalf of conservation in Ohio.

To point up this man's dedication to conservation and public service, note a partial list of the organizations in which he is presently, or has in the past, actively participated, and the positions he has held in each: He is a director of the Scioto Conservancy District, since 1960, and was also a director of its predecessor, the Scioto-Sandusky Conservancy District—1936–58; is vice president of the Ohio Forestry Association, a member of the Ohio State University Advisory Committee to the College of Agriculture; past president of the Ohio Farm Manager's Association; a member of the Williamsport School Board for 20 years; director, First National Bank of Circleville; director, Columbus Production Credit Association; director, Home State Publications, which publishes five farm papers in the Midwest, emphasizing good conservation practices; a member of the League of the Ohio Sportsmen and a member of the Methodist Church, the Elks, the farm bureau, and Masonic orders.

John Dunlap truly exemplifies the best example of citizen participation and leadership in conservation and public service. His contributions are indeed of national significance to the wise use and management of the Nation's natural resources.

I am proud and privileged to consider him my friend.

Hon. James W. Day To Retire as Mayor of Parma, Ohio

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. VANIK. Mr. Speaker, on Sunday, January 29, 1967, in the Sheraton Hotel in Cleveland, the citizens of Greater Cleveland, and the city of Parma in particular, will pay tribute to the successful leadership of the city of Parma by Mayor James W. Day, who is retiring as mayor on February 15, 1967, to take a position in private business.

It is fitting that at this time when so much of our emphasis and concern is directed toward the city and its problems that we analyze the extraordinary accomplishments of the municipal executive who managed to reduce the bonded indebtedness of his city during his tenure of office from over $16 million to slightly over $4 million, while improving the urban services of the city to levels which place it among the highest in Ohio and in the country.

Before Mayor Day entered the office of mayor, he had extended previous experience as a member of his city's board of zoning appeals of the city council. He served in the office of mayor since the year 1961.

The achievements of Mayor Day as mayor of Parma have brought new dimensions to this important office. It has become, in fact, "model city," making great strides while reducing its obligations—a most extraordinary feat.

While it is unfortunate that public service should lose so capable an administrator—we in public life share pride in this recognition of talent in the public service.

Parma is becoming recognized as a training ground for excellence in public administration. Only last year the city provided Cleveland with a topnotch school administrator in Dr. Paul Briggs.

Parma and the entire northern Ohio community and the Nation are grateful for the contribution which Mayor Day has made as mayor.

On his new assignment with the Higbee Co., we wish him well. If he had to move from public service to private enterprise, he could have made no better change. This extraordinary department store, in my judgment, is one of the finest institutions of its type in America. It is my hope that the Higbee Co., as his new employer, will provide him with released time so that he can be free for occasional community and public responsibilities in which he has provided such capable leadership. We would like to reserve the right to call upon his experience, his time, and his talent.

National Power and Firepower

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. RIVERS. Mr. Speaker, it is a pleasure for me to bring to the attention of my colleagues in the House a challenging and provocative article entitled "National Power and Firepower," which appears in the January 1967 issue of the Air University Review published by the Aerospace Studies Institute at Maxwell Air Force Base, Ala. The article is written by Mr. Anthony Harrigan, associate editor of the Charleston, S.C., News and Courier, a nationally recognized author on military affairs.

I commend the article to all of those who want a better understanding of the historical background of the world in which they live.

The article follows:

NATIONAL POWER AND FIREPOWER

(By Anthony Harrigan)

In 1913 the maps of the world showed Europe as occupying the central position on the globe. As the earth is a sphere, there is no centrality of position in geographical terms. But in terms of the power realities of the age, it was only logical that maps show the central area of the globe located on the European continent. Europe *was* the center of the world, not only in European eyes but in the eyes of Asians, Africans, and Americans.

In a very real sense, Europe discovered the world without ever having been discovered itself. The Chinese had an opportunity in the voyages of Cheng Ho to sweep around Africa and reach the northern hemisphere, but they muffed their chance. They lacked the world vision of the Europeans at the end of the medieval period. As a French writer said in 1816, "This narrow peninsula, which appears on the globe as a mere appendix of Asia, has become the metropolis of the human species." Europe, in 1913, was at the peak of its power. The states of Europe had divided the entire African continent, with the exception of Ethiopia. The subcontinent of India was the crown jewel in the British Empire. China was subdued and impotent. What Europe did not control outright, or manage by way of military protectorates, it manipulated through a variety of financial and other pressures.

The heart of the European world consisted of the major powers—France, the new German Empire, the Austro-Hungarian Empire, and Imperial Russia. Italy, while not a first-rank power, had considerable possessions in Africa. Little Belgium commanded the Congo, the heart of Central Africa. The Dutch controlled the rich East Indies. Only Spain and Portugal had regressed, though Portugal still held immense territories beyond the seas. Spain had suffered many misfortunes, the most recent having been the bad luck to tangle with the rising power of the United States of America.

Britain's power still seemed to be in the ascendancy, the British having won a protracted war with the Boers and strengthened their hold over the Cape Town to Cairo route. Throughout the nineteenth century the Russians expanded their empire in Asia by the absorption of Chinese territories. Russia, however, made one critical mistake and suffered one significant setback. The mistake was the decision to sell the vast Alaska territory to the United States. Alaska represented a beachhead in the New World, but the Russian government lacked leadership with an understanding of the potential of Alaska in strategic terms. The setback was defeat at the hands of the Japanese in 1905.

Germany's power was increasing rapidly. She held large and valuable territories in East Africa and South-West Africa, the latter being the world's principal source of diamonds. Germany also maintained a foothold in China on the Shantung Peninsula. Had war not broken out in 1914, Germany might have arrived at an understanding with Britain regarding a division of the Portuguese colonies of Angola and Mozambique in Africa.

The United States, while not subordinate to European power, was linked to Europe. Its people were overwhelmingly European in origin. American culture, commerce, and finance were joined in various ways to the nations of Europe. America in 1913 was a complement to European power, not in any sense a threat. The United States had a role to play in shaping the history of the western hemisphere. It was on its way to establishing protectorates over Haiti and Santo Domingo while guiding the new nation of Cuba in a protective relationship.

In 1913 it seemed that the *Pax Europa* would endure for a long time, perhaps as long as the Roman Empire had endured. Westernization of isolated pockets on the globe seemed a certainty. Within 50 years, however, or the life span of many men educated before World War I, the power structure of the world had completely changed. For a time, in the late 1940's, the very survival of the European nations was in question. Indeed much of central and all of eastern Europe had fallen under control of the Soviet Union, which had largely rejected Russia's European past. Germany in 1945 was in ruins, as was Italy. France was a moral wreck, bitter and divided. Britain, having "won" a world war, was exhausted and ruined by a second colossal conflict within a quarter century. Only the power of the United States enabled the European nations to make an economic recovery. American military power had to stand guard from Norway to Greece to protect prostrate Europe. Psychologically, Europe found itself unable to retain its overseas territories or even to remember its civilizing mission. Where there was not outright collapse in Europe, there was a contraction of goals and a loss of faith in the ability to develop and use power. The United States, while protecting western Europe against economic ruin and Soviet military conquest, showed no understanding of Europe's need for power bases elsewhere in the world. American administrations applied pressure to help oust the Dutch from Java and Sumatra, the French from Algeria, the Belgians from the Congo, and the British from many parts of their former empire. Only Portugal, the weakest of the European countries, had the stamina to stand firm against terrible pressure. As Elie Deloches wrote in *Le Charivari*, "Portugal in a pillory, the only one of the older nations of Europe to grace the storm, is like the symbol of the West, which does not want to die."

That Europe could fall to such a humiliating condition in so short a time, after being at a peak in 1913, has sent a shock through the minds of thoughtful Westerners. What happened? Why? Is the process of deterioration inevitable? Such questions confront the West, especially America, which today stands as strong as the European states in 1913. An examination of the metamorphosis of power is essential if we in the West are to be masters of our fate, not victims of new historical tides.

To begin with, the inner structure of Europe did not change as the major European nations developed overseas empires and protectorates. The crowned heads of Europe knew each other, and many were related by blood. But their countries had scant appreciation of the changed relationships in the world—relationships which require a considerable measure of collaboration among the advanced states. Europe had the interests of a single house, but European diplomats did not see this. They could have pondered the Japanese naval victory over Russia at the Battle of Tsushima Strait, but they did not do so; or at least they did not reach the right conclusions. Apparently it never occurred to the masters of European chancelleries that, in Franklin's words, they had to hang together or assuredly they would all hang separately. They did not grasp the fact that European technology was spreading and that new power centers—competitive centers—would emerge as threats to Western nations. Being rooted in the conflicts and enmities of previous centuries, they could not take stock of the new challenges just over the horizon. Indeed history was repeating itself in a sense, for it had proved very difficult in earlier times for the nations of Christendom to see beyond their disputes and deal effectively with the power of Islam. Because they lacked vision, the great nations of Europe turned to civil war, not once but twice in the twentieth century. The two European civil wars—known as World Wars I and II—gutted Europe's power. The millions killed at Verdun, Stalingrad, and scores of other battles took away the edge that the advanced nations of Europe had over the backward lands of this planet. The vast outpouring of blood and treasure, in what amounted to domestic struggles, represented a near-fatal bleeding of a civilization.

What strange and terrible ironies one finds in this period of European madness! For example, after the awful struggles between Frenchmen and Germans, the French Foreign Legion, fighting in Indochina to save an important piece of the French Empire, had its ranks filled with former soldiers of the German *Wehrmacht*. The British Commonwealth, created as a link between English-speaking nations with a shared constitutional heritage, in the 1950's and 1960's became an assembly in which backward and turbulent states had the dominant voice.

These two civil wars of the Western world represent a kind of massive failure of control, a breakdown through irritability. True, the components of Europe in 1913 were often contradictory. Styles of national life were different, as in England and Germany. Nevertheless, there were lessons of history that the wise men of early twentieth century Europe should have been able to read. Through the Dark Ages and the Crusades, in the period of the advance of the Mongol armies of Genghis Khan, in the era when Spain was flattened and France half overrun, Europe had been the underdog and the loser because of a lack of unity—a failure to direct conflict feelings against the external enemy. Then, with the coming of the Renaissance, Europe turned outward toward the new worlds being discovered. The forces set in motion by discovery, in terms of space and ideas, galvanized the Continent. as Denis de Rougemont has said, "Their [the Europeans'] fusion produced energy so great that it had to spread to the entire planet. First, it was a conquering energy, belligerent and business-minded out of necessity, spiritual by vocation and then unifying. Europe did not merely discover the world; it practically made the world."

Europe's lapse in 1913, its plunge into suicidal strife, was the strangest crisis of our civilization. The retreats and nihilism that have followed are the products of that breakdown.

The result, after 50 years, has been a transformation of power in the world. Today, power centers exist in lands that seemed hopelessly backward in 1913. After 500 years of slumber, China is reasserting power as in earlier dynastic period. The Soviet Union, consisting of an Asian as well as a European component, is the second largest power center in the world. The Indian Union, despite its internal problems and stresses, looms large in global politics. Unstable, proletarian states such as Cuba and the United Arab Republic seem capable of far more decisive action than many of the old, stable states of Europe, economically recovered from World War II. Belgium in 1960 cast loose the vast empire of the Congo, under pressure from the United States. Meanwhile Cuba, which the United States seems impotent to handle, works hard to build a Communist political empire in South and Central America. France fought a war to retain Algeria and faced terrible opposition within and without. The United Arab Republic wages war in Yemen and receives massive financial aid for its economy from the United States while the Soviets supply weapons. The situation is such that the West is not only witnessing the establishment and strengthening of power centers that threaten its existence but is actively helping such centers augment their power. For the West, however, this is not just a part of a bad dream; it is a reality. The West on many occasions seems determined to accomplish for itself a final ruin that the two wars of 1914–18 and 1939–45 could not achieve. If there is not positively hurtful action, there is dangerous inaction. Thus the West fails to take preemptive actions against Communist China's increasing nuclear arsenal, even though it now realizes that pre-emptive action against Imperial Japan would have been wise in the 1930's.

In ignoring the power realities in this manner, the West—and this includes the United States—acts as though human nature had been repealed. It acts as though—indeed it openly professes that the good will of masses of people is more important than a solid advantage in terms of power. Thus we have the slogan that we must "win the minds" of the people. But the impossibility of doing this, in a period when nations practice thought control through news media, public education, and other instruments of policy, is ignored. The people who are developing new power centers in Africa, Asia, and Latin America are not answerable to their peoples. The good will of the Russians toward individual Americans, for instance, has no bearing on the policies of the Soviet state. Writing in the Columbia University *Forum*, David Cort has pointed out, though many Westerners refuse to believe it, that "while there may be different kinds of power, power has always been and will probably always be a decisive element in human affairs." Arnold Toynbee touched on this reality in another way: "Self-assertion is of the essence of life. The self-assertion is perpetually being challenged, because there are more self-assertive creatures than one."

This is the real world of self-assertive creature against self-assertive creature; power center against power center. In this age-old struggle for power, the role of firepower has been and is crucial. Europe's decline from the power it held in 1913 involved not only a kind of inner crackup but a loss of firepower, or failure to control the spread of weapons once exclusively in Western hands. The decline is involved also with the failure of the European powers to look ahead and master new forms of command and control in remote regions, to develop a combination of military and political warfare as scientific as the doctrines taught by enemies of the West in the Lenin institutes.

Historically, the evolution of the West has been deeply involved with the evolution of arms and military command systems. Professor Eddy Bauer, a Swiss military historian, has described the intimate relationship of the Roman legion to the overall Roman order:

"Going no further back in history than the start of the Christian era, one finds that the Roman army held sway, guaranteeing order, security and peace throughout the entire Mediterranean world. The highly organized legions which, in the days of Augustus, numbered 30 major units all with interchangeable weapons, maintained the upper hand over such varied adversaries as Hannibal's mercenaries, the Macedonian phalanx inherited from Alexander and the mass rising of Vercingetorix."

When the legions were reduced to half their former strength, and when barbarian contingents filled the ranks, Rome's decline set in. Thus Rome's political crisis was essentialy a military crisis. Oddly, it was not that Rome's military adversaries were so formidable in numbers and equipment. The aggressors against Rome were generally few in number, but the defenders were even fewer. Moreover, the Roman military machine was in disrepair in many ways. Once the barbarians broke through the empire's outer defenses, they found little to impede them in the interior zones. This contains a warning for Westerners who in recent decades have seen the "countryside" of the world conquered by Communist revolutionary forces as they prepare to ring the inner citadels of the West.

The influence of weapons and military formations upon history has been enormous. Hellenism spread over the ancient world because of the phalanx. Military changes have brought about new social systems. Consider the establishment of heavy cavalry units after Charlemagne's time. To ensure the availability of these shock troops, the cavalrymen were granted land which they held on the promise to render service to their lord. It was therefore a military need that laid the foundation of the feudal system and new social relationships. The employment of new weapons also has had the most striking effects on the lives of nations. An example of this was the decision of Edward I to equip his infantry with a longbow capable of rapid fire. This military instrument enabled the English to inflict terrible defeats on the French at Crécy, Poitiers, and Agincourt. The ultimate in history-making through weaponry was the exploding of atomic bombs over Hiroshima and Nagasaki in 1945.

The great expansion of the West from the sixteenth through the nineteenth centuries can be attributed in large part to the monopoly that the Western nations had no firepower. They achieved a technological breakthrough on arms that allowed Europeans to penetrate and hold vast areas of the world. But before the nineteenth century came to an end, there were signs that the non-Western world intended to obtain the West's tools of power. Gunrunners found markets from the Western territories of the United States to the grasslands of south-central Africa. Custer's death at the Little Big Horn was symbolic of what would happen when backward peoples obtained modern weapons. In southern Africa, warlike Zulus obtained firearms and wiped out a British force at Isandilwanna. Fanatic Moslems murdered Gordon at Khartoum in 1883. But European nations were strangely complacent about the non-Western world's interest in modern arms. They were almost exclusively concerned with the threat they posed to one another.

The Japanese were the first of the non-Western people to realize that modernization meant the acquisition of contemporary weapon systems of great destructiveness. By acquiring a modern fleet and learning how to handle it expertly, the Japanese were able to virtually destroy Russian seapower in the Pacific at the Battle of Tsushima Strait. The Japanese learned their lesson well. From that time on, they knew that a greater empire could be built on greater firepower. Imperial Russia learned nothing, however. It failed to modernize its armed forces, with disastrous—indeed fatal—results for the Romanoff dynasty in World War I. Had the czars developed a modern military machine, it is questionable whether the Russian Revolution would have taken place or, if it had, whether it would have succeeded. It was the shock of defeat at the hands of the Japanese that did much to undermine the confidence of the Russian people in the imperial government.

The vital role of firepower in shaping history is still not recognized in many quarters. Critics of the American role in the Vietnam war repeatedly have come forward with the argument that you cannot bomb an idea out of existence. They have said that bullets will not stop revolutionary advances. In this connection, it is well to bear in mind the words of Professor Stefan Possony of Stanford University, that the Communist "use of violence must be preceded, accompanied, and followed by techniques aimed at demoralization and at preventing the enemy from using violence." Thus while Communism is an armed doctrine and while Communist use of violence has given it all its victories, the Communists use their political "transmission belts" to convince Westerners that counter-force is futile. Nowhere in history, however, is there any substantiation for the belief that it is futile to try to stop force with force. Indeed it is the organization of violence in military systems that always has been basic in effecting change in the world. Pre-World War II China was under the influence of an idea—the idea of democratic development; but this did not prevent Japan from conquering large parts of China and, in World War II, coming close to ultimate victory. It was only the existence of superior American firepower—from the South Pacific to Hiroshima—that blunted the Japanese drive. And at Hiroshima and Nagasaki the United States unquestionably *was* able to bomb out of existence the Japanese idea of conquest of Asia and the Pacific world.

The underdeveloped revolutionary nations —Communist China is the prime example— profess to believe that firepower has only limited application. Their spokesmen have worked very hard to convince the West that this is true. Indeed China hopes that the war in Vietnam will convince Americans that their vaunted firepower is useless against a revolutionary enemy in the countryside. But the successes that the Communists enjoyed in the Vietnam war were not due to a failure of Western firepower but simply to the long delay on the part of the United States in utilizing its weapons on sufficient scale and against significant targets. It is true that there is a certain equality in warfare between the forces of advanced and underdeveloped nations when warfare is restricted to rifles, machine guns, and mortars. The absurdity of Western nations limiting themselves in this way should be obvious. It is as though Europeans had attempted to conquer Africa in the nineteenth century, using only spears inteady of the repeating rifle and the Maxim gun. The real Western advantage is in area weapons, the delivery of immense firepower over large areas in which guerrillas find concealment. It is these weapons, of course, that are most bitterly campaigned against by the underdeveloped revolutionary states—understandably so as they are not prepared to counter these weapons.

But the Communist nations that are resorting to guerrilla war will have to reckon with the cybernetic revolution, that is, the control of machines by machines. The late Ralph McCabe touched on this in writing of the cybernetic revolution and backward nations:

"Military applications are of critical concern now and will be more important if, as some observers predict, conflict in the world tends to increase with population. This would suggest that the variety of military applications also will increase.

"Casualty-limiting applications are of first importance. In Viet Nam, the cost of locating guerrilla positions is high—in lives and time. A fleet of cybernetic automata, programmed to move out over a defined course and report on the presence of the adversary, would be more efficient than military patrol operations and less costly. Linked to artillery, this kind of cybernetic force would be a new weapons system—and a formidable deterrent."

With the development of electronic, infrared, and other sensors for detecting guerrillas, the underdeveloped revolutionary nations would lose one of their most important military advantages. Western firepower would gain in decisiveness.

What we have seen in recent decades is a narrowing of the military gap between the advanced countries and the underdeveloped revolutionary nations—partly because of the spread of automatic weapons to countries such as North Vietnam, partly because of the West's decision to restrict use of its most powerful weapons, and partly because of the idea that firepower is not a particularly significant factor in history-making. But there is no assurance that the military situation will remain unchanged.

As mentioned earlier, the cybernetic revolution will affect military systems. The West may shed its mistaken sense of guilt over possession of area weapons. Finally, there may be a new appreciation of the role of firepower in affecting political decisions in the world. If we have eyes to see and use them, we will not be misled.

This is not to say that the clock will be turned back. It would be foolish to believe that the conditions of 1913 will be duplicated in 1973, let us say. The power centers that have grown up in Asia and Africa will continue to exist in one fashion or another. China has awakened and is unlikely to return to sleep in the foreseeable future. But the gains that the emerging nations have scored since 1945 may not be matched by further significant power gains. The West may regain much of its supremacy because of the technical revolution and because of the underdeveloped nations' inability to pay for the latest stage of the industrial revolution.

It is clear that the United States, Canada, Australia, Western Europe, Japan, and the Soviet Union will go through an immense amount of cybernetic change in the decades ahead. These countries have the economic resources to apply machines to the learning process and the storage of information, to the control of industrial processes and the management of transportation. They will be able to eliminate costly man-hours, lay aside the slide rule, subject agriculture to a precise new kind of direction, obtain optimum yields from natural resources, and install new controls over machine-tool industries such as shipbuilding. In short, the populations of the advanced countries will have a rapidly rising income and will be free for other tasks.

Countries such as China, Indonesia, India, and the parts of Africa where European leadership is absent, however, are decades behind the advanced countries in overall industrial development. Thus, after several decades, although the military gap between the advanced and preindustrial countries may have narrowed, the technological gap may well be further widened as a result of cybernetic change in the advanced countries.

The *German Tribune* has rightly pointed out that "a world power of today is a country that can muster the tremendous material means needed to make modern missiles and nuclear armament, airforce, navy and army equipment with all basic formations, bases, ground installations, logistics systems; and, what is more, maintain them and modernize them continuously."

The process of continual modernization will put the greatest strain on the revolutionary nations that have become power centers in recent decades. Thus, unless the advanced nations are brainwashed into believing that firepower is not decisive in history, the atlases of the 1970's again may show the advanced states of the northern hemisphere occupying the central position.

Avert a New Arms Race

EXTENSION OF REMARKS

OF

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. ROSENTHAL. Mr. Speaker, President Johnson's efforts to slow down the arms race, particularly his concern with the Soviet Union's antimissile system, has properly drawn widespread praise.

Favorable comments from two different parts of the country have recently come to my attention, and I request that they be printed in the RECORD.

The Harrisburg, Pa., Patriot wishes Ambassador Thompson well in his efforts to sound out Moscow's attitude.

> Whatever the outcome—

It says—

> the President deserves mankind's gratitude for trying to spare the world a new and more delicate balance between the major nuclear powers.

In Wichita, Kans., the Eagle detects what the diplomats call a "selective thaw" in the United States-Soviet relations. This development, the newspaper speculates, could include agreement not to engage in an antimissile race.

Editorials from both newspapers follow in full:

[From the Harrisburg (Pa.) Patriot, Jan. 14, 1967]

JOHNSON TRIES TO AVERT A RACE

If informed speculation about a message Ambassador Llewellyn E. Thompson carried with him to Moscow is correct, President Johnson is embarked upon one of his most constructive foreign policy efforts.

What he hopes to achieve is an agreement with the Soviet Union that would prevent an additional costly and dangerous elevation in arms competition between the two countries.

The prospect of such a full-scale race was raised by Defense Secretary McNamara's revelation that the Soviets have begun installation of an anti-missile system. If the Russians persists, this nation could be pressured into doing the same. As President Johnson noted in his State of the Union message, one of his basic duties is to make certain no nation would ever feel it had a "rational" basis for a first nuclear strike.

Possession of an anti-missile system might delude a possessor into believing it had such a "rational" basis. An impressive array of experts maintains that unless truly fantastic technological breakthroughs have been made, which seems unlikely, any anti-missile system, however elaborate, would be of only marginal effectiveness. A nationwide deployment in the United States, for example, would still not prevent the death of tens of millions of Americans in an all-out nuclear assault.

The President obviously hopes to avoid the staggering waste of money and manpower and the disruption of national priorities which an anti-missile program would cause. And the Soviet Union should be interested in agreement for the same reasons—its economy would also be strained, its priorities for its people also need attention.

The possibility of agreement is enhanced by widespread recognition of the exercise in futility which matching anti-missile systems would be. Both nations would end up right back where they started—stalemate.

But not quite. There would be new and subtle dangers of which President Johnson and the Soviets have undoubtedly been apprised. The odds for nuclear war might jump if either side believed, falsely, it was "safe" from a counterstrike. Even limited wars and "incidents" could become more numerous and more dangerous if any major power felt a misplaced sense of security against the consequences of provocation. What might have been the outcome of the Cuban missile crisis, if either side had had an anti-missile system?

News of the Soviet activity was surprising at a time when cold war tensions had been lessening. Indeed, the Soviets may try to assure Ambassador Thompson that their program is only a response to developing Red Chinese nuclear and missile capacity rather than a challenge to the United States for a new arms race.

Whatever the outcome of Mr. Thompson's mission, Mr. Johnson deserves the gratitude of mankind for his direct effort to spare the world from a new and more delicate balance between the major nuclear powers.

[From the Wichita (Kans.) Eagle, Jan. 13, 1967]

United States-Soviet "Selective Thaw"

In his State of the Union message, President Johnson touched on the possibility of a renewed arms race with the Soviet Union. He confirmed that the Soviets have begun to deploy an antimissile defense system near Moscow. But rather than responding now with a costly anti-missile system of our own, he indicated, we shall try to negotiate with the Kremlin to halt such a race before it really starts.

Now Llewellyn Thompson, new ambassador to the Soviet Union, is off to Moscow, carrying a personal message from Mr. Johnson to Soviet leaders. It almost certainly has some bearing on the question of anti-missile competition.

A sudden gain by the Soviets in missile defense could upset the balance of power between Moscow and Washington, so Mr. Johnson must have reason to believe the Kremlin is interested in negotiating an arms race stalemate. Else he would hardly risk delaying preparation of a response.

One reason for believing the Soviets may be reasonable on this issue is obvious. An anti-missile race would be painfully expensive, to the Soviet Union as well as to the United States. It is estimated our cost would run as high as $40-billion. With Vietnamese war and domestic demands running as they are, we could ill afford this.

Granted, the Kremlin might like to see us forced to divert some of our resources from Vietnam. But it takes two to make a race. And if the Soviet Union were to proceed with full deployment of an anti-missile defense the impact on its economy would be significant. Resources would have to be diverted from consumer production, and the Kremlin would find itself in a bind.

Another reason for hoping for agreement on the arms race is less obvious and less tangible. But it is there and has to be considered. What diplomats call a "selective thaw" is occurring in Soviet-U.S. relations. On some issues, notably Vietnam, we appear as far apart as ever. But on other questions there is a new warmth. Our ambassador to the United Nations, Arthur Goldberg, and Soviet Deputy Foreign Minister Vasily V. Kuznetsov appear to be developing a positive relationship. Each has a background in his respective country's labor movement, and there mutual respect. Kuznetsov went so far as to send warm holiday greetings to Goldberg and other Americans—an almost unprecedented occurrence.

This is only symbolic, however. More tangible factors in the U.S.-Soviet relationship is the common concern over Red China, and interest in expanding East-West trade. It may well be that the "selective thaw" could include agreement not to engage in an anti-missile race. Certainly the possibility must be pursued before Washington embarks on a costly anti-missile system.

Letters From Vietnam

EXTENSION OF REMARKS
OF
HON. JOSEPH G. MINISH
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 25, 1967

Mr. MINISH. Mr. Speaker, the war in Vietnam has many faces, two of which are vividly brought home to us in recent articles in the Newark News about servicemen whom I am honored to claim as constituents.

The stark, grim face of battle is portrayed in letters written by brave young L. Cpl. E. D. Bethea whose parents reside in Newark, N.J. Mr. and Mrs. Bethea have reason for pride in rearing a son with Ernest's courage and fortitude as he fights the everyday war in the jungle and rain. The fine article by William Gordon, with Lance Corporal Bethea's letters, appeared in the Newark Sunday News on January 15, 1967. It follows below together with an article in the Newark News of January 18, 1967, concerning the humanitarian activities being carried on by Sgt. Joseph Gernert, a career soldier, who is the son of Mr. and Mrs. Charles J. Gernert, of West Orange. The compassionate and helpful spirit of our fighting men is exemplified by Sergeant Gernert, and the quick action on his plea for diapers for the Vietnamese babies in his hospital by the Sears-Roebuck employees typifies the generous American response to need.

The articles follow:

[From the Newark (N.J.) Sunday News, Jan. 15, 1967]

Viet Cong and Indians—Newarker Writes About War and Fortunes of Weequahic Team

(By William Gordon)

The monsoon and the Viet Cong had hit them and they came back from the patrol, wet to their underwear, tired and very knowledgeable about war and the meaning of it in the letting of blood.

When you come back from such an action in Vietnam there's not much solace. You sit in the mud with the rain falling on you and you suck on a cigarette in celebration of your own safety while the grief is still in you of a buddy who has fallen and died.

You can do this after such an action or you can sit down and think very hard about what you have just gone through and be concerned about what it means to the folks at home and write a letter about it all, writing about it on a tablet pad as the splashing rain makes stains on the paper.

WRITES TO NEWS

This is what Lance Corp. Ernest D. Bethea of 555 S. 17th St., Newark, did after a recent meeting with death in a rain-swollen stream not far from the demilitarized zone in Vietnam.

"To whom it may concern," he wrote, addressing the letter to The Newark News.

"People in the states only know Vietnam by the big operations they read of or of the bombings in the north.

"My company just came back from three days spent in the mountains only miles from the DMZ. We were in search of a VC camp in the middle of the jungle-covered mountains in our area of responsibility.

"One squad went up a stream because the thick bush on either side made it impossible to walk without using machetes to cut a path. A VC waited alone in the stream with a machine gun and the one burst caught three men.

"I watched as they carried Cpl. Moses down that mountain stream, his body wrapped in a single rubber poncho. The six men carrying him had trouble due to the fast current and as they neared me two slipped.

"The water turned red with his blood and as they struggled to replace his body on the poncho I could see the hole in his head.

"Cpl. James Moses died the day after Christmas, never seeing his seven-month-old son. As for the rest of us, the wrinkled sore hands and feet from over-exposure to the three days of rain and the bloodshot eyes from lack of sleep were only a little of what we went through."

Cpl. Bethea said the big operations are part of the war, but the patrol he had just been on was "the real war."

"We will go out again searching for the VC in his jungle home," he said, "and we will take more KIAs (killed in action) but no one home ever hears or knows the real war—only the big operation."

Bethea said he was writing because "I'm from Newark, a graduate of Weequahic High and I wish someone could let my friends and people of Newark know a little about the everyday war we face here."

He ended by apologizing for his handwriting. "I'm still a little messed up from the jungle and rain," he said.

"Thank you for your time and forgive me for wasting any of it but I had to get this off my chest," he said, signing off, "Respectfully, Ernie D. Bethea, Lance Cpl., USMC."

Cpl. Bethea said nothing of himself in his letter. What manner of man is he?

Lance Cpl. Bethea is 21 years old and a Negro. He was graduated from Weequahic High School in 1962. He writes home often to his school and to his parents. His parents live on the top floor of a run-down apartment building.

To his parents he wrote recently: "Well, we just came back from three days on a hill. We started from here, carrying six grenades and all the ammunition we could carry, and walked about six miles to this hill about 300 feet high. We finally got to the top and that 400 rounds of machine gun ammo almost broke my back before we reached the top.

"We got to the top, set our trip flares, mines and my machine gun, and made ourselves at home. Most of the time me and Jones sat around a fire and ate and talked about all our old loves.

"It was cold at night and I wrapped myself in a poncho and laid in the waist high grass for protection from the wind. The monsoon is just about over, but it still gets windy and cold here in these hills."

At Weequahic, Ernie Bethea played football, baseball and basketball. He was good at all of them, but he was best at basketball. His team at Weequahic was the first to win the state championship in the history of the school.

He played ball for three years for basketball coach Les Fein. Today, Fein continues to get letters from Ernie, letters that are anxious for information about what the current team is doing, letters that Fein reads to the players in the lockerroom.

"The first letter I got," said Fein, "indicated that he had remarkably high spirits. He spoke of conditions in Vietnam and how wonderful the United States is, despite all its problems, and it being so much better.

"I wrote back, giving him the general rundown and clippings of the press coverage of our game as defending champs of the Essex County Coach's Association in which we played and won against Boy's High School in New York at Upsala."

A couple of days ago, Ernie wrote back to Fein.

"I don't by any means compare hunting Viet Cong with playing basketball, but both take skill and patience to obtain the desired results. We lose at times as you do in basketball, but it's a high price when we lose."

At Weequahic, they called Ernie "Windy." No one recalls how he got the nickname. In his letters he's talkative, but he was not when he was in school where he was unassuming, and very popular as a student and athlete.

Recently, Ernie got back from patrol. He wrote to Fein: "We were all quite tired back here and sleep and dry clothes were number one on our minds."

Fein's letter told of the Weequahic Indians winning the championship in the tussle with Boy's High of New York.

"Well, I was very tired," Bethea wrote, "but I ran in every tent in our area seeking New York boys to let them know the score of the game. I really let them have it and as far as I'm concerned, Weequahic is not only Jersey champs but New York City champs. I know you never taught us to brag but I couldn't help kidding all the city boys about the game."

"Oh, yes," said Ernie, "tell Moe (Moe Layton, an outstanding player of the current team) he looked like he was fouling in that picture, but I guess you didn't yell at him."

"He never forgets his school," said Hal Ginsburg, baseball coach at Weequahic. He played two years for me and was an all-city performer, and a quarterback in football. He's a wonderful boy and a fine leader."

So Ernie Bethea writes back from Vietnam, a voice seeking to recapture treasures of his old school days, and doing it, succeeding in doing it, while the slashing monsoon rains drip through his poncho 13,000 miles away in a hostile area north of Da Nang.

And occasionally, he is forced to write of a Cpl. Moses, "a friend of mine and a father who was killed two weeks ago, and two others from the platoon wounded. They made the mistake of going up a stream bed instead of sticking to the high ground . . ."

[From the Newark (N.J.) News, Jan. 18, 1967]

VIET BABIES GET DIAPERS—STORE EMPLOYES HEED WEST ORANGE GI'S APPEAL

A West Orange GI is Spearheading a campaign among members of his Army company in Vietnam and several dozen employes at Sears Roebuck and Co to clothe youngsters being cared for at "a small Vietnamese hospital."

Sgt. Joseph Gernert, a career soldier started the whole thing in November when he wrote the Sears firm asking that four dozen diapers be sent "for the small babies here. Could you please help us with this order," Gernert asked, stating "we will be more than glad to pay whatever they cost."

Gernert, son of Mr. and Mrs. Charles J. Gernert of 110 Watchung Ave., West Orange, said in a subsequent letter he decided to write the Sears firm because he formerly lived on Avon Avenue in Newark and was familiar with the store

HARD TO GET

According to Gernert, "My company has a small Vietnamese hospital in 'no man's land' we take care of. It is full of small children ranging in age from two months to 12 years. We have only a small supply depot here and the things we can't get for these small babies are diapers."

The letter arrived at Sears shortly before Christmas and it was turned over to Mrs. Marie Ikas of Hillside, in the catalogue department.

Mrs. Ikas said enough money to purchase nine dozen diapers was contributed by employes in the auditing, cashier and credit departments.

Hon. John Connor

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. DINGELL. Mr. Speaker, John Connor has served this Nation well as Secretary of Commerce, and I feel certain that history will rank him among the very best who have filled that office. Moreover, his 2 years in Washington have reminded us all that excellence of person need never be compromised to achieve excellence in office.

I can sum up my estimate of John Connor with a single, unadorned phrase: He is a good man—good to know, good to work with.

I deeply regret his leaving us. The Federal Government will be hard hit by the loss of his service. However, the Secretary has already offered, most generously, to continue to be of further service to the Federal Government. With typical selflessness, he has committed himself as standing ready to respond to the President's call for further duty in an advisory capacity. That that call will come, again and again, I have no doubt.

John Connor's impact on the conduct of our Government and the course of the Nation will be felt for many years to come. He has left his mark, and it is a mark shaped by wisdom and principle.

Mr. Speaker, not the least of Mr. Connor's accomplishments was his elevation of the complex relationship of business and Government to a level of true dialog. With Secretary Connor at the helm in Commerce, we have witnessed an unprecedented broadening and deepening of the channels of understanding between the two, and we have only begun to reap the benefits of this creative partnership.

Some public officials win headlines and acclaim by their handling of crises; Secretary Connor sought to avert crises, and by successfully doing so he won our admiration and respect.

He has worked quietly and effectively to help insure balanced and orderly economic growth at a time of great economic stress. By his astute management of the voluntary balance-of-payments program with the business community, he has kept our deficit down and our dollar strong.

He has expertly helped to promote the modernization of industry to strengthen our competitive position at home and abroad; he has worked hard to reseed the bare spots in the economy through regional planning and economic development; he has increased the flow of tourists to our shores. These, of course, are just a few of his achievements, for the responsibilities of his office have been many, and he has fulfilled them all with uncommon excellence.

He has performed with characteristic ease and effectiveness on all these many fronts, including the reorganization of the Department of Commerce. It is a different and more effective arm of government as the result of his leadership and executive ability.

So, to John Connor I say—and I am sure the other Members concur; "Well done—and best wishes."

White Backlash

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. FARBSTEIN. Mr. Speaker, occasionally a newspaper column will come across my desk which holds special relevance to one of the major issues of our time. Such is the caliber of the column which I wish to insert into the RECORD today.

This article by Eugene Connolly appeared in a recent edition of the West Side News and Morningsider, a leading local publication in the 19th Congressional District of New York.

Mr. Connolly is a well-known and respected resident of the West Side Community in Manhattan. He is a former New York City Councilman, a man who speaks from experience as well as with compassion.

Mr. Connolly's article entitled "White Backlash", reminds us what our unwavering objective in human rights must be if we are to insure adherence to the principle of equality, so basic to our democratic system.

I am sure my colleagues in the House will find this article of timely interest.

The article follows:

WHITE BACKLASH

(By Eugene Connolly)

Peopled by immigrants from virtually all the lands of the world, the United States has witnessed in its time the struggle of each successive group to win the respect of those who came before and escape the discrimination that greeted each. Irish, German, Jew, Italian, Pole, Hungarian, Russian, and the men of other races and creeds had to break down the barriers of intolerance and ignorance. The latest, our Puerto Rican citizens, now slowly struggle to win acceptance among us as equal in our democratic system.

Uniquely, only the Negro people, immigrants through force, brought to this continent before we became an English-speaking nation, have had to suffer over four hundred years of intolerance, abject degradation; three hundred years as chattel slaves and hardly one hundred years as free men, but yet denied the full privileges of a nation that prides itself on being a democracy.

The Emancipation Proclamation, issued over one hundred years ago and noble in intent, brought no real ease or alteration in the circumstances of the Negro people. The masses of Negroes who followed Sherman's armies chanting "Hallelujah" as the last resistance of our Confederacy was crushed, awoke to find that they had lost only part of their chains and that slavery had been exchanged for a servitude hardly distinguish-able from that which had gone before. All the long, weary intervening years brought only pitiful sops to the Negro people and an illusory easing of our national conscience.

Enacting into the law of the land the greatest series of civil rights ever, we have set the stage to insure the Negro people that which is justly theirs—the right to live with honor and simple human dignity. Yet it becomes clear that there is a great and widening gap between the law and its implementation, feeding on the unextinguished fire of prejudice to which so many Americans have been conditioned over the long decades of our history as a people. To succumb to the forces behind these moves will be to jeopardize the unrivaled advances we have now begun to make over the almost unparalleled example of man's inhumanity to man.

No one will condone the cry of "Black Power" but, equally, the thoughtful person will understand the age-old frustration that has brought it temporarily into the national focus. Disturbing as it is to some, let us recognize it for what it is, merely the activity of a very minor group certain to be repudiated by the masses of the Negro people.

Most dangerously, it serves as an implement in the hands of the demagogues, the unscrupulous politicians, and those who, bitterly opposed to the granting of civil rights, were forced into acquiescence only by the aroused conscience of the American people.

Today and now, the greatest menace facing the American people and our democracy is the sordid spectacle of so many decent people unthinkingly falling into the unholy trap of those who openly and covertly promote the so-called white backlash."

If it has engaged our attention even fleetingly, let us reflect for only a few passing moments. Let us recall that we, all of us, have almost certainly faced discrimination if not in our own generation then in those generations just past. Let us try to feel for those few moments what it has meant to be a Negro in these United States, subject to discrimination, intolerance and, yes, degradation not for a generation but for hundreds of years, every day, every hour, and perhaps every minute over the untold lifetime of the Negro people.

When most of us will understand what this has meant to a fellow human being just because of the color of his skin, we will sooner realize that we must each and in our several ways enlist in the cause of exposing the "white backlash" for what it is—an ugly and vicious attempt to stay the progress of decency, humanity and justice in our midst. Let us expose it to our friends, in the places of our employment, in the streets and byways, and wherever we encounter our fellow Americans.

Let us use some of the days of our lives for this.

(Mr. Connolly is active in the Democratic Party of the West Side.)

Another Achievement by the FBI

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. COLLIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Chicago Tribune of January 19, "Another Achievement by the FBI."

The editorial gives the details of the Federal Bureau of Investigation's efforts in helping to bring certain terrorists to justice.

ANOTHER ACHIEVEMENT BY THE FBI

Five unionists have been indicted by a federal grand jury for the bombing of a Canadian freighter in Calumet harbor during a 1963 labor dispute. The jury's action was an extraordinary event; prosecutions for bombing attacks and labor union terrorism are almost unheard of in Chicago. Bombers usually vanish, leaving the police wringing their hands.

The police made no arrests after a five-month campaign of violence against the freighter Howard L. Shaw in 1963, altho 100 or more persons were questioned. On the night of May 28 a watchman was attacked and savagely beaten. Several nights later two Shaw crew members were assaulted. On Sept. 6 a dynamite bomb tore a hole in the hull of the ship at the water line.

The terrorism grew out of a jurisdictional dispute between the Seafarers International union and the Canadian Maritime union. The ship owners had hired members of the CMU. In Chicago the members of the Flour and Feed Mill Workers union, an affiliate of the International Longshoremen's association, refused to load the ship and the union was fined for contempt by Federal Judge B. Parsons.

After the bombing the Canadian minister of external affairs protested to Secretary of State Rusk against the "lawless interference with Canadian shipping." The Canadian consul general in Chicago asked city officials to protect the ship and to prosecute the assailants. The violence here and in other lake ports was not ended until the Canadian government seized the SIU.

The grand jury's indictment names two former officials and three members of the SIU. The five also are charged with conspiring to bomb railroad tracks at the Ohio cities of Toledo, Maunee, and Ashtabula. Six other persons are named as co-conspirators but not as defendants.

We regret that the Chicago police department was unable to protect the ship and its crew or to arrest the terrorists. It is a credit to the FBI that it did not give up so readily and that it was able to present evidence which the grand jury believed was sufficient for an indictment.

The FBI has been working on the case for more than three years. The grand jury has been hearing evidence, from time to time, since last April.

The diligence of the FBI in this case may have been spurred by the complaint of a Canadian cabinet officer to our state department. But, whatever the cause, the FBI has demonstrated that it is not necessary for law enforcement officers to fail to find the offenders in every instance of union terrorism.

Inaugural Address of the Honorable Buford Ellington, Governor of Tennessee

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. EVINS of Tennessee. Mr. Speaker, Gov. Buford Ellington, of Tennessee, in his recent inaugural address at the capitol in Nashville challenged the people of Tennessee to face up to their problems and responsibilities and join him in building a better State.

The Governor called for a new and better relationship between people and government and pointed to the great opportunities in the State.

Governor Ellington predicted:

> Tennessee's great hour of forward motion and accomplishment is very close at hand.

The address was most eloquent—most important—most significant.

In view of its interest to my colleagues and its broad general interest, I insert the inaugural address of Gov. Buford Ellington, of Tennessee, in the RECORD.

The speech follows:

INAUGURAL ADDRESS OF GOVERNOR BUFORD ELLINGTON, JANUARY 16, 1967, NASHVILLE, TENN.

I come before you on this inaugural day of January 16, 1967, strong in the belief that the next four years will bring to Tennessee its greatest era of governmental accomplishments and standings.

The keynote we sound here today is that we understand the extent of our problems and responsibilities, and that we are prepared to meet them.

Just moving ahead slightly is not the answer.

The truth of the matter is that we have a considerable way to go, and our solutions must be in keeping with the bigness of the problems.

We possess the resources to meet our critical needs.

We possess the desire.

We possess the will.

Therefore, let our vision be of the required depth and breadth.

Let this inaugural day also be a day to inaugurate a new and stronger relationship between the people and those in places of government.

I have endeavored to select a cabinet thoroughly competent to handle the affairs of the departments assigned to them.

These commissioners will be available to the people at all times.

See them. Meet them—and meet with them.

That's what they are there for—to serve you.

Let this inaugural day also be a day to inaugurate a new drive in Tennessee for new assets.

Tennessee is sparkling with opportunities for new industry.

The great mine of our natural resources has barely been touched.

Top industry is our goal.

We are seeking the very best.

Let this inaugural day also be a day to mark a re-dedication of our talents, and a re-dedication of our joint best efforts.

In the meeting of our clearly outlined responsibilities, I welcome the privilege of serving with the 85th general assembly.

I am ready to work with you.

I am ready to work for the people of Tennessee.

A mandate for sharp improvement, and high progress of State, has been given to those in public office, and the people are not likely to retreat from that position.

In our minds—in our hearts—I feel that we are prepared for the heavy duties and responsibilities that lie immediately ahead.

Now let our hands get to the task.

Successes will greet us.

The assurance of that lies in the quality of our goals.

There is no other course of action—

No other course of honor—

No other courses of pride—

For us to take except the faith-keeping course of vast improvement in the development of our internal affairs.

Whenever other Americans think of a Tennessee boy or girl, I, like you, want them to think of that boy or girl in bright new terms of education and opportunity.

Our young Tennesseans are thoroughly entitled to that status—and I do not think that we are going to by-pass them.

We are moving into hours of great invitations for improvements.

We see on the near horizon great opportunities to bring these improvements to pass.

We are dealing with a new and better tomorrow.

If we join efforts to build a better Tennessee, our reward will be a new and better tomorrow for all our citizens.

My fellow Tennesseans:

I thank you warmly for your friendship.

I am grateful to all the people of Tennessee for the confidence placed in me to serve a second term as Governor.

Tennessee's great hour of forward motion and accomplishment is very close at hand.

I value greatly the privilege of having a part in it.

Mr. Chief Justice, I am now ready to take the oath of office.

Realism on Resources

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. EDMONDSON. Mr. Speaker, an excellent article on the subject of conservation and the need for realism in our policies affecting conservation recently appeared in the Wall Street Journal for December 27, 1966.

It is not surprising to see that the views of a distinguished former colleague from Mississippi, the Honorable Frank E. Smith, inspired this well-balanced article.

As a Member of Congress, Frank Smith was one of the most effective champions in this body of effective conservation of resources. His interest in this subject has continued in his present post as Director of the Tennessee Valley Authority, and he continues to speak out forcefully for good conservation policy.

The article in the Wall Street Journal follows:

[From the Wall Street Journal, Dec. 27, 1966]

TOWARD REALISM ON RESOURCES

Until fairly recently many Americans seemed to regard conservation as an exceptionally dull conversation piece. But no longer.

Anyone who has experienced a water shortage or driven through ruthlessly cutover timberland or visited a polluted lake is bound to realize that the nation's resources, though vast, are neither limitless nor particularly well handled.

As Frank E. Smith says in a new book, "The Politics of Conservation," the U.S. so far has been mostly content to muddle through, and that just isn't going to be good enough for the future.

Since Mr. Smith is a director of the Tennessee Valley Authority, it's scarcely surprising that he calls for a huge expansion of Government efforts to prevent future waste and destruction of vital resources. Still, he is sufficiently realistic to see that Washington neither can nor should try to solve every problem single-handed.

The TVA official also argues for better coordination and planning of Federal resource programs. Matters directly touching on conservation and development now are scattered among dozens of agencies around Washington. While bureaucratic dukedoms don't topple easily, some of the ridiculous overlapping certainly could be eliminated. The nation can ill afford to further entrench the pork-barrel politicking of the past and present.

Equally important, an intelligent middle course must be found between two bitterly opposed groups that never did find conservation a bore: Those who want to preserve most of the remaining untouched land largely in its natural state and those who want to develop most of it.

The preservationists often imply that the wilderness must be kept "for only that small fragment of the population considered capable of proper appreciation," Mr. Smith remarks. On the other hand, the all-out developers are prone to labeling their foes as anti-free enterprise, almost un-American.

Sooner or later each side will have to give. Obviously the nation will need to use more of its resources in the future if its expanding population is to be fed, clothed and housed. Just as surely it will be the loser if it unthinkingly despoils its heritage of clear lakes, green forests and towering mountains.

Reasonable compromises will vary widely for various areas, which is one reason Mr. Smith is correct when he discerns an important role for states and local governments in future resource management. For another, governments on the scene usually can move more quickly and efficiently than the distant Federal Government. The TVA official notes with approval that Kentucky started to curb abuses of strip mining before Congress was able so much as to agree to make a general study of the subject.

Even where resource questions cross state lines, as they frequently do, Federal control isn't necessarily the best answer; in some cases interstate cooperation may operate more effectively. Though such proposals don't always work, Mr. Smith mentions the Delaware River Basin Compact, involving New Jersey, Pennsylvania, New York and Delaware, which "has proven an instrument for action and progress."

What the TVA director does not stress is that private industry increasingly is realizing that it has a role not only in developing resources but in conserving them. Aside from public relations benefits, the efforts can achieve real economic gains. Tree farming, for example, may not satisfy the rabid preservationists but it is a far cry from the reckless forest destruction of the past. And it helps to assure a continuing supply of lumber and other wood products.

Nearly every segment of the population, in fact, can contribute to conservation and development of the country's resources. In each case the right question is who can handle the task most efficiently for the public good, not solely whether the job should be public or private.

Though progress has been made, no one is so optimistic as to think that the wasteful strife will be ended easily. If the nation is not realistic about its resources, however, the future reality could be not only wearisome but downright grim.

Carnegie Institute President Emeritus To Be Recognized for Contributions to Education

EXTENSION OF REMARKS

OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. MOORHEAD. Mr. Speaker, Dr. John Christian Warner, the distinguished president emeritus of the Carnegie Institute of Technology in Pittsburgh, has been named to receive an award for his outstanding contributions to education during 39 years of service to the institute.

The citation, honoring Dr. Warner for "preserving and extending the ideals of education and constitutional government," will be presented at the 19th annual citation luncheon of the All-Pennsylvania College Alumni Association of Washington, D.C., to be held here February 4 at the Shoreham Hotel.

In previous years, the association, made up of graduates of Pennsylvania's fine institutions of higher learning, has conferred similar citations on other distinguished persons associated with education in the Keystone State, but no one deserves the citation more than Dr. Warner.

In view of the honor soon to be bestowed on Dr. Warner, I would like to include at this point in the RECORD a summary of this scholar's remarkable career:

Dr. Warner, born in Goshen, Indiana (May 28, 1897), began his career at Carnegie Institute of Technology as an instructor in chemistry, in 1926. Subsequently, he rose through various teaching positions to become dean of graduate studies at the Institute, in 1945. In 1949, he was appointed vice president; and in the following year he became the school's president, a capacity in which he served until 1965, when he was named president emeritus.

In addition to his distinguished career as an educator, Dr. Warner has been active in civic and business affairs. He has been a director of such notable enterprises as Jones and Laughlin Steel Corporation, Pittsburgh Plate Glass Company, and others. In 1954–55, he was president of the Pennsylvania Association of Colleges and Universities.

During World War II, Dr. Warner was on leave from Carnegie Tech to the Manhattan Project, where he supervised research on the chemistry and metallurgy of plutonium. He served as a member of the General Advisory Committee to the U.S. Atomic Energy Commission from 1952 until 1964. He has served as a professional consultant in various undertakings for the United States Government and for private organizations in this country and abroad.

Dr. Warner is author, co-author, or editor of numerous books and articles in the field of physical chemistry and electrochemistry. He received his A.B., M.A., and Ph. D. degrees from Indiana University. He attended the University of Michigan for post-doctorate study in theoretical physics. He holds honorary degrees from several outstanding colleges and universities, including an Honorary Doctor of Science from Carnegie Institute.

He is a member of the National Academy of Sciences, the American Chemical Society, the American Institute of Mining and Metallurgical Engineers, and numerous other professional organizations. In 1953, he was awarded the American Institute of Chemists' Gold Medal.

Modernize Customs Procedures

SPEECH

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. ULLMAN. Mr. Speaker, I introduced legislation yesterday which would correct some longstanding abuses of our customs regulations and procedures.

The general purpose of my bill is to eliminate the requirement for reimbursement by the traveler for all overtime inspection and quarantine services performed at designated ports of entry on Sundays and holidays.

This bill will require the Government to provide, without reimbursement by the private parties involved, the necessary Federal inspection agency services—such as customs, immigration, and agriculture foreign quarantine—during regular hours of duty on Sundays and the eight national holidays.

Under present law and regulation, the traveler by boat and airplane, or commercial carrier, arriving during Sunday or holiday hours, must pay up to $60 to clear customs at many ports of entry. The fee is intended to compensate the customs collector for his overtime duties and inconvenience. If the same entry takes place during ordinary business hours, the Government provides these services free of charge.

Mr. Speaker, all administrative means of correcting this situation have been explored, and in the judgment of all concerned a legislative remedy is the most appropriate solution.

This system, while it may have been justified years ago, works a considerable hardship in this age of pleasure travel by boat and plane. In many cases the use of these facilities by vacationers is limited almost exclusively to off-hours entry.

In addition, our Nation's commitment to expanded commercial interchange with our neighbors is burdened by these restrictions. These services are performed in the interest of the public and the Nation's welfare, and not in the interest of any individual citizen or private group. U.S. citizens and private groups should not be required to pay these expenses which result from the conduct of the Government's business, particularly in enforcement agencies whose activities are similar to other police functions required to protect the Nation.

The bill I introduce today has the support of private aircraft and vessel operators, as well as all segments of our transportation industry. The proposed legislation is the same bill approved by the Senate in the 89th Congress. I was privileged to introduce it in the House on August 16, 1966, but time did not permit its consideration before adjournment.

One practice, which is patently unfair, is the sliding fee system now employed at small ports of entry. The first traveler arriving at a port of entry—say at 10 a.m. Sunday morning—may be charged $60 for his overtime customs inspection. Another traveler who by chance arrives at 10:15—while the inspector is still on the premises—will be charged perhaps $20 for his inspection.

The public has the right to know in advance the cost of clearing customs. Therefore the bill provides for the collection of a flat fee for inspection services, and specifies how this fee will be computed, in circumstances when other sections of the legislation do not apply. This feature of the bill was proposed by the Treasury Department and enjoys its support.

I consider these antiquated practices, which date back 50 or more years, completely inequitable today. Transportation into our country is no longer limited to the weekday operations which prevailed when the laws were enacted establishing these practices.

In promulgating the present requirements, I am sure that the Treasury Department did not intend to hinder international travel for business or pleasure, or to provide a lucrative reward for some of their employees.

I believe it is time for the U.S. Government to move into the 20th century by providing, without reimbursement, Government services needed to handle the international commerce of the United States on all Sundays and holidays of the year.

Critique of Laws Covering Present Patent Procurement Process

EXTENSION OF REMARKS

OF

HON. THOMAS G. MORRIS

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. MORRIS of New Mexico. Mr. Speaker, in conjunction with my bill on patent infringement in Govenrment procurement, H.R. 2898, and my remarks which appeared in the CONGRESSIONAL RECORD of January 23, I am submitting the following critique of our present laws which cover the procurement process. This critique is an excerpt from an article which appeared in the October issue of the Notre Dame Lawyer, as follows:

A CRITIQUE

Governed by the present position of the Comptroller General,[1] every federal department and agency refuses to consider the possible infringement liability of the Government in evaluating bids or proposals in the procurement of patented items. Thus, government contracts are currently awarded without regard to private patent rights, and if a patent owner concludes that his patent has been infringed, he may file an administrative claim for patent infringement, provided the agency involved has authority to settle such claims,[2] or he may sue the Government for patent infringement in the Court of Claims under section 1498. Under the Comptroller General's decisions, therefore, the existence of a judicial remedy in section 1498 for patent infringement has destroyed any right the patent owner may have had to a preference in the award of government contracts.

However, while section 1498 has as its underlying purpose to provide a remedy for a patent owner whose patent has been infringed by the Government, from the viewpoint of the patent owner this remedy may be less than adequate. A patent owner, for example, may be unable to afford the expense of a Court of Claims suit, or he may feel that his "reasonable compensation" may not be of an amount sufficient to warrant risking the expense of such an action.[3] This inadequacy would be particularly evident where the patent was owned by a small business concern having limited resources to devote to litigation[4] or where infringement had taken place on only a small scale. Also, there is an understandable reluctance on the part of the patent owner to confront the vast resources of the Government in a test of his patent. Moreover, he may fear that such a suit would prejudice his chances for future business with the agency involved.[5] Finally, a patent owner may be unwilling to commit the valuable time of his scientists and engineers to prepare for litigation and to remain available for depostions and testimony.[6] For all of these reasons, section 1498 often falls short of its intended objective of providing reasonable compensation for patent infringement by the Government.

There is no question that the current practice simplifies the procurement process by removing the rather complex variable of a bidder's patent and its relevance to the procurement. On the other hand, awarding a contract to the "low bidder" and later compensating the patent owner could ultimately cost the Government more than awarding the contract to the patent owner or one of his licensees. The administrative costs of investigating an infringement claim or the costs of defending a Court of Claims action increase this likelihood. More important, however, present practice creates a double bias: first, against the patent owner, who presumably must attempt to recoup the research and development expense that led to the patented invention; second, against his licensees, who have obligated themselves to pay a royalty to the patent owner if they are awarded a contract. This practice, in turn, could be expected to have the anomalous effect of removing the incentives of the patent system from privately financed research and development programs in areas of government interest, and of discouraging prospective licensees from taking out licenses under privately owned patents where the patented invention would be useful in government programs. In this respect, current practice is not in harmony with the Government's policy of encouraging private research efforts in fields important to the Government. For example, in establishing the National Aeronautics and Space Administration (NASA), in 1958, Congress gave the agency the mission of maintaining this nation's leadership in aeronautical and space science and technology and of achieving "the most effective utilization of the scientific and engineering resources of the United States."[7] In view of this mandate, NASA has expressed concern that its present procurement procedures for purchasing patented items do not contribute to these objectives.[8]

The widespread dissatisfaction with the present situation is best documented in hearings held last year by Senator McClellan's Subcommittee on Patents, Trademarks and Copyrights.[9] While virtually all segments of industry were represented, spokesmen for the drug industry and related labor unions were particularly incensed by the present policies. Dr. Austin Smith, President of the Pharmaceutical Manufacturers Association, summarized the feelings of the drug industry in these words:

"This then is the plight of the American patentholder: The U.S. Government issues a patent and says to him by so doing "This is the guarantee of the U.S. Government that (at least in this country) your invention is protected from pirating—protected, that is, from pirating by anybody except the U.S. Government." A foreign manufacturer, in a land which will give no protection to the U.S. patentholder, pirates the protected invention. The foreign manufacturer was put to no expense to develop the invention. He did not have to invest in the complicated apparatus of modern research; he did not

---

Footnotes at end of speech.

have to think any original thoughts; he did not have to sweat over the invention, or test it, or develop it, or market it. He did not have to nurse it to commercial maturity. In most instances, he need not pay American social security or State and Federal income taxes. He is free from the burden of various laws enacted to protect American labor. His costs are low, his investment small. Yet, under the policies which are being pursued, the biggest single customer in the United States, namely, the U.S. Government, is his.

"Meanwhile, the American patentholder is told that all he can do is sue the United States for a limited amount of damages. Whether even limited damages will be paid depends altogether upon whether the patentholder can afford to bring an action in the Court of Claims and wait through the 2 to 4 years an adjudication of his rights is likely to require in that court, and wait through a possible appeal as well. Meanwhile, the Government and its infringing supplier are free to invade the patentholder's rights again and again because the patentholder cannot get an injunction against the Government to stop the infringement, as he could were a private party guilty of similar tortuous [sic] conduct." [10]

Representative Roudebush of Indiana pointed out that present government practices had cost the drug industry alone an estimated ten million dollars during the preceding five years and that over 500 jobs had been lost in the industry as a direct result of this policy.[11]

Senator McClellan was more impressed with the basic principles underlying the problem. He stated:

"We grant these patents and the same Government undertakes by the patent system to provide a protection to those who receive the patents. . . . [I]f the Federal Government itself engages in a practice calculated to impair that system and impair that protection, I just wonder about the consistency of it. . . . The principle involved here is bigger to me, much bigger, than the loss of maybe $10 million every 5 years in wages that would be paid." [12]

A number of measures are being considered to reverse the *Herbert Cooper* rationale—or at least to soften its impact. They include suggested administrative proposals that could be adopted within the framework of existing statutory authority and are, presumably, consistent with the viewpoint of the Comptroller General. More significantly, the reforms include legislative proposals to limit the scope of section 1498, expand the settlement authority of federal agencies or amend the procurement statutes to authorize agencies to negotiate with the patent owner or his licensees for the procurement of patented items.

PATENT INDEMNITY

Before detailing these proposals, patent indemnity should be considered, since it is sympotomatic of the problem and is seen by some as a partial solution to the problem.[13] On the question of whether to include patent indemnity provisions in government contracts, essentially two approaches have been followed: one has been adopted by the Armed Services Procurement Regulations (ASPR) and the other is typified by NASA's policy. In general, ASPR requires patent indemnity across the board in formally advertised procurements and permits indemnity in negotiated supply contracts (1) where the supplies normally are sold or have been sold or offered for sale to the public, or (2) where the patent owner contends that the prospective procurement would infringe his patent and the low bidder or offeror is willing to indemnify the Government without an increase in price.[14] The NASA practice has been to use patent indemnity only in rare instances in supply contracts, and then only with respect to an identified patent or group of patents.[15] Both ASPR and NASA proscribe patent indemnity clauses in research and development contracts; however, ASPR permits indemnity for supplies when such purchases are contemplated under research and development contracts.[16]

Footnotes at end of speech.

Proponents of patent indemnity argue that it properly gives a patent owner a competitive advantage in obtaining government contracts, since he does not have to include in his bid a "cushion" against contingent liability which presumably his unlicensed competitors must include. Moreover, it is argued, if such clauses were generally enforced, they would free the Government of liability for the infringing acts of its contractors, thereby lessening the Government's ultimate procurement costs. Patent indemnity clauses are not generally enforced by the Government, however, and thus, they do not achieve this result.[17]

A principal objection to the use of patent indemnity clauses is that they make it difficult, and in many cases impossible, for an agency to settle a patent owner's administrative claim for infringement. To be obligated to reimburse the Government for any administrative settlement, the indemnitor must first agree to the settlement,[18] and it is usually to his advantage not to agree, thus forcing the patent owner into a suit against the Government in the Court of Claims. In this way the indemnitor can have his competitor's patent litigated at no cost to him. Patent indemnity clauses may also have the effect of unnecessarily increasing contract costs because of the inclusion by bidders of a contingency fund; [19] they may discourage prospective bidders from taking part in procurements because of the uncertainties of infringement liability; finally, they may encourage contractors to use second-best materials to avoid possible infringement liability.

In view of these factors, the present NASA policy is based on a conclusion that, on balance, across-the-board use of patent indemnity clauses creates more problems than it solves for both the patent owner and the Government. Regardless of whether this conclusion is valid and whether indemnity is used, there is no question that there is legitimate concern over the present government procedures for the procurement of patented items. As noted above, this concern has prompted a number of proposals designed to change present policies.

---

[1] For an interesting case on the authority of the Comptroller General as head of the General Accounting Office to control government procurements see United States *ex rel.* Brookfield Constr. Co. v. Stewart, 339 F.2d 753 (D.C. Cir. 1964). See also, House Comm. on Expenditures in the Executive Dep'ts, *The General Accounting Office, A Study of Its Functions and Operations,* H.R. REP. No. 1441, 81st Cong., 1st Sess. (1949); MACHINERY & ALLIED PRODUCTS INSTITUTE, THE GOVERNMENT CONTRACTOR AND THE GENERAL ACCOUNTING OFFICE (1966).

[2] See text accompanying notes 72–74 *infra.*

[3] Estimates of "out-of-pocket" costs of a patent suit in the Court of Claims run as high as $250,000. Yeaton, *The Administrative Claim Procedure,* 25 FED. B.J. 106, 108 (1965). Coupling this with the fact that of 143 patent cases closed in the Court of Claims from 1952 to 1964, the patentee prevailed in only forty-seven, or less than one out of three, Dreyfus, *Government Counterclaim for Patent Infringement,* 9 PTC J. RES. & ED. 459, 463 (1965), the deterrent to such suits is clear.

[4] "We have pointed out and have numerous examples showing that for small business (the primary sufferer) a suit in the Court of Claims is no remedy at all because of its cost and the delay involved." Letter from Henry J. Cappello, National Small Business Association, to Hon. John J. McClellan, July 20, 1965, set forth in *Hearings on S. 1047,* at 88, 91:

"We believe that the present state of affairs completely overlooks the fact that more often than not the inventor seeks a patent on his discovery not so much in the hope of royalties but rather in the hope of enjoying some small preferential position in the manufacture of his brainchild." Statement of J. P. Perry, National Small Business Association, *Hearings on S. 1047,* at 58, 60.

[5] Obviously, attorneys representing the Government in either an administrative claim for patent infringement or a court action must consult in considerable detail with government scientific and technical experts on the merits of the claim. These same experts are usually potential "customers" for equipment or services in the area involved. An understandable reaction often encountered is a feeling of antagonism toward the party claiming compensation from the Government. For this reason, most government attorneys make a practice, usually successful, of explaining to potential witnesses that by bringing a claim the patentee is merely exercising his legal rights in a wholly appropriate manner.

[6] See Yeaton, *supra* note 37, at 108. Under its recently amended rules, the Court of Claims discovery, in many respects, is virtually coextensive with that under the Federal Rules of Civil Procedure. Lane, *Certain Rules of the United States Court of Claims in Patent Suits,* 25 FED. B.J. 119 (1965).

[7] 72 Stat. 426 (1958), 42 U.S.C. §§ 2451-(c) (5), (8) (1964).

[8] Address by Robert F. Allnutt, Monthly Meeting of the Los Angeles Council, Western Electronic Manufacturers Association, February 22, 1966.

[9] *Hearings on S. 1047.*

[11] *Id.* at 29.

[12] *Id.* at 29, 30.

[13] *Id.* at 67.

[14] ASPR § 9–103, 32 C.F.R. § 9–103 (Supp. 1966).

[15] NASA Procurement Regulation § 9.104, 41 C.F.R. § 18–9.104 (1966).

[16] ASPR § 9–103(1), 32 C.F.R. § 9–103 (Supp. 1966). In Van Valkenburgh, Nooger & Neville, Inc., B–139585 (July 2, 1959), the Comptroller General stated that "there is no mandatory requirement that a patent indemnity clause be included in a Government contract . . . . The advisability of using the indemnity clause is the primary responsibility of the procuring agency . . . ." *But see* Electro-Neutronics, Inc., B–154001 (June 22, 1964), where the Comptroller General stated that the matter is "subject to review by our Office on the basis of the facts and circumstances of each case presented." Where an indemnity clause is included in an invitation for bids, a bidder who takes exception to the clause is nonresponsive. ACF Industries, B–155640 (Feb. 5, 1965).

[17] As concluded by Lawrence Glassman, Chief, Patents Procurement Branch, Office of the Chief Signal Officer, U.S. Army: "There is an extreme lack of information as to the monetary benefits which the Government has derived from the clause. The best available estimate which is admittedly based on very incomplete studies is that the saving has been about $40,000. The *Lane Lifeboat* case [United States v. C. M. Lane Lifeboat Co., 118 F. 2d 793 (2d Cir. 1941), *cert. dismissed,* 314 U.S. 579 (1941)] is the only published decision which refers to a recovery by the Government based on an indemnity clause. However, there have undoubtedly been cases in which indemnifying contractors have voluntarily contributed to the settlement of infringement claims or of suits in the Court of Claims without any cumulative record having been kept from which the overall benefits to the Government could be calculated. It is unlikely that any of these settlements were very large or they would have been better known among gov-

ernment officials concerned with this subject." Glassman, *The Patent Indemnity Clause in Government Contracts,* 25 Geo. Wash. L. Rev. 256, 277–78 (1957). See also Dreyfus, *supra,* note 37, at 465.

[18] See Martin Co. v. United States, 163 F. Supp. 376 (Ct. Cl. 1958).

[19] In Glassman, *supra* note 51, at 280, the author noted:

"At least eight contractors, including several of the largest in the electronic field, have indicated that at least on occasion they include such contingency reserves in the contract price and that these reserves vary from 1 percent to 5 percent of the price. During World War II, one company refunded approximately $410,000 representing a contingency reserve accumulated under a number of contracts in return for the Government's agreemen to cancel the indemnity provisions of the contracts. The [Report on the Under Secretary of War Patent Conference held at Aberdeen Proving Ground, Maryland, December 15 and 16, 1944] describes on pages 87 and 88, a similar situation involving $8,100,000, although at the time the discussion reported on took place, the matter had not yet been finally concluded."

In view of this he concluded: "According to the best available evidence, [use of patent indemnity clauses] substantially increases the cost of government procurement, yet produces only a very minor benefit in indemnification with respect to administrative infringement claims and suits in the Court of Claims. It complicates the Government's placing of contracts, settlement of infringement claims and purchase of licenses." *Id.* at 287.

Inaugural Address of the Honorable Warren P. Knowles, Governor of the State of Wisconsin

EXTENSION OF REMARKS

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. LAIRD. Mr. Speaker, my good friend and the very good and outstanding Governor of the State of Wisconsin these past 2 years delivered his second inaugural address on the second day of January in our State capitol of Madison, Wis.

The remarks of Governor Knowles on this occasion were brief but to the point, short but full of meaning not only for Wisconsin but for the times in which we live.

So that my colleagues may have the benefit of reading the full text of Governor Knowles' inaugural address, under unanimous consent, I include the text of his outstanding address in the Record at this point.

The address referred to follows:

Inaugural Address of Governor Warren P. Knowles, Madison, Wis., January 2, 1967

My Fellow Wisconsin Citizens: Two years ago—here in the Rotunda of our State Capitol—I took the oath of office as Governor of Wisconsin for the first time. Today, as then, I offer you my assurance that I shall continue to do the very best I can, every day, to carry out my commitment to the citizens of Wisconsin.

The past two years have been years of firm progress for our State. By almost every measure, Wisconsin has set new records for growth and prosperity; the highest number ever employed, the greatest sustained period of low unemployment since World War II, and record earnings in most areas of employment.

Equally significant, Wisconsin has advanced through the enactment of important legislative programs.

We have broadened and expanded the opportunity of our youthful citizens to receive education beyond high school.

We have increased the care and assistance available to the blind, handicapped, needy and aged.

We have provided for an accelerated highway construction program and stepped-up safety program.

We have unleashed a powerful legislative weapon for use in the battle against water pollution.

Yet there is more to be done—much more. This era of advancing technology, economic growth and social progress generates new needs and problems: it demands new ideas, new answers.

The true challenge before us is to stimulate the creative power of free men to direct their own destiny amid the turmoil of growth and change. It requires that your public officials prove themselves *servants* of the people and *masters* of the forces testing us.

These forces—these problems—beset us from every side. They touch the lives of our citizens deeply and constantly—whether they concern the training of our youth or the health of our aged, consumer protection or law enforcement, agriculture or automation.

The challenge is the same today as that described by Abraham Lincoln when he said:

"The dogmas of the quiet past are inadequate for the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion.

"We must think *anew,* we must act *anew.*"

We in Wisconsin must look ahead to the preservation and enhancement of our human and natural resources.

We must continue to develop our economy so that Wisconsin citizens can use the full measure of their talents and skills.

We must take massive steps to preserve the gifts of nature, the cleanliness of our water and the purity of our air.

We must focus our attention on the relationship of the state government to local units of government; and direct the State's efforts toward easing the growing pains of urbanization and toward resolving the problems produced by geographical shifts in our population.

And, we must continue to provide the training grounds for the gifts of intellect and skill enjoyed by our citizens.

We are challenged, too, on a higher and less practical plane. For, as we grow, *we must grow in quality and in spirit.* As we excel, we must excel in truth as well as technology. As we expand, we must expand the heart and the mind—the compassion and concern, as well as commerce and productivity.

General of the Armies Omar Bradley once gave voice to the challenge in terms designed to startle his listeners. He said:

"We have mastered the theory of the atom, but we have rejected the Sermon on the Mount.

"We have achieved brilliance without wisdom, and power without conscience. Ours is an age of nuclear giants and ethical infants.

"We know more about war than we know about peace . . . and, we know more about killing than we know about life."

That's a harsh indictment; one the people of Wisconsin must strive never to deserve. Yet it holds the challenge for the future. We are challenged—*to achieve wisdom* as well as brilliance, *to acquire conscience* as well as power, *to comprehend the meaning of life,* and *to create a total environment* in which our citizens can discover, practice and exercise those pursuits in which they find meaning, purpose and satisfaction.

My administration during the coming years is pledged to encourage the fulfillment of those ideals among our citizens. Working together—the people, their legislative representatives and the Executive Office—can pledge *to pursue excellence,* knowing it will not always be reached, but knowing that it should always be our goal.

That spirit—a spirit of dedication to the continual advancement of our great State and to the growing security, prosperity and opportunity for our citizens—will, I trust, be the hallmark of my administration during the coming years.

The very roots of my being are deep in the soil of Wisconsin. As a boy growing up in the northwestern part of our State, I grew to know and love its rolling hills, its rich forests and farmlands. I grew up with a sincere appreciation of the fish, fowl, and deer that delight children and challenge sportsmen.

In my maturity, I developed an admiration for the men and women of earlier generations who had carved a vibrant commonwealth out of the wilderness; pioneering people who set in motion the varied enterprises which have produced this great and growing State.

And now, through many years of public life, I have had the opportunity to observe, at first hand, those forces which give shape and direction to our State and our society.

I have been blessed with a unique opportunity to visit almost every community in our State; to visit with and come to know the people and their problems; their needs and aspirations.

From boyhood to adulthood—through grade school, law school and the "hard knocks" school of political life—my affection and dedication to Wisconsin has deepened.

It is my one ambition to serve my State and its citizens, to nurture its growth, and to preserve for those who follow us its tradition of sound government.

I extend my earnest thanks to all those who expressed their confidence in me through the elective process.

I pledge to all that this Administration will set new goals; that we will *build* on the proud achievements of the past and *plan anew* for the future. And, I will work in every possible way and to the limit of my ability, to build a better Wisconsin for the citizens of today and the generations to come.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the Record at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

Appendix

The Address of Congressman A. Sydney Herlong, Jr., Before the American University Conference on Federal Tax Aspects of Nonprofit Organizations

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. CUNNINGHAM. Mr. Speaker, last week, our distinguished colleague, A. SYDNEY HERLONG, JR., made a significant address before the American University Conference on Federal Tax Aspects of Nonprofit Organizations. Speaking from his vast experience on the Ways and Means Committee, he called for tightening up tax loopholes, particularly in the foundation and tax-exempt advertising fields.

I have previously called the attention of this House to the absurd situation existing in the publishing business where tax-exempt organizations are running increasing amounts of advertising and paying no income tax on their profits. The Treasury Department has had a regulation on this subject before it for a long time. In my opinion, no further time should elapse and that regulation should be issued without further delay.

If there is one thing that my constituents said to me during the last campaign it was that they were prepared to pay their fare share of taxes, but they wanted the loopholes closed up first. I note that the very able gentleman from Florida has had the same experience, and I commend him for the courageous and forthright position he has taken. SYD HERLONG is eminently right, and let us hope that his courage is a forerunner of immediate action by Treasury on the advertising situation.

I appreciate this opportunity to call the attention of the House to the full text of the speech of our very able colleague from Florida:

REMARKS OF CONGRESSMAN A. SYDNEY HERLONG, JR., FOURTH DISTRICT OF FLORIDA, BEFORE THE THIRD ANNUAL AMERICAN UNIVERSITY CONFERENCE ON FEDERAL TAX ASPECTS OF NONPROFIT ORGANIZATIONS, JANUARY 16, 1967

I appreciate the privilege of appearing before this Third Annual Conference on the Federal tax aspects of non-profit organizations. In the American University's pamphlet which announces this conference, it is stated quite clearly that, "rarely has a single subject attracted such broad and concentrated attention from all types of tax-exempt organizations as their current confused tax status."

The invitation for me to appear here was received and accepted some months ago. At the time no one asked me my views on this subject and I can assure you that no one has attempted to influence them in any way since I accepted the invitation. What I have to say may not please all of you, but from the very nature of the invitation I received, I concluded that I was not invited to this American University sponsored forum for the purpose of parroting statements that my audience might wish to hear.

My remarks, therefore, will be in the spirit of academic inquiry and it is in that spirit that I should like to explore for a few moments two phases of tax exemption which I am sure are in the forefront of your minds—one, of course, involves the field of private foundations, the other, so-called tax-exempt advertising. As in most discussions such as this, it is not the use of the tax-exempt feature of our law that creates difficulty, it is the abuses; and as frequently happens, the abuse in this field is the reason for so much confusion.

The 90th Congress will have the opportunity to consider the subject of private foundations. Foundations have received a good deal of attention in the press recently because of the publication, in December, of the Fourth Report of Congressman Wright Patman's foundation investigations. They have also been the subject of continuing interest and comment in a number of different quarters for at least the past several years.

The Ways and Means Committee has pending before it a Report on private foundations prepared by the Treasury Department and submitted to Congress in 1965. The Report is, I understand, based upon a rather extensive Treasury investigation of what private foundations are doing and how the laws which govern them are operating. According to the Report, the Treasury investigations disclosed that serious abuses exist among a substantial minority of private foundations. To cope with those abuses, the Treasury Department recommended six major legislative changes. In general, the recommendations were:

First, that self-dealing practices—that is to say, dealings between foundations, their donors, and related parties—be prohibited.

Second, that rules be adopted to insure prompt flow of foundation income or its equivalent to the support of active charitable enterprises.

Third, that foundations be prevented from owning 20 percent or more of any single business.

Fourth, that charitable deductions be postponed for gifts to foundations of property over which the donors continue to maintain real and effective control.

Fifth, that restrictions be placed upon foundation borrowing for investment purposes, lending, and trading and speculation.

Sixth, that donor control over a foundation be limited to the first 25 years of the foundation's existence.

The Treasury Report illustrates its charges of foundation abuses with a number of specific examples. Without attempting to prejudge any of the issues which the Treasury Department raises, I think that some of those examples are rather striking. Discussing the extent to which some foundations have become involved in competitive business enterprises, the Report mentions one foundation which holds controlling interests in 26 separate corporations, including a large metropolitan newspaper, the largest radio broadcasting station in the state, a life insurance company, a lumber company, several banks, three large hotels, a garage, and a variety of office buildings. According to the Report, another foundation controls 45 separate business enterprises. Included are clothing manufacturing establishments, real estate businesses, retail stores, a hotel, and printing, hardware and jewelry businesses.

Again, illustrating its statement that some foundations have been able to develop very considerable wealth entirely through the manipulation of borrowed funds—without ever securing substantial contributions from the public and without, therefore, ever having to rely upon the community's evaluation of their charitable activities—the Report draws attention to one foundation which began with a capitalization of $1,000 and, entirely through the mechanism of investment borrowing, was able to multiply its net worth within five years to include a 34-acre tract of industrial real estate valued at $1,150,000. Another foundation was organized in 1954 with no funds of its own at all. By 1961 it had incurred indebtedness of more than $14 million in oil and gas dealings, and had annual income of over $68,000.

To facilitate our consideration of the Treasury's recommendations, in the fall of 1965 the Ways and Means Committee requested comments on the Treasury Report from all interested parties. A large volume of comments were received. More than 70 foundations, attorneys and others submitted material to the Committee, and we have published their comments in two volumes.

I have not yet had an opportunity to examine the Treasury recommendations in detail. I note, though, that a number of the country's well-known foundations—including the Ford Foundation, the Danforth Foundation, and the Alfred P. Sloan Foundation—commented favorably. In any event, it seems to me clear that the area is an important one; and I hope very much that the Ways and Means Committee and the Congress will be able to devote full attention to it this year.

In June of last year, Chairman Mills and Representative Byrnes of the House Ways and Means Committee introduced identical bills dealing with the group of problems highlighted and intensified in 1965 by the Supreme Court decision in *Commissioner* v. *Clay Brown, et al.*, which stemmed from investment borrowing by exempt organizations. This legislation was prepared by the staffs of the Joint Committee on Internal Revenue Taxation and the Treasury Department.

In the *Brown* case an organization claiming tax exemption acquired a business by agreeing to pay the former owners a percentage of the future profits of the business until a specified sum had been reached. The exempt organization, making no commitment for payment other than from the assets of the transferred business itself and the income produced by those assets, obtained a business—valued at $1,300,000—entirely without investment of its own funds. Careful and elaborate steps were taken to immunize the business earnings from the present tax on unrelated business income. With three Justices dissenting, the Supreme Court held that the former owners were entitled to report their profits on the transaction as capital gains.

The availability of the tax exemption for use in transactions following the *Brown* pattern, and in other arrangements involving borrowing for investment purposes, has a variety of undesirable conseqeunces, the most important of which is to establish a powerful incentive for the transfer of businesses and other productive property to tax-exempt organizations. In an arrangement under which the entire price is to be financed from the future earnings of the transferred property, exempt organizations are peculiarly suited to pay a substantially higher price than a taxable entity could afford. They can, in effect, make available to the seller the additional business earnings which would have been paid to the government had the purchaser been taxable. The particular favorability of the exempt organization as a purchaser in transactions of this sort has for some time been widely advertised in the tax and business press, and since the announcement of the *Brown* decision such advertising has intensified. It seems quite likely, therefore, that unless something is done, a substantial unplanned shift of productive property to exempt organizations will occur. One consequence of such a shift would, of course, be considerable erosion of the tax base. Another, quite possibly, would be broad economic and social changes stemming from the ownership of a large number of the country's businesses by organizations with different motives and different objectives than the entrepreneurs who have thus far constituted our business community.

To deal with the problems of exempt organization investment borrowing, the Mills-Byrnes bills impose tax upon the "unrelated debt-financed income" of all classes of exempt organizations. The bills continue the fundamental policy of a statute adopted by Congress in 1950 to deal with one facet of this area—the sale of real property to an exempt organization and immediate leaseback to the original owner—but eliminate the defects which experience has demonstrated that statute to possess. Under the proposals, income would be subject to tax only if it meets two requirements: it would have to be derived from property acquired or improved with borrowed funds, and it would have to be produced by activities unrelated to the educational, charitable, religious, or other operations constituting the basis of the organization's tax exemption. The taxable portion of the unrelated income from any particular property would, in general, be the amount bearing the same ratio to the total income from the property as outstanding indebtedness bears to the basis of the property.

The Ways and Means Committee held a hearing upon the Mills-Byrnes bills in late 1966. Appearing on behalf of the Treasury Department, Mr. Surrey strongly supported the bills. Comments both for and against the bills were also received from several interested organizations and private attorneys. Because of the proposal of the investment credit suspension legislation almost immediately after this hearing, the Ways and Means Committee did not have an opportunity to consider the bills further last year. However, we anticipate that a substantially similar legislative proposal will be introduced early this session, and of course, we hope the Committee will have an opportunity to act on it.

Now, with reference to the subject of tax exempt advertising, I must say that more and more voices are being raised on the general subject of tightening up tax loopholes or escape hatches. No doubt, these same voices will be raised in the Ways and Means Committee when it considers the tax increase proposed by the President last Tuesday night. Granted that the amount to be recovered from plugging tax loopholes will not make up multi-billion dollar deficits, there is equity in the argument that those presently paying taxes should not be asked to pay more until those escaping taxes are also paying their fair share.

When Congress passed the unrelated business tax in 1950 as a result of the New York University-Mueller Macaroni situation, I note that both the Ways and Means Committee and the Finance Committee Reports state:

"The problem to which the tax on unrelated business income is directed is primarily that of unfair competition."

In passing the unrelated business tax, Congress was accepting the recommendations of organizations like the United States Chamber of Commerce. Appearing before the Finance Committee in 1950, Mr. John Dane of Boston, representing the Chamber, testified:

". . . It is our policy that we are opposed to government favoritism in any form, and we urge that no enterprise be favored over any other form, and that each enterprise, whether it is cooperative, individual, or corporation, should stand on its own feet, with protection from unfair competition, and free from either tax exemption or other public subsidy."

I know of no organization which was exempted from the income tax so that it could sell advertising. Indeed, I see no relationship between advertising and any tax-exempt purpose.

I understand there are some 700 tax exempt publications grossing over $110 million in advertising revenue today. I know also that they are fine publications and that some of them could not be published except for the advertising, much of which is of a complimentary nature and of doubtful advertising value. However, it is not this use of this type of tax exemption that I protest, it is the abuse, such as advertisements which appear in these publications in an attempt to convince a prospective advertiser that he will get more for his advertising dollar by advertising in the tax exempt publication than he would in publications which pay taxes on their profits. This certainly is unfair competition.

Having fought as hard as I have for free enterprise and against this government encroachment in my 18 years in the House, I cannot reconcile the acceptance of a handout from the government in the form of tax subsidy on profits resulting from advertising, with simultaneous expressions of faith in the free enterprise system. It is the great trade associations and professional societies which have been the leaders in this fight. We cannot by word support free enterprise, and by action accept government support, which tax exemption on advertising profits really is. It seems to me that someone's slip is showing and it ought to be corrected.

As you know, the Treasury Department is considering a regulation at this time because there seems to be a great deal of doubt as to just what the law means. In the last Congress, bills were introduced which would, if enacted, declare that such advertising is a "related activity" and therefore clarifying any confusion that now exists as to the meaning and intent of existing law. The Committee took no action on these proposals. I think this was proper and I further think that it is not necessary for the Committee to do anything in this field until Treasury does come up with some sort of regulation. I feel sure that before any such regulation is issued, there will be a public hearing before the Internal Revenue Service. It is at that time and in that forum that anyone who feels aggrieved should state his case.

Frankly speaking, how could the Ways and Means Committee act at this time without being premature? We are in the position of having passed the unrelated business tax. When we passed this unrelated business tax, Congress delegated to the Internal Revenue Service discretion as to where the tax should be applied. It is, therefore, up to the Internal Revenue Service to apply that tax. If after experience, the tax is found to be inequitable, then and only then should there be recourse to Congress.

I hope that some regulation in this field will be forthcoming before too long, and in this connection, my personal views are those expressed by the Court of Claims in the *Indiana Retail Hardware Association v. the U.S.*

"We are of the opinion that Congress did not mean to grant exemption from the payment of taxes to an association engaged to such a large extent in activities ordinarily carried on for profit by persons liable for the payment of taxes on the income derived from such activities."

Drugs for Rhodesia Banned by United Nations

EXTENSION OF REMARKS

OF

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 26, 1967

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "U.N. Bans Drugs for Rhodesia," written by Ralph de Toledano, and published in the Lynchburg, Va., News, of January 25, 1967.

There being no objection, the article was ordered to be printed in the RECORD, s follows:

U.N. BANS DRUGS FOR RHODESIA

(By Ralph de Toledano)

UNITED NATIONS, NEW YORK.—There exists perhaps no more pious a group of men than the delegates to the United Nations. Almost at any time of day or night, the observer can hear representatives of the Communist-bloc nations talking about justice, democracy and human rights with the same fervor that they showed when Joseph Stalin was purging Jews by the thousands and throwing people into murderous slave labor camps by the millions.

The United States is not entirely out of the running in the hypocrisy stakes, however. For while Ambassador Arthur Goldberg is talking about crimes against "humanity" and trying to interfere in the internal affairs of those nations whose domestic policies Washington does not like, the U.S. Food and Drug Administration and a related agency of the U.N., the World Health Organization, have been declaring their own little war against pregnant women in independent Rhodesia.

The United Nations is hoping to topple the present Rhodesian government by imposing sanctions. The USFDA and WHO therefore withheld from Rhodesian health authorities vital information about certain anti-histamine drugs that are injurious to pregnant women and that Rhodesian doctors had been prescribing. Bulletins prepared by USFDA and circulated by WHO ceased to arrive in Rhodesia nine months ago.

In another example of the U.N.'s concern for people, the World Health Organization boycotted Rhodesia though the country had entered into an agreement with other Central African nations to embark on a concerted malaria eradication program. Doctors from WHO presumably believe that malaria-carrying mosquitoes from Rhodesia, stung by the U.N. boycott, would stay on their own side of the border and not infect the Africans of Malawi, Zambia, and other neighboring states. As cruel but more logical was WHO's refusal to honor an agreement with Rhodesia to join in a multi-nation effort to combat the malnutrition among Africans that results from unsound dietary practices.

But with inhumanity, a United Nations dominated by the delegates of the new Afro-Asian dictators and the Communist-bloc nations has combined illegality and malicious propaganda. For the U.N.'s basic law flatly states, in Article 2, Clause 7, that "nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the members to submit such matters to settlement under the present Charter."

Yet Rhodesia and South Africa today—and perhaps the United States tomorrow—are confronted by actions of the U.N. that violate the Charter provision quoted above by attempting to intervene directly in internal affairs that are no business of the world body. Should the United States ever become the target of similar action against it, the U.N. could quote the speeches of Ambassador Goldberg in which he argued that a general (and vague) concern for "humanity" is sufficient to negate international law and the Charter. Intervention, let us say, on the ground that the people of Harlem were deprived of their rights when Representative Adam Clayton Powell was refused his seat in Congress would then be sanctioned under such logic.

Inaugural Address of Gov. Walter J. Hickel, of Alaska

EXTENSION OF REMARKS

OF

HON. HOWARD W. POLLOCK

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. POLLOCK. Mr. Speaker, I would like to call to the attention of my colleagues the following remarks made by the Honorable Walter J. Hickel, Governor of the State of Alaska, as his inaugural address:

INAUGURAL ADDRESS OF GOV. WALTER J. HICKEL, OF ALASKA, JANUARY 14, 1967

You have made me Governor of the State of Alaska. I am grateful for the opportunity, challenged by the responsibility, and humbled by the confidence you have shown.

This is a time when Alaska's flag is high up the mast, the wind bellies out the sails, and the tide is with us. We sit at the top of a continent—at the headwaters of the pacific—and our mooring lines are strained with the urge to break loose and sail into the future on another voyage of discovery.

Can you sense it? I can. And I know you can. We must take stock of what we are today, our resources, our strengths, our weaknesses. We must have a vision of tomorrow, for all things of reality must first be an idea, a vision, a dream. We will build a strong course of economic development and progress for all Alaskans, and in the pursuit of that vision, many of the good things of life will come to us.

I will present some of my specific plans and recommendations to the people of Alaska later, in the "State of the State" message to our Legislature. But now let us examine our potential.

We can be proud of our giant fishing operations, our pulp and timber mills, and our young, but rapidly growing oil business. What we need is more economic development. We need basic economic development, to tap Alaska's great wealth.

Now, the kind of economic development I seek is not the kind that the rich will get richer while the poor stay poor. It does not mean that big business will come up from the outside to take our great natural wealth and then abandon us. Far from it. They will become Alaskans, and *all* will be partners in progress in our State.

Alaska is a unique land in many ways. We like to call Alaska "The Last Frontier." We are not like New York state: heavy with industry, cris-crossed with highways, a-buzz with the manufacture, transportation and consumption of goods. We are not even like California—3,000 miles away from New York, and developed at the end of the tremendous Westward expansion across the United States.

Is there any reason for expansion to stop at California? Let us turn our heads North, to the future. We are the last frontier.

We are the last frontier, which gives us an opportunity to do many things right that other states have done wrong. Our Borough Act has already started to guard against sloppy urban sprawl as we develop. We will keep our air clean and our water pure. We will see to it, with a planned park system, that Alaskans will always have the pleasures of the untouched out-of-doors.

But our frontier status has another implication: economically, what happened earlier in other states must now happen in Alaska.

When a railroad was built across the continental United States to tie the East and West together, every other section along the entire route was given to the railroaders by the Federal government. Along with that went an outright grant of one million dollars in order to make it profitable to span the country with steel rails.

Why should it be any different today, in America's last frontier?

Let us build a railroad—the Alaska Railroad—through the high country in the North, stretching from Fairbanks to Nome. That railroad will open up this highly mineralized area, and within but a few years huge ore-carrying trains, 100 cars long and more, will carry our minerals out of the ground and to the marketplace.

Then, wherever vast mineral deposits are uncovered, let us build new cities. We can not develop our Arctic lands by compulsion as the Russians did. We will develop them by attraction. Jobs created in these new cities will attract people from the river country. And while we have been unable to solve individual village problems of sanitation, electrification, and so on, we will have them already solved in these cities.

Meanwhile, we will develop hydro-electric and gas generating plants. Over 200 sites throughout our State have been identified as being potential producers of low-cost hydro-power—power estimated to be in excess of nineteen million kilowatts. The possibilities of gas generation of electricity are barely beginning to present themselves.

Working together, we will use low-cost electrical power in that area where our greatest potential lies: the refinement of our resources.

Alaska is of great importance to the rest of the United States. Our huge supply of natural resources makes us so. Already the major oil companies have realized this. They are exploring the State, discovering and tapping our reserves of oil and gas. The oil stores in Cook Inlet and on the Kenai Peninsula may be as large as those in Venezuela, or larger yet. And searching goes on in the Arctic Slope, Bristol Bay and the Gulf of Alaska for yet other deposits of that black gold.

I am sure that many companies, in a variety of fields, intend to follow the lead of the oil industry. Indeed, some were already here, exploring and working for the development of our natural resources before oil was discovered.

We are aware of the diminishing supply of various metals in the lower 48. We are aware that revolution or less violent political changes could drastically change the availability of things that we as a nation import. We are aware of an impending crisis in the world's food supply, brought on by a rising population.

We also know that when there is a need, Alaska must be able to call upon its vast land for minerals. Alaska must be able to harvest food from the two mighty oceans and the three great seas that touch our coastline. No other nation, and certainly no other state, is so blessed with the riches that the sea offers Alaska.

We need the Federal government as a partner in progress, to pave the way for private enterprise, for if private enterprise by itself had to start to develop the continental United States today, with today's tax structure (and without Alaska's unique climate and geography) I seriously doubt that the development attempt would get off the ground.

But as allies—private enterprise, the State, and the Federal government—we will succeed in extending Alaska's economic development.

Private enterprise must supply the long-term risk capital. It must supply the specific talents and know-how that are its strength. It must do the job of development wherever it can, and with its productive capacity it must supply those things that make us a free nation.

Government can help, and must help, in areas where the individual or private enterprise cannot possibly start us on the road to greater economic development. Such fields as transportation and communications must be pioneered in that way in order to open up the land and give us as free people the opportunity to develop it.

Now, other states have a well-developed road network. Alaska does not, and the lack causes us many problems in transportation. Because we are the last frontier, 50 years behind the other states, and because Alaska is so important to the entire nation, we must have help to catch up.

The cutting out of some thirteen million dollars from our Federal highway funds for this year will slow down work on the Anchorage-Fairbanks Highway, and eliminate work on other projects. This is not the way to help.

Highways and transportation are but two of the areas in which Alaska will grow. Our salmon pack for last year—some three million, nine hundred and thirty-five thousand cases—was the largest in the past seventeen years. Our king crab fishery is growing by leaps and bounds, with some 150 million pounds of king crab taken in 1966—an increase of eighteen million pounds over last year.

To develop our fisheries further, Alaska needs a Fisheries Research Center, so that we will know the kind and extent of all of our fishing resources.

When I was visiting Savoonga, on the Bering Sea, Siberia was very close; and on this exceptionally clear, beautiful day, although the Russian boats were working, we were doing nothing. A native mentioned to me that "they are fishing all the time, and we don't even know what's there." We need to know what's there, and everywhere along our 34,000 miles of coast line. We need to know so that we can satisfy a hungry world's need for protein, so that we might better harvest the seas.

We will also develop a better reindeer industry, from herding to meatpacking, on the Seward Peninsula. We will work for further development of our mining industry, which will be bolstered when we open up the Arctic to transportation.

The list goes on. It is a long, visionary list, and in order to make those visions a reality the State must work with the Federal government and provide an encouraging climate for private industry

The picture is one of greater economic development for Alaska. That development will be good for all Alaskans, providing many with opportunities for better jobs, and some with the opportunity for regular, year-round work instead of the seasonal jobs they have now.

As Alaska develops, more and more of our seasonal workers will be able to receive an income on which they can count, on which they can plan and build for their own future.

Economic development will allow all Alaskans—already an independent bunch—to become economically independent. And with this economic independence many of our social and welfare problems will disappear, for men will have the dignity and self-satisfaction of self-help.

In addition, we will fully use all of the existing ways we have within the State government to solve our social problems, many of which are unique, such as the shocks that come to a person used to the way of life in a native village when he comes to live in one of our cities. This, we will do.

We sit at the headwaters of the Pacific, a vast natural treasure house at the top of a continent. Our natural market extends to the South along the Pacific Coast of four continents: North and South America, Asia and Australia.

Already, oil from Cook Inlet is competitively priced because of the economy of water transportation. The products from our pulp mills in Southeastern are going to Japan and as far away as Australia. In the near future, giant tankers will take liquified methane gas from the Kenai Peninsula to Japan.

Along the entire length of the Pacific rim are vast areas of primary need, markets for our natural resources.

In my lifetime, I see a million people in Alaska, with primary manufacturing, supplying resources to meet the needs of the whole Pacific Basin.

Our country is unique geographically and climatically. To many, Alaska seems to be a strange land, a far away land. Modern transportation is bringing it closer than ever before to the rest of the world.

This year's Alaska Purchase Centennial will bring many visitors to our State. I have said we need salesmen for Alaska. We do. We need everyone to tell the people that visit us of the wonders and opportunities that are here. We must go farther than that and reach out to tell people all over the world about Alaska, this year and forever in the future.

By doing that, we will not only have a Centennial Celebration which glories in the richness of our past, but we will also help to guarantee that our future, in the next 100 years and beyond, will be a bright one.

Our country is unique, our people are unique in the ruggedness and determination of their pioneer spirit, a spirit which the land helps mold. Our location and our natural wealth, combined with imagination and a determined effort to make our dreams a reality, are the only things we need to achieve our vision of the future.

I pledge my cooperation and strongest efforts to overcome whatever problems we encounter as we go forward.

It is your government. I am but here to serve, and serve I will with all the vitality, imagination and drive I can muster—and I'll enjoy it.

Federal Control of Schools

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, January 26, 1967

Mr. COTTON. Mr. President, Mr. Meldrim Thomson, Jr., of Orford, N.H., recently wrote a thought-provoking article for the Manchester Union Leader on the growing role of the Federal Government in our public schools. He points to the enormous sums of money now being dispensed by the U.S. Office of Education to school systems throughout the country, and the growing degree of thinly disguised Federal control which inevitably accompanies those funds.

To counter this trend toward Federal control of America's public schools, Mr. Thomson advocates apportioning all Federal aid-to-education money directly to the States through Federal tax remissions. This proposal is similar to legislation which I have introduced in the past two Congresses to provide for financial assistance to the States for educational purposes through annual appropriations to each State equal to 1 percent of the Federal income taxes collected in that State.

I believe that all Senators will find Mr. Thomson's article of value, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RESHAPING AMERICA WITH FEDERAL SCHOOL AID

(By Meldrim Thomson, Jr.)

The shape of American civilization is changing rapidly under the pressures of federal aid to education. Many of the programs are excellent; the erosion to many of our most sacred political institutions and personal liberties is evil. This rising tide of federal aid is carrying us swiftly to the socialistic shores of the welfare state.

Last year the U.S. Office of Education had 10 billion dollars to spend for federal aid; this year it has 14 and a half billion; and if the proposed 1967 Equal Opportunities Act is passed next year the figure might well rise to 20 billion.

We can have all of this money, plus the middleman's charge for handling that now goes to the federal bureaucrats, if Congress would pass a federal tax remission program. Under any one of the several proposals now before Congress, a given per cent of the total federal income tax would be returned directly to each state for distribution to public schools. The money would never reach the U.S. Office of Education.

A federal tax remission program would banish federal control of our schools, save billions, now headed for socio-economic projects, and insure the control of public schools where Thomas Jefferson insisted it should be—at the local level.

When Harold Howe II, Commissioner of the United States Office of Education issued his guidelines under P.L. 89–10 last February, our own courageous senior Senator, Norris Cotton, promptly said: "The print on the act was hardly dry when the United States Office of Education began to show its teeth. School districts better follow the 'guidelines' or else." Cotton promised to fight "to hold to a minimum this new and phony aid."

On Sept. 20 Congressman Robertson of Virginia said on the floor of the House of Representatives: "I have served in the Congress long enough to know that Federal control inevitably accompanies Federal funds. Anyone who says he favors Federal funds without federal control is either ignorant of how the federal government operates in these matters or else is not intellectually honest about what is involved."

In New Hampshire we have seen the sad results of schools leaping for the million-dollar boondoggle bait with mouths wide and gills aflutter. Our deputy commissioner of education was reported in a UPI news release the 10th of last month, as blaming our critical teacher shortage this fall in part on new programs stimulated by Federal funds.

This has resulted in a temporary lowering of teacher qualifications. How much better it would have been for our school programs and district taxpayers if we could have had that million dollars with no strings attached to make up for the foundation and building aid shortages now confronting many of our school districts.

Here in the Granite State we hold to the faith of our Founding Fathers when we oppose federal dominance over our schools.

INSISTED EDUCATION WAS LOCAL CONCERN

By New Hampshire's vote in 1788 the Federal Constitution was launched upon the sea of history—a ship made great and strong by the masts and spars of sovereignty granted to her, and made trim and true—a thing of beauty racing down the winds of destiny—by the reservation to the states of all those powers not expressly granted by them to the Federal Government.

In the Constitutional Convention of 1787, New Hampshire was one of six states to oppose successfully the creation of a national university on the ground that education was a local concern.

Franklin Pierce, the only New Hampshireite to occupy the White House, writing in 1854 of the defeat of the motion in the Constitutional Convention to create a federal university said: "It proves that such objects were considered by the convention as appertaining to local legislation only; they were not comprehended, either expressly or by implication, in the grant of 'general power to Congress'."

A few years later, in 1867, Congress established a Department of Education, later to become the U.S. Office of Education, with a $13,000 appropriation, and with power only to gather statistical data.

Behold this might fig vine, a towering and voracious parasite, that will be a hundred years old next March! The U.S. Office of Education today administers 14.5 billion dollars in federal grants!

How big is the federal commitment in education today? More than 10 per cent of our total national budget; more than the entire federal budget the year before Pearl Harbor!

On what is this vast and growing sum of our federal tax dollars to be spent?

Let Commissioner Howe answer. Cong. Paul Fino of New York quotes Howe as saying recently: "If I have my way schools will be built for the primary purpose of economic and social integration."

HOWE DID NOT WAIT UPON THE YEARS

Speaking last May, Howe said, in discussing programs under Title I of ESEA: "I would hope that my office could bring forward even more adventurous enterprises in the years ahead."

Howe did not wait upon the years. He is a restless innovator who in a speech on last June 18 recognized the revolution brewing under our feet. "Feeding that revolution is a major shift in American folkways," said he.

The shape and course of this revolution was revealed by Congressman Fino last month when he forced out of secrecy the outline for the proposed 1967 Equal Opportunities Act. It was drawn at a June White House Conference and numbered among its authors, Floyd McKissack, head of CORE and a vigorous proponent of "Black Power."

Briefly, this bill, scheduled for introduction in Congress next January, and carrying a 6 billion dollar appropriation, would among many things provide for:

1. Metropolitan area-wide rezoning of school attendance areas, without regard to existing state or county lines;
2. Bussing of suburban school children into city schools and bussing of city pupils to suburban schools at federal insistence and expense;
3. Complete obliteration of present school district boundary lines, with free transfers between school districts; and
4. Federal subsidies to underwrite the cost of rewriting history books so as to recast the history of racial and religious minorities.

In past months, we were told numerous times that the federal government would not touch our textbooks; in fact, it is generally thought that this is prohibited under present law.

Can we believe in these assurances when:

1. Howe said in a speech last May 3: "It is about time we stopped offering an antiseptic history of our country cleaned up to please the local power structure."

2. At the House Education and Labor Committee hearings held the end of August, two California Congressmen told Howe to get on with the job of getting federally approved textbooks in the schools; and

3. Howe in his testimony before that committee described grants his office had made to approved authors and researchers who will produce books expounding the approved line.

If we allow this fig vine to continue its run-away growth, it will shortly strangle our dual federal-state system of government. There is one simple, sure way to eradicate it. Cut aff the federal funds on which it thrives. Let all federal aid money be apportioned directly to the states through federal tax remissions.

Ukrainian National Republic

SPEECH

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. LIPSCOMB. Mr. Speaker, January 22, 1967, marked the 49th anniversary of the official declaration of independence of the Ukrainian National Republic. It is appropriate that we pause again to remember the fate which has befallen that proud people and to reflect upon the significance of their continued subjugation.

Today there are nearly 40 million Ukrainians descendent from cossack communities which established themselves as self-governing, independent communities in the 17th century. From earliest times their rich lands were subject to the greedy incursions of their more powerful neighbors, Moscow, Poland, and Turkey. At length, Czar Peter I, of Imperial Russia, was successful in bringing the Ukraine and its peoples under Russian domination in 1709, and the struggle of Ukrainians to be free had begun.

Perhaps it might have ended there. Perhaps the independence-loving farmers and cultivators of the Ukraine might have lost their sense of national identity in the decades under Russian domination. If that had been the case we would not today be concerned with their fate. The fact is, of course, that Ukrainian nationalism did not wither under foreign domination, it grew. Ukrainian culture, different in so many ways from that of the Russian rulers, flowered.

The immortal Ukrainian Poet Taras Shevchenko—1814–61—inspired the Ukrainians of his day never to give up in their fight to win their homeland back from Russian domination, and others such as Ivan Franko—1856–1916—and Lesya Ukrainka—1872–1913—gave renewed voice to the yearning to be free.

It was a long wait for the millions of Ukrainians dreaming of an end to Russian rule, but, finally, in the turmoil that was the Russian Revolution they had their chance and they took it. After more than 200 years of Russian domination they threw off the foreign yoke and on that January day nearly a half century ago proclaimed themselves to be a free and independent nation. But, as we all know, that freedom was not to last. Russia, now a Communist state, attacked the young nation, and after a bitter 3-year struggle again forced her to yield to the domination of Moscow.

Again, as in the two centuries after Peter I, Ukrainian nationalism did not die. An underground insurgent force fought both the Nazis and the Communists in World War II and on June 30, 1941, Ukrainians again proclaimed themselves to be free and the struggle was reborn, a struggle which continues to this day.

Ukrainians throughout the world still feel the surge of spirit which was motivated them from their earliest days. Whether it be the 1,600,000 who have found their home in the United States or the 40 million who still remain in Communist-controlled Ukrainia they seek, and shall continue to seek that freedom which it is the inherent right of all men to share. All Americans, everywhere, share with these brave people that determination. And as it has not died in the centuries of subjugation to the present time, so it shall not die in the future.

Senator Byrd of Virginia Asks Questions

EXTENSION OF REMARKS

OF

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 26, 1967

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Senator BYRD Asks Questions," published in the Northern Virginia Daily of January 25, 1967.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR BYRD ASKS QUESTIONS

Senator Harry F. Byrd Jr. has raised questions which have been on the minds of millions of Americans. Speaking on the floor of the Senate Monday, he demanded a clarification from United Nations Ambassador Arthur Goldberg on the quid pro quo legality of sanctions as applied according to inequitable U.N. formulas. The Virginia senator also raised some pointed questions regarding U.S. hesitancy to request U.N. help in Vietnam.

Alluding to the fact that Ambassador Goldberg, who represents the thinking of the Johnson Administration, had cast logic to the winds in supporting the British demand for U.N. sanctions against peaceful Rhodesia, Sen. Byrd reminds us that the Administration has made no parallel effort to enforce U.N. sanctions against North Vietnam.

According to the Virginia senator, Mr. Goldberg expressed the conviction that U.N. sanctions against North Vietnam are not now in the realm of possibility because ". . . as a practical matter we know this cannot be done." Sen. Byrd's reply is both direct and caustic:

"I say that whether or not this objective can be accomplished, Mr. Goldberg has an obligation to strive constantly for it.

"But why does not he stand up in (Security) council and demand a rollcall vote? Let us see where Great Britain stands. Let us see if Great Britain is willing to vote sanctions against North Vietnam after demanding that we vote sanctions against Rhodesia.

". . . Too long has the United States submitted to pressure from other nations for help from us, but never do we seem willing to apply pressure on our behalf."

Again, when asked by the senator whether the United States has officially requested U.N. military assistance in Vietnam, the Ambassador's answer was paradoxical if not reassuring:

"Because of the sharply divided opinions of United Nations members, it is not realistic to seek a United Nations military role."

This brings us to the inevitable question, which we have posed many times. Sen. Byrd did not raise the question, but we do. What can the U.S. really expect from the United Nations? What lasting contributions toward keeping world peace can we expect from an organization of diverse cultures, political and religious views, who manage to see a brush fire behind every native hut in Rhodesia but closes its eyes to the "realities" in North and South Vietnam?

Very little, we're afraid.

Foster Grandparents

EXTENSION OF REMARKS

OF

HON. WILLIAM F. RYAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. RYAN. Mr. Speaker, the war on poverty has many facets, some of which do not come to our attention very often. One of these programs is designed for the benefit of senior citizens and little children—the foster grandparents program which was described in Newsday of September 26, 1966. In an article entitled "A Government Program That Fosters Love," Audrey Clinton described the progress achieved under this program in the New York Foundling Hospital, the McMahon Shelter, the Cardinal McCloskey Home, and St. Agnes Hospital orthopedic ward in White Plains.

I believe that Audrey Clinton's observations concerning this highly successful antipoverty program should be of substantial interest to my colleagues.

The article follows:

[From Newsday, September 26, 1967]

A GOVERNMENT PROGRAM THAT FOSTERS LOVE

(By Audrey Clinton)

NEW YORK.—Taking care of children just comes naturally to Mrs. Rosemary Bailey, a warmhearted widow who has raised two of her own and has boarded others in her home.

Her grandchildren are in St. Louis, Mo., but the Foster Grandparent Project of the U.S. Office of Economic Opportunity is helping to provide what is made to order for Mrs. Bailey. And Mrs. Bailey seems made to order for Angelo, a hard-to-handle 2-year-old now living in the McMahon Memorial Shelter in Manhattan.

"I guess Angelo has adopted me," said Mrs. Bailey recently, discussing her success in reaching a little boy "nobody could do anything with," she comments: "He's fine with me."

Mrs. Bailey is one of 100 foster grandparents in the New York City area who work four hours a day, five days a week giving children in four institutions the loving care, companionship and attention they would otherwise have no hope of getting. They work on a one-to-one basis in the New York Foundling Hospital, the McMahon Shelter in Manhattan and the Cardinal McCloskey Home and St. Agnes Hospital Orthopedic Ward in White Plains. The demonstration project is being administered in New York by Catholic Charities and by other agencies in 34 other locations in the U.S. under federal grants. It's scheduled to last three years.

"We've begun to hope it might become a permanent project," said Edward Dohrenwend, New York project director. "We have no reservations about the program whatsoever."

The project serves several needs, besides those of the children. It gives those over 60 a chance to supplement their pensions. (They're paid $1.25 an hour and carfare). It gives them a new role that enables them to feel needed and productive. Dohrenwend said that since the program went into operation last March, only two foster grandparents have dropped out. In New York City, there is a waiting list of 122 persons who want to join the program. In White Plains, there are openings for 14, he said.

Mrs. Bailey was one of the first foster grandparents in the program. Like the others, she was trained in the New York Foundling Hospital before being assigned to the McMahon Shelter. "I fell in love with the children there. It's four enjoyable hours a day," she said.

She has been a grandparent to four children since the program began, all 3 or under and just learning to talk. One was a Chinese boy and another spoke only Spanish. But Mrs. Bailey finds a way of communicating. "Children always make up to me right away. I've always had them around me," she said.

She takes them on trips to the zoo, brings them presents, reads and sings to them, tucks them in for afternoon naps and, in general, treats them as she would her own grandchildren, who are aged 4 and 7, now living in Missouri. "They're darling children," she said of her two current foster grandchildren, Angelo and Mildred.

In Westchester, easy-going 69-year-old Raymond Bartlett and his wife, with eight grandchildren of their own, find time to shower personal attention on children in the Cardinal McCloskey Home. They play games with them, take them on walks—even see to it that they drink their proper quota of milk.

It's a labor of love for the Bartletts and Mrs. Bailey. As for the children, they just reach out to her and say "Mommy."

Young Appalachia Drifter Finds Job Corps Anchor

EXTENSION OF REMARKS

OF

HON. CARL D. PERKINS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. PERKINS. Mr. Speaker, I would like to call the attention of my distinguished colleagues to yet another Job Corps success story, entitled "Young Appalachia Drifter Finds Job Corps Anchor," which appeared in the Louisville Courier-Journal on January 13. The story is about Ezra O. Chandler, a 16-year-old lad from Cumberland, Ky., who a short while ago was a high school dropout and an unemployable drifter, but who now is working toward a retail sales career at the Breckinridge Job Corps Center in Morganfield.

Mr. Speaker, the story of Ezra Chandler demonstrates once again that the Job Corps is really working, and is helping our neediest youth to win their own wars on poverty. I include this story, as it appeared in the Courier-Journal, at this point in the RECORD:

YOUNG APPALACHIA DRIFTER FINDS JOB CORPS ANCHOR

MORGANFIELD, KY.—Once a youthful drifter and a victim of economically depressed Appalachia, Ezra O. Chandler, Jr., 16, is working toward a retail sales career at the nearby Breckinridge Job Corps Center.

Chandler, son of Mr. and Mrs. Ezra O. Chandler who live in the Harlan County coal mining town of Cumberland, became the first corpsman recruited and accepted by the Breckinridge Center.

Chandler came to the center December 29, under its own new recruiting program for Kentucky, Southern Indiana and Southern Illinois. Center Director James Fornear says the new program is already showing good results.

The Eastern Kentucky youth said he quit school in the 10th grade and had trouble even landing a part time job. He said he started drifting about the country, joined a carnival for a time, but soon decided that without an education or a skill there was little hope in life.

Chandler's period of study at the center may extend a year.

Mr. Speaker, while a vast amount remains to be done—and must be done—there is no question but that the war on poverty is making progress in Kentucky. As an example of the fine work that is being done under the poverty program, I call the attention of my distinguished colleagues to a report by Mr. Al Whitehouse, director of Kentucky's Office of Economic Opportunity, on Leslie County's successful war on poverty. This extremely encouraging report appeared in the Louisville Courier-Journal on January 14.

For the State as a whole, Mr. Whitehouse said:

> The poverty program has reached at least 500,000 persons and has provided a chance for a better education, job opportunity, and an important element known as hope.

I completely subscribe to Mr. Whitehouse's assessment that "the war on poverty is being won," although "not as fast as we would like it."

Mr. Speaker, I include the Courier-Journal story of Mr. Whitehouse's report at this point in the RECORD:

SPONSOR TOLD LESLIE WINNING POVERTY WAR

FLEMINGSBURG, KY.—Al Whitehouse, director of Kentucky's office of Economic Opportunity, said here last night the war on poverty is being won in Leslie County.

Speaking to the 38-member board of the Licking Valley Community Action program at the courthouse here, Whitehouse said 1,286 children and adults in Leslie County have had eyeglasses prescribed and fitted as a direct result of a comprehensive health program now under way there.

"Also in this county," Whitehouse said, "6,000 people have had medical screening and treatment where necessary. They found 104 diabetics, 7 cases of cancer from 952 pap smear tests, and 125 mentally retarded."

Whitehouse said 8,469 dental corrections were made, including fillings, extractions and topical fluorides on 1,984 patients, and 504 medically indigent patients not otherwise qualified for medical care were treated at an average cost of $95.34 per patient.

"There are other significant numbers directly helped in this Leslie County Community Action agency effort under a contract awarded the Kentucky Department of Health," Whitehouse said.

"Need I explain to some 16,000 persons gaining further education under adult basic education programs througout Kentucky that they are helped in the war on poverty? Surprisingly, about 74 enrollees in these courses are now attending college at their own expense.

"In fact, the war on poverty in Kentucky has reached at least 500,000 persons and has provided a chance for a better education, job opportunity, and an important element known as hope."

Whitehouse said he knows "the war on poverty is being won," although "not as fast as we would like it."

East-West Push

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. HAYS. Mr. Speaker, the Washington Post regards the President's state of the Union comments on East-West relations as statesmanlike.

For one thing, the Post tells us editorially that the President displayed not only strategic sense but political courage in seeking an antimissile moratorium.

The newspaper also endorses the President's position on increasing East-West trade and approving a consular convention with the Soviet Union. Both measures will require hard pushing, the Post observes, but they deserve to be pushed.

I include the newspaper's discussion of East-West relations as a part of the RECORD:

EAST-WEST PUSH

The President's remarks on East-West relations were brief but statesmanlike. "Our objective is not to continue the cold war, but to end it," he declared, reviewing the limited steps his Administration has taken toward that goal and committing himself to several more.

One is of the greatest urgency and import: to head off the "additional waste of resources with no gain in security to either side" that would ensue from deployment of antimissile systems by the United States and the Soviet Union. In seeking an antimissile moratorium, the President displays not only strategic sense and an earnest devotion to international stability but political courage as well. There are all too many signs that an issue of an antimissile "gap" will be raised against him in the new Congress.

Since there are strong signs that the Soviet Union shares many of the American government's doubts about the wisdom and need of an antimissile system, nothing could be more prejudicial than premature congressional or executive action on it. The quest for a moratorium is Ambassador Thompson's first assignment in Moscow. He must have the time and political elbow room to pursue it.

The President "asked and urged" the Congress to pass an East-West trade bill and approve the long-pending consular convention with the Soviet Union. These measures would make real the American desire to turn backwaters of distrust into currents of mutual benefits. Nonstrategic trade is good practice in the ways of peace and normalcy. The consular convention would add elements of convenience and safety to private travel. The President will have to push both these measures hard and often to get them through a Congress still jittery about detente. They deserve to be pushed.

Copper County

EXTENSION OF REMARKS

OF

HON. EDWARD J. PATTEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. PATTEN. Mr. Speaker, Middlesex County, N.J., is prominent in several fields—education, industry, agriculture, and others—and I am proud of all the attributes of this growing and dynamic area.

But I am particularly proud of the fact that 28 percent of the copper in the United States is refined in Perth Amboy and Carteret, in Middlesex County.

Recently, a group of copper union leaders visited my office and urged that Middlesex County be designated, "The Copper County."

I think there is great merit to this suggestion. As the union leaders pointed out:

> The metals we produce are used in the most advanced industries, from space exploration to national defense.

And that—

> Without copper, our Nation would not be a first-class power.

Additional details are cited that would, it seems to me, justify the designation, "Copper County," in an article written by Donald Rosselet of, the Evening News, of Perth Amboy, N.J.

The article follows:

COPPER COUNTY, NEW JERSEY?

(By Donald Rosselet)

More than one quarter of the refined copper used in the nation today is produced within the confines of Middlesex County.

Thus, the copper workers unions concluded Middlesex ought to be formally known as the Copper County.

To implement the idea, representatives of the copper workers called on Rep. Edward J. Patten, D-15th, to joint their campaign for the official designation.

"No area in the country is more vital to our economy than the County of Middlesex. Without copper, our nation would not be a first class power," a statement from the copper workers unions reads.

"The metals we produce are used in the most advanced industries from space exploration to national defense. We think it only proper that Middlesex County should receive the recognition that it deserves," the statement continues.

Heading the effort for the designation of Copper County are Alfred Petit-Clair, board member of District 5, International Union of Mine-Mill and Smelter Workers; John Infusino, president of Local 365, Perth Amboy Smelting and Refinery Workers Union; and Thomas De Federico, president of the Cateret Smelting and Refinery Workers Union.

Infusino and De Frederico head unions representing workers at American Smelting and Refining Co. of Perth Amboy and U.S. Metals and Refining Co. of Carteret respectively.

The Perth Amboy and Carteret plants are the sole copper refining firms in the county. Middlesex County's copper boom dates from about 1895. By World War I, there were four refining establishments in the county producing more than one half of the nation's copper.

The three union leaders presented Patten a plaque in appreciation of the congressman's previous help and to symbolize the role of copper in Middlesex's economy.

The plaque, made of copper, is in the shape of the county, with Perth Amboy and Carteret marked out. It reads: "Presented to the Honorable Edward J. Patten in appreciation of his efforts on behalf of the Copper Workers of Middlesex County."

The union leaders said, "We are proud that 28 per cent of America's copper is refined in our county."

But they noted other important metals are also produced in Middlesex's 312 square miles. In addition to gold, lead, zinc and titanium, the county produces 40 per cent of the nation's refined silver.

Petit-Clair indicated the appeal to Patten was the initial step in an effort to enlist leading Middlesex County residents in helping to popularize the copper indutry's role in the area.

Dairy Production Continues To Decline

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. TEAGUE of Texas. Mr. Speaker, as 1966 ended and statistics for the year become available it is apparent that effective steps still have not been taken to reverse the downward trend in milk production. Total milk production for 1966 was estimated at 3 percent less than 1965 and 3 percent less when compared with the 1960–64 average. Production in every month in 1966 was down when compared to 1965 with the exception of November. It is now apparent that the small price increases approved by the Department of Agriculture earlier in the year were insufficient to reverse the downward trend of milk production. The price increases approved by the Department of Agriculture of about 1 cent per quart were immediately doubled by the processors to about 2 or 3 cents per quart and passed on to the consumer. The additional return to dairymen from these small increases has not been sufficient to halt the exodus of dairymen going out of business.

Reports from the Economic Research Services of the U.S. Department of Agriculture on farm costs and returns tell the story. Dairy farmers in the Central Northeast realized a return per hour for the operators and family labor of 60 cents an hour, about half the amount legislated by Congress last year as the minimum legal wage for agricultural employees. Grade A dairy farmers in Wisconsin realized 75 cents an hour return on their own and their family's labor. Grade B dairies in Wisconsin realized only half of this amount—30 cents for the operators and their family labor. The total invested capital in these dairies was from $50,000 to $75,000 and no profit was realized and there was no additional return for management. Obviously we cannot expect, during a period of high employment, the dairyman to work 7 days a week, risk invested capital and apply management skills for returns less than the typical 15-year-old babysitter receives for watching children for a few hours. In fact, a good many mothers would be quick to tell you that reliable babysitters cannot be found for 50 or 60 cents an hour.

During the year there was sharp reaction to increased food prices and the prices of bread, meat and milk were usually mentioned when the consumer complained. In 1940 a man worked 15 minutes for a quart of milk, but now 8 minutes work will bring in enough money to buy a quart of milk. Consumers pay about 45 cents a quart for soft drinks and 55 cents a quart for beer, but complain about paying 25 cents a quart for milk.

The only decline in the last 3 months in the major elements making up the cost of living index has been for food. Economists are predicting a drop in net farm income in 1967 as compared with 1966. In the face of the depressed condition in the American dairy industry, the country is being flooded with imported butterfat—sugar products. This type of product is designed to evade restrictions against butterfat imports. An effort will be made during this session of Congress to limit these imports. Such action certainly will be in the best interest of the dairy farmer, the consumer and the rural economy. The dairy farmer is subsidizing the American housewife with cheap milk produced at a loss. He cannot be expected to continue this indefinitely. If the American consumer expects to continue to enjoy a dependable supply of wholesome dairy products it is inevitable that a more healthy economic climate for the dairy industry must be created.

To the Point

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. SCHWENGEL. Mr. Speaker, recently one of Iowa's best known radio stations has editorialized about two important issues before the Congress.

WHO radio in Des Moines, Iowa, is to be commended for taking forthright positions on issues of national importance.

The two editorials below indicate, I believe, the sentiment of the people in Iowa on the President's proposed tax increase and the administration of the medicare program.

The editorials follow:

NO APPLAUSE

There were no outburst of applause from Senators and Congressmen when the President announced his proposal for tax increase and it will get no applause from us. The proposal to boost taxes, while at the same

> time increasing spending in certain domestic programs, should be blocked by Congress. The pressures of inflation and the cost of Viet Nam war might eventually force a tax increase. But this should not be done until domestic programs have been trimmed to the fullest possible extent. The war in Viet Nam is too immense and too costly to have business-as-usual at home. The Congress should cut the President's domestic spending proposals. Until this is done there should be no talk of a tax increase.
>
> ### DELAYS IN MEDICARE
>
> If you've applied for payments under the Medicare program but haven't received them, rest assured you're not alone. Officials frankly admit they are behind in payments under part B of Medicare . . . the part helps pay physicians fees. Part of the problem, of course, is just the newness of Medicare. It's new not only to those calculating the payments, but also to patients and others who fill out the applications. Each mistake takes time to correct and slows down the process. This will tend to correct itself with time. But, unfortunately, another cause of the slowdown won't take care of itself. Some of the formulas used to calculate the payments are quite complex and time consuming. It's possible that the advantages of these formulas are worth the trouble they cause, but that's at least open to question. Congress should make an attempt to simplify where possible. It could result in lower administrative costs and faster payments.

Ukrainian Independence

EXTENSION OF REMARKS

OF

HON. THOMAS S. KLEPPE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. KLEPPE. Mr. Speaker, countless Americans across the country joined with their fellow citizens of Ukrainian descent on January 22, 1967, to mark the 49th anniversary of the proclamation of independence of the Ukrainian National Republic and the 48th anniversary of the act of union under which all Ukrainian ethnic lands were united into one independent and sovereign state. For 3½ years, the gallant people of Ukraine defended their independence against Communist Russia's onslaught, finally succumbing to superior military force. The spirit of these brave people has never been crushed, however.

Dr. Anthony Zukowsky, of Steele, N. Dak., president of the State branch of the Ukrainian Congress Committee of America, Inc., speaks for the cause of these people in these words:

> The freedom-loving people of Ukraine have not accepted Soviet Russian domination and have been fighting for the reestablishment of their independence by all means accessible to them for the 46 years.
>
> During World War II the Ukrainian people organized a powerful underground resistance movement, known as the Ukrainian Insurgent Army (UPA), which fought not only against the Nazi regime, but against the Soviet security troops as well. Stalin and Khrushchev unleashed bloody persecution and reprisals against the Ukrainian people in the late 1940's, and it was Khrushchev himself who stated at the Congress of the Communist Party of the Soviet Union in February, 1956, that "Stalin had wanted to deport all Ukrainians, but there were too many of them and there was no place to which they could be deported."
>
> Relentless and harsh persecution of Ukrainians continued after the death of Stalin, and it continues now after the ouster of Khrushchev from the top leadership in the Kremlin, inasmuch as the Brezhnev-Kosygin duumvirate is bent on keeping the Soviet Russian empire intact and unified.

Vietnam Hero—Competent Employee

EXTENSION OF REMARKS

OF

HON. GEORGE A. GOODLING

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. GOODLING. Mr. Speaker, the following account proves very graphically what desire, ability, and opportunity, when properly combined, can do for the individual.

The American Machine & Foundry Co. is an integral part of industrial York. It furnished the opportunity, the hero of the drama had the desire and because of it acquired the ability.

It again proves a helping hand is far more desirable than a handout.

Read the story as it appeared in Tri-Lites, a publication of AMF:

> ### VIET HERO ON AMF TEAM
>
> (By Sheila Myers)
>
> James Dodson, at 24 is a quiet, hard working unassuming type of guy. He's the kind of guy who reads the paper, pays his taxes and has a normal supply of interests and hobbies. To see James Dodson coming through Gate No. 2 every afternoon one would not figure him to be the central figure of a hair raising drama played out against an alien backdrop of jungle and mountain where the final curtain is sudden and violent death by any one of a thousand means. One, however, would be wrong, because James Dodson is all of this and more.
>
> In May of 1966 he was Sergeant Dodson, USMC deep in the wilds of Viet Nam, fighting an unseen and vicious enemy. It was in May of last year that Sergeant Dodson, for six years a Leatherneck, suddenly and without warning became a captive of the Viet Cong. The following month was one of forced marches, little rest, poor food and worse treatment until Dodson, Marine Corps trained to make every effort to escape and fight again, made his move. Lunging for a carelessly placed rifle, Dodson got the drop on his jailers, and along with another American made his successful break for freedom, one of the very few POW's ever to make a successful escape attempt in Viet Nam.
>
> Dodson came back to his native York a hero, the guest of honor in a downtown parade and reception, his story told in the national press, radio and TV.
>
> All this attention however, didn't put much food on the table for his young wife, Wilhemenia, and small son Alonzo, and despite an avalanche of job offers, James wanted to learn a valuable trade and thus secure his future as just plain Mr. Dodson, since he knew his adventures as Sergeant Dodson were enough for only fleeting fame at best. It was with this in mind that James applied for and was accepted into AMF/York's training program.
>
> In August of '66 James started undergoing on-the-job training as a machine operator in the continuing training program of AMF which is a part of the training provided for in the Manpower Development and Training Act of 1962.
>
> James Dodson, who attended York Catholic High School, now moves with the ease and assurance around his turret lathe he once employed in the job of figthing a war in Viet Nam.
>
> He says he's very happy now, and looks forward to a long association with AMF, and points out that working to fill government contracts is just another way of helping his country, a job James Dodson can do uniquely well no matter where he is.

Fino Introduces Bill To Set Up Secondary Mortgage Market Facilities

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. FINO. Mr. Speaker, today I am introducing legislation to authorize the Federal chartering and supervision of private corporations to create a private secondary mortgage market. One type of corporation would insure conventional residential mortgage loans and the other type of corporation would buy and sell the insured loans. To supervise the corporations, the bill establishes a Federal Joint Supervisory Board of mortgage insurance and marketing corporations.

I think the tight mortgage money market of 1966 has taught us the need for secondary mortgage market facilities to facilitate and when necessary, expand, conventional residential mortgage lending.

The question is "What kind of facility should we set up?" And the question lurking behind all this is "What kind of facility can everybody affected agree on?" For my part, I believe the answer to both questions is the same—two types of Government-chartered corporations, one insuring and one buying and selling conventional mortgage loans. I do not believe we should set the facility up within the Federal Home Loan Bank Board, because such a proposal would alienate some who might see potential favoritism to the thrift institutions. Nor do I think that such an institution ought to be set up in FNMA, because FNMA's new "hock shop," that is, participation sales function is utterly contrary to any secondary mortgage market function, inasmuch as participations soak up mortgage market money. FNMA should never have been made a "hock shop," but since it has been, it is not the place for the proposed secondary market facility.

I have therefore chosen to introduce the proposal which would set up a Federal Supervisory Board to charter new, independent private corporations to handle the two phases of the secondary mortgage market operation for conventional mortgages. I think that everybody ought to be able to agree on this proposal.

I was glad to note recently that the homebuilders agree with the several banking and thrift institution groups that secondary mortgage market facilities are needed.

The bill I am sponsoring was introduced last year by Senator JOHN SPARKMAN, new chairman of the Senate Banking Committee. I expect that he will hold hearings in the Senate on the secondary market proposals, and I hope that Chairman PATMAN will do the same in the House Banking Committee.

Johnson Is Caught Gapping

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. BOB WILSON. Mr. Speaker, I insert as a portion of my remarks the following editorial from the San Diego Union dated January 16, 1967:

NOW THERE'S GREAT FLAPPING—JOHNSON IS CAUGHT GAPPING

When future historians assess the stewardship of Lyndon Baines Johnson they might well add one word to his own favorite description of his goals.

They may call his administration the "Great GAP Society."

It may be hard to pinpoint the exact moment the Gap was born, but it was not too long after that tragic day in 1963 when President Johnson took office.

At first it was known to newsmen as the Credibility Gap, an annoyance at contradictions between promise and act of the Administration. Like all other Gaps in the Administration it has grown to include outright prevarications, an insistence that the government has a right to lie, half truths, concealments and misleading denials.

Now a certain city in south central Texas is being called Credibilty Gap.

Then there is the Economic Gap, which includes many things. It includes inflation and a receding economy at the same time, taxes when none were promised in the early honeymoon days, budget gaps that will total nearly $20 billion this year and next, a debt gap approaching $14 billion. It also includes a theory gap on when to tax and when not to tax to stimulate the economy, and the uneasiness gap between business and the government.

In toto, all gaps are too numerous to mention. They include, however, the Postal Gap of weak service and deficits of $1 billion annually; the Underestimation Gap on how much money is needed for funds to supply the military in Vietnam.

There is the Agriculture Gap, as any farmer can attest; the F-111 Gap, the Nike-X Gap, the Manned Bomber Gap, the Maritime Gap, the Nuclear Navy Gap, the Balance of Payments Gap, the Foreign Policy Gap (plural); the Poverty Gaps, the Medicaid Gap, the Inter-Government Relations Gap, the Guns and Butter Gap, Trading With the Enemy Gap, the Cost of Living Gap, the Crime Gap and many others.

Is there any wonder that any one of these or perhaps the combination of many of these has resulted in the Popularity Gap documented by poll takers?

As a result Asian historians will probably calle 1967 the Year of the Ram. To American historians the "year of the ram" was in 1965 when runaway legislation was rammed through Congress, in part leading to the Great Gap Society.

To them 1967 has to be a year of the Gap Flap.

Judge Pine Dissents Once More

EXTENSION OF REMARKS

OF

HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. DOWNING. Mr. Speaker, a number of public opinion polls have indicated recently that Americans rank crime one of the major ills of our society today.

Every American agrees that our Nation's leaders must move to stop the shocking increases in crime on our Nation's streets. However, as in most public policy issues, disagreement exists on the best course of action to reduce crime.

I know many of my colleagues are intimately familiar with a report filed a few days ago by the President's Commission To Study Crime in the District of Columbia. The Commission's report received a great deal of public attention and it has been widely discussed in the District of Columbia and throughout the United States.

To my way of thinking it is unfortunate that the minority report to the Crime Commission's recommendations has received relatively little public notice. I am pleased, therefore, to be able to call my colleagues' attention to an article by James J. Kilpatrick in a recent edition of the Washington Star on the dissenting statement prepared by Judge David A. Pine. My colleagues will remember Judge Pine as the U.S. district judge who read President Truman a lecture on the powers of Government in the steel seizure case. Judge Pine's statements on matters of public policy are always important, and I would appreciate an opportunity to include Mr. Kilpatrick's article on Judge Pine's dissenting crime report in the CONGRESSIONAL RECORD.

The article follows:

JUDGE PINE DISSENTS ONCE MORE

(By James J. Kilpatrick)

David A. Pine probably is best remembered, abroad in the land, as the U.S. District judge who rebuked Harry Truman in the steel seizure case. His opinion of April 29, 1952, remains to this day a shining moment in the recent history of constitutional law. Now Pine has made another significant contribution to public understanding of the role of law. It too should be remembered.

Unhappily, the circumstances are quite different. Fifteen years ago, Pine spoke from a national spotlight. Truman had relied upon his "inherent" powers as President to justify seizure of the mills. Coldly and dispassionately, Pine read him a lecture in fundamental principles:

> The government of the United States has no inherent powers; its limited and enumerated powers are delegated solely by the Constitution; not even a President may exceed them.

To the delight of constitutional conservatives, Pine found the seizure order "illegal and without authority of law." For a few days the jurist was a national figure.

Thirteen years elapsed. In the summer of 1965 President Johnson created a special commission to study crime in the District of Columbia. The President stacked this body with liberals and moderates, either 5-4 or 7-2 depending upon how one reads the litmus indications, but to lend some semblance of balance Johnson also named to the commission Judge David A. Pine. Ten days ago, the commission filed its ponderous two-volume report. Pine dissented.

In the nature of such things, the majority's findings and recommendations properly commanded the greatest attention. Crime in Washington, to put the matter bluntly, is appalling. A great many of the majority proposals, with which Pine concurred, were assuredly sound. Yet the tone of the majority report, taken as a whole, suffered from the tremolo so familiar to the liberal chorus. In this dewy-eyed view, crime is a social sickness and criminals are merely ill. Punishment is a dirty word, and brutality is something the police must guard against. An answer to crime must be found in treatment of the root causes—poverty, discrimination, ill housing. And so on.

Pine turned upon his majority colleagues the same cool gaze that 15 years ago he turned on Truman.

"Throughout its deliberations," he wrote, "it seemed to me the commission was concentrating on minutiae, statistics, and social and economic studies. This is reflected in its report and in the voluminous reports submitted by the commission's staff. I do not disparage their relevancy or importance. Neither do I dispute that socio-economic ills are a vital causative factor in the commission of crime, and that steps should be taken to alleviate them, but there are other causes to which I think the commission might have given greater attention than it did."

Pine took a backward look. During the dark days of the depression, the country also was afflicted by abject poverty, distress and misery, "but I do not recall at that time that there was a vast upsurge in crime." Indeed, between 1931 and 1935, while the nation was gaining a million in population, most major criminal offenses actually declined.

What has produced the frightening picture that obtains today? In Pine's view, it has resulted in part from abandonment of the old proposition that crime is crime, and must be punished. In his own mind, "I have felt that one of the immediate, urgent ways to repress crime was swift, certain and impartial justice."

"My experience has caused me to believe," he added, "that once wrongdoers are convinced that the law is not to be trifled with and that they will be called to account for their misdeeds, crime will decrease."

His colleagues did not share that old-fashioned view. Pine was perplexed to find "that some members of the commission and its staff seemed to believe it to be our responsibility to suggest means for making the lot of the wrongdoer a little easier, rather than to find ways for reducing crime."

The 75-year-old jurist devoted a large part of his dissenting statement to a clinical dissection of certain judgments of the U.S. Court of Appeals for the District of Columbia. In the last six years, this court has reversed criminal convictions in 161 cases, and many of these have been flagrant cases of wide public concern. Petty legalisms, trivial technicalities, and an excessive solicitude for the defendant's rights have figured in these reversals; and time after time the released defendants have promptly returned to the streets to commit new crime. The District's rate of recidivism is shockingly high.

Pine's comments doubtless will be interred in the obscurity that awaits a minority voice in an 1,800-page report. Yet history suggests that dissenters are not necessarily wrong; they may be merely outvoted at the moment. Here the judge's views did not prevail, but he was as sound in this statement as he was sound in the broadside he threw at Truman 15 years ago. What a pity it is that he never made it to the highest tribunal of them all!

Social Security

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1967

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I submit for inclusion in the RECORD a timely editorial which appeared in the January 25, 1967, issue of the Los Angeles Times questioning the administration's social security proposal.

The Los Angeles Times, in asking the question "Hasn't the time come to take that program out of politics?" recommends the enactment of legislation to provide for an 8-percent social security increase at this time coupled with an automatic cost-of-living increase.

The editorial follows:

POLITICS IN SOCIAL SECURITY

President Johnson's sweeping proposal on Social Security raises an immediate question:

Hasn't the time come to take that program out of politics?

When conceived in the mid-thirties, it was believed that huge reserves would be built up so that the program would be fully funded. That did not occur, because politicos could not resist the temptation to augment the program in one way or another in biennial election years.

As a result present available reserves are insufficient to cover one year's benefits. Instead of the original estimate of a $54 billion reserve in 1967, the amount is now only $20 billion, while the outgo for the year is estimated well in excess of $25 billion.

The "unfunded liability"—obligation to pay benefits for which reserves are not now in hand—amounts to $400 billion. Mr. Johnson's new proposals would add another $100 billion of unfunded liability. That $500 billion total, incidentally, is half the financial worth of all individuals in the United States.

The whopping payroll tax increase the President proposes would, according to fiscal experts, virtually exhaust the potential of that levy as a revenue-raiser. Congress, therefore, may be forced to dip into the general treasury in the future to meet the costs.

An extra $2 billion would be paid beneficiaries during the final six months of 1967, and an additional $4.5 billion would be handed out in 1968. Of that amount only about $1 billion would be offset by initial Social Security taxes.

Obviously President Johnson is simply doing what politicos before him have done—but on a far vaster scale than ever before proposed.

Indicative of the political motivation is the fact that the bulk of the increased taxation would be deferred until after the 1968 election. The administration plainly is aware that those voters whose payroll taxes would ultimately be doubled wouldn't be too happy if reminded of that fact just before they went to the polls. Nor would employers who are required to match the amounts paid by their workers.

Congress is bound to modify the Presidential request, which would result in an average 20% increase in benefits. Republicans are insisting that the increase be held to 8%, an amount they contend can be financed from cash surpluses without increased taxes.

Whatever benefit increase is finally decided upon, The Times urges one further step.

The Congress should enact the GOP proposal for automatic cost-of-living increases. If the cost of living in one quarter increased at an annual rate of 3% or more, benefit checks would be increased by a similar amount in the following quarter.

We are persuaded that is the only way by which Social Security can be removed from election-year politics.

Beneficiaries whose fixed and meager income is eroded by inflation assuredly are entitled to increases. But those increases should not, and must not, come solely at the whim of vote-hungry politicians.

Farewell Day in Cleveland, Ohio, for Jim Brown, January 29, 1967

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1967

Mr. VANIK. Mr. Speaker, I wish to pay tribute at this time to a great athlete, Jim Brown of the Cleveland Browns—one of the greatest football players of all time—who retired at the end of the 1965 season.

The city of Cleveland will pay tribute to Jim Brown this Sunday, January 29, 1967, at the Cleveland Arena. This day has taken on special meaning for Jim and for the city because the day's events are sponsored by and will be for the benefit of the Negro Industrial and Economic Union, of which Jim Brown is one of the founders.

This endeavor was developed by prominent athletes to assist the American Negro to attain a meaningful and respectable position within the framework of the American economy. This group plans to promote business and industry opportunities on a competitive basis by providing capital and other specialized assistance to qualify members of the union who wish to start or improve business, to expand, relocate, or consolidate existing business ventures. It has been the intention of this group to make financing of such endeavors less restrictive because of collateral requirements or high interest rates. This is a nonprofit organization.

The Negro Industrial and Economic Union has been designated to benefit from Jim Brown Day because of his dedication to its high purpose of opportunity development for others. This nonprofit organization maintains its national office at 10515 Euclid Avenue, in Cleveland.

Jim Brown is the president, Arnold Pinkney is the secretary-treasurer, Dola Miller is the management director, John Wooten the executive director, Booker Griffin the executive secretary, Carl B. Stokes the legal adviser, and William Stennis the director of finance. The group expects to become a national organization with offices in all cities. Their national goal anticipates a total capitalization of $10 million within 5 years.

I wish to include a fine article which appeared in the Plain Dealer, by Mr. Hal Lebovitz, Plain Dealer sports editor, entitled "What's Jim Brown Organizing?"

I wish to commend Jim Brown on his fine athletic career and upon this important national endeavor upon which he has entered and wish to extend my congratulations to all of the participants of this vital program. The article by Mr. Lebovitz follows:

WHAT'S JIM BROWN ORGANIZING?

(By Hal Lebovitz)

The other day we rapped our civic leaders for failing to get off dead center. This has become a "talk" town, with little action. Our leaders appear afraid to take chances, to gamble. They actually seem fearful of progress. They're running scared.

Therefore today it's a pleasure to write about somebody who is trying to do something constructive—at his own expense and time. Not talking, doing.

Jim Brown is going around today with an attache case. Except for those unusual shoulders and slim hips you'd never know he was an athlete.

He and several other Negroes have combined to form what could be called "Operation Bootstrap." The purpose is to invite Negroes to pull themselves out of their economic doldrums—not to wait around for handouts.

The Brown's fullback has coralled other professional athletes throughout the United States to go along with him in this goal. The Negro athlete who, through his own physical and mental ability has risen to a better life, is seeking to help his fellow Negro, achieve economic security. The athlete is the cornerstone of Jim Brown's program.

We never have seen Brown more excited, or more thrilled over a project. A record number of touchdowns, or a championship couldn't enthuse him more.

Brown is getting all the Negro athletes to put up $100 each. This fund is the starter. Offices are now being set up in major cities for door-to-door fund-raising campaigns in Negro neighborhoods. A regular membership is $2.00. Lifetime membership is $5.00 The money will be used to help Negroes help themselves. An office is being established at E. 105th and Euclid, with Jim Shorter of the Washington Redskins, and John Wooten of the Browns, in charge.

"Of course we athletes are interested in Civil Rights," says Jim. "But we're not interested in participating in the picketing, the sit-ins, the singing, the marching and the kneeling. We're not interested in being Nationalists. We don't want to go around shooting.

"What is the real basis for the Negro's problem? It's economics. As athletes we feel this is the area we can help in. We can do this, we think, by getting the Negroes to help themselves."

The idea began to develop about two years ago. Brown was in Los Angeles for an All-Star Game. Some talented young Negroes interested him in a new fashion magazine, to be called "Elegant." It folded after ten issues because the group lacked money.

It had nowhere to turn for financial help after the original money was used up. There were no Negro lending institutions to tap and the white bankers weren't interested.

"That's it, you see," says Brown. "We have been consumers. Not producers. If we could provide dollars to allow Negroes to become producers—to publish magazines, to run factories—there wouldn't be a need now for a poverty program, where people wait around for handouts.

"Instead of a Negro owning one little old grocery store or some tiny record shop, maybe he could own a big one. Or several. What he would need is the financial backing."

He gave an example of a grocer in Harlem who got a $200,000 loan from Jackie Robinson's Freedom National Bank. The grocer now has a chain and is doing an exceptional business.

"That's what we want to do," says Brown, "on a national scale. You'd be surprised how many people come to me with good business ideas. All they need is the money. They simply don't know where to get it."

Here Carl Stokes, who recently lost in the mayoral race by a fraction, is the legal advisor of the organization, known officially as the "Negro Industrial and Economic Union." Arnold Pinckney, a highly successful insurance man, is also active with the Cleveland athletes.

"One good thing about our organization," says Jim, "is we're not moving anybody in or out. We're definitely not trying to build a separate economy. There's no interest in trying to divide the community. We simply want to try to get the Negro to have full participation in the economy. And that must be done by turning the Negro into a producer, something he hasn't been."

For two years, since the Los Angeles episode, Jim has had the intense desire to do something constructive. "But we didn't want to jump into anything cold," he explains.

"We wanted to be sure of our foundation. We wanted good, solid people from which to grow. Most of us in it, will be giving—not talking. We'll be giving time and money. I know every one of the top echelon personally.

"What we present now is a new image: A young group, no agitators, no power-hungry people. We'll be able to do more in Watts in Los Angeles than any other organization. In fact our Los Angeles chapter has started there already."

Jim reveals that night after night he, other members of the Browns, and players from various pro teams, sat around talking about the problem. A survey in New York revealed the lack of unskilled Negro workers and the dearth of Negro businesses there.

"That was the whole story—right there," he says. "We wanted to do something right away, a positive contribution. Our contribution could be two-fold, we decided. We could contribute educationally and financially.

"We must get people in a frame of mind to try to do something for themselves; to overcome despondency; to make them realize there's hope. This must be done by education.

"As ball-players we have a built-in attraction. We're prepared to go to schools, colleges, anywhere we're asked, to give the message of how the Negro can help himself. This won't cost money—just time. And when you're enthused you're glad to spend the time."

Financially, each player also put up cash.

Brown sums it up: "In this world everybody seems to be asking for somebody else to do something. We want the Negro to help himself. We're going right to the grass roots. It would be done in the framework of the existing economy. And if we're successful it'll help the entire economy, period."

Word already has reached Washington about the group Jim is spearheading. He was called there to a meeting of the Small Business Association. He came back with his attache case filled with interesting literature.

"Now," he said, pointing to his case, "we have a greater knowledge of lending institutions. So right from the beginning we can render a service.

"And if the whole thing fails, at least we can say we tried."

Jim Brown doesn't have to put his time and money into "Operation Bootstrap." He's financially set. He can stay with the Browns as long as he desires. Even after he retires next year, the pay checks will continue, for his football salary has been spread over a period of years. He has an excellent job with Pepsi-Cola. He is about to make a movie and has a contract for three more. He is a ten percent owner of "Mainbout," which will handle the pay TV for the next heavyweight title bout. Columbia Broadcasting System has talked with him about a radio future.

Jim Brown could sit back and comment on the passing parade. He could ignore the problem he sees. Instead he wants to help solve it. Only through effort can goals be achieved.

Ukrainian Independence Day

EXTENSION OF REMARKS

OF

HON. J. WILLIAM STANTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. STANTON. Mr. Speaker, nearly half a century has passed since the world witnessed the brief glory of Ukrainian independence. On January 22, 1918, the Ukrainians finally realized the culmination of their aspirations for liberty and dreams for national independence, which several centuries of Russian domination had prevented. Even though Ukrainian independence was officially recognized by the Bolsheviks, within 2 years the Russians had reconquered the Ukraine.

Despite the brevity of their liberty, despite long centuries of foreign domination, despite the anguish and despair of the Ukrainian people, their commitment to Ukrainian independence has never been destroyed.

During both periods of Russian domination the Russians have tried to incorporate the Ukraine, denying its people self-government and those basic rights considered inalienable in Western philosophy. At one point in Ukrainian history—in 1863—their Russian tasklords even denied the Ukrainian people their own language. During both periods of Russian domination, the Ukrainians have been subjected to many atrocities, including mass executions and deportations.

The Soviet Union may through coercion continue to maintain the Ukraine in captivity for the present, but they will never succeed in controlling the Ukrainians' passions for freedom, liberty, independence, and national identity. The Ukrainians are not a submissive people; the history of their long struggle for independence is a testament to their unyielding, indomitable spirit. The Ukrainian poet laureate described that spirit as follows:

THE CAUCASUS

So likewise shall our spirit never die
Nor our dear freedom wholly vanquished lie.
Sooner may foemen hope to plough with glee
A meadow at the bottom of the sea
As chain the living soul with force uncouth
Or choke to death the vital word of Truth.
The glory of our God may not be rent,
The glory of the Lord Omnipotent.

Today we wish to express our deep respect for the Ukrainian people and add our fervent hope to theirs for their restoration of independence.

Action on Trading Stamps

EXTENSION OF REMARKS

OF

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. WOLFF. Mr. Speaker, in their typical fashion of distorting the purposes of my legislation, the truth-in-trading-stamps bill, the Sperry & Hutchinson Co., which issues S. & H. stamps has charged that it is my desire to outlaw trading stamps.

We would be taking the exorbitant profit out of the trading stamps that are adding to food costs, but it is absolutely false to say that my legislation calls for the abolition of stamps. It is typical of the deceptive tactics of these companies to falsely represent my bill and then ask 500 housewives in my district:

> Do you think that people should have the right to save trading stamps if they so choose, or should stamps be banned by law?

There is nothing whatsoever in the legislation that calls for the abolition of stamps but it does call for the right, in the free American tradition, of providing the American people with the freedom of choice to determine if they want their premiums or their cash returned. Stamps are not free or a gift—as advertised—and my legislation simply recognizes this and also the fact that a housewife could receive a whole week's supply of groceries per year without additional cost if she were allowed to turn in these stamps for cash.

After misrepresenting my legislation, the Sperry & Hutchinson Co. announced gleefully that 72 percent of the housewives had said that people should have the right to save trading stamps and therefore 72 percent were against my legislation. This is a deceptive practice and it is high time these myths that surround the "something-for-nothing" game are exposed. It is because the American people believe in freedom of choice that I introduced my legislation in the first place—to give them the choice they are now denied. Under my legislation they would finally be able to save trading stamps if they so choose and not to save them if they would prefer to have the cash. The housewife would no longer be forced to purchase something she elected not to in a "tie in" sale if the "truth-in-trading stamp" legislation is passed by this Congress.

After this new display of deception and trickery I am more determined than ever to bring truth into the trading stamp game.

The housewives of America are fed up with the unnecessarily high cost of food and have been insisting that somebody do something about this situation which affects every budget in America.

Farsighted States are doing just that and under leave to extend my remarks I include in the RECORD an article from the Drug News Weekly, January 23, 1967, which describes the attempt of the California Legislature to come to grips with this problem. I respectfully commend this action to the attention of the Congress because State action along with the Federal controls I propose in my Truth-in-Trading Stamps Act will respond to consumer demands and bring this situation under control.

The article referred to follows:

CALIFORNIA BILL TO SEEK TIGHTER STAMP CONTROL

SACRAMENTO, CALIF.—A bill aimed at strengthening California's control and regulation of the 25 medium-size trading stamp companies within the State is being readied for introduction in the State Assembly.

Members of the staff of Assemblyman Bob Moretti, Hollywood Democrat, who is chairman of the Interim Committee on Finance and Insurance, say prospects are bright for passage of an omnibus stamp control bill.

The legislation probably will try to wrap up in one law the four major recommendations Mr. Moretti's committee made after a study of the insolvent demise of Thrifty Green Stamps, Inc., and the relative ineffectiveness of the Trading Stamp Act of 1960.

Mr. Moretti's bill is a recognition that, as he puts it: "The Trading Stamp Act as it is now constituted is an ineffective regulatory tool. The act does not provide an effective statutory mechanism for the public protection of stamp holders."

As evidence to bolster this claim, Mr. Moretti's committee report notes that since the act took effect three companies licensed under that law have not been able to meet their obligations. They have wound up coming before the State Corporation Commissioner in liquidation proceedings.

In two such cases, Mr. Moretti reported, persons holding the stamps found they had a redemptive value of less than 35 cents on the dollar. "Not all stamps were tendered, however," he said. "So in both instances, the actual redemptive value on those that did turn up was well below 50 cents on the dollar."

On a liquidation proceeding now coming up, that of Thrifty Green Stamps, the payout to stamp retainers is estimated at about 35 cents on the dollar.

The committee contends that Thrifty's insolvency is a prime example of the dangers of under-regulation of the many regional and local stamp firms in California.

Mr. Moretti's committee consultant Edward Levy pointed out that the super firms of the trading stamp industry, like Blue Chip in California or S&H nationwide, pose no problem from the regulatory standpoint because they are solid and solvent. It is the smaller, local stamp outfits which need a firm regulatory hand, the committee said.

"Thrifty Green was licensed and issuing stamps in April 1966 at the very time when its financial statement indicated it had a sizable deficit capital position," reported Mr. Moretti's committee.

Colgate University Meets Challenge of Ford Foundation

EXTENSION OF REMARKS

OF

HON. ALEXANDER PIRNIE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. PIRNIE. Mr. Speaker, I am pleased to report that Colgate University in Hamilton, N.Y., has just taken a giant step forward in guaranteeing its future as a leading, independent college of the liberal arts—one of the finest in the Nation.

Three years ago, Colgate President Vincent M. Barnett, Jr., was invited to accept the greatest challenge ever presented to the university in its 150-year history. The Ford Foundation offered Colgate a $2.2 million grant on the condition that the university raise $6.6 million in eligible matching funds before June 30, 1967. That challenge not only was accepted and met, but was exceeded by more than $200,000, 6 months before the deadline. That is a significant and impressive accomplishment of which everyone associated with the endeavor should be justifiably proud.

This is but a portion of an overall success story at Colgate. With support coming from many and varied sources, including several Federal grants, the university to date has raised $16 million toward a $23 million 5-year goal which is expected to be reached by 1969, Colgate's sesquicentennial anniversary.

The future of higher education in America depends, in large measure, upon the continued success and growth of the independent colleges. It is with this thought in mind, coupled with my particular interest in this fine university that lies within the district I am privileged to represent in the Congress, that I commend Colgate and give well-deserved praise to its family of supporters.

ABC-ITT Merger: The Justice Delay Is Justice Denied

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. PELLY. Mr. Speaker, I would like to comment today on the recent action taken by the Justice Department and in particular the Antitrust Division in opposition to the Federal Communications Commission's approval of the merger between American Broadcasting Co. and International Telephone & Telephone Co.

At the outset let me make it absolutely clear that I believe that the Justice Department should actively and most vigorously police the antitrust laws of this Nation.

On the other hand, I am sure that many Members of Congress are familiar with the background of this merger. The FCC has spent almost 1 year studying the proposal while the Justice Department has spent over a year investigating the ramifications and effects of the merger.

In this connection the FCC considered all the facts of this case, and operating under the rules and regulations set forth by the Congress, carried out its obligations in a proper manner. Public hearings were duly held before the entire Commission, during the course of which hearings, the Justice Department elected to remain aloof. It did not participate. It was given every opportunity to voice its opinion, and it elected not to do so.

However, it is also a fact that no other interested parties voiced any objections to this merger. Now, in an 11th-hour move, the Justice Department has suddenly intervened, completely ignoring what seemed to be the evidence. The question in my mind is why and under what prompting did the Justice Department suddenly decide on a change of course. Why did the Department wait until the FCC had rendered its decision before it attempted to block this merger?

It has long been my feeling that the purpose of the antitrust laws was to assure competition rather than to stifle it in any respect.

It seems to me that the action of the FCC in approving the merger was to make it possible for a third network, ABC, which until now has had difficulting in competing with the giants, National Broadcasting Co. and Columbia Broadcasting System, to merge with a large company, acquiring able management, a better corporate structure, and putting the corporation in a position where it could more effectively compete. It is generally believed that at this time ABC is not in any position to give effective competition to CBS, much less NBC.

To me, the action of the Justice Department is ill advised and contrary to public interest. I would suggest, Mr. Speaker, that if the Justice Department has any new and pertinent information concerning this merger, it make its information available at once. But to try and stifle the principles of free enterprise is subject to the strongest criticism.

Latin America's Population Dilemma

EXTENSION OF REMARKS

OF

HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. CLEVELAND. Mr. Speaker, for many years the Keene Evening Sentinel, published daily in the Second Congressional District, of New Hampshire, has been an outstanding example of a small newspaper doing a big job.

Although its circulation is centered in a rural area far from the world's population centers, it has consistently promoted the interests of international harmony and understanding through thoughtful articles and editorials.

Recently, in an attempt to increase its already ample coverage of world affairs, the Sentinel inaugurated as a regular Saturday feature, "World Focus," a page devoted entirely to international news and issues. This section is a shining example of what can be done by a capable and interested publiction, despite limitations of staff size and space.

Much of this scope and direction is due to the efforts of its publisher, Mr. James D. Ewing, who has traveled extensively throughout the world gathering information for many of these articles.

A recent series by Mr. Ewing discussed most thoughtfully and comprehensively the problem of Latin America's population explosion and dilemma. I commend the series, which follows, to my colleagues for its treatment of a most serious and yet rarely publicized or understood problem:

POPULATION DILEMMA—LATIN AMERICA'S REAL THREAT

(By James D. Ewing)

The most serious threat to Latin America is rarely discussed in public: the region's population is increasing too rapidly.

There is a possibility—indeed a probability—that millions of people will be relatively worse off in the years ahead unless high birth rates can be curbed and economic development greatly accelerated. Both actions are necessary to prevent the fantastic rate of population increase from wiping out all the economic and social gains being made under the Alliance for Progress.

As matters now stand, with the exception of a handful of individual nations, population is rising faster than food production, faster than industrial development, faster than school, hospital and housing construction.

It all adds up to less food, less employment, less education and fewer medical and social services, per capita, than in the past. It's a prospect which contains a built-in invitation to Communist agitation.

Latin America's rate of population growth is the highest in the world—significantly higher than Asia's or Africa's, according to the best available figures. At the present rate, the population would double every 23 years.

There isn't a country on earth, including the United States, which could cope with that kind of growth without a drastic lowering of living standards. It is political dynamite.

Thanks to greater self-help, coupled with massive aid from the Alliance for Progress, many Latin American countries are showing (by normal standards) very encouraging economic growth rates. But the situation isn't normal. Too often the population growth is even greater, which means that, per capita, they are going backward, not forward.

There does not appear to be any one way to check this slide toward disaster. Advocates of expanded birth control programs talk as though they had the whole answer. So do those who argue that it's just a matter of stepping up economic progress and developing the interiors of most countries.

But practically speaking, reasonable hope for a solution lies only in doing all these things simultaneously and on a scale never before attempted.

The obvious need for much more extensive and effective birth control programs—for those who want to use them—is still obscured behind a veil of semi-secrecy in many countries, and even the most advanced programs are relatively limited.

Advocates of voluntary family planning are inclined to place most of the blame on the opposition of the Catholic Church. But this is not entirely accurate or fair, because the church in a number of countries is looking the other way.

There are other important obstacles. One is the traditional concept of the supremacy of the male, which includes the principle that he alone has the right to determine whether the act of creation shall take place.

Beyond this, there is the belief that a man's virility is measured by the number of children he sires, especially males, and that the more children there are, the greater the parents' chances for a secure old age.

For these reasons, even in countries where the Catholic Church pretends not to notice birth control programs, there is political timidity and a positive aversion to public discussion.

But behind the veil, some progress is taking place, though it's only a beginning.

POPULATION DILEMMA—FOOD PRODUCTION A CRUSHING NEED

(By James D. Ewing)

In all but two or three South American countries, voluntary family planning and birth control programs have been started. In several, they are getting important governmental support.

Usually this has been a case of making the right move for what some would consider the wrong reason.

In Chile, for example, it was publication of shocking statistics on abortions which prompted the government to start a birth control program, largely educational. Despite the fact that voluntary abortion is illegal, the director of the Chilean National Health Service said in 1965 that for the 260,000 children born there annually, there were 150,000 abortions.

ABORTION RATE

In Brazil publication of equally startling figures has helped a rudimentary birth control program get started. A medical statistical study indicated that 60 per cent of the budgets of maternity hospital services were devoted to treating abortion patients.

In Colombia, where the population has doubled in just 10 years, the government has also begun a birth-control information program, and some private clinics have gotten under way.

In Peru, very little progress has been made. In Argentina and Uruguay the rate of population increase is low enough to pose no serious threat. These two countries are exceptions to the almost universal pattern.

Elsewhere even if the cultural and religious objections to birth control were overcome, it's almost inconceivable that the necessary educational and clinical birth control programs could be instituted on a scale adequate to cope with the population problem by that method alone. It would take too much money and too much trained medical and para-medical personnel.

At best, therefore, family planning and birth control efforts are but one avenue of attack on the overall population problem.

FOOD PRODUCTION

Of equal or even greater importance is the need to step up food production and industrial development. The first is required simply to feed burgeoning populations without the necessity of costly import programs which increase prices to the consumer and drain off reserves of foreign currencies.

The second is essential not only to provide more jobs but also to generate the tax revenues needed to modernize agriculture and to educate millions of young people in the skills which modern technology demands on the farm and in the factory.

As has been true in other parts of the world, many Latin American countries have pushed industrialization and neglected agriculture. And even the industries have, in some instances, been developed more for reasons of national prestige than economic good sense.

FURTHER COMPLICATIONS

In either case, the hope of industrial employment has lured millions of peasants to the industrial centers, where they live in expanding slums and add to urban problems which are already frightening.

Thus agriculture must not only be made more efficient; it must be made more attractive and profitable to millions of people who now dream only of leaving it. Among other things, this will require a vast array of weapons ranging from land redistribution to improved credit facilities; from expanded technical assistance programs to modernized marketing and processing procedures.

Underlying the agricultural and industrial challenges, and essential to meeting both, is the need for drastic reform and tremendous expansion of educational systems which in most countries are woefully inadequate.

Unless education is improved and extended to millions who are now effectively denied it, neither agriculture or industry can be developed fast enough to cope with the population explosion.

POPULATION DILEMMA—EDUCATION IS KEY TO PROGRESS

(By James D. Ewing)

If Latin America is to develop to its full potential, and especially if it is to deal with the consequences of its rising population, educational systems must be overhauled and expanded enormously.

Most modern industries require an increasingly high proportion of skilled workers and technicians. Modern farming also demands a high level of technical know-how. In a world in which technology is more and more essential to the creation of wealth, education is thus the key to progress.

ANCIENT SYSTEM

The largest nation in South America—far bigger than the 48 continental United States—is Brazil. But its educational system is almost archaic.

Elementary education is free, but is not available to many, and to still others only on a limited basis. The student who makes it through the elementary grades probably has to pay for his secondary schooling.

There are some state-supported secondary schools, but the majority are privately operated and charge tuition. This automatically eliminates a high proportion of potential students.

At the university level, free education is again readily available for those who get that far. But the curriculum for generations has been heavily weighted toward the humanities. Thus, in addition to a built-in limitation on the numbers who can obtain a university education, the system turns out too many lawyers and too few engineers, agronomists, and other technicians. There are very few vocational schools at any level.

GRIM FIGURES

The statistics are startling. Of every 1,000 youngsters who enter elementary school in Brazil, only 180 finish the full course. Of that number, 98 go on to a secondary school, but only 52 graduate. Fifty go on to a university preparatory school, but only 34 graduate.

Of that number, 17 go on to higher education of some sort and 13 graduate—which means that only 1.3 per cent of all students who begin formal education ever obtain a college degree.

In other countries, the situation is better, and in some cases worse. Almost everywhere an effort is being made to improve things, but there is evidence that in most cases it's too little and too late.

The result is that in most of Latin America the skilled workers, the managers and the technicians so urgently needed for rapid development simply don't exist in sufficient numbers. This is the major reason, for example, why the newspapers in Lima, Peru, publish a number of help-wanted ads, even though 50 per cent of the people are so poor they are effectively outside the money economy and would obviously leap at the chance for an industrial job. The shortage is not of people, but of trained, educated people.

It is also the reason why almost limitless amounts of capital and, where they exist, vast, undeveloped land areas won't be enough to provide sufficient food and jobs to feed, clothe and house the expanding population better than in the past.

LIFE EXPECTANCY

Better medicine and modern drugs are increasing life expectancy and decreasing infant mortality. Simultaneously, high birth rates continue. They all add up to populations which in many cases are doubling in 25 years or less.

Economic development, frequently impressive in statistical terms, is silently being cancelled out by the population explosion.

There is no one answer. At the least, a solution requires, first, sweeping improvements and expansion in education, which, second, would supply the trained manpower to permit more rapid agricultural and industrial development. Third, voluntary birth control programs for those who want and need them should be available.

Even the most sympathetic observer is forced to wonder whether the full implications of the problem are understood except by a relative handful of Latin Americans.

It is a challenge which demands imaginative and courageous leadership, and a sense of urgency which is notably lacking in many influential quarters of many countries.

The Moral Sense of the Scientists

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. DADDARIO. Mr. Speaker, an editorial appeared in the January 20, 1967 edition of Science magazine. It is a pertinent appraisal of the moral responsibility of the scientist in light of his expanding role in today's world. I therefore draw it to the attention of the Members and offer it for insertion in the RECORD.

THE MORAL SENSE OF THE SCIENTISTS

(By J. V. Reistrup)

(NOTE.—This editorial is condensed from a column in the 5 January issue of *The Washington Post* and is used here by permission of the publisher.)

The recent meeting of the American Association for the Advancement of Science provided an impressive body of evidence that many scientists now are indeed worried about their social responsibility. The announced theme of the week's sessions was "How Man Has Changed His Planet," and the phrase provided far more than a take-off point for bragging. It was a symptom of the unease that permeated the meeting.

Thus Thomas F. Malone warned one session that the possible consequences of weather modification must be weighed "before we are called upon to deal with them." Malone, vice president of the Travelers Insurance Company, told his audience: "The point is that there is still time for reflective thought, for setting objectives, for weighing alternative courses of action—in short, to act responsibly."

In the kind of exhortation that had telling effect on its audience but could earn little space in newspapers, Malone went on: "If the exploration of weather modification adds one more small brick to the edifice that contains world conflict and supports world order, science will have served a noble purpose by enriching human life. The burden of responsibility for seeing that this happens is, I believe, on scientists."

It was not only the prospects of man's modifying weather, however, that aroused concern. Other aspects of man's effects on his environment—notably air and water pollution—also stirred it up.

Questions from the audience at a session on pest control, for instance, indicated widespread worry about the use of chemical pesticides whose residues last a long time, such as DDT. The questioners were looking for the kind of assurance they got from George L. Mehren, Assistant Secretary of Agriculture, that most Government research money in pesticides—the 1966 figure was 79 percent—is now going into nonchemical means.

The impact of science on man's social environment drew concern, too, as the sessions on the races of humankind showed. The most heated area of dispute was on the question of how scientific inquiry would do least to feed the fires of racial animosity. One school held that the best thing to do was stay away entirely from investigations of the differences between the races, which one scholar labeled "pseudoscientific"; the other held that inquiry should go forward but that researchers have the obligation to denounce erroneous interpretations drawn from it. Geneticist Theodosius Dobzhansky, an exponent of the latter argument, added: "And in our world a scientist has no right to be irresponsible." The audience applauded his sentiment.

But exactly what is the scientists' responsibility in the matter of racial differences? The day of arguments produced no consensus.

Nor were those attending the meeting allowed to forget the historical examples of how science had hurt, rather than helped, mankind. Loren C. Eiseley, a historian of science, taxed the 19th century's evolutionists with characterizing races other than those of Western Europe as inferior, rather than simply different. The tags have persisted, he noted.

And Lynn T. White, Jr., another historian, argued that "both our present science and our present technology are so tinctured with Christian arrogance toward nature"—the attitude that it exists for the service of man—that "the remedy must also be essentially religious." Science and technology, he said, cannot answer all the questions they raise.

Mission in Moscow

EXTENSION OF REMARKS

OF

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. MINISH. Mr. Speaker, I should like to commend to our colleagues' attention an editorial "Mission in Moscow" that appeared in the Newark Evening News on Monday, January 16, 1967.

As the newspaper declares, the realization that what cannot be stopped today cannot be rolled back tomorrow should inject reason into the effort to come to terms on means of checking the nuclear arms race.

The editorial in full follows:

MISSION IN MOSCOW

First order of business for Ambassador Llewellyn Thompson on his new assignment to Moscow will be to present a message from President Johnson urging the Soviet Union to desist from extending its antiballistic missile system both in quantity and capability.

In terms understandable to the ordinary mind, this would seem an odd, even totally unrealistic request. Who beside the country itself should decide the nature of its defenses? Least of all, an ideological opponent and potential military enemy?

But these are no ordinary times, and they get steadily more extraordinary. The President's request makes sense only because the Soviet Union can be sure that if it extends its antimissiles, this country will, too. More, the offensive weapons needed to overcome better defense weapons will be developed. Under present knowledge, this will require nuclear explosions in the atmosphere and a wholesale system of defense shelters.

As cycle builds on cycle, the cost will become exorbitant. What's more, Russians and Americans alike could look forward to a life tuned to the sound of a missile warning and a dive into a shelter. Pretty grim, and certainly to be avoided in any way possible.

The disarmament business hasn't progressed very far. But enough is known to bring realization that what cannot be stopped today cannot be rolled back tomorrow. That in itself ought to inject some reason in the present effort to come to terms on means of checking the nuclear arms race.

The University of California

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. COHELAN. Mr. Speaker, I want to commend our colleague, the gentleman from California [Mr. TUNNEY], for his remarks to the House yesterday concerning recent developments at the University of California. I would certainly agree completely that the heavy hand of politics, as it apparently has been practiced recently, can only damage the stature and confuse the purpose of a great institution of higher education.

I would like to say once again that I deplore the firing of one of this country's finest educators, Dr. Clark Kerr, from his post as president of the University of California. His shoes would be difficult to fill under the most agreeable of circumstances. But the fact that Dr. Kerr was fired only 3 weeks after the inauguration of a Governor who had repeatedly attacked him during his campaign for office will, I expect, make this task far more difficult.

There is also room for concern that this action may have complicated the university's task of attracting and keeping the topflight faculty which has made it one of the greatest centers of higher education in the world. I deeply hope this will not be the case, but here again I think that Governor Reagan may have made the university's job still more difficult.

Mr. Speaker, we cannot undo the lamentable action of firing Dr. Kerr, but we can hope that at least one of the apparently precipitating causes for it will be removed. I speak of the Governor's proposal to end the 98-year-old tradition of tuition-free education at the university. I speak also of his plan to cut the budget which the university felt was necessary for this next year by 30, not 10 as he has stated, but by 30 percent.

Let us remember that it takes generations to build a university and a State college system as fine as California's. It takes very little time at all, however, to dilute or even to destroy it.

I sincerely and earnestly hope this will not happen. I hope that the Governor will realize that we can not economize at the expense of education and the future of the young people of our State.

The Governor and his aids talk about returning from "never, never land" to the "world of reality." Well, let me suggest that the fastest way to do this is to provide education with the funds that it needs and to see that we do not erect barriers, such as tuition, at a great publicly supported institution of higher education, in the path of the many that need it most but can afford it least.

Mr. Speaker, the contribution of good wit and humor to a situation such as this is too often overlooked. Fortunately, it has not been in this case.

I include Mr. Art Buchwald's column from this morning's Washington Post which speaks with devastating effectiveness to the problem created by a new and obviously inexperienced State administration.

The column follows:

Capitol Punishment: California, Here I Come

(By Art Buchwald)

When President Clark Kerr was fired by California's Board of Regents last week, I immediately got a call from my Uncle Oscar.

"I hear they're looking for a new president for the University of California. You know anybody out there I can speak to?"

"Gee, Uncle Oscar, what credentials do you have to become the president of the largest university in the country?"

What credentials did Ronald Reagan have to become Governor of the State?" he said hopefully.

"That's different, Uncle Oscar, and let's keep politics out of this. The beautiful thing about the university system in California is that it remains above politics. Now what are your qualifications for the job?"

"I saw 'King's Row,' 'Brother Rat,' and 'Knute Rockne' three times. I'm one of Reagan's biggest fans. I still choke up everytime I see a re-run of 'Death Valley Days.'"

"I'm sure the Governor will be very pleased to hear it, Uncle Oscar, but he has a great deal of respect for education and he wouldn't hire someone to run his school system just because the person was a movie fan."

"I should hope not," Uncle Oscar said. "A state university system is a very serious thing and they should get someone who knows how to handle kids."

"Now you're talking, Uncle Oscar. What is your feeling about California students paying tuition to go to school?"

"I not only think the kids should pay tuition, but the teachers should too. You're not going to have a balanced budget in California unless the professors pay their own way."

"That's pretty radical, Uncle Oscar. There are very few schools in the country that require professors to pay tuition in order to teach."

"Well, just because they've been doing it one way for so long is no reason why they can't change. You have to get the money for the schools somewhere."

"There has been a lot of unrest on California campuses in the past few years. Do you have any idea how you can do away with it?"

"I'd build up a strong university police force. Instead of putting all that money into new buildings and research, I'd put it into police equipment—you know armored cars, riot helmets, tear gas masks and things like that. You get enough cops on campus and the students will run for the hills."

"That's pretty strong medicine."

"Well, they did it at the universities in Argentina and you don't have any student unrest down there."

"That's a point," I said. "What would you do to encourage a strong, independent faculty?"

"What's that?"

"Well, in order to have a good university system you've got to attract brilliant men who believe in what they're doing."

"I'd get control of the library. If you have the key to the library, nobody's going to mess with you."

"You make sense, Uncle Oscar. Now there is one more thing that everyone's going to insist on, and that is that the University of California must be kept out of the political arena. How do you plan to do this?"

"I'll do away with the Student Government for a start."

"Okay, Uncle Oscar, I'll pass on your application to the Board of Regents, but I wouldn't count on your getting the job."

"Why not? Who else are they going to get?"

"Buddy" Lewis: A Fitting Choice for Hall of Fame

EXTENSION OF REMARKS

OF

HON. BASIL L. WHITENER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. WHITENER. Mr. Speaker, John Kelly "Buddy" Lewis is one of the outstanding citizens of my home city of Gastonia, N.C. He is also a well-known former resident of our Nation's Capital. From 1935 through 1949, his name was a household word in the Washington area because of his outstanding performance on the baseball field with the Washington Senators.

Buddy Lewis is a man of outstanding attainment in athletics, citizenship, and community service. This was again recognized on Monday, January 23, 1967, when he was awarded the Gastonia Hall of Fame Sports Award at the annual sports banquet sponsored by the Gastonia Chamber of Commerce.

I know that many of Buddy's friends in the Congress, the Washington area, and throughout the Nation will be interested in reading an editorial which appeared in the Gastonia Gazette on Tuesday, January 24, 1967, as well as a column entitled "Pat's Peckings," by Neale Patrick which appeared in the same issue of the Gazette.

In saluting my close personal friend, Buddy Lewis, I join his many North Carolina friends in recognizing this new achievement.

Under unanimous consent I include the above-referred-to newspaper items as a part of the appendix of today's RECORD:

Banquet and Lewis Arrive at Same Time

It was an impressive affair, that sports banquet last night.

Some of the top names in the world of sports were there, and the local supporters came out by the hundreds to see and hear.

You don't let people like Bobby Richardson and Steve Spurrier come and go, if you love their sport, without making an effort to see them up close.

These guys are the greatest. And there were many more. Celebrities were on hand by the dozens. That's why the "Y" basketball court was filled to capacity. Around 900 people were fed. It was the largest banquet, probably, ever held in Gastonia.

There were many highlights. But one of the greatest moments came when J. K. (Buddy) Lewis assumed an easy stride down the right side of the gym, mounted the speaker's platform, and, blushing with modesty, accepted this year's Hall of Fame Award.

Few people in Gaston County have done more for the world of sports than has Buddy Lewis. Indeed, few people have done more for their community than has the former Washington Senator outfielder.

Lewis is one of those middle-aged Lions that a couple of AP reporters wrote about some few weeks back. He returned home from World War II, donned again his baseball uniform in Washington, and slugged the ball the way his fans knew he could.

Then, he returned to his home in Gastonia, established himself in the Ford business, and has had an excellent batting average in the world of business.

The name of Buddy Lewis, when added to any endeavor, carries with it a measure of excitement, an almost built-in guarantee of success.

The sports banquet, itself, was the beneficiary of the Lewis effort and has received much of his attention during its seven years of existence. Therefore, it is doubly satisfying that such an honor should come to such a man.

Gastonia is justifiably proud of its sports banquet.

But it is equally proud of Buddy Lewis, a gentleman, a competitor, a hard-working, community-minded individual who has heard the call of responsibility and has responded.

Our congratulations to those who helped make the sports event such an overwhelming success.

Our compliments and best wishes to Mr. Lewis who swings hard and hits 'em long.

Pat's Peckings—Buddy Lewis: A Fitting Choice for Hall of Fame

(By Neale Patrick)

It has been written that a prophet is not without honor, save in his own land.

In truth, many great athletes achieve fame and recognition afar, instead of in the land of their heritage.

Let it be added, however, that others in the field of athletics are with honor and are duly recognized at home. Such is the case of J. K. (Buddy) Lewis, third recipient of the Gastonia Hall of Fame Sports Award.

Buddy Lewis certainly has been one of Gastonia's finest and most outstanding contributions to sports. His ability and his leadership have long been recognized, here and nationwide.

Last night, his homefolks justly iced the cake of sports greatness that Buddy has molded in three and a half decades of service and achievement in athletics. The Sports Hall of Fame award is the most cherished recognition that Gastonia can give to those who have walked and led in that way of life.

Buddy Lewis has been a vital cog in baseball here since his teen age days as one of the legends of local Legion junior baseball. He played three years on the Post 23 All-Stars, his final season of 1933 leading to a regional championship.

That was the first step forward for Buddy to 11 years of stardom (.297 lifetime batting average) with the Washington Senators of the American League. He was our city's first major league product of the junior program.

It was a big league career, interrupted by three and a half years of Air Force duty during World War II, a service hitch which found Buddy "Flying the Hump" in the Burma-India theater.

JUNIOR BASEBALL DEVOTEE

That is only a skeleton outline of the career of service in sports and athletics that

Buddy has given to Gastonia, the state and his country.

Buddy, for instance, is the only person ever to play for, coach and supervise the Gaston Post 23 American Legion junior baseball program.

Twice, he has coached the local juniors. Several times he has headed the Post 23 Legion baseball committee. He also has served as Area Four junior diamond commissioner, directing the program for western North Carolina.

Buddy admits that, next to his family, junior baseball is the closest thing to his heart. He says that without the Legion program he would not have been given the opportunity to begin his major league career three years later. It was his stepping stone to baseball fame, his career in business here . . . and the Hall of Fame selection last night.

The National American Legion has recognized Buddy for long service to the junior baseball program, presenting him with an Award of Appreciation a few years ago. It is an award which is given in most exceptional cases to Legion diamond leaders across the land.

It is indeed fitting that Lewis has been honored, at home and afar, in the field that is so close to his heart.

In Buddy's playing days in the American League, he helped to spread abroad Gastonia's claim as a baseball community, an incubator of major and minor league diamonds stars.

Since retiring following the 1949 season, he has been a guiding force in bringing professional baseball to his home community.

He was the ram-rod in obtaining the Tri-State League franchise for the Rockets in the early fifties. He was instrumental in swinging the switch of the Columbus club of the Sally League to Gastonia in mid-season 1959.

Buddy, however, has not confined his athletic and leadership abilities to baseball. For instance, he is a member of the Wake Forest College committee raising funds for a new football stadium, a post which drew from him the quip: "I'm a baseball man. I don't know what I'm doing on a football stadium committee."

He also is a member of the committee which has been seeking a site for a new municipal stadium for Gastonia, and is a long-term member of the Sims Park Board. He, too, has been a moving force behind the Chamber of Commerce sports banquets over the years, little realizing that he would be singled out for his award last night.

Buddy's love for youth baseball and work with young boys carries over, too, to the fact that he was a major fund raiser for the building fund of the new Red Shield Boys Club.

He was a baseball hero to all Gastonia in his big league days. Buddy has returned to serve with honor at home, an inspiration to the youth of the community.

PLAYED WITH HALL OF FAMERS

A few years after Buddy retired from active baseball, he looked back at his 11 years with the Senators and picked his all-star American League team of that era. It read like this:

Bill Dickey of the Yankees, catcher; Lou Gehrig of the Yanks, Charlie Gehringer of the Tigers, Cecil Travis of the Senators and Phil Rizzuto of the Yankees, around the infield; Ted Williams of the Red Sox, Joe DiMaggio and Tommy Henrich of the Yankees in the outfield; and Bob Feller of the Indians and Hal Newhouser of the Tigers, pitchers.

The quality of the American League at the time Buddy was one of its stars is best shown by the fact that six of those 10 players against whom he played are now members of Baseball's Hall of Fame . . . Dickey, Gehrig, Gehringer, Williams, DiMaggio and Feller.

Buddy also was an all-star, twice in his career being named to the American League All-Star Game roster. He had the unusual distinction of being one of the few players in the history of the mid-summer classic to be selected at two different positions, at third base in 1938 and in the outfield in '47, after he had returned from the service.

He started both games for the AL, and recalls that a "pretty good hitter" pinch-hit for him in the 1938 game . . . a fellow by the name of Lou Gehrig.

Yes, Buddy Lewis' athletic qualifications are known afar . . . and at home. The secret committee which selected him for his award last night have let out a fact which really isn't a secret, after all.

Outstanding performances—Tied American League record for most games played in season by third baseman—156 (1937). Equaled American League record for most errors in game—4 (first game, August 19, 1937). Made 15 hits in four consecutive games; July 25, 26, 27, and 28, 1937. Led American League with most triples, 16 (1939). Led American League third basemen in assists, 359 (1938). Led American League third basemen in errors for three consecutive years, 1936–38, with 32–29–47 errors in successive years. Led American League third basemen in double plays, 1938. Led outfielders in assists, 16, (1946). Played in two all-star games, playing third base for American League team in 1938. He failed to hit in one trip to plate, had one assist afield; played outfield in '47 failing to hit in two plate trips.

Entered U.S. Army Air Force November 18, 1941, discharged July 23, 1945, and returned to Washington lineup, July 27, 1945.

Buddy Lewis' pro record

Year and club	League	Position	Games	At bat	Runs	Hits	2-base hits	3-base hits	Home runs	Runs batted in	Batting average

AID and California Colleges Join in Scholarship Program

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 11, 1967

Mr. MILLER of California. Mr. Speaker, on January 20, 1967, I was pleased to be present in the office of AID Administrator, William Gaud, with colleagues in the U.S. House of Representatives from California to witness the signing of a contract between AID and the California State colleges.

This contract is highly significant because it marks a major milestone in Vietnamese official programs in higher educational pursuits. It gives advanced Vietnamese students an opportunity to receive formal educational skills in the United States. This program will also provide an excellent opportunity for an exchange of ideas between our respective cultures. It will truly mean a new dimension in our efforts to provide the strength and will for these brave people to build their nation.

As I observed the signing ceremony between Dr. Glenn Dumke representing the California State colleges and Administrator William S. Gaud signing for AID with Ambassador Bui Diem of Vietnam looking on, I could not help but be proud of these great institutions of higher education of my native State. The 18 individual colleges of the system offer a unique opportunity for bringing academic richness and intellectual stimulation to the great population centers of our State. Under the very able leadership of Dr. Glenn S. Dumke, the chancellor and chief administrative officer, these colleges have grown to meet the dynamic challenge of a rapidly developing state. The contract is a true recognition of the spirit and resources provided by these schools and their respective center of excellence.

Additionally, I might point out that the management of this program will be realized without any use of California State tax revenues. Each college has a foundation which is self-supporting and which seeks to foster research on the various campuses. The funds for these foundations come from Federal, State, and local research grant money, as well as from public and private endowments. Each of the foundations is a nonprofit, self-financed corporation, which receives no State-appropriated funds for its operation. In the instance of the Vietnam student contract, the sponsor is the San Diego State College Foundation.

In conclusion of these remarks, I am pleased to insert in the CONGRESSIONAL RECORD a copy of the AID press release on the signing ceremony which succinctly presents the highlights and objectives of the program.

The press release follows:

AID AND CALIFORNIA COLLEGES JOIN IN SCHOLARSHIP PROGRAM

An Agency for International Development contract was signed today with a group of California State Colleges to provide up to four years of education for 100 students from Vietnam. Expected to arrive the end of February, the pilot group will give AID its first concentrated experience in the training of scholarship students from Southeast Asia.

The students will be divided into groups no larger than 15 and split up among seven of the 18 California State Colleges. Each successful candidate, selected from among 3,000 applicants, will therefore be a member of a particular small student group at a college campus with unique environmental and resource characteristics.

In signing the contract on behalf of the Agency, Administrator William S. Gaud noted that AID had selected the California complex in order to train students in small groups, while at the same time keeping them still close enough for useful coordination.

Signing for the colleges was Dr. Glenn S. Dumke, Chancellor of the 18-college system. Congressmen from California representing the districts in which the seven college campuses are located also took part in the ceremony held in the AID Administrator's office.

"Special effort will be made to involve the students in community as well as college affairs," Administrator Gaud said. "The California colleges intend to provide enrichment through special activities focusing on the problems of Southeast Asia. The purpose is to stimulate study of the student's own country relative to the rest of the world and to the student's future leadership role within it."

The Scholarship Leadership Program under which the 100 students are coming to the United States was developed last fall to give preference to candidates who planned to study in fields especially wanting in Vietnam, such as education, agriculture, and medicine.

Knowledge of English was not a requirement. Part of the AID contract with the California State Colleges calls for intensive English-language training and familiarization courses on American culture, as well as emphasis on Southeast Asia. The value of the contract with the colleges is $425,000, which will cover full costs incurred by the California State Colleges.

AID and the colleges will engage in research projects regarding the relationships between the students and their environments both on and off the campus. Results are expected to facilitate improvements in AID's over-all training program.

The seven institutions involved are the California Polytechnic College at San Luis Obispo and the California State Colleges at Fullerton, Fresno, Long Beach, Sacramento, San Diego, and San Jose.

Hon. Charles A. Buckley

EXTENSION OF REMARKS

OF

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. WOLFF. Mr. Speaker, my colleagues from New York and I mourn the loss of the late and beloved Charles A. Buckley, who for 30 years served in this House as a Representative from New York's 23d District. He served with distinction representing not only his constituents most ably but guided the Public Works Committee as its chairman.

One of his longtime friends and associates, Mr. John Hagan, has written a very fine letter about the Honorable Charles Buckley, and I wish to call it to the attention of my distinguished colleagues by having it inserted in the RECORD.

HAGAN PAYS TRIBUTE TO CHARLES BUCKLEY

Hon. LESTER L. WOLFF,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN WOLFF: I know that you, just as I, received the sad news of the death of a longtime friend and associate, the Honroable Charles Buckley, who for 30 years represented the good people of New York's 23d District.

Through his efforts our harbors, our waterways, parks and beaches, have been improved; we have the St. Lawrence Seaway, the Niagara power project, and Hudson River improvements, the Major Deegan Expressway and New England Thruway. He worked hard for these and many, many more projects which benefited not only the citizens of New York but all Americans.

Charley was a truly loyal and dedicated American. His loss is mourned, and his family has my deepest sympathy.

Sincerely,

JOHN G. HAGAN.

Report on Thurston County, Wash., Neighborhood Youth Corps.

EXTENSION OF REMARKS

OF

HON. JULIA BUTLER HANSEN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mrs. HANSEN of Washington. Mr. Speaker, there has been a great deal of discussion recently about the usefulness of community action programs. When I was in the West this winter, I had the opportunity to visit the Olympia, Wash., Neighborhood Youth Corps project. I saw there some of the most valuable work I have been privileged to see.

Young people were being given their first opportunity for job training and employment. I met these youngsters and I talked with them on subjects from grooming to technical aspects of their jobs. The work of this program is tremendous. It is so good that I asked Mr. Elmer Keiski, director of the Thurston County Neighborhood Youth Corps, to give me the following report:

REPORT TO THURSTON COUNTY COMMISSIONERS—ACTIVITY REPORT: FIRST YEAR—THURSTON COUNTY NEIGHBORHOOD YOUTH CORPS, NOVEMBER 8, 1965 TO NOVEMBER 8, 1966, FROM ELMER KEISKI, DIRECTOR

GENERAL OBSERVATIONS

The Thurston County Neighborhood Youth Corps has done a valuable and successful job in filling the employment gap for high school dropouts in Thurston County. The Youth Corps has provided work experience and training to a significant number of 16–22 year old youth who might otherwise have had no opportunity to enter the labor market because of their general unemployability. The Youth Corps has provided a "stabilizing work situation" for a number of troubled and uncertain youngsters. The Youth Corps has been a new local agency solely concerned with low income, unskilled drop-outs trying to meet a need that received minimum attention or services from other educational and social agencies in Thurston County. The Youth Corps has markedly improved the opportunity of those low income and unskilled youngsters who take advantage of the program to eventually become part of our affluent society.

The Thurston County Neighborhood Youth Corps atempted to recruit and provide work training experiences for out of school youth with the following characteristics: Insufficient education to obtain suitable employment; unskilled or underemployed; selective service rejectees, rejectees from other training programs; erratic work histories; improper attitude to work in general; social adjustment problems interfering with employment; and emotional or attitudinal problems requiring personal adjustment assistance.

All enrollees were from families whose incomes were insufficient to provide it with basic needs. The following standard as established by the U.S. Department of Labor was used in determining ecomonic eligibility for the Youth Corps:

Family size	Income (nonfarm)[1]	Income (farm)[2]
Unrelated individual	$1,450	$1,080
2	1,990	1,400
3	2,440	1,710
4	3,130	2,200
5	3,685	2,580
6	4,135	2,900

[1] Add $550 for each nonfarm family member in excess of 6.

[2] The poverty income levels of farm families are based on 70 percent of the income of nonfarm families.

By counseling and observing the youngsters enrolled in the TCNYC over a year the staff discovered many interesting and often disturbing characteristics. The most general characteristic of the average enrollee was the lack of basic educational skills. Nearly all the enrollees failed to complete basic secondary educational levels. A great number were deficient in basic elementary educational skills. The average enrollee had completed 9.97 years of schooling and was 18.2 years old.

Most of the enrollees indicated below level achievement early and consistently throughout their schooling. Many enrollees would not return to the regular daily school program or even consider it. Once having dropped out, the youngsters seemed to develop a "closed door" attitude to the regular school program. Counseling these youth back into remedial classes or other basic skills class was difficult and often unsuccessful.

Often enrollees could be counseled into night school classes of basic education or secretarial skills. Those youngsters who expressed interest in additional education often looked at the GEDT equivalency as a more practical goal than the regular high school diploma. Enrollees were introduced and encouraged to study under the excellent opportunities of the Olympia Adult Evening School.

A general characteristic of enrollees was an unstable or nonexistent family unit. Many enrollees "drifted" from residence to residence and frequently throughout the state. The project staff became surprised at the number of youngsters often only 18 or even less who had been "independent" of responsible adult supervision for some time. Several youths working in the TCNYC had served time in State Institutions.

Applicants were often wary of officials and forms. Many youngsters had extensive counseling and case records with other agencies including schools, juvenile authorities, parole officers, welfare case workers, and employment counselors. Therefore, the Youth Corps office was conducted as informally as possible and a friendly, easy-going attitude encouraged during personal counseling. The Youth Corps staff counseled all applicants on their employment goals and educational needs. The Project Director tried to assess the applicants work attitudes and potential. Enrollees were placed on work stations that best matched their potential. Daily work supervisors counseled the NYC Aides as well. The Project Staff provided additional guidance on work adjustment and attempted to resolve individual problems as they arose. The NYC Aides received their best guidance, direction, and training from those regular employees they worked with daily.

Other characteristics of those working in the TCNYC were: early marriage, early divorce, low mental ability, poor appearance, poor communication skills, no work experience, repeated failures in school and society, mental retardation, emotional instability, laziness, fear of rules and regulations, unkempt appearance, crime experiences, cultural deprivation, poor health and poor eating habits, inept money management, and general insecurity about the world of work.

It must be remembered that the Youth Corps was established to provide work experiences for youngsters with those very problems mentioned above. Often those negative traits were not severe. Not all enrollees exhibited serious negative characteristics. However, reviewing the total numbers involved, the staff noted an awesome variety of problems troubling the enrollees. These multiple problems frequently interfered with the enrollees functional working ability.

SPECIFICS

During the first year of the TCNYC some 280 youngsters applied for work by coming into the office personally. This figure does not include those youths who initially contacted the local office of Employment Security. Not all these youth qualified for the Youth Corps. Many were referred for the local employment office or given other job tips. A number of high school and college students requested employment during June and July and they received encouragement and direction on part-time work opportunities.

A total of 126 youths were hired and involved in the project during the first year. Of this number 59 were girls and 67 were boys. Some 97 youth were terminated from the Youth Corps—43 girls and 54 boys. The average enrollment each month was 33 youngsters. The average length of employment was 8 weeks. Not one enrollee was "fired". Those youngsters working as NYC Aides earned a total salary of $56,633.00 for the first year. An additional $3,379.00 was paid them in fringe benefits. The average enrollee earns $476.00. By the U.S. Department of Labor standards NYC Aides worked a 32 hour week earning $1.25 per hour.

Of the total enrollee termination of 97 in the first year some 37 youths went to work full-time. A follow-up survey indicated that at least half were still working after the first month. Some moved on to other jobs, or left town or quit for various reasons. The length of the jobs changed as well.

Besides the objective of placing youth in full-time work, the TCNYC provided those youth enrolled with a period of employment stability, work experience, and time to adjust and evaluate personal goals. Actually other NYC objectives were to return youngsters to school, provide their very first job, and counsel individuals on educational needs.

The following table indicates the reasons for enrollees leaving the NYC project from November 8, 1965 to November 8, 1966:

	Number of youth
1. Full-time employment	37
2. Moved from county	16
3. Quit voluntarily	7
4. Returned to school full time	6
5. Marriage	5
6. Nonattendance	5
7. Jailed	4
8. Transferred to other training programs	3
9. Care of children and home	3
10. Pregnancy	3
11. No longer qualified	3
12. Drafted	2
13. Illness	2
14. Unknown	1

The Federal government supplied 90 per cent of the project costs $103,770.00. The remaining 10 per cent was provided by local sponsors as an "in-kind" rather than cash contribution. The value of the local sponsors' "share" was $16,710.00. The original agreement between the Thurston County Commissioners and the United States Department of Labor called for a $103,770.00 expenditure for six months. However, the contract underwent several extensions and was stretched out to 16 months without additional new County or Federal funds. A lower monthly enrollment than originally anticipated made it possible to extend the project.

Total administrative costs came to $17,297.14. This figure includes $15,598.00 for staff salaries and fringe benefits. Also the figure $1,107.01 for office expenditures and $592.13 for staff travel expenses for NYC activities.

All NYC expenditures had to have prior approval by the United States Department of Labor and then listed in the official contract budget between the Thurston County Commissioners and the Labor Department. No deviation or expenditures were allowed beyond stated contract figures unless approved by a Labor Department representative.

NYC funds were deposited in the County Treasurers office. Vouchers for payroll and other expenses were drawn up by the NYC staff, submitted to the County Commissioners for approval, and paid by warrant by the County Auditor's office. All funds and expenditures must be Commissioner approved, audited by the County Auditor and subject to audit later by the State Auditor. The U.S. Department of Labor also subjects NYC budgets to inspection anytime by roving Federal auditors. All expenditures were also reported monthly to the Labor Department representative in Seattle and Washington, D.C., where they were reviewed and compared to contracted budget figures.

In evaluating the success of the TCNYC one must understand that the program operated to assist disadvantaged youngsters gain work experience. Those youngsters working in the TCNYC had a multiplicity of problems making them generally unemployable. The NYC objectives were to provide that first all-important job, show these youngsters how to work, introduce them to the demands of the work-a-day world emphasizing such rudimentary work skills as appearance and punctuality. Thus in measuring the degree of successfulness of the first year's operation of the TCNYC, an economic yardstick may not be appropriate or practical. However, this new program brought a total new purchasing power to the community of $72,290.59.

Excellent cooperation from all participating agencies existed. Those City and County offices and their personnel that provide work stations and supervision made the project a success because of their patience and understanding with these youth. Other cooperating agencies that provided unlimited assistance were the local office of Employment Security, Thurston County Welfare Office, Thurston County Juvenile Office, and Thurston County Community Action Council. Project Headstart, Morningside School, the local Social Security Office, Lacey Fire Department and others also provided work stations for NYC Aides and assisted significantly in acquainting the youngsters with meaningful work experiences. Those individual supervisors who worked daily with NYC Aides carried the brunt of job training and work counseling. Without the positive attitudes of all those assisting in the Youth Corps project—the TCNYC would have been far less successful.

The project had a 47 per cent success rate the first year. This figure includes the total enrollees who went to work full-time, who returned to school full-time, and who transferred to another work training program. Originally it was hoped that if 10 per cent of the youngsters were helped the program would be worthwhile. Those youth who terminated without going to work full-time profited by having their first introduction to the responsibilities of the world of work.

We Had To Earn Our Way Up

EXTENSION OF REMARKS

OF

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. O'HARA of Michigan. Mr. Speaker, in the story of one family one can often read the temper and measure the strength of a nation. The story of how Vincent Gudobba and his family have weathered the years and improved their economic lot has this quality.

The Gudobba story appeared in the Christian Science Monitor on January 5, 1957. It was the first in a series of articles entitled "15 Families in a Changing World." This sensitively written portrait by Charlotte Saikowski is absorbing and instructive, and I commend it to the attention of my colleagues.

Vincent Gudobba, it happens, is a good friend of mine. He is a resident of Clinton Township in my district and is employed at the Chrysler Outer Drive Stamping Plant in Detroit. He is first vice president of the Macomb County AFL–CIO Council and a member of its executive board.

The economic position of the Gudobbas today is an eloquent testimonial to the wisdom with which this family has carried the burdens of everyday life. It is a testimonial, too, to the sinew and fiber of millions of American workingmen like the Gudobbas, as well as to the effectiveness of the Nation's labor and economic policies since the New Deal. It is no less a monument to the accomplishments of the American labor movement.

The article follows:

WE HAD TO EARN OUR WAY UP

(By Charlotte Saikowski)

(NOTE.—Detroit auto worker Vincent Gudobba credits his union for the economic benefits that paid for the small but expanding home in which he and Mrs. Gudobba brought up their three children. With family responsibilities subsiding, the Gudobbas look forward serenely from a comfortable present to a well-secured retirement.)

MOUNT CLEMENS, MICH.—For Vincent and Hazel Gudobba, life is as comfortable and secure today as it has even been. Two of their children are married, and with only 17-year-old Vincent still living at home they no longer need to scrimp and save quite as much to make ends meet.

"Whenever I get discouraged," says Mr. Gudobba, "I think about the old times back in the '30's when I used to be a door-fitter on the assembly line. You had to stand there hour after hour while those cars shuffled by and you couldn't stop for a minute until your relief came. And all for a buck and eight cents an hour! It was rough."

Today—30 years later—Vincent Gudobba, is a well-built, round-faced man of 55, still works at the Chrysler Outer Drive Stamping Plant in Detroit. But his working conditions have vastly improved. No longer an assembly-line worker, he has moved into a job in the factory tool crib where he distributes tools, safety equipment, and parts to the production workers.

"I guess you'd call it a semiskilled job," he told me. "I just see to it that the guys have enough stock. Anyway it's much cleaner work. I can wear ordinary clothes. The hours are good, too. It's the first shift—from 6 in the morning to 2 o'clock. The pay of course is much better now. With the raise I just got I make $3.24 an hour for a 40-hour week.

" 'Course it's the unions that done it. We fought for it and, we got it. Better pay. A shorter week. Safety devices. Ventilation and light. Pensions. And now there's workmen's compensation and unemployment insurance—all that makes it easier so you don't worry so much."

At $3.24 an hour Mr. Gudobba now brings home three times the wage he did in 1937. With occassional overtime work he can earn between $7,000 and $7,500 a year — not enough, as he says, to buy a lot on Lake Huron or a boat but "enough to eat well."

Like thousands of other factory workers who have fled the congestion, high rents, rising cost of living and other pressures of the city, the Gudobbas early moved into the outskirts of Detroit — Clinton Township, to be exact. This was back in 1947 when just a few scattered houses dotted the flat, weed-strewn fields and when a community well was the only water supply.

"We used to live on the east side of Detroit in a four-family flat, paying only $27.50 a month rent," Mr. Gudobba recalled. "Then the colored people started moving in. I didn't really mind that too much until one day I found out my Negro neighbor was paying $67.50 a month rent. I knew if I stayed around my rent would go up. So one day — it was dreary and drizzling — we drove out to have a look at a house near where my father lived.

"Well, it was small — only four tiny rooms on a lot 50 by 120 feet. It didn't have a basement or attic like my wife wanted but it was only $3,400 and we figured we could swing the $30 monthly payments. So we moved in with the two kids. Judy was three and Roger nine."

Since then the Gudobba home, which still has its original mottled-gray synthetic brick siding, has been expanded by a utility room, a bedroom, and a frame two-car garage, all of which Mr. Gudobba built himself. The house now has its own well and the township recently installed a sewer.

The inside, too, has seen changes.

"We tried to do a little bit every year," said Mr. Gudobba. "This year I knocked out a closet and made this L-shaped living room. I dropped all the ceilings so it'd be easier to heat and me and my brother-in-law paneled all the rooms. You know there's only one original window left? Now I have only a few jobs left. I want to put aluminum siding on the house — wish I could've done that before you came."

"We live like millionaires," chimed in Mrs. Gudobba as she showed me through her house. "You know I've had that Bendix washer for 17 years? And now we have a drier— 'course I can't dry my silks in it; I still have to hang those up. But you know, it's a funny thing. Look at that big sink. When we were raising our kids and needed it we had just a little sink. Now the kids are gone and we have a bigger sink than we know what to do with. That's life for you!"

Mrs. Gudobba, a hazel-eyed woman with dyed black hair, opened her home to me warmly and unselfconsciously. She smiled a little shyly on my first visit because I had caught her unaware in Bermuda shorts and uncombed hair. But she soon forgot about herself as we sat chatting on the foam-rubber couch near the picture window.

In one corner stood a 21-inch walnut color television set from Sears, with three glass swans resting on top. A few plastic roses sprouted from a slender gold wall vase. On a nearby table were perhaps a dozen framed photographs of the Gudobba children and grandchildren, as well as two chrome trophies which Mr. Gudobba had won in bowling competitions. A basketful of unironed laundry lay on the sofa at the other end of the room.

"I'm sorry all that laundry is around," apologized Mrs. Gudobba. "But it's not easy to keep up with the house when you work. I started working again part-time about six years ago and now I go full time—at the secretary of state's fee office on Van Dyke where you get boat and car licenses. I got tired staying at home taking care of the grandchildren. I don't want to babysit all the time.

"The kids don't like me to work but you get used to that $70 a week coming in—$53 after deductions. There's a lot of stuff we wouldn't be able to buy otherwise. Now we're saving for a new car. I still got that 1964 Dart outside and Vince uses the 1965 Dodge sports wagon. Just think—two cars and all paid for!"

Now that their children are grown and the cares of looking after a family are subsiding, the Gudobbas are thinking about the future and what they might do in the years ahead. With social security and Mr. Gudobba's pension they anticipate no financial worry and already have a few long-range plans.

"First I want to get the house finished and get far enough ahead so I can retire in five or six years," said Mr. Gudobba. "Then we're going to get us a camper and go traveling when we're young enough to enjoy it."

The married Gudobba children, like their parents, have primarily the concerns of paying for a home and raising a family. But they are a few steps farther ahead than were Mr. and Mrs. Gudobba at their age, and their goals and aspirations reach higher.

The oldest son, Roger, 27, has three children and is making mortgage payments on his house; he earns close to $9,000 operating a computer at Lafayette Clinic at Wayne University. A tall, swarthy youth, Roger wants to better himself and is working for a bachelor of science degree at Macomb County Community College. Four times a week he goes to night school—and the fifth he usually bowls.

"It's kinda hard not seeing him too often," laments his attractive blond wife, who stays home to look after the children, "but I'd rather have him happy."

Judy, the second of the Gudobba children, quit school in the 12th grade, married, and now lives with her husband George and two children in a clapboard house across the street from her parents. Today she regrets not having finished her education and is attending night school as well as taking a beautician's course.

Even as Mrs. Gudobba was telling me about her children, her young son, Joe, walked through the front door. ("We call him 'Joe' because of the wartime song, 'Don't Cry Joe'—he used to cry a lot and we'd sing that song.") A gangling teen-ager, with dark locks falling over his forehead, Joe was spattered liberally with dirt and grease. His sweatshirt sleeves were rolled up to his shoulders and his hands looked as if they had just emerged from under the hood of his 1959 Chevy.

"That boy's not happy unless he's full of grease," Mrs. Gudobba said with feigned irritation. "Cars, cars, cars. That's all he thinks about."

Joe, in actual fact, had just come from a car-wash establishment where he works weekends, earning as much as $16. His parents used to give him $2 a week allowance but he now has started making his own money, which he spends on jalopies and his girl friend Debbie.

"I don't know what I'll do eventually," said Joe, plopping himself down horizontally on a stuffed rocker. "I'm doing okay in school and I'll graduate in June. But I'm no brain. I'll go to community college and maybe take up tinsmithing or mechanics or somethin'. Gee, if I can make it a year I'll be happy and if I can go it two years that'll be somethin'. At least I hope I don't get drafted."

"Maybe before that you'll wash my car?" his mother put in half teasingly.

"Gee, you shoulda told me. I coulda taken it to the garage and washed it for a buck."

"Okay, so *I'll* give you a buck."

If the Gudobbas had any teen-age problems, they didn't show. Joe's relations with his mother and father seemed comfortably relaxed and easy-going. Mrs. Gudobba had her own explanation for the woes of young people.

"When the kids've got something to do and somewhere to go they're all right," she said. "Macomb County ought to have more activities so the kids aren't out on the streets. Joe here is always bringing his pals home and we've never had any trouble. I remember how mad I used to get when he stayed outside batting a basketball against the garage door till all hours of the night. But Vince always used to say, 'Listen, you at least know where he is and what he's doing.' "

"We've been real lucky with our kids," commented Mr. Gudobba as he took me out to the back yard to show me his tomato patch. "The main thing I've drummed into the kids is to get an education. That's the most important thing. You'll never know how I regret quitting in the 8th grade. But I'm tickled for the kids.

"You know what I tell 'em? 'You see that old car? That's what you'll drive if you dont' get an education. You see that big house? You can have it if you get an education.' Joe complains when I ask him to do a little digging for me. 'How would you like that eight hours a day?' I ask him."

Then he added philosophically: "You don't always convince them. But you get 'em thinking anyway.

"It's like with the unions. The young people today don't realize what they have. They think all these benefits always existed; they don't know how we had to fight and struggle for them. Management never gave us anything—we had to earn our way up."

For Vincent Gudobba unionism has been perhaps the most influential factor in his life. He joined the United Auto Workers in 1936, did shop committee work for 20 years, and at one point was chief shop steward. Today he is letting the "younger ones" take over. But he still belongs to Local 212 and is first vice president of Macomb County AFL–CIO Council and a member of its executive board.

"Today of course Chrysler lives with the union and we get along all right," he said.

"Everybody squawks about unions getting too big. But what about the manufacturers who are making bigger profits? Why shouldn't they have to limit their profits so us working people can have boats, too? Why does a millionaire need more than one boat?"

This Mr. Gudobba said in a calm, matter-of-fact tone, without any trace of resentment or rancor. Mr. Gudobba feels equally strongly about the Democratic Party. Both he and his wife have been precinct delegates to the Macomb County Democratic Committee and always plunge vigorously into election campaigns, canvassing votes and registering voters.

"I feel only the Democratic Party has helped the workingman," declared Mr. Gudobba. "Maybe there are some liberal Republicans, but I'm a laboring man. If the Republican Party did something for the working people, we'd vote for it."

"What's Romney done for us?" he asked rhetorically. "He dropped the wage law and voted against pensions for the elderly. You take Johnson, he's done quite a bit. But I really liked Kennedy—we got spoiled with him. He was for the young people and the younger generation."

But it's not only politics and unions that take up the Gudobbas' time. They have a fund of other interests—the social Silver Dollar Club, the Ladies' Aid at St. John's Lutheran Church, an evening of Crazy 8 at the neighbors, an occasional game of shuffleboard, and sometimes a night in town and a "good show."

"Mostly we stay home and watch TV," said Mrs. Gudobba. "I hate the commercials, especially when you're waiting for the end of a picture. But I like the Bob Hope Hour. And Perry Mason. He's my favorite. Then, you know, the kids are always running over here and there's always something going on.

I saw this for myself when the Gudobbas invited me over one Sunday morning for pancakes and sausages. I arrived just as Mrs. Gudobba, her daughter-in-law Lois, and Lois' three children were returning from St. John's. Six-year-old Eddie immediately plunked himself down in front of the TV and sat transfixed at the goings-on of "Beany and Cecil." Little Timothy, aged two, sporting a shirt with "Batman" emblazoned across the front, hovered around his grandmother's legs and consumed everything and anything he could lay his pudgy hands on.

Outdoors Mary Anne, aged four, having dutifully sat through a church service, started chasing her cousin Denise; it wasn't long before a pitiful little cry echoed through the house. Mother Lois, clearly experienced in the politics of children, took everything in stride.

"Mary Anne, come here. Why did you push Denise?"

"I didn't push Denise. She pushed me first."

"Well, go over and sit on the couch. And stop crying or I'll put you to bed." Penitent and sniveling, her pride wounded, Mary Anne obediently went to the couch. Five minutes later all was forgiven and she buried her head in her mother's skirts.

Through it all—the quick-tempered but short-lived squabbles, the infectious bursts of laughter, the uninhibited screams of excitement—Mrs. Gudobba placidly went on making pancakes. And they disappeared, every one.

Why We Should Back Our Boys in Vietnam

SPEECH
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 23, 1967

Mr. BOGGS. Mr. Speaker, the Young Men's Business Club of Jefferson Parish, which I have the honor to represent, has recently completed an essay contest in which students of the parish were invited to submit essays on the topic, "Why We Should Back Our Boys in Vietnam."

The thoughts that the winner, and two runners-up, have offered in their essays contrast sharply with the small but vocal minority of students who protest our role in Vietnam.

Through the minds of the winners of this contest, we can see that the U.S. position in Vietnam is understood by thinking students. I believe it is good for all of us to read these essays.

The essays follow:

WHY SHOULD WE BACK OUR BOYS IN VIETNAM

(By Vickie Gros, Immaculate Conception School, grade 8, Marrerro, La.)

Our boys in Viet Nam should be supported because they are fighting for a cause greater than any other in the world today. They are fighting so that a small country can maintain independence, the power to rule itself. This, many people in our country take for granted, because they have never been without it. But to the people in countries like Viet Nam it's one of the greatest gifts on this earth. With it you can be a free person, without it not much more than a slave and in some places even lower. Life is meaningless.

The troops in Viet Nam serve as living symbols of democracy to all nations of the free world. They also reassure all democratic allied nations that the United States will always be willing to render whatever assistance necessary to combat aggression. In addition to serving as symbols to free nations, they also serve as a reminder to communist countries that the United States will not tolerate any aggression on their part towards any of our allies.

Our Boys leave their homes, families, and friends to defend a small nation fighting to protect its freedom in the midst of the many communist powers of Asia. They go to remote areas where they can't tell friends from enemies, fight hard for the sake of liberty and justice, and many even die aiding a country that cannot help itself.

Not supporting our boys in Viet Nam would be equivalent to not believing in what democracy stands for. The mere fact that a nonsupporter is able to express himself in our society should be reason enough for him to realize why our boys in Viet Nam must be supported. For what goals are greater than life, liberty, and the pursuit of happiness?

WHY WE SHOULD BACK OUR BOYS IN VIETNAM

(By Richie Tankersley)

War is a terrible thing. It takes with it not only ruin and distress, but lives and suffering as well. While we cannot explain why war must exist, we know that it will always be, and, even though we cannot stop it, we can and must do several things to make it easier to bear.

Our American boys in Viet Nam represent freedom and a peaceful nation. In America, we are proud of our independence, and we are not afraid to let others know about it. Our boys, in turn, are showing their loyalty to their free homeland. With weapons and determination, they have kissed loved ones goodby and have set off to win a war for freedom. Some are fighting hard and shall continue to do so. Some are lying in crowded hospitals, anxiously awaiting the time when their wounds will be healed, and they can continue the long battle. Others lie on blood-stained battlefields, never to return home or find out if their efforts were rewarded.

The least we can do is to give our boys the confidence they need. Just a short letter, a card, a thoughtful gift—anything for our soldiers renews their spirits. If we lose faith in our nation or its power, what kind of feelings do you suppose our boys will have? Why should they try when their own country does not have faith enough to care? We must not let our boys down. They represent us, the people of the United States of America. And we are proud of our country—and our boys!

WHY WE SHOULD BACK OUR BOYS IN VIETNAM

(By Michael Nee)

Wars are unpopular—any war. But, this is especially true of the war in Viet Nam.

The people of America have become so involved in their own lives—pleasure and making money—that there is little time for anything else. Because of the sacrifices that Viet Nam demands this war is very unpopular.

We must realize that the spread of communism has to be ended. The government of South Viet Nam has asked the United States for help to end this threat. If we don't end it in Viet Nam, it will be somewhere else. Maybe when we do decide to stop it, the problem will be much greater and it will require many more lives to solve it.

Any man in Viet Nam should have all the backing our country can give him. He is fighting to preserve our way of life. The fact that we don't agree is no reason to be a slacker. In past wars there were always those who didn't agree—but they fought anyway. The fact that we are allowed to disagree should make us realize how fortunate we are.

It should be an honor for every American to fight for his country. President Kennedy said "Ask not what your country can do for you, but what you can do for your country."

Shorter Presidential Election Campaigns

SPEECH
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. MONAGAN. Mr. Speaker, the 1968 presidential elections are rapidly approaching and I shudder to think that we will expose the public once again to that summer and fall extravaganza which we call a presidential election campaign. Since 1960 I have endeavored by reducing the time of campaigns to introduce an element of sanity in our presidential electioneering not only to save money, but also to conserve the energies and health of candidates and to prevent a provoking imposition on the public. This session I have introduced an amendment to the Presidential Election Campaign Fund Act of 1966 which, I believe, will accomplish the objective of reducing the length of presidential campaigns.

I hope Congress will give prompt and favorable consideration to my amendment. It is with this in mind that I ask unanimous consent that an editorial from the Hartford Times of January 7, 1967, which succinctly states the case for action be reprinted as follows:

HOT AIR REDUCTION

Protracted presidential campaigns have become so irritating and tedious to the people that they would welcome some abridgment.

Congressman John S. Monagan of Waterbury, representing our Fifth District, has been a persistent pleader for shorter campaigns. He began seven years ago and hasn't given up the fight. He is again introducing a bill incorporating proposals for shorter campaigns.

In 1960 the five-year congressman thought 60 days sufficient for candidates to expound their views. He hasn't changed his mind.

The congressman thinks present practices are objectionable for a variety of reasons.

They are, for example, "over-elaborate and generate more heat than light." They also are "unduly expensive" while at the same time they "emphasize the unimportant" and their most regrettable aspect is "their physical effect upon the candidates themselves."

Before the advent of radio, television and swift air transport there was more reason for long campaigns. This is a big country; it took time for candidates to cover even a relatively small part of it. But no longer.

Now candidates can bring their messages into millions of homes and, in a single day, touch half a dozen states to speak directly to the people.

Furthermore, after the first few weeks the candidates are repeating themselves with such regularity that the people get fed up, lose interest, and turn to other things.

Congressman Monagan rightly labels present campaigns as "vaudeville-circus type" which he insists should have "passed into oblivion with the departure of the stagecoach."

He is right. It is absurd to continue a practice increasingly repugnant to the people.

The Late Charles Anthony Buckley

SPEECH

OF

HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. JONES of Alabama. Mr. Speaker, I read with great sadness of the passing of our distinguished former colleague, the Honorable Charles A. Buckley.

It was my distinct personal privilege to be able to serve with Congressman Buckley on the House Committee on Public Works for several years.

As chairman of the Committee on Public Works for 12 years, Charles A. Buckley earned the gratitude and respect of all the people of this Nation by his sincere and devoted interest in the building and development of all sections of the country.

He very ably represented a district from New York City, but his outlook and his energies were directed toward a better and stronger United States.

Through his chairmanship of the Committee on Public Works, he was responsible for an impressive array of vital Government activities.

He was sincerely interested in and worked to promote improvement of the Nation's rivers and harbors for the benefit of all the people.

He took a special interest in flood control projects which protect the life and property of people in our vast river basins. These projects also provided hydroelectric power and recreation benefits throughout the land.

Mr. Buckley showed great concern for the multibillion-dollar Federal highway program and through his leadership the Committee on Public Works authorized the 41,000-mile Interstate System—the greatest single public works program in the history of the world—which will link all our major cities when completed. This program provided billions of dollars into our economy at a time of need and has provided jobs for untold numbers of men in all sections of the country. It has also revitalized the vast automobile industry and its companion industries such as steel, concrete, asphalt, and rubber.

Charles Buckley showed a special interest in my section of the country—a thousand miles from his home in New York. He was forceful in his leadership for the development of the Tennessee Valley Authority which has continued to bring prosperity to the Tennessee Valley and has been essential in providing electric power for our great space center at Redstone Arsenal in Huntsville, Ala., as well as for new and developing industries from one end of the valley to the other.

His concern and leadership was also responsible for developing a program to prevent beach erosion and create thousands of new beaches along our Nation's coastline.

A detailed account of the vital work of Charles A. Buckley for the development of his country would require pages. He exhibited foresight and determination in presenting innumerable worthwhile improvements throughout the country.

For this, Americans in all States owe Mr. Buckley a large debt of gratitude.

We will continue to benefit from his leadership and direction for years to come.

It was a great personal privilege for me to be able to know Charles A. Buckley and to serve with him on the Committee on Public Works.

My deepest sympathies go out to his family in this time of their great loss.

Those Elusive Gallactic X-Rays

EXTENSION OF REMARKS

OF

HON. HERVEY G. MACHEN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, January 23, 1967

Mr. MACHEN. Mr. Speaker, Dr. C. Stuart Bowyer has been searching for some time now for those elusive X-ray sources in outer space. With the aid of a $180,000 grant from the National Aeronautics and Space Administration, Dr. Bowyer, who resides with his wife and family at 3300 Gumwood Drive, West Hyattsville, Md., recently was able to fire an Aerobee rocket into space to further his scientific inquiry.

The following article from the Washington Post of January 7, 1967, aptly describes the recent efforts of just one of thousands of space scientists in our country who are performing valuable research tasks in their long standing determination to find the answers:

SCIENTIST HUNTS SPACE X-RAY ORIGIN

(By Don Robinson)

C. Stuart (Stu) Bowyer is back at his desk after a December expedition in Brazil where he encountered a scorpion, a coral snake, a tarantula and—possibly—several extra-gallactic X-ray sources.

The bugs and snakes were gratuitious, furnished by the equatorial landscape around Natal on the northeast coast of Brazil.

The X-ray sources were what Bowyer was really after. He and a team of scientists went after them by launching a detector rocket. Data telemetered to earth during the rocket's four minutes in space is being analyzed now to determine what was found.

Bowyer is a gangly, six-foot-plus, 32-year-old research assistant professor in the Catholic University department of space science and applied physics.

He is an exuberant member of a small band of astrophysicists engaged for the past couple of years in one of the newest fields of astronomy—the search for, and analysis of, sources in space that emit X-rays.

Some 10 to 20 such sources have been identified thus far. No one knows exactly what they are; the first task is to determine how many there are. It was only a few years ago that a group from Massachusetts Institute of Technology detected the first X-rays in the sky.

This was quickly followed by additional discoveries by scientists of the Naval Research Laboratory in Washington including Bowyer, then a doctoral candidate. The leader of this effort, now the world's prime authority on X-rays in space, was Herbert J. Friedman, superintendent of the Atmosphere and Astrophysics Section of the lab.

Eventually, Bowyer decided to send up a rocket to look for X-rays in the skies above the Southern Hemisphere.

After joining the Catholic University faculty, he obtained a $180,000 grant from the National Aeronautics and Space Administration. He and a team of faculty members, graduate students and undergraduates spent from March to November last year constructing an instrument package to detect X-rays.

That six-foot instrumentation section was fitted onto a 22-foot Aerobee rocket, capped by a 3-foot nose cone containing radio transmission equipment, and shot from the Brazilian range facility at Natal on Dec. 13.

Upon his return to Washington, Bowyer learned from a West Coast astronomer that his rocket may have been up during the occurrence of a nova—a super-explosion of a star.

"If we can tell where we were looking, and if we were looking where we were supposed to be," Bowyer enthusiastically told a coworker on the phone, "we may have what they (novas) look like in X-rays." At present, the world's only records of novas are optical.

Analysis of the data will take several months. Until then, Bowyer is cautious about saying what his probe did or did not discover, although there are strong indications that several X-ray sources were detected.

H.R. 3803 Seeks To Reduce the Oil Depletion Allowance

EXTENSION OF REMARKS

OF

HON. HERBERT TENZER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. TENZER. Mr. Speaker, on January 25, 1967, I introduced H.R. 3803, a bill to reduce the oil depletion allowance from 27½ percent to 20 percent at the rate of 2½ percent annually over a 3-year period.

The bill also requires the Secretary of the Treasury to reduce the tax allowance by an additional 50 percent whenever he finds that a substantial part of the tax savings has been used to finance mergers with or to purchase companies in unrelated fields.

During the 89th Congress, I introduced an identical bill and I urge my colleagues in the House to call for congressional hearings on this special tax privilege which results in an annual loss of revenue to the U.S. Treasury of nearly $2 billion.

Now in 1967, with the President proposing a 6-percent surtax for individuals and corporations, it is all the more important—I should say urgent—that we do something about the oil depletion allowance in particular and also something about other tax loopholes in general.

Our Federal budget is increasing and our local village, town, city, county, and State budgets are likewise increasing—often to an even greater degree. Plugging the tax loopholes is our way to equalize the tax burdens among the Nation's taxpayers, corporate as well as individuals.

The special privileges under our present tax laws to the oil companies are inequitable and require all other corporations and individuals to carry a greater share of the tax burden than they should be carrying.

It is shocking that the largest oil companies pay a smaller percentage of their net incomes in taxes than small businessmen, workers, and farmers. The man in the lowest tax bracket pays 14 percent of his net income in taxes while in 1965 the 20 largest oil companies paid an average of 6.3 percent of their net incomes in Federal taxes. These companies had a combined net income of more than $5.7 billion, yet paid only $360 million in taxes.

The depletion allowance was originally enacted as an incentive for further exploration in a field with a large risk factor; but as President Kennedy stated in his 1963 tax message to Congress:

> Unintended defects have arisen in the application of the special tax privileges that the Congress has granted to mineral industries, and correction of these defects is required if the existing tax provisions are to operate in a consistent and equitable fashion.

In the 89th Congress we passed a bill to defer the 7-percent investment credit and to postpone the fast writeoff and depreciation of real estate and construction. These incentives were needed when originally enacted to help create jobs, reduce unemployment, encourage construction and provide housing, respectively. I respectfully contend that the incentive to encourage further exploration of oil is not as urgent as the requirement to fill some of our basic human needs and to help reduce the tax burdens upon our citizens.

The following editorial, in which a reference is made to the depletion allowances, appeared in the January 25, 1967, edition of the Long Island Press. I call it to the attention of my colleagues for their consideration:

THE FEDERAL BUDGET

President Johnson's $135 billion budget for fiscal 1968 is our largest in history, the result of his commitment for both guns and butter—to wage limited war and limited peace at the same time.

A little more than half ($72.3 billion) will go for the guns, $21.9 billion of it for Vietnam. The remainder represents the butter.

As incomprehensible as these huge figures are to ordinary mortals, none of this comes as a surprise—except for little things like a call for an unmanned landing on Mars in 1973 and construction of a third nuclear aircraft carrier.

The remarkable thing is not that the budget is so high, but that it appears quite manageable, considering we are trying to fight a limited, but major war overseas, reach the moon, touch Mars, improve the nation's education, health and welfare and just keep the myriad of governmental wheels turning. In line with the national impatience over the rising federal commitment to non-war spending, the President has not significantly expanded the Great Society programs. Whatever increases he has called for are relatively modest, far below the national need.

What makes this huge adventure in spending possible, of course, is something the viewers-with-alarm fail to consider—that a high rate of prosperity, represented by a $787 billion national output for 1967, means a higher rate of tax collection. And that $787 billion national product represents a $47.5 billion increase over 1966.

Whether this will be enough to avoid those "measures of sacrifice" the President spoke of—notably the 6 percent surcharge on corporation and most personal income taxes—will depend on the course of the war and the state of the economy later this spring.

None of this will stop the outcries for cuts in "non-essential" spending and the usual fears of doom in the deficit. Congress, motivated more by politics than good economics, will energetically go over all this with a fine-tooth comb. We wish them well in their economy hunt. There is always fat to be trimmed.

But while the Congressmen are prowling through the space and anti-poverty budgets with their pruning shears, it would be refreshing to see them devote energy to plugging some tax loopholes as well. Thanks to depletion allowances and the like, for instance, there are a lot of rich people in the oil and cattle business, who chuckle all the way to the bank over the higher taxes that do not touch them. Philip M. Stern, in "The Great Treasury Raid," estimates these loopholes cost the Treasury $40 billion a year, nearly four times what the President's tax increase would bring in over two years.

I believe the House Ways and Means Committee should hold a public hearing on revisions of our tax laws to eliminate inequities such as the oil depletion allowance. This is a year in which Members of Congress will be talking about cutting nonessential spending as a result of the President's request for a 6-percent tax surcharge. I suggest that we also look at loopholes in the tax laws which cost the Treasury billions of dollars. That is why I have reintroduced my bill which would lower the oil depletion allowance by 7½ percent, bringing to the Treasury approximately $500 million per year in additional revenue.

Mr. Speaker, with a greater understanding of the inequity of the oil depletion allowance loopholes there would be greater support for the passage of H.R. 3803. I plan to make available to my colleagues and to my constituents vital statistics and material on the subject to help bring about a better understanding.

Where Are We Headed?

EXTENSION OF REMARKS

OF

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. WYMAN. Mr. Speaker, occasionally, editorials are helpful in achieving understanding and perspective. Such an editorial, in my opinion, is that appearing in Foster's Daily Democrat, an outstanding newspaper in my district, on January 10, 1967, entitled "Where Are We Headed?"

The editorial follows:

WHERE ARE WE HEADED?

As the last sheet is torn from the calendar the pundits, commentators, financial and editorial writers pause with pen in hand to make a retrospective look at the year 1966. They will find that it was a good year in many respects. The economic indices continued to reflect a general state of affluence that the nation has enjoyed for 20 years. The blatant evidence of this affluence has bothered those who find it difficult to reconcile the tragedy that men are facing in Viet Nam with a persistent demand at home for a life of greater ease and comfort. The truth is that while the output of United States industry poured a flood of material well-being across the land, there was no stinting on military requirements.

The productive capacity of this country has become so great that it can sustain a major war effort without interrupting our peacetime lives, and judging by reports at the end of the year, there is growing evidence that the communist world is not a monolithic force after all. Serious as it is, the war in Viet Nam and the threat of worldwide communism may have less of a bearing on the shaping of the American future than events that have been taking place right here at home.

In the midst of prosperity, there has been a rising discontent that is difficult to explain. At a time when major industries and business leaders are devoting a large part of their energies to helping solve broad social and economic problems, a deep-rooted movement is sweeping across the country that could well undermine the private enterprise, free market economic system.

During 1966, extensive investigations into the motives and the performances of many basic industries reached a new high. The maladjustments of inflation have been blamed on industry. Toward the end of this past summer, consumers turned their wrath on retail distribution. Housewives picketed stores and demanded price reductions. Simultaneously, striking unions made a shambles of the government's wage guidelines. Wage increases threatened to outstrip productivity increases. All of these things promise to raise a fundamental issue to which most citizens have given no thought.

The issue that is being raised by the striking housewives, striking workers and investigative government bodies, involves the question of whether or not our private enterprise, capitalistic system, which functions on the profit motive, is to be retained? The growing discontent, if it runs deep enough, will result in legislative action that will alter irrevocably the system under which we have lived since the founding of the nation.

Since any fair examination of the record will reveal the great benefits that have been derived from competitive capitalism, we must assume that the present discontent is based on misunderstanding—a misunderstanding that has been encouraged by irresponsible political actions that have led to the depreciation of the dollar. The rise of discontent among U.S. citizens, if not resolved, may well lead to the crippling of productivity and the erosion of liberty, as controls are substituted for the laws of supply and demand in a free market—a market that is incomparably the best in the world. Life magazine describes its accomplishments in a few sentences: "American housewives, many of whom are engaged in supermarket boycotts to protest the high cost of food, spend an average 18.2 per cent of their families's take-home pay to buy that food. In 1960 they were spending 20 per cent and in 1947, 24.6 per cent. In France, housewives dedicate 30 per cent of their family budget to food. In Japan the rate is 43 per cent, and in the Soviet Union—something between 50 per cent and 60 per cent."

As the new year opens, we should all vow to try a little harder to understand what makes the wheels go around in the United States. That is the biggest task we face in 1967. Only through understanding can we erase excessive discontent and mistrust. Only through understanding of bread and butter facts of our economic system can we hope to retain the good and abundant life that we have enjoyed in the past—to say nothing of freedom and our stature as a world power.

The Late John E. Fogarty

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 26, 1967

Mr. VANIK. Mr. Speaker, I want to take this opportunity to join my colleagues in the House of Representatives in paying tribute to the dedicated service and tremendous contributions in the national interest of the late John E. Fogarty, of Rhode Island.

During the entirety of my tenure in Congress, I have been fortunate to receive counsel continually from John Fogarty during the course of legislative activities over the past 14 years. His friendship has been of great importance to me personally. He was a wise and judicious man who never failed to place the interest of this country above all considerations. The legislative accomplishments attributed to him are but a fraction of the total contributions he actually made to the health and welfare of the people of our country.

While it is difficult to contemplate how history might have differed were it not for one man, it is possible to know the long list of significant contributions John Fogarty made. His record in the field of health and welfare was so comprehensive, his name and work dominate the field throughout the country. It was a fitting tribute that flags flew at half staff on the buildings of health institutions, public and private, throughout the country as a voluntary act of homage to a great leader.

We will miss him in the House of Representatives and in the country.

I wish to include in my remarks a copy of an article written for the Cleveland Press by Marie Daerr, reporting Mr. Fogarty's visit to Cleveland on January 4, 1967. As well, I wish to include a fine tribute written by Howard A. Rusk, M.D., in the New York Times January 15, 1967, called "Mr. Public Health."

I wish to convey my condolences to Mrs. Fogarty and to his children who can be proud of the exemplary record of this fine gentleman.

The articles follow:

[From the Cleveland Press, Jan. 5, 1967]

Elderly Urged To Watch Congress

(By Marie Daerr)

It is essential that older people be kept up to date on legislation—and that, as responsible citizens, they let their representatives in Congress know their reactions.

Cong. John E. Fogarty (D-R.I.) had this message today for 400 older adults attending the Live Long and Like It Library Club's annual institute at Higbee's. The all-day event marked the Cleveland Public Library group's 20th birthday.

On the program were Fogarty, Louis B. Seltzer, former editor of The Press; Mrs. Lucia Bing, retired coordinator of volunteers for the Golden Age Center, and Miss Fern Long, Live Long and Like It adviser and head of the library's adult education department.

Fogarty praised Miss Long for the imagination and leadership she has shown in guiding the club since 1946 and said its program, which "has been widely imitated but never duplicated."

Fogarty said that, in spite of much publicity given Medicare before its enactment, there still is much misunderstanding about the program. He made a plea for a public information program to relate the legislation he introduced last year, known as Livingcare or the Health Education Act of 1966, and the Social Security Amendments of 1966, which he said he planned to introduce again.

Seltzer said that, while American society has done much to secure people against the hazards of old age, through such programs as retirement benefits and Medicare, it must redirect its efforts to help them to "a maximum and most meaningful use of their time." This would come through such aids as job opportunities and crafts and hobby classes.

"It is a monumental tragedy that we have lengthened people's lives, then farmed them out, left to their own devices," Seltzer said. "They get their pension checks, their Social Security, then what?"

[From the New York Times, Jan. 15, 1967]

Mr. Public Health—Death Ends Long Fight by Representative Fogarty To Give America Freedom From Disease

(By Howard A. Rusk, M.D.)

If hospitals, research laboratories and institutes for the aged, infirm and retarded had flagpoles, every flag would have flown at half-staff this past week to mourn the loss of John E. Fogarty.

Representative Fogarty of Rhode Island died of a heart attack last Tuesday at the age of 53.

Flags at half-staff would not, however, have been limited to institutions. They would also have been in evidence in thousands of homes throughout Rhode Island and the nation.

Mr. Fogarty was not just interested in institutions and dollars. He was interested in people, and no appeal for help that went to his office was ever left unanswered. He would go to inordinate ends to try to find the solution to problems that were all too often insoluble.

No one in the history of this country has done more to promote more and better health services, more and better health facilities and more and better health research than Representative Fogarty.

PLANNED NEW CRUSADE

Ironically, his death came just before he was to be sworn in for his 14th term—a time when he was mobilizing his forces for another all-out crusade against disease, disability and death.

Also ironically, his death was caused by a heart attack, his own personal public enemy number one as the primary killer of others.

The contribution of John Fogarty to improving health and rehabilitation services for the American people are legend.

When he entered Congress our Federal investment in medical research was but $3-million. It is now well over $1-billion.

During his freshman year in the House of Representatives, the number of disabled persons rehabilitated into employment under the public program was but 12,000. Last year it was more than 154,000.

Medicare, Medicaid, more nursing home beds, Federal aid for the training of physicians and other health workers, the clinical center of the National Institutes of Health, workshops and classrooms for the mentally retarded and all of the other tremendous advances in health and rehabilitation in the last quarter century stand as monuments to this late "Mr. Public Health."

He and his co-worker in the Senate, Senator Lister Hill from Alabama, were recognized as the great health leaders of all time. They complemented and supplemented each other in their continuing fight for the fifth freedom—freedom from disease.

STARTED AS BRICKLAYER

Mr. Fogarty's formal education ended when he received his high school diploma. He immediately followed in the footsteps of his father and older brother and became an apprentice bricklayer.

He was only 27 when he was first elected to Congress from Rhode Island. During World War II he served as an enlisted man in the Navy construction corps. After the war he returned to Congress to carry the torch for the enlisted men in the armed forces.

Having been denied a formal education and a college degree, he made possible through his untiring efforts the education of literally thousands of others as physicians, scientists and technicians because he cared.

Some years ago Mr. Fogarty was challenged with the opportunity to run for the Senate from Rhode Island. After a great deal of discussion with his friends and colleagues he decided his destiny was in the House of Representatives where he could continue his fight for health as chairman of the Subcommittee on Appropriations for Labor and Health, Education, and Welfare.

This was a decision that for suffering humanity was a blessed one.

John Fogarty, who started as a bricklayer, ended his career by placing countless bricks in a solid foundation of modern laboratories, medical schools, hospitals, institutions for the mentally ill and the retarded, and research laboratories that extend from the halls of science to the community itself.

With his bright green tie and his Irish accent, he was a circuit rider for health, a teacher, a preacher, a fearless foe to any challenger who stood in the way of his crusade.

He died on the field of battle. His friends from the scientist to the sick mourn his loss and call him blessed.

RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record, with Mr. Raymond F. Noyes in charge, is located in room H-112, House wing, where orders will be received for subscriptions to the Record at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

Appendix

Europe's Advice to United States on Medical Care

EXTENSION OF REMARKS

OF

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, January 30, 1967

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Europe's Advice to United States on Medical Care," published in the U.S. News & World Report of January 23, 1967.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EUROPE'S ADVICE TO UNITED STATES ON MEDICAL CARE

(NOTE.—Medicare in America, European experience indicates, is not likely to stop with aid for the aged. Countries which have had forms of socialized medicine since as long ago as 1883 believe that the U.S. program inevitably will be expanded. Their authorities have some friendly words of advice on what to do and what not to do.)

REPORTED FROM EUROPEAN CAPITALS

From Europeans with years of experience in socialized medicine come words of caution to the U.S., six months into its first venture in this field.

Medicare care for the aged started in the United States last July. Nursing-home care was added on January 1. European experts, convinced that these first steps will lead to others, give this advice:

Medical services should not be absolutely free. Patients, except the indigent, should be charged a reasonable part of the costs—up to 30 per cent.

Don't move too fast in expanding coverage, lest demands for medicare exceed the capacity of doctors, hospitals and nursing homes.

Continue to provide private medical care for those who can afford it and desire it. Freedom to choose doctors should be zealously preserved.

Government resources should be concentrated on maximum medical care for the aged and other groups with the greatest need, rather than spread thin trying to provide everything for everyone.

Nationalization of hospitals and medical services should be avoided.

Group practice by physicians in well-equipped medical centers should be given maximum encouragement and financial assistance.

In country-by-country reports, here are experiences that Europeans have had with socialized medicine, and some pitfalls that the U.S. is urged to avoid.

Stockholm

Sweden's experience with a system of compulsory health insurance and free hospitalization for all shows that heavily subsidized medicare is bound to be a severe strain on the health services of a country.

Sweden has been running into unforeseen difficulties ever since its system went into effect in 1955. From a social point of view, the Swedish plan has its advantages. Financial obstacles to adequate medicare have ceased to exist. Everyone can afford to have his health examined and to seek medical and hospital treatment.

At the same time, however, demand for medical services and hospitalization has kept soaring beyond expectations. Waiting periods for admission to overcrowded hospitals and nursing homes for the chronically sick and old persons have been getting longer, partly because of personnel shortages.

Overburdened doctors have been forced to turn away many patients, including older people. Experts predict that most of these shortcomings will persist well into the '70s, despite great efforts to expand the medical and hospital staffs in this country.

The same is true for Norway, which has a system similar to Sweden's, and Denmark, which has a far more complicated medicare plan.

"Social necessity." Swedish medical leaders and health insurance officials who know America take the view that medicare for the aged in the U.S. is a "social necessity." The wealthiest nation in the world, they say, should be in a position to do more for its older citizens than it has in the past.

Yet these officials admit that the U.S. experiment in medicare for the aged could easily lead to troubles similar to those that exist here today, and they mention some risks.

A sharp rise in the number of people seeking medical examinations and hospitalization is to be expected as the program advances. Doctors will be inclined to send more patients to hospitals for care. The U.S. will therefore be facing a mounting shortage of doctors and hospital personnel, already a serious problem.

A dramatic increase in the cost of medicare seems inevitable, especially if the U.S. now should enter a period of inflationary price and wage increases. Hospitals would have to offer higher pay and better fringe benefits to attract more people into the medical services.

In Sweden, the total cost of health services has been multiplied by four in the past 12 years. It is expected to climb by at least 10 per cent annually from now on.

The Swedish system provides free hospitalization for all. This includes food, treatment, nursing, medicines, and transportation to the hospital. No limit is placed on the length of stay. Patients who wish a private room must pay the difference between that room and the cost of a bed in a ward—now established at $31 a day.

The plan covers up to three fourths of the bills from doctors in the public-health service, based on a standard fee schedule. Choice of a doctor is unlimited. Private practitioners and specialists are free to charge higher fees than the standard rates. Patients who prefer private doctors usually get refunds of only about 30 to 50 per cent. Drugs prescribed by a doctor are available at discounts of up to 50 per cent. Some drugs, such as insulin, are free.

"Psychological imperative." Says a prominent Stockholm physician: "It's imperative, for psychological reasons, that the patient pay some part of the cost. People would be tempted to abuse our health plan and see doctors more often than necessary if medicare were completely free of charge. Things would get out of hand."

A prominent Stockholm doctor who has had experience in the U.S. believes that the American system of medicare will continue to expand in the years ahead to include more and more people until it resembles the Swedish plan.

Therefore, he advises Americans to take a good look at the Swedish plan and study its advantages and shortcoming in preparation for what lies ahead.

London

Medical experts here, on the basis of 18 years' experience in operating a comprehensive system of socialized medicine, warn that the British National Health Service is the worst possible model for the U.S. to copy.

The British plan, these medical men say, has tended to aggravate the difficulties now bedeviling the medical profession in every advanced country: a shortage of doctors, high cost of building and operating hospitals, enormous stress on specialization, loss of professional incentive for general practitioners, and a breakdown of the traditional doctor-patient relationship.

Chronic shortages. By offering comprehensive, "free" medical care for everyone and by depending mainly on tax revenue for its financing, the British system is chronically starved for capital and operating funds. Pay of doctors and financing of hospitals depends on the state of the National Government's budget each year, and not on the ability of patients generally to pay at least part of the cost of medical attention.

General practitioners, in particular, complain that under this system they must look after too many people to permit them to practice good medicine, and that any "interesting" cases almost automatically must be sent to hospitals. That's one reason why so many doctors—between 300 and 400 annually—are emigrating from Britain to Australia, Canada, New Zealand and the U.S.

The number of general practitioners working under the National Health Service actually is declining, while the population is increasing steadily. That means fewer doctors to care for more people under a system that already is overloaded.

Two tiers of medicine? Some medical experts here are predicting that a two-tier medical system will develop in Britain in place of the present setup. More and more people with middle-class incomes and standards are expected to buy health insurance to bypass the queues in their family doctors' offices and in hospitals. "Free" care still will be available for all under the National Health Service, but will be used mainly by the aged, the indigent and the lower-income groups.

By starting with a system of state-sponsored and subsidized medicare for the aged only, British medical men say, the U.S. is moving in the right direction. Under this plan, they contend a nominal contribution is made by patients, hospitals remain locally controlled and the service is limited to the group in greatest need.

But, these authorities warn, the real problems will begin to show up as pressures inevitably grow to extend medicare to other groups in the population—first the children, then to those suffering from diseases that are economically disastrous, and, finally, to all below a certain income level.

Paris

A French system of national health insurance has been in effect since before World War II. A highly complex system based on payroll deductions and employer contributions, it permits most Frenchmen to get an

80 per cent refund on doctors' bills, hospital costs and purchases of medicines.

As medical men watch the U.S. move into the same fields, they offer some advice in the interest of "good medicine." Here are typical comments:

"It is important that people pay at least something. If medical care is absolutely free, people take advantage. They think that you owe them the service, and they act as though they really don't think the service is good, anyway. They drop in without appointments, for even the most trifling causes.

"Once the Government starts dishing out money, it inevitably has to exert some controls. Watch out for excessive Government regulation."

Another doctor says: "By actually having to pay out funds, even though he gets most of it back, the patient remains aware that the doctor is a real person—not a faceless civil servant.

"State medicine will always be 'quick medicine.' Medicare fees will have to be low. No government in the world, including the U.S. Government, can afford to pay doctors what is required for them to provide slow, studied care. Quick medicine can be adequate. You can give diagnoses and make treatment, but you can also make mistakes.

"The slow way is safer and more efficient. There will always be need for private doctors who can practice in this way. Even the Soviet Union has them."

Rome

The Italian health service is in the middle of a crisis which doctors here say should provide a lesson for Americans on the pitfalls to avoid.

Every Italian is entitled to doctors' care, hospitalization and medicines—all without charge. This costs nearly 194 million dollars a year and is paid for by contributions from employers—an amount equal to 10 per cent of their payrolls—and workers, plus Government subsidies. The results are far from satisfactory. Patients complain of the hastiness of treatment, the limited list of free medicines and the incomplete or delayed reimbursement when treatment is paid for in advance.

Doctors are calling for higher pay rates and are protesting against the growing bureaucratization of their profession and the frequency with which they are consulted for the slightest ailments, such as common headaches. On all sides, there are complaints over time wasted on red tape and over the great shortage of hospital beds which at times is responsible for dangerous or even fatal delays in treatment.

Much of the dissatisfaction and confusion is caused by the fact that there are more than 200 state health-insurance agencies, all of which have their own administrative staffs and budgets. The type of care varies widely. Only six of the insurance agencies cover more than 1 million people each, but one is responsible for 28.5 million.

This big agency, known as INAM, had a deficit in 1965 of nearly 105 million dollars. Its payments for medical care have more than doubled since 1962.

About half of Italy's 85,000 doctors are registered with the state-operated medicare system. Some are paid for each consultation, some according to fixed quotas of patients. Few are satisfied.

A leading Rome physician says: "A doctor in state medicine loses all incentive to pursue professional perfection and scientific improvement. He becomes a white-collar worker whose work is conditioned by the fact that free service attracts the public for the slighest ailment. This can cause symptomatic and superficial treatment."

Bonn

In West Germany, which has had a medicare system since 1883, about 48 million people—87 per cent of the population—are covered by compulsory health insurance. It is financed by contributions from workers and employers.

Individuals with incomes above $220 a month can join the plan on a voluntary basis or subscribe to private insurance programs.

German medical authorities recommend that any medicare plan be limited to low-income groups, and that in any event those covered should pay part of the cost of treatment and medicines.

Most German doctors combine treatment of medicare patients with private practice. Their average income from the medicare program is $20,000 a year, to which they can add fees from treating private patients.

Geneva

Medical care in Switzerland still is based primarily on voluntary insurance through private "sick funds," supported by moderate Government subsidies. Most of the funds operate as nonprofit mutual companies. However, private, nonsubsidized health insurance is growing fast.

Only a few cantons (States) and communities have introduced compulsory plans for people of moderate means or children. The Swiss, therefore, have had little experience with state medicine.

Medical leaders and health officials here who follow developments in the U.S. believe that state-financed medicare for the aged sooner or later will develop into a broader and costly system of state medicine for most Americans.

Politicians, they contend, will find it difficult to resist pressures from other groups which want to share the benefits of medicare. They see the program being extended to cover a wider range of medical expenses, such as drugs, dental care and special services.

The U.S., these observers say, seems likely to move toward a more and more comprehensive health scheme.

A "means test"? Many Swiss doctors hold the view that medicare without a "means test" is bound to lead to a rush on hospitals and excessive demands for medical services in general.

Completely free medicare, the Swiss believe, encourages patients to wander from one doctor to another, seeking advice and treatment for the same ailment. Doctors soon find themselves overburdened with minor cases and have too little time for patients suffering from serious ailments.

Experience here also shows that medicine available free of charge or at very low, subsidized prices often leads to overconsumption of drugs.

Vienna

Austria has a compulsory plan of medicare that embraces about 90 per cent of the population. It is paid for by taxes on workers and their employers and covers hospitalization, treatment by doctors in and out of their offices, medicines dispensed by hospitals, dental care and prosthetics.

On the basis of experience, Austrian medical authorities say the system creates these problems:

Free, or virtually free, medical care encourages patients to take a wasteful attitude toward medical care. The patient tends to run to a doctor, or to a hospital, at the slightest symptom—real or imaginary—of ill health. He welcomes an opportunity to get a "sick slip"—in effect, a paid vacation from work. His will to get well quickly is blunted—a mental attitude which, in turn, has an adverse effect on his physical health.

Moreover, these experts add, the relationship between doctor and patient is adversely affected. The patient tends to view the doctor with suspicion; he forever suspects that the doctor, being paid by someone else, is not putting forth his best efforts in the patient's interest. The patient tries to squeeze as much as he can out of the doctor—in the way of treatment and prescriptions.

The doctor, on the other hand, is burdened with an excessive number of patients, including those with minor or imaginary illnesses, with an excessive number of prescriptions to write, and with an excessive number of forms to fill out. Hence, the quality of medical care tends to deteriorate.

The basic remedy which Austrian doctors suggest for these difficulties is that those insured who can afford it should be required to pay part of the cost of all medicare they receive. They suggest that cost participation by the insured by fixed at a maximum of 30 per cent.

What Europeans warn Americans on the subject of medicare sums up to this:

As you embark on the road to socialized medicine, do not travel too fast or too far. Otherwise, the time will come when you will find it advisable—as many countries in Europe now are discovering—to retract some of your steps, in the interest of doctors, patients and the whole community.

Memorial Resolution in Memory of Congressman John E. Fogarty, Board of Directors, American Heart Association, January 14, 1967

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a memorial resolution adopted by the board of directors of the American Heart Association at its recent meeting in Los Angeles, expressing its sorrow on the death of our late beloved colleague and valued friend, Hon. John E. Fogarty, of Rhode Island.

In the letter I received from Philip P. Ardery, chairman of the board, of the American Heart Association, Inc., Mr. Ardery said:

> The American Heart Association is proud of its long and friendly relationship with John Fogarty, who last year received our "Heart-of-the-Year Award" in recognition of the encouragement his service as a recovered cardiac gave to all other victims of the heart and blood vessel diseases.
>
> MEMORIAL RESOLUTION IN MEMORY OF CONGRESSMAN JOHN E. FOGARTY, BOARD OF DIRECTORS, AMERICAN HEART ASSOCIATION, JANUARY 14, 1967
>
> The Board of Directors of the American Heart Association expresses deep sorrow at the untimely death of a most valued friend, Representative John E. Fogarty of Rhode Island.
>
> Congressman Fogarty was unsparing in his efforts to further the programs and objectives of the American Heart Association in reducing death and disability from cardiovascular diseases. The magnificent courage he displayed in surviving a severe heart attack in 1953 to resume his duties as the nation's leading protagonist of health legislation was a persuasive and encouraging example to heart patients throughout America and the world.
>
> Over a period of many years, John Fogarty graciously fulfilled speaking assignments and contributed many other services to the Heart Association and its nationwide affiliates. In his home state especially, he worked prodigiously in helping to found the Rhode Island Heart Association in 1941 and launch its out-

standing rheumatic fever prevention program.

In the ensuing 25 years, he regularly attended key meetings of the Rhode Island Heart Association giving generously of his wise counsel. No request from the Association for his personal services to aid rheumatic fever patients ever went unanswered. John Fogarty served on the Board of the Rhode Island Heart Association from 1953 to 1964, when he was voted the Board's first Honorary Member.

In addition, John Fogarty sponsored one of the first measures signed by Lyndon B. Johnson when he became president—a resolution establishing February as "American Heart Month" to coincide with the national Heart Fund campaign. In February, 1966, he received from President Johnson's hands the American Heart Association's "Heart-of-the-Year" Award for his "faith, courage and achievement in meeting the personal challenge of heart disease and inspiring people everywhere with new hope and determination to conquer heart disease."

This Board is indeed honored to pay tribute to the memory of Congressman Fogarty, a man who devoted his life to bettering the health and welfare of all men.

To Another Frontier

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Monday, January 30, 1967

Mr. BARTLETT. Mr. President, Leonhard Seppala died in Seattle January 28. He was 89 years old. During a long residence in Alaska, Leonhard Seppala built one of the great sagas of that northern frontier. A man of adventurous spirit, of iron will, Leonhard Seppala will go down in history as one of the great dog mushers and dog racers of all times. Indeed, many believe that he had no equal.

"Sep," as he was called by his Alaska friends, broke many a trail in many a far-off place and now this master of the trails has set out on another and the greatest of them all. Diminutive in physical size, "Sep" was small in no other way. In addition to everything else and more important than anything else, he was a fine human being, gentle, kind, and loved by thousands who knew him in the land where he spent his active years. Of Viking stock, Leonhard Seppala came to Alaska from his native Norway. I do not know if he introduced the Siberian husky to Alaska. Probably not. What I do know is that he most likely was the first to use this breed of dog exclusively and all his great races were won with teams of Siberian huskies.

In those days, of course, the sled dog in Alaska was used only incidentally for racing. Primarily he was a work animal, as he still is in some parts of the 49th State.

But it was in racing that Leonhard Seppala gained his great reputation. It is true that he and others performed an heroic humanitarian task in delivering diphtheria serum to Nome during the 1925 epidemic. But "Sep" was inclined to scoff at this as being an easy job and one which he did not count as being among his top dog-mushing experiences. Leonhard Sappala won most of the great races of his time, races which in the early days were long and hard endurance contests which tried man and animal.

Upon retirement Leonhard Seppala and his wife moved to Seattle and they had been living there for several years.

As one who knew him for 40 years or more, I mourn his passing. He was a great man, a great Alaskan.

The Wrong Road for Social Security

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1967

Mr. YOUNGER. Mr. Speaker, in the January 21 issue of Business Week, appeared an editorial entitled "The Wrong Road for Social Security," which I commend to all Members of Congress. This editorial is deserving of our close attention before taking legislative action this year in the social security field. The editorial follows:

THE WRONG ROAD FOR SOCIAL SECURITY

In his State of the Union message, President Johnson said that he is asking Congress to liberalize Social Security benefits. But on close analysis, it appears that what he is really asking is a series of radical changes in the very nature of a system that has served the broad middle of U.S. society well for over 30 years.

Social Security has merited—and received—wide public support up to now, because its operations have been guided by a series of principles that experience has shown to be necessary to an effective system of social insurance. Instead of strengthening these principles, President Johnson's proposals are likely to undermine them.

In any insurance pool, a degree of graduation of benefits must be maintained so that there is a reasonable relation beteween what people put in and what they expect to get out. Yet the thrust of the President's proposals is to turn what has been primarily a system of public insurance into a system of public relief.

The Social Security benefit scale already is loaded in favor of those with low incomes or a short period of covered employment during their working lives. At present, 80% to 85% of the tax on employers goes to finance aspects of the program other than the actuarial cost of benefits to their own employees.

Experts on Social Security expected this welfare component to drop as the system matured. But President Johnson's proposal to increase the minimum benefit by 59% and to guarantee everyone who had been in the system over 25 years at least $100 a month will make the welfare element higher.

The aged poor have a claim on the resources of a rich society. But to meet this claim out of Social Security funds invites a cruel paradox: The greater the welfare payments that must be met out of the system, the less the money that is available to finance earned pensions. Relief by any other name is still relief; and the new proposals promise long-run expansion, rather than shrinkage, in the relief rolls.

PROBLEMS OF FINANCING

Social insurance ought to be self-financing. And except for part of the costs of medicare, Social Security always has been just that. If the President's proposals are enacted, however, they are almost certain to increase the welfare component in Social Security to a point where there will be no alternative to tapping general revenues.

The combined employer-employee payroll tax already is running at a stiff 8.8% and is scheduled to go up to 11.3% by 1987. These presently scheduled taxes cannot support a 20% increase in benefits over the long run. Consequently, new revenue eventually would have to be found.

It is obvious to most serious students of taxation that the already oppressive payroll tax, which hits hardest at small business and low-income individuals, can't bear this extra burden. The President's proposals, therefore, are an open invitation to general revenue financing—and this invitation has been taken up quickly by Senators Robert F. Kennedy and Jacob K. Javits.

The trouble with general revenue financing is simply that it would make the future of Social Security a creature of day-to-day politics. And this is exactly the kind of thing that an insurance system must avoid.

THE DANGERS OF EXPEDIENCY

As a long-run insurance program, Social Security should not be affected by what the government sees as its short-term fiscal needs. It is common knowledge among economists that the mid-1965 increase in benefits was made retroactive because the Administration's fiscal planners—incorrectly as it turned out—thought that the economy would require stimulus in the second half of the year. It now is a common suspicion among economists that this year's proposal for a massive $4.1-billion boost in benefits was framed to provide a fiscal offset to the $4.5-billion increase requested for corporate and individual taxes. If both proposals pass, President Johnson will be able to reduce the deficit in his administrative budget without causing much of a reduction in aggregate purchasing power.

All this is much too clever. The state of the Social Security trust fund should, of course, weigh heavily in the Administration's fiscal planning. But the system serves long-run ends. Planners, therefore, should adjust their other programs in the light of what is happening to Social Security rather than the other way round.

It is evident that President Johnson's proposals would take the Social Security system down the wrong road. Congress is committed—wisely or unwisely—to increasing benefits this year, but it certainly is not committed to changing the basic philosophy of the system and embarking on a dubious adventure in a new approach to financing. When it takes up the subject, Congress should keep clearly in mind the distinction between welfare and insurance and the vital importance of maintaining the integrity of the financing system on which the whole structure of Social Security rests.

ASIA: The Turning Point Has Come

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, January 30, 1967

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial entitled "Asia: The Turning Point Has Come," written by William Randolph Hearst, Jr., and published in the Hearst newspapers on January 15, 1967.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

Asia: The Turning Point Has Come

(By William Randolph Hearst Jr., editor in chief, the Hearst Newspapers)

Bringing the war in Vietnam to an acceptable conclusion is going to require iron determination and nerves of steel not only from the fighting men in the field, but from Americans at home. And that task is going to be a whole lot more difficult, if not impossible, unless we can clear away some of the myths and misunderstandings that are plaguing our efforts to play a constructive role in Asia.

Some of the myths and misunderstandings grow out of the very complexity and remoteness of Asia. Others are peddled deliberately by merchants of doubt.

I'd like to explode some of those myths today, basing my observations on The Hearst Task Force trip recently concluded by Bob Considine, Milt Kaplan and myself—to Japan, South Korea, Indonesia, the Philippines, Singapore, Hong Kong, South Vietnam, and Thailand. In articles that will follow this one, The Task Force will take a long look at how the U.S. stands at the moment in Asia, and what's ahead.

The most outrageous myth is that we have forced our way into Asia uninvited and that all the nations of Asia just can't wait until we leave.

During the course of our trip The Task Force talked to the prime ministers or presidents or foreign ministers of seven countries. Some of them are allies of ours; some are neutrals. But to a man—including the neutrals—they understood why we are in Vietnam. And not one of them wants to see us out of there before we complete the job we came to do.

Let's look at Indonesia. Although they have every reason to be anti-Communist—considering that the Commies tried to take over the government by force—the leaders of that unhappy land are still steering an independent course in world affairs.

But Adam Malik, the brilliant and witty little foreign minister—a one-time Marxist, who may still harbor some Marxist ideas—doesn't sound at all like the antis in this country. He says, sure, you've got to get out of Vietnam, but he adds a big condition—that we must get out only after we have established a strong government in South Vietnam, one able to cope with guerrillas and other problems. I told him there were very few Americans who wouldn't agree with that.

Another myth concerns the leadership in South Vietnam. Premier Ky has been pictured as a one-man show, a dictator. The fact of the matter is that when he speaks he does so as the voice of the government directorate. He may very well not be the strongest single man in that group. Well informed people in Saigon with no particular ax to hone will tell you that Nguyen Van Thieu, the head of the directorate but of a more retiring nature, is the more influential figure. And there are others in the directorate whose counsel Ky must take.

The important thing here is that South Vietnam is not just moving from one dictator to another—as appeared to be the case after Diem was assassinated—but is acquiring some institutionalized leadership so that continuity can better be assured.

Still another myth is that the American soldier could not survive in the jungles and mountains of Vietnam. A number of highly respected U.S. military men subscribed to this particular bit of dogma just two or three years ago.

But the fact of the matter is that the U.S. serviceman fights and gets along very well in the jungles of Vietnam. And, even though this will not be any consolation to those who have lost loved ones there, the casualty rate has been only a fraction of the secret estimates made for the U.S. Chiefs of Staff when commitment of U.S. troops to combat was under consideration.

The sort of myth I mentioned contributes to the distortion of America's role in Vietnam. But the greatest sin may be one of omission. I'm talking about the failure to see what the U.S. is doing out there in the context of East Asia. Vietnam is not an isolated outpost.

One of the most impressive of our ambassadors in Asia took the larger view. What we have done in Vietnam, he said, is to deny control of the Asian mainland to Red China.

There is absolutely no doubt in the mind of any knowledgeable observer of that area that had we not gone into Vietnam, that country and most or all of its neighbors would now be under the domination of Red China—that means Laos, Cambodia, Burma, Thailand, Malaysia, among others.

Instead, here, briefly, is what we find today.

Thailand is a stable, strongly anti-Communist land. It has to cope with Communist-supported guerrilla bands in the northeastern part of the country, but there is little evidence to support the charge now being heard that Thailand is another Vietnam in the making. There is really no comparison. Thailand is not a divided country; it is a united one with a long tradition of nationhood. It has a strong government; it has a viable, healthy economy.

Burma is still neutralist. But her leaders don't all sound like U Thant. The premier, Ne Win, recently visited the U.S. The Burmese also recently went out of their way to say that they wouldn't allow their territory to be used by aggressors seeking to attack Thailand—meaning Red China. That might be an idle promise, but it doesn't sound like a country that expects Red China to take over the continent.

Cambodia, under Prince Sihanouk—unaffectionately known to our people as Snooky—moved a long way into the Red China orbit the past few years. Apparently Snooky felt Peking Communism was the wave of the future. Now he appears to be trying to row back a bit towards our shores. He recently indicated to Pan American Airways that he'd like to see Pan Am landing and taking off at the Pnom Penh Airport.

Indonesia, which might have provided stepping stones for the Chinese Reds from the Asian mainland down to Australia, represents the biggest defeat the Red Chinese have suffered since they started their mad moves towards Asian domination. The Communists had control of that nation of 107 million people within their grasp at the time of the bloody, abortive coup of Sept. 30, 1965. There is no question in the minds of senior American officials in East Asia that the U.S. presence in Vietnam helped stiffen the anti-Communist resistance in Indonesia.

South Korea, with U.S. help—military and economic—has become the new success story of Asia. This was a devastated land a dozen years ago. But the Koreans are tough, they are hard-working, they are proud. They are building, building, building—schools, houses, factories, roads.

The South Koreans and the Thais also hope they are laying the foundation for a different kind of structure—a regional security organization that will in time be able to keep the peace in Asia with a minimum of U.S. aid. This is a distant goal. But it is one that we must encourage and nurture.

There are other very bright spots, particularly on the economic side. Japan had a slight recession last year but its growth rate is running at eight and perhaps as high as ten percent annually—an astounding figure. Formosa gets a little less American attention these days only because things are going so well there. Hong Kong and Singapore and Malaysia are all booming.

And none of these developments would have taken place—not a one of them—if the U.S. had not provided a cornerstone of Asian security in Vietnam.

So one of the things that we have been doing in Vietnam is buying time, time for the non-Communist or anti-Communist nations of Asia to put themselves on a stronger economic and political base. The Asians understand this.

This is the message we bring home from our tour of Asia and it is so important that I intend to proclaim it at every publishing oportunity and from every available podium.

Sandy Hook National Seashore

EXTENSION OF REMARKS

OF

HON. JAMES J. HOWARD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. HOWARD. Mr. Speaker, I rise today to speak in behalf of a bill I have just introduced which would create the Sandy Hook National Seashore in the great State of New Jersey.

This historic site must be preserved as a park, recreational and natural wildlife area. To use it for anything else would be unthinkable.

New Jersey presently leases a 754-acre tract from the Federal Government. That tract is used as the Sandy Hook State Park and is one of the most beautiful as well as the most overcrowded resorts in the State of New Jersey.

Mr. Speaker, earlier this month Secretary of Defense McNamara announced that some 400-odd acres of land which is now being used by Fort Hancock, is being declared surplus. The people of New Jersey would benefit if that additional acreage would be added to the present State park acreage. We would then have a 1,200-acre site for park and recreational purposes with the possibility of eventually expanding that by 400 more acres when Fort Hancock is eventually phased out.

The bill which I have drawn up also is to be introduced in the other body today by New Jersey's two U.S. Senators, Harrison A. Williams, Jr., and Clifford P. Case.

On a local level, elected officials from both the Democratic and Republican parties have joined together in a bipartisan effort to make sure this area is kept as a park and recreational area.

The importance of Sandy Hook is well outlined in a letter the late President John F. Kennedy wrote to Secretary of Defense McNamara on September 1, 1961. At this point in the Record, Mr. Speaker, I include a copy of that letter.

Last week, I had the opportunity and privilege of discussing the possibility of creating a Sandy Hook National Seashore with Secretary of the Interior Stewart Udall. All of us in the House, on both sides of the aisle, are well aware of the outstanding contribution Secretary Udall has made to this country and in particular to the people who love our beautiful outdoors. Secretary Udall expressed an interest in the proposal and agreed that this area must be preserved as a park, recreational, and wildlife area for the people of New Jersey, regardless of how it is done or by whom.

I urge all of my colleagues in the House to look over this bill with the thought in mind that New Jersey is one of the few States in the Nation that does not now have a national seashore or a national park. I also urge that hearings be scheduled on this bill as soon as possible.

Mr. Speaker, in closing, I place a copy of my bill in the RECORD:

THE WHITE HOUSE,
WASHINGTON, D.C.,
September 1, 1961.

Hon. ROBERT S. MCNAMARA,
Secretary of Defense,
Washington, D.C.

DEAR SECRETARY MCNAMARA: In the program that you have undertaken to strengthen vital defense bases and inactivate establishments no longer justified as a result of changes in weapons systems and defense requirements, I am most anxious that real property not required for security purposes be made available on appropriate terms for urban and rural communities whose economies and other development can thereby be significantly encouraged.

Secretary Udall, under my direction, is already engagd in a determined search for land resources suitable for public recreational needs. This is especially important near congested urban centers where the need is urgent and little undeveloped acreage remains.

A prime example of land for which there is urgent nonmilitary need is Sandy Hook, New Jersey, on which Fort Hancock is located. This has one of the few undeveloped long shore lines in the New York metropolitan area.

Generations of Americans have accepted the importance of using this area as a military reservation in the interest of national security. Defense considerations must, of course, continue to take precedence over other potential utilization. But every effort should be made by the Department of Defense to provide long range plans for suitable public use of Sandy Hook or other parts of the peninsula if your present survey indicates that is possible as a result of changes in weapons and security requirements.

I will appreciate your keeping New Jersey state officials as well as the Department of the Interior advised on the opportunity for long-term use of this priceless natural resource.

Sincerely,

H.R. —

A bill to establish the Sandy Hook National Seashore in the State of New Jersey, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for the purpose of preserving for the use and inspiration of present and future generations certain relatively unspoiled beaches and waters on the Atlantic coastline of New Jersey which possess great scenic, scientific, and recreational value, there is hereby established the Sandy Hook National Seashore. The seashore shall consist of the lands, waters, and interests therein and improvements thereon comprising the former Fort Hancock Military Reservation, together with the submerged land area adjacent to the reservation lying within a distance of one-quarter mile from the shoreline.

SEC. 2. Notwithstanding any other provision of law, Federal property located within the seashore is hereby transferred without consideration to the administrative jurisdiction of the Secretary of the Interior for use by him in carrying out the provisions of this Act. Within the seashore, the Secretary may acquire lands, submerged lands, and interests therein owned by the State of New Jersey or a political subdivision thereof only by donation.

SEC. 3. The Secretary of the Interior shall permit hunting and fishing on lands and waters under his administrative jurisdiction within the Sandy Hook National Seashore in accordance with the laws of New Jersey and of the United States, to the extent applicable, except that the Secretary may designate zones where, and establish periods when, no hunting or fishing shall be permitted for reasons of public safety, administration, fish or wildlife management, or public use and enjoyment. Except in emergencies, any regulations of the Secretary pursuant to this section shall be put into effect only after consultation with the Department of Conservation and Economic Development of the State of New Jersey.

SEC. 4. The Secretary shall administer the Sandy Hook National Seashore for the general purposes of public outdoor recreation, including conservation of natural features contributing to public enjoyment. In the administration of the seashore, the Secretary may utilize such statutory authorities relating to areas administered and supervised by the Secretary through the National Park Service and such statutory authorities otherwise available to him for the conservation and management of natural resources as he deems appropriate to carry out the purposes of this Act.

SEC. 5. The authority of the Chief of Engineers, Department of the Army, to undertake or contribute to shore erosion control or beach protection measures within the Sandy Hook National Seashore shall be exercised in accordance with a plan that is mutually acceptable to the Secretary of the Interior and the Secretary of the Army, and that is consistent with the purposes of this Act.

SEC. 6. There are authorized to be appropriated such sums as may be necessary to carry out the purposes of this Act.

Polish Commerce Between United States and North Vietnamese Ports

EXTENSION OF REMARKS
OF

HON. HARRY F. BYRD, JR.

OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, January 30, 1967

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Polish Freighters Continue To Feed North Vietnamese Ports," written by Victor Riesel, and published in the Nashville Banner of January 25, 1967. The article deals with the attitude of American longshoremen toward shipping between United States and North Vietnamese ports.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLISH FREIGHTERS CONTINUE TO FEED NORTH VIETNAMESE PORTS

(By Victor Riesel)

NEW YORK.—Some of the Eastern European people's republics literally may need a physical bridge to the U.S. if irate American longshoremen transform their anger into a boycott of Communist freighters now heaving regularly into this and other harbors along the Atlantic coast.

Traditionally, U.S. dockwallopers have a low boiling point and the heat's up now and they've learned from their union chiefs that European Communist labor organizations have been urging such unions as the International Longshoremen's Assn. (ILA, AFL-CIO) to cripple shipments of war material and food to South Vietnam.

This waterfront still is tough territory. If there are to be any strikes and boycotts these will hit Communist lines which put in here regularly, are serviced, unloaded, loaded and turned around although their owners also feed the North Vietnamese forces through the port of Haiphong.

One such two-front operator is the Polish government. It operates here through the state-owned, Polish Ocean Lines on Battery Place from which, on any clear day, can be seen the Statue of Liberty. It's a fine money raiser, what with regular calls here with heavy cargoes—especially the famed Polish hams.

Polish Ocean Lines also put in at other Atlantic Coast ports. Thus far the longshoremen have handled the ships, though their leaders, through association with the anti-Communist International Transport Federation, Workers' have learned that Poland has dispatched at least 15 freighters to Haiphong in recent months.

Except for the Soviet Union and mainland China, the Polish shipments to North Vietnam are the heaviest of any maritime nation. The tonnage of these Polish freighters, and their names have been learned. A check now is being made by Brooklyn longshoremen to learn whether any of these 15 vessels have put into New York.

The Brooklyn locals are involved because the Polish line uses Pier eight there.

Furthermore, the expert Polish shipbuilding yards at Gdansk and Gdynia are building a huge cargo fleet for the Soviets—Ho Chi Minh's main supplier of military equipment and fuel. Obviously the Soviets are highly satisfied with the work being turned out since Poland now has a Soviet order for delivery between 1966 and 1970 of 175 ships totaling 1.5 million tons" says a Congressional report by eyewitnesses. In this order are 20,000 tankers as well as fast 12,000 ton freighters.

In addition to the Poles, described to me by an American ambassador in Europe as the most bitterly anti-U.S. of all Communist bloc nations, the other Eastern Communist lands also send craft into American harbors.

This commerce is a source of considerable U.S. hard currency now so badly needed in "the bloc." Typical is the arrival here in mid-January of a huge shipment of Russian vodka. There also are furs to which, incidentally, the fur workers' union objects

Virtually all of the time the cargoes are unloaded. But the pressure on American longshoremen, especially from French labor as well as from others affiliated with the World Federation of Trade Unions (headquartered in Prague) may boomerang and slash East-West trade.

Typical of the letters flowing into the offices of American unions is one received by the ILA leaders recently. It was from "Federation National Des Ports et Docks" of 213 Rue Lafayette, Paris.

Written by one of its leaders, D. Brest, it said in effect, that during the "war between the French and Vietnam, the French dockers intensified strike action against every shipment, especially military ones going to Vietnam."

The ILA reply was polite but tough and blunt. The longshoremen made it clear that they backed American policy. There would be no boycott of American shipping in American ports.

But Polish and other Communist craft docking in these waters might make another kind of game.

Martha Raye: Star Performer in Emergency

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. DULSKI. Mr. Speaker, last week the 15th Annual Women's Forum on National Security was held here in Washington. In its closing session, the forum honored Miss Martha Raye with its distinguished service award for outstanding service in the cause of national security 1967.

A great trouper and a great entertainer, Miss Raye has brought cheer and laughter to thousands of service men and women overseas, and, more recently, proved that she can be a good nurse, too.

Under leave to extend my remarks, I include below an article which appeared in the January 1967 issue of Army Digest:

Martha Raye: Star Performer in Emergency Emergency

There was that one night in Vietnam when, despite all the traditions and the examples, the show didn't go on.

It was the night that veteran trouper Martha Raye turned nurse at a hospital in Soc Trang in the Mekong Delta. The brunette comedienne had been making a tour of the area and was scheduled to entertain two aviation helicopter companies. But the units ran into a heavy fight that day as they attempted landings in the midst of a Viet Cong battalion.

Four helicopters were shot down, another score damaged, and wounded began pouring into the little dispensary at Soc Trang just about the same time Miss Raye arrived.

A former nurse, she sized up the situation, put on Army fatigues, gave a pint of blood to a wounded sergeant, then scrubbed and prepared the wounded for surgery, and generally assisted at whatever else needed to be done.

That was the night the show didn't go on. Next morning Martha was back helping the one doctor and eight corpsmen. Most of the wounded were surprised, somewhat naturally, to find themselves under the care of the famed actress. Typical of the stories told by the men was that of a gunship pilot and his crew chief and doorgunner. Shot down, with the copilot of their aircraft killed, they made their way through swamp, canal, rice paddies for 20 hours, killing and capturing several Viet Cong on the way. Unable to bring the captured men along they had tied them up and left them on a canal bank—and finally stumbled on a unit of the Army of the Republic of Viet Nam.

The trio—all members of the 121st Airmobile Company known as the Soc Trang Tigers—were Major Raymond T. Nutter of Bowling Green, Kentucky, SP5 David Olson of Jackson, Minnesota, the crew chief, and doorgunner SGT Rodger Swindler of Lakeland, Florida. All three were presented with the Bronze Star and "V" for Valor by BG George P. Seneff, Jr., commanding general of the 1st Aviation Brigade.

About noon on the second day Miss Raye was flown to Vinh Long, 80 miles away, and that night her show went on for another unit. But those who benefited from her nursing care remember a Martha Raye performance that no stage show could ever duplicate.

A Challenge to the Nation

EXTENSION OF REMARKS

OF

HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. JONES of Alabama. Mr. Speaker, it is with a great deal of pride that I want to point out a very fine example of responsibility and patriotism on the part of the younger generation.

I refer to the students of the Athens, Ala., High School who last week became the first high school in the Nation to sponsor a Red Cross blood bank campaign. In a city of about 10,000, these students secured actual donations of blood from 557 people. Additional pledges were secured but some potential donors were ineligible. The total is more impressive when you consider that donors must be at least 18 years old which eliminated most of the students as actual participants, no matter how eager.

These spirited students at Athens High School have now challenged other high schools throughout the Nation to top this successful record. It is a challenge worthy of consideration because I see only winners in this sort of competition.

I want to personally commend this distinguished effort on the part of all the students and their leaders. An editorial in the Alabama Courier gives details of the students' activity. I include it at this point in my remarks:

A Display of Responsibility, Patriotism

Perhaps the older generation could well learn a lesson from the demonstration of community awareness and patriotism that was displayed earlier this week at Athens High School.

Both junior and senior high school students became the first in the nation ever to sponsor a blood bank campaign. And a record 80 percent turn out was witnessed from those who signed pledge cards and actually gave blood.

This figure is startling; it has never been equalled in the history of the Limestone County American Red Cross Bloodmobile. The spirited students were responsible for 557 pints of blood, another new record.

It appears that the students have the secret to resolving complacency among citizens. Tuesday 192 new blood donors contributed, a painless operation.

These newspapers along with those who give four to five pints of blood a year offer heartiest congratulations.

Somewhere these students, the cornerstone of the younger generation, aroused the public to stage the most successful Bloodmobile visit in its 11 year history here.

Tradition has it that the new generation should listen to criticisms and free advice gained by the experience of their elders. Athens Junior and Senior High School apparently turned the tables Tuesday.

Their sense of community responsibility and service to their nation and fellow man deserves the highest praise that can be offered. It is by such accomplishments that tomorrow's youth may be capable of grasping more responsibilities at an earlier age.

Athens students of 1966–67 have paved the way. These newspapers have noticed an increased activity of various student projects that lead toward the betterment of the area during recent years.

It is also worthy of mention the excellent supervisor and coordination of efforts on the part of the school's faculty and administration. What happened here this week leads us to believe that our school system is producing a higher caliber graduate than ever before.

Years ago the Student Council was known as the lower level judicial arm of the schools, more commonly referred to as an escape from the paddle. It pleases us to know that the council is acting as an agency among the students for community betterment.

Learning the values of community is, indeed, a step in the right direction. We commend the parents, faculty and the students themselves.

The 1966–67 Bloodmobile quota is virtually assured. Last year was the first time for the goal ever to be attained. With the type of cooperation and acceptance displayed by both the donors who supported the campaign and the earnest efforts of the students the Athens High School Bloodmobile should become a semi-annual affair.

Donors must contribute at least twice a year to keep the benefits of free blood in effect.

Need for blood and its uses in South Viet Nam can not be over emphasized. Many American soldiers, who are wounded in battle, will return home as a result of the efforts of people like those who contributed so generously here Tuesday.

Athens High School, the credit is due your efforts; your display of community support will long be remembered. You have set an outstanding example for both the new and old generations.

Two Articles of Interest by Arthur Hoppe

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. YOUNGER. Mr. Speaker, the satirist, Arthur Hoppe, has placed two articles in the San Francisco Chronicle recently which will be of interest to our readers, one under the date of January 16 and the other, January 18. His articles follow:

Gay Times in Washington

(By Arthur Hoppe)

Washington.—The most monumental task we ace newsmen face as Congress gets underway each January is to assess the mood of Washington and report it to a waiting world.

I have now assessed it and am glad to report that the mood of Washington this year is gay and joyous. That's an exclusive report.

I obtained this assessment by attending a typical gay and joyous Washington cocktail party.

"That large group by the window is pro-Bobby," said the hostess, taking my coat, "while the little band with their backs to the corner are those grimly sticking to Johnson.

"The doves are in the kitchen looking noble. We have two Negroes by the fireplace looking bitter. And most of the rest are the usual cynical observers looking cynical. Would you care for a hemlock over ice?"

I took up a post slightly to one side of two gentlemen who were arguing whether the Manchester book had done the most harm to President Johnson, Senator Bobby Kennedy or Mr. Manchester himself. I took care not get between them.

Behind me a cynical observer was expounding the new widely held theory that Mr. Johnson would not run for a second term in 1968 "because he is too proud to be another Hoover."

"Yes," agreed another, rubbing his hands. "They all know he's a lame duck and they'll carve him up good. It certainly creates an interesting power vacuum. The long knives will be out for the next two years."

Wandering off, I came on a circle of ladies and gentlemen playing the fascinating new Washington game of naming Congressmen who are "far more corrupt" than Mr. ADAM CLAYTON POWELL. The rules require not naming the Congressman but citing his corrupt activities—with extra points if it's a corrupt activity no one else in the group has pinned on him before.

After listening in for a few dozen I turned to a stimulating battle between two gentlemen—one arguing that Mr. Bobby Baker would make lots of money by writing his much-anticipated book about his experiences in the U.S. Senate. The other was arguing he would make lots more if he didn't.

Over by the fireplace, the Negro gentlemen were certainly enjoying the fire. "Burn, baby, burn," said one.

Taking my leave of the hostess, I thanked her for a most interesting time.

"Yes," she said, "wasn't it delightful to see everyone in such a gay and joyous mood?"

Gay and joyous? But everyone had spent all evening glaring, snarling, back-biting and carving each other up. Frankly, I said, I had never observed the Washington scene in such a poisonous state as now.

"Quite so," she said, nodding. "But if you think such activities don't make Washingtonians gay and joyous, then you don't understand Washington."

A Ticklish Peace Feeler

(By Arthur Hoppe)

WASHINGTON.—President Johnson, as you know, keeps magnanimously offering to stop bombing North Vietnam. If Mr. Ho Chi Minh will just promise to do something nice for us in return.

To check on the progress of this latest bold stroke in American diplomacy, I dropped over to the State Department for a chat with Mr. Homer T. Pettibone, Deputy Assistant Curator of Peace Feelers.

I found him opening a long, narrow package labeled, "Peace Feeler—Do Not Crush." He examined its contents with a frown. Was it a response to the President's offer?

"It appears so," said Mr. Pettibone. "They say here that if we will stop bombing them, they will unconditionally promise to stop shooting down our aircraft with Russian-built SAM missiles."

Marvelous, I said. Nothing's angered us more than their unfair use of SAM missiles against our planes. But what of conventional anti-aircraft guns?

"Oh, they've already agreed to stop firing those if we'll halt the bombing. Nor will they challenge us with MIGs. Say, this is new. If we stop bombing them, they pledge to stop accusing us of causing widespread civilian casualties."

That sounds important, I said. Nothing's given us a worse black eye in the world press than these accusations they keep making.

"It could be the breakthrough we've been looking for," agreed Mr. Pettibone thoughtfully. "And then again it couldn't. Let's see what else is in their package."

He shook the cardboard container over his desk and sorted through the pieces that fell out. "Ah," he said, "They'll now agree to stop installing so much sewer pipe."

Sewer pipe?

"It looks like sewer pipe, but we happen to know they're using it for air raid shelters. I see they've also tossed in some specifics. If we'll stop bombing their oil storage depots, they'll stop sending clouds of black smoke up to 20,000 feet."

A help in smog control, I said.

"And if we'll stop bombing their bridges, they'll stop rebuilding them in four hours."

A constant frustration to our military, I said. These sounded like major concessions.

"Yes, we knew our policy of force would bear fruit," said Mr. Pettibone proudly. "And now if we'll stop bombing them, they're willing to promise to stop being bombed."

What more could we ask, I said jubilantly. Peace was just around the corner. As soon as he delivered the news to the White House. . .

"I'm afraid there's no point in that," said Mr. Pettibone, stamping the package "File for Reference" and tossing it in a broom closet.

"Oh, I realize their concessions look good on the surface," he explained. "But how do we know they're sincere?"

A Federal Budget Too Huge To Comprehend

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. CEDERBERG. Mr. Speaker, the President's budget appears to be growing so confusing that even the astute newspaper columnists who daily deal with the astronomical figures of Government operations cannot comprehend it. James J. Kilpatrick, for instance, says that about the only way the President's budget can be seen is through a mist. Describing the Johnson budget as "formless and immeasurable," Mr. Kilpatrick wrote the following about the document:

A Federal Budget Too Huge To Comprehend

(By James J. Kilpatrick)

The smog in Washington, which has been getting worse this winter, was unusually bad at noon on Tuesday. Through the grimy haze of Capitol Hill, a sooty deficit came swimming past. One could barely make out the billions. Was the deflect two-point-one? Or eight-point-one? Certificates of participation moved darkly to and fro. Nothing seemed quite real.

And the truth is that this is about the only way the President's budget can be seen —through a mist, dimly. Mr. Johnson's revenue figures will stand up if he gets his surtax, if he gets his postal increase, if the Congress goes along on Social Security hikes. His expenditure figures depend upon Vietnam, on anti-missile missiles, on some bookkeeping sleight-of-hand. One figure rises above the fog: In fiscal '68, the Federal government proposes to collect $168 billion in cash receipts from the public. The sum is almost $34 billion above the level of fiscal '66.

If any such tax program, relatively speaking, were to be proposed by a local governing body, the voters would descend on City Hall with whips and hunting hounds. Over most of the country, an increase of a few cents in the rate on real estate is guaranteed to set off a rebellion. The local politician trembles at the dreadful thought.

Yet the President's several recommendations, concealed in the Washington smog, arouse no visible passions. Perhaps the voter cannot see what Mr. Johnson has in mind.

In fiscal '66, collections of individual individual income tax amounted to $55.4 billion. Mr. Johnson would increase the take in fiscal '68 to $73.2 billion.

As recently as 1959, a worker paid a maximum Social Security tax of 2.5 percent on the first $4,800 of his earnings. For 1969, Mr. Johnson recommends a tax of 4.5 percent on the first $7,800 of earnings. By 1974, the tax rate—Mr. Johnson calls it a "contribution"—would go to 5 percent on $10,800. And the employer would be compelled to match these payments dollar for dollar.

The increases in individual income taxes and Social Security taxes are only a part of the Johnson program. The President also recommends an increase in corporation income taxes, an acceleration in corporation tax payments, a $700 million boost in postal rates, and an increase in the tax on diesel fuel. He proposes a 2-percent charge on air freight bills, a 4-cent per gallon tax on jet fuel, and a doubling of the present tax on general aviation gasoline. He proposes new taxes on large trucks and new taxes on fuels consumed on inland waterways. He would impose new fees for commodity inspection and warehouse licensing. He would boost the rate of taxes paid into the Railway Retirement Fund. All told, the President asks for nearly $5.8 billion in new revenues.

For millions of American families whose earnings come to $150 or $200 a week, the Johnson package will mean a heavy burden. Employers will feel the impact too. The Social Security increases alone will result in heavy pressure upon management for wage increases sufficient to restore the take-home pay. The pressure upon small manufacturers and shippers will be especially severe, and can only result in another round of higher prices.

All this looms dimly in the outlines of the Johnson budget. If the higher revenues were demanded solely in the name of national defense, few persons would object. This is not the case at all. The vast bulk of the administration's proposed spending program falls on the non-defense side.

In his message, the President went to some pains to justify his domestic outlays. He had given all requests a "rigorous review" and a "sharp paring." He had cut out "waste and non-essentials." He had approved increases "only where vitally necessary." He was proposing merely "to press ahead at a controlled and reasoned pace."

Yet his budget proposes a 20 percent increase in public assistance grants over a span of only two years. He would disburse $25.6 billion thruogh 10 agencies to help the poor. He recommends rent supplements, dental care for children, the rebuilding of model cities, a $622 million increase in aid to education. For the discredited Office of Economic Opportunity alone, the President asks $2.1 billion, an increase of $448 million over the present fiscal year.

The figures are too huge to register clearly on the mind. The zeroes merge into meaningless symbols, so that the thousands, millions, billions all seem alike. One gropes aimlessly through the 1,300-page budget searching for some flash of insight in a haze of orderly charts and tables. Nothing comes. This is the biggest budget—by far the biggest budget—ever sent to Capitol Hill. It reduces the individual, and the taxes he pays, to insignificance. Like the smog itself, the budget is formless, immeasurable, essentially unassailable; but increasingly, it affects every breath an American draws.

Ukrainian Independence Day in Boston

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a declaration issued by the Honorable John F. Collins, mayor of Boston, proclaiming Sunday, January 22, 1967, as "Ukrainian Independence Day" in Boston:

Declaration

Whereas, the 49th anniversary of the declaration of Independence of Ukraine will be observed on January 22, 1967; and

Whereas, for 49 years, the Ukrainian people have resisted Russian Communist oppression and have amply demonstrated their desire for freedom and national independence; and

Whereas, Americans of Ukrainian descent desire to direct the free world's attention to Ukrainian's struggle for freedom and independence; and

Whereas, American Ukrainians in Boston, under the auspices of the Ukrainian Congress Committee of America, desire to protest the latest wave of Communist terror and oppression against Ukrainian writers and intellectuals because of their demands for freedom of expression, as well as against the continuous Communist destruction of Ukrainian national cultural heritage;

Now, therefore, I, John F. Collins, Mayor of the City of Boston, desiring to provide the opportunity for Americans of Ukrainian descent to adequately commemorate the significance of the memorable day, do hereby declare Sunday, January 22, 1967, as Ukrainian Independence Day in the City of Boston, and direct that the Ukrainian National Flag be raised at the City Hall on Monday, January 23, 1967, as a symbol of Ukrainian freedom and independence.

John F. Collins,
Mayor, City of Boston.

Future Use of Sandy Hook

EXTENSION OF REMARKS
OF
HON. JAMES J. HOWARD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1967

Mr. HOWARD. Mr. Speaker, today, both here in the House and in the other body, legislation is being introduced which would create a Sandy Hook, N.J., National Seashore. Minutes ago I outlined in some detail why I have drawn this bill up and what it means not only to the people of my district, but to all of the people of New Jersey.

Editorial comment on this proposal has been swift. Both the Daily Register of Red Bank and the Daily Record of Long Branch have come out in support of this proposal.

Mr. Speaker, at this point in the Record, I enclose a copy of each editorial:

[From the Red Bank Daily Register, Jan. 26, 1967]

Future Use of Sandy Hook

It has been gratifying to observe the show of strength mustered at keeping for the state some 1,200 acres of land at Sandy Hook for public use.

The Defense Department has announced that Fort Hancock will vacate much of its land at Sandy Hook and it will be declared surplus. This immediately raised questions as to what would happen to the acreage.

The hope always has been to increase the size of the present Sandy Hook State Park and to make certain that private interests do not acquire it.

Rep. James J. Howard and Sen. Clifford P. Case immediately went into action to explore various alternatives for preservation of Fort Hancock as a natural wildlife, recreation and marine research area and for expansion of the state park. State Conservation Commissioner Robert A. Roe said the state will move to acquire the land.

And a resolution declaring that Sandy Hook should be preserved for public use has been introduced by Monmouth Assemblyman Alfred N. Beadleston, Joseph Azzolina, and James M. Coleman. The resolution says the section of Fort Hancock to be abandoned by the federal government should be added to Sandy Hook State Park or to the national seashore project of the Department of the Interior.

Significant is the fact that the resolution calls upon the federal government to hold the property pending the development of a plan for public use of the area. The measure has bi-partisan support.

We cannot help but think of the importance attached to Sandy Hook by the late President Kennedy.

In 1961, he said:

"A prime example of land for which there is an urgent non-military use is Sandy Hook. . . . This has one of the few undeveloped long shorelines in the New York metropolitan area. . . .

"Generations of Americans have accepted the importance of using this land as a military reserve in the interests of national security. Defense considerations must, of course, take precedence over every other potential utilization, but every effort should be made by the Defense Department to provide long-range plans for suitable public use of Sandy Hook, if present surveys indicate it is possible as a result of changes in weapons and security requirements . . ."

The priceless natural resource that Sandy Hook is must be kept for public use—and the government should not even think of selling the land to private interests.

New Jersey's congressional delegation and an aide to Gov. Richard J. Hughes will meet today in Washington with Secretary of the Interior Stuart L. Udall in an effort to save the land for the public. To be explored chiefly are ways to turn over the acreage to the state through legislation or through direct negotiations with the General Services Administration, which will handle the sale of the property.

The success and the popularity of Sandy Hook State Park are solid examples of how the public has accepted this location. And the way in which conservation is stressed there has made the park a wonderful asset to the state and its residents.

It would be unthinkable to have the surplus land become anything but a state park or a national park, similar perhaps to the land acquired at Cape Cod as a national seashore. We hope the day will come when all of Sandy Hook will be set aside for that purpose. Sandy Hook State Park was the first step in that direction—and now it is imperative that the new land be made available for recreational use.

Conservation, of course, should be a paramount consideration here—and so should the desire to keep this land in the public's possession for the public's enjoyment.

[From the Long Branch (N.J.) Daily Record, Jan. 28, 1967]

A National Park for Us

We commend Rep. James J. Howard (D-3rd Dist.) Democratic U.S. Senator Harrison A. Williams and Republican U.S. Senator Clifford P. Case for the speed with which they are acting to preserve Sandy Hook for parks and recreational purposes.

Ever since the announcement earlier this month that Ft. Hancock would be deactived by December of 1968, except for 434 acres which will be maintained as a Nike installation, New Jersey's national representatives have been meeting and working in concert to preserve the 1,200 acres remaining for parks and recreational purposes and to prevent it from being sold, hodgepodge, by the General Services Administration, for half of its fair market value.

On Monday, a bill will be introduced in the House by Rep. Howard, and in the Senate by Sens. Case and Williams, to establish the Sandy Hook National Seashore in the State of New Jersey, and for other purposes.

We urge Congress to pass this important piece of legislation.

Howard's bill urges its establishment for the purpose of preserving for the "use and inspiration of present and future generations certain unspoiled beaches and waters on the Atlantic coastline of New Jersey which possess great scenic, scientific, and recreational value." It goes on to say, "The seashore shall consist of the lands, waters, and interests therein and improvements thereon, comprising the former Fort Hancock Military Reservation, together with the submerged land area adjacent to the Reservation lying within a distance of one-quarter mile from the shoreline."

The bill asks that federal property located within the seashore be transferred, without consideration, to the administrative jurisdiction of the Secretary of the Interior, for use by him in carrying out the provisions of the act, and that the Secretary may acquire lands, submerged lands, and interests therein owned by the State of New Jersey, or a political subdivision thereof only by donation. There are 750 acres on Sandy Hook presently delegated as the State Park.

It calls for hunting and fishing to be permitted in accordance with the laws of New Jersey and of the United tSates; for its administration by the Secretary of the Interior for the general purposes of public outdoor recreation, including conservation of natural features contributing to public enjoyment, and that the authority of the Chief of Engineers, Dept. of the Army, to undertake or contribute to shore erosion control or beach protection measures within the Sandy Hook National Seashore, shall be exercised in accordance with a plan that is mutually acceptable to the Secretary of the Interior and the Secretary of the Army.

It asks for authorization of funds necessary to carry out the purposes of the act.

There is no National Park in the State of New Jersey at the present time.

We believe that this solution is an ideal one for the choice acreage which will be abandoned by Ft. Hancock and urge passage of the enabling bill.

Mr. Speaker, I respectfully urge each of my colleagues to take a few minutes out of his busy day to read these editorials. They point up the importance of favorable action in the House and Senate on this bill.

Remarks of John E. Davis, National Commander, the American Legion, Before Women's Forum on National Security, January 24, 1967

EXTENSION OF REMARKS
OF
HON. THOMAS S. KLEPPE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1967

Mr. KLEPPE. Mr. Speaker, my friend, John E. Davis, Bismarck, N. Dak., national commander of the American Le-

gion and former two-term Governor of the State, addressed the Women's Forum on National Security in Washington, D.C., on January 24, 1967, on the subject "Vietnam Today." Because his remarks and observations are so timely on a subject that is on the minds and lips of all Americans, I want my colleagues to have the benefit of reading his entire speech. By virtue of unanimous consent, I include the text of his "Vietnam Today," and insert it in the RECORD at this point:

REMARKS OF JOHN E. DAVIS, NATIONAL COMMANDER, THE AMERICAN LEGION, BEFORE WOMEN'S FORUM ON NATIONAL SECURITY, JANUARY 24, 1967

Mrs. Ryan, distinguished leaders and ladies of the Women's Forum of National Security, Members of the United States Congress and other honored guests:

I was especially pleased by your invitation for me to attend and address this annual gathering of organizations whose concern for national security coincides with that of the American Legion. I think it is a most appropriate occasion to discuss with you my views on Vietnam Today.

As many of you are aware, I recently toured the Far East and spent eight days in South Vietnam. In that short a time, of course, one does not become an expert on so involved and complex a matter as the Vietnamese situation.

Yet, it was time enough in which to gain some valuable insights into what is going on there, and to form some valid conclusions regarding what must continue to go on there—of our commitment and our sacrifices are to have any meaning in the long run.

The first and most important of these is: There is no alternative to victory. The United States has no course open except to see this conflict through to a successful conclusion.

By "victory," however, I do not necessarily mean a military triumph in the historical manner, for the Vietnamese struggle is not like any other war in which the United States has been engaged. In Vietnam, there will not take place an interrelated series of battlefield successes, culminating in one dramatic final assault on the enemy's last stronghold; we cannot anticipate an ultimate confrontation of opposing forces followed by the total collapse of the enemy's army on the field of battle. Also, I think it unlikely that this war will be followed by formal peace negotiations of the classical type.

On the other hand, there will not be a Dien Bien Phu for us as there was for the French in 1954. Ho Chi Minh already knows that he cannot throw us out and, therefore, that—as long as the United States honors its commitment to South Vietnam—he cannot take that country over by force.

What, then, do we mean by "victory" in the context of Vietnam? In answering this question, we must keep in mind that our military and political objective at present is not to crush North Vietnam as a people or as a government, though it may become necessary to do both, if Hanoi—aided and abetted by Peking and Moscow—continues its agression indefinitely.

Thus, victory for our side will come when the communist side either is convinced that further military efforts would be fruitless, or it is hurt so badly that it cannot carry on. As to the first eventuality, I doubt if there would be any clear-cut signal from Hanoi that it has decided to quit. After all, North Vietnam officially refuses to admit that it is involved, and it certainly has nothing to gain by coming to the negotiating table, except an unnecessary confirmation of what was granted to it by the 1954 Geneva agreement.

As to the second eventuality, I regret to say that all I heard and observed while in Vietnam causes me to feel that we will have to step up the level and the nature of our punishment of North Vietnam and its forces before we will achieve even the limited victory which we must attain. In either case, our victory will be marked by a sharp but welcome reduction in casualties, by a gradual finding that infiltration appears to have ceased, and that North Vietnamese regulars have disappeared from the ranks of the Viet Cong. There still will remain, of course, the gigantic task of pacification and the rooting out of diehard guerrillas.

I will not take your time to describe the details of my itinerary while in South Vietnam. I was privileged, however, to visit many of our Army, Air Force, Navy, Marine Corps, and Coast Guard installations throughout that country. And, I did have the opportunity of talking with our military and civilian leaders there, of meeting with national and local Vietnamese officials, and of visiting with our troops in the field—the officers and men who bear the burden of day-to-day combat in Vietnam. Also, I spoke with wounded men in several of our hospitals. (And here I would digress to mention the sad fact that to the soldier who stops a bullet, be it a fatal injury or not, it makes no difference that this war is unlike any other which we have fought. To those serving there under combat conditions, this war is very real and very personal. It is being fought under the grimmest of circumstances, in harsh climate and hazardous terrain, and against a fierce, cunning, dedicated and desperate foe.)

I asked many questions wherever I visited. Constantly I asked, "Why does the Viet Cong fight? Why is he so motivated?" I found that there are many answers to this puzzle. For some, guerrilla warfare has simply become a way of life—to the second and third generation; for others, it is only because there is a gun at their backs or their loved ones are under threat of death.

I asked, too, that if Hanoi knows it can no longer hope for a military victory, why does it continue to support the aggression? The answers here were not so varied. It is to the communist world's advantage to continue to cause the United States to commit a substantial proportion of its conventional fighting force to what is essentially a limited war. Ho Chi Minh knows the cost to us is very high, and relatively much greater than it is for his government and its backers elsewhere. Meanwhile, he—and communists everywhere—can continue to hope for an ultimate collapse of the American will in the face of increasing U.S. casualties, rising costs, continued dissension and demonstrations at home, and constant diplomatic pressures from abroad. The Reds know that the collapse of our national resolve to see this commitment through would ultimately yield far more significant gains for them than, the mere takeover of South Vietnam.

That is why I say there is no alternative to victory for us.

It is also why I say we must put increased pressure on Hanoi. We must destroy that government's ability to carry on its aggression in the South, and thereby force the victory we seek, regardless of whether or not the communists ever come to the peace table.

And, we must do this soon.

This leads to another important question I asked repeatedly: "How best can we win this war? What should we be doing that we aren't doing now?" This question, no matter how it is put, immediately brings one face to face with some of the limitations under which this war—our side of it at least—is being fought.

I do not mean to suggest that I found unanimity of opinion on this issue. But two points were raised over and over again by those who feel that military, rather than purely political, considerations should apply to a greater degree than is now the case.

These two points, and not necessarily in the order of their importance, are the facts: (1) the enemy makes massive use of Cambodian territory as sanctuary, and (2) our fliers are too severely restricted as to the targets they might strike in North Vietnam.

A substantial number of those who spoke on either of these two points did so with conviction and from a base of extensive military knowledge and experience. Some, unfortunately, did so with no small sense of frustration.

How, they ask, can we defeat an enemy who—when badly hurt—is free to take refuge in so-called "neutral" territory; that is, in neighboring Cambodia, or for that matter back across the "demilitarized zone" into home base. And from those safe havens, these same units—regrouped, resupplied, and restored to strength with fresh troops—return to South Vietnamese territory in efforts to overrun our smaller outposts or to ambush our patrols. Following this pattern, such enemy units inflict far more American and allied casualties than would otherwise be the case. At a minimum, especially in the Central Highlands border area, they tie down far greater numbers of our troops than their size and potential would otherwise justify.

Even the layman must ask, how can we defeat an enemy who has ready access to privileged sanctuary? Are we facing an unending stalemate—another Korea" The answer has got to be—no!

As to the bombing in the North, I am not going to pretend that I know exactly what targets we should be hitting that are now "off limits." I could make some guesses, and so could most of you. (I suspect the enemy's airfields would be high on both our lists.) Neither am I going to attempt to suggest how best the port of Haiphong might be rendered useless to the enemy as far as war materials are concerned.

I am going to state, however, on the basis of my discussions in South Vietnam, as well as with knowledgeable individuals here at home, that if the military feels that its pilots need greater options—both to hurt the enemy more and to offset the tremendous risks they are taking every day—then it is time to reconsider the existing restrictions. And, if our best military minds agree that the continued traffic of strategic goods into Haiphong is costing us increased casualties and indefinitely prolonging the war, then I believe the military should be permitted to cut off that traffic by whatever method is deemed most practical and feasible.

Setting these problems aside for the moment, I am happy to be able to report that my findings with regard to the morale of the American fighting man in Vietnam coincide with what you have heard and read elsewhere. Despite great hazards and great handicaps, the morale of our troops there could not be better. All America can be tremendously proud of them, as individuals and as fighting units.

Our military leaders there—especially those who saw combat duty in World War II and Korea—volunteered time and again that this is the finest fighting force America has ever sent into battle, that these men are better trained, better equipped, better motivated, and that they have all the spirit necessary to see a tough job through. I would add that our military leadership there is truly superb, from General Westmoreland on down, in all commands and in all services that I observed. In addition, the cooperation between services is excellent and perhaps unparalleled in our previous wartime experience.

If my visit to Vietnam caused me to have reservations of any kind, it was in regard to the seeming lack of spirit and motivation on the part of the Vietnamese people themselves. As you walk about the streets of Saigon and other population centers, you cannot help but notice that the natives appear indifferent, sullen, and sometimes almost hostile. This appearance is not so pronounced in rural areas, and it was not true of the groups of children we saw at several schools both in and near Saigon.

But, if the smile has gone out of that land, one does not have to reflect too deeply to understand why. Our officials, who have worked with and even lived with the people there for any length of time, are quick to defend them and to point to the fact that most of them have known nothing but war their entire lives. Also, while many Vietnamese are tired of death and destruction to the point of discouragement and disinterest, the majority are not willing to give up to the Communists and its so-called National Liberation Front. This they proved last year, when despite Viet Cong threats, eighty percent of the electorate exercised their privilege of voting for representatives to the National Constituent Assembly—a clear rejection of the Front and what it stands for.

On the military side, I was assured that given good leadership the Vietnamese soldier is courageous and highly effective. While this leadership is not more than "average" in many units, there is continued improvement. It must be remembered, of course, that the Vietnamese Army has taken tremendous punishment for its relative size. It has suffered over 46,000 combat deaths in the past six years! Also, as one three-year veteran pointed out to me, the Vietnamese Army today compares very favorably with that of South Korea during the conflict there. Now, in Vietnam, the ROK troops are the object of high praise among all the allies, and the object of much fear among the Viet Cong.

Proper training and the development of leadership in depth cannot come overnight. It takes skill, time, and patience on the part of our advisers. I saw young Vietnamese recruits in their training camps. The material is there, they seemed eager to learn and to learn right. After all, at stake are their individual lives, as well as the future of their country.

The number one question asked in Vietnam—just as here at home—is how long will the job take. To this question, I must admit that I received only opinions for answers. Nevertheless, many are willing to venture that the large scale military war—that is clashes of major units—may already be nearing an end, that 1967 may see the last of it.

I hope so, for clearly this would mean many less American casualties. But that still leaves three other "wars," the guerrilla war, the political war, and the economic war.

The first of these may well take the ten years that many have projected. It was about that long in the Philippines, and longer in Malaysia. And pockets of resistance still remain in both of these countries. But victory in Vietnam's guerrilla war is intimately related to progress in the other two. It depends in large part on the whole slow process of nation-building, restoring a ragged economy and developing a much larger corps of able civilian leaders down to the last hamlet.

Even without continuing conflict, assassinations of village chiefs, teachers and all representatives of law and order, the odds against quick success are great. Regional, ethical, religious and other cultural differences are tremendous practical barriers to political unity in Vietnam.

Given all these problems—most of which have been aired repeatedly in the press here—and considering our more than 6,000 combat deaths, it is no wonder that I am frequently asked, "Is it worth the sacrifices we are making?" Does the freedom of those faraway people really mean that much to us?"

My answer is "Yes," but not because I think that our national interest is intimately bound up with the collective welfare of the Vietnamese. My answer is based on the conviction that our involvement is essential in order to establish—even at great cost in lives and money—that armed aggression by the forces of communism cannot succeed. If this be the test case, and I'm certain that it is, we must convince the communist world that its stratagem of so-called "wars of national liberation" will not work. Herein, I think, lies our true national interest. If, while succeeding in this effort we help maintain the freedom and independence of another country, well and good. But that goal alone is not enough. It is our own long-range freedom and independence that we seek to maintain.

Meanwhile, let us bring about our victory in the least possible time, with the least possible casualties. Let us reexamine all of the limitations now placed on our military to make sure these do not stand in the way of our vital objectives.

Let us say to Prince Sihanouk of Cambodia—and to the world generally—we will no longer tolerate the use of his land by the Viet Cong and North Vietnamese regulars. Let us follow that warning, after reasonable notice, with positive action. And let us accept military judgment as to the need to lift the restrictions on bombing in the North, and with respect to closing the port of Haiphong.

But, regardless of targets or tactics, I say let us pile on the pressure until we have broken either the enemy's will or his ability to carry on the fight. When we hurt him hard enough long enough, we will have our victory. There is no other way.

Wisconsin Proclaims Unemployment Compensation Day

EXTENSION OF REMARKS
OF
HON. WILLIAM A. STEIGER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1967

Mr. STEIGER of Wisconsin. Mr. Speaker, on January 28, 1932, 35 years ago, the State of Wisconsin pioneered with the enactment of this country's first State unemployment compensation law.

This landmark legislation has been recognized by Gov. Warren P. Knowles in his proclamation of Unemployment Compensation Day in Wisconsin.

The designation of this day reflects on the progress we have made since 1932 in helping to provide opportunities for our citizens and I am proud of the role the State of Wisconsin has played in these efforts.

As part of my remarks it is my pleasure to, at this time, include a proclamation by Wisconsin's Gov. Warren Knowles proclaiming January 28 "Unemployment Compensation Day":

A PROCLAMATION

Whereas, 35 years ago, on January 28, 1932, America's first state unemployment compensation measure was signed into law by Wisconsin's Governor, Philip F. La Follette; and

Whereas, Wisconsin's pioneering action and leadership in this field helped to influence the development of unemployment compensation principles and programs in this country, and paved the way for enactment of state laws throughout the nation in connection with the Social Security Act of 1935; and

Whereas, Wisconsin's jobless benefit program has helped hundreds of thousands of workers since it was launched on January 28, 1932; has sustained their buying power during layoffs; and has thereby strengthened the whole economy of this State; and

Whereas, Wisconsin's program has, from the start, sought to finance its benefits fairly, and to encourage all employers to provide steadier jobs insofar as practicable; and

Whereas, Wisconsin, with the full cooperation of labor and management, has continued to strengthen its jobless benefit system and to encourage responsible action by every state to improve its unemployment compensation law;

Now, therefore, I, Warren P. Knowles, Governor of the State of Wisconsin, do hereby proclaim the 35th anniversity date of America's first jobless benefit law, namely January 28, 1967, as Unemployment Compensation Day, to be observed by such ceremonies as may further public understanding of this program, recognize the part played by various individuals and organizations in its development, and encourage further improvements in the general public interest.

In testimony whereof, I have hereunto set my hand and caused the Great Seal of the State of Wisconsin to be affixed. Done at the Capitol in the City of Madison this eleventh day of January in the year of our Lord one thousand nine hundred and sixty-seven.

WARREN P. KNOWLES,
Governor.

Extending the Vote to 18-Year-Olds

EXTENSION OF REMARKS
OF
HON. WILLIAM L. ST. ONGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1967

Mr. ST. ONGE. Mr. Speaker, we are entering a great period of a youthful America, one in which over half of our citizens are under 25 years of age. This young generation is well educated, and deeply concerned with national and international events. The vital issues facing our Nation today have a profound influence upon their future, perhaps even more than those which any other generation has had to face. These problems are frustratingly complex, and yet cry out for some form of action.

I believe a symptom of this is seen in the widespread campus demonstrations, sit-ins, picketing, speechmaking, and all the other activities in which our young people are engaging. To their parents and the older generations such behavior is often looked upon with something akin to horror, or as proof that today's youth has gone wild. Rather, it seems to me a manifestation of the very real and perhaps justified frustration which an informed youth population feels when confronted with today's problems without any real means of effectively expressing themselves.

One excellent way to give young people a means of participating in the great issues of our times is to extend to our 18-, 19-, and 20-year-old citizens the right to vote in Federal elections. While this would allow practically all of our college age youths to exercise their right to vote, it would not automatically mean the end of student demonstrations. It will enable, however, this alert and informed segment of our population to become better infused into the body of our democracy. Instead of having to stand by the sidelines and vent their frustrations by carrying picket signs, they will have the opportunity to participate directly in the orderly processes of democratic government.

I believe that extending the vote to our youth will also have a very salutory effect upon our legislative and executive bodies. It will become necessary for them to be much more aware of, and responsive to, a new group of voters with fresh ideas and new approaches to our problems. In like manner, this vast reservoir of young people who are currently studying and discussing the great national and international issues would be more inclined to offer the fruits of their intellectual labors once given the opportunity to participate directly in national elections. As Adlai Stevenson remarked some years ago:

> The 18 year old of today is more aware of national and world events than ever before.

I believe that this is an increasing trend, and that our youths of 18, 19, and 20 are no less informed on the average than those between 21 and 25 years of age.

Carl E. Sanders, former Governor of Georgia, where 18-year-olds have been allowed to vote since 1943 has stated:

> During more than 20 years, these younger voters have repeatedly shown mature responsibility.

The Governor further remarked:

> I think that now, perhaps more than ever before, political life needs an infusion of idealism, and the largest single source of that idealism is our young people. It has often been said that our nation's youth are our greatest asset; if this is true, as I believe, then extending the franchise to them insures the maximum utilization of that asset. Besides, courts cease to recognize men as juveniles after their 18th birthday; federal relief for dependent children is suspended upon reaching the age of 18, and, of course, the minimum draft age is 18.

The chairman of the Democratic National Committee, the Honorable John M. Bailey, has said:

> Many of our young people have become involved in politics and are happy to perform any task from ringing doorbells to running campaigns. They are knowledgeable on issues, articulate in debate, and committed to our way of life. We should do everything we can to promote ratification of the Constitutional amendment that would grant all people over the age of 18 the right to vote.

It seems obvious to me that if we are willing to ask our young men to give up their lives on a foreign battlefield, the very least we can offer them in return is the opportunity to participate through enfranchisement in the selection of those who will make the crucial decisions for the nation. This is not to imply that the right to vote is to be considered a reward for military service. Rather, it should be recognized that in a democracy such as ours, where we consider that a citizen is mature enough to be given the responsibility to operate sophisticated modern weapons and he is called upon to risk his very life, then he should also be considered mature enough to participate directly in the processes of representative government. Modern communications are so rapid that even the serviceman far from home is kept well-informed and abreast of the criteria necessary for intelligent and responsible decisions as a voter. Indeed, because of his personal stake in the quality of his representatives in the Federal Government, the military man is probably able to make a more dispassionate decision than many citizens at home.

To tax our 18-, 19-, and 20-year-old citizens without giving them the right to vote ignores the great rallying cry of our War of Independence that there be "no taxation without representation." At the very least we should allow these young people a role in selecting those who will have the responsibility of determining how their tax dollars are to be spent.

Unfortunately, too large a portion of our young people still leave school at about the age of 18, just when their knowledge and interest in national affairs is at its highest. By the time they reach 21, most of them are preoccupied with family and work, their enthusiasm for public affairs has greatly diminished, and thereafter they usually follow a course of indifference toward their voting rights. Allowing this group to participate in national elections at the point when their political knowledge and enthusiasm is highest, would offer the best possible training in citizenship and would develop the habits necessary for a lifetime of civic responsibility.

Prior Congresses have seen the introduction of legislation to lower the voting age to 18, and yet no final action was ever taken. I believe this to be an issue of major importance, an idea that has ripened in our day, and one behind which both political parties can unite. Its adoption would add very real distinction to the achievements of the 90th Congress.

Hypocritical, but Profitable

EXTENSION OF REMARKS

OF

HON. GLENARD P. LIPSCOMB

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. LIPSCOMB. Mr. Speaker, there is an increasing public interest in the subject of our trade relations with other nations. This is evident in the more frequent appearance of news columns, editorials, and cartoons which deal with the subject. A recent example is the column by James J. Kilpatrick which appeared in the Washington Star of January 24, 1967, which I commend to the attention of the Congress.

Under leave to extend my remarks, I submit the article for inclusion in the RECORD:

HYPOCRITICAL, BUT PROFITABLE

(By James J. Kilpatrick)

If politics is the art of the possible, how is one to define diplomacy? As the art of the hypocritical? As the art of the inconsistent?

One searches in vain for some rational explanation for policies of world trade and mutual alliance that often appear to be working at cross purposes. Britian's guarantee of the sale of a $28 million fertilizer plant to Communist Cuba is merely the most recent in a series of events that suggest that in international affairs, the almighty dollar becomes the dominant factor.

By general agreement among Latin American observers, Castro's Cuba is broke. Her credit with non-Communist countries is worthless. Her exports to the non-Communist world have dropped from $250 million in 1964 to $100 million last year. If an undesirable regime may be toppled by an economic squeeze (and this is precisely the argument used to support sanctions against the Ian Smith regime in Rhodesia), Cuba's troubles would appear to offer an excellent opportunity to apply new pressures. But the government of Britain sees nothing wrong in guaranteeing a five-year credit on the fertilizer plant. The deal will make Cuba stronger, not weaker; and it will represent a nice profit to the British firm of Simon-Carves. What price mutual friendship?

The same question has been raised in recent months in reference to West Germany's financial support of a steel mill in North Vietnam. Last fall the Senate adopted a resolution censuring West Germany for the deal, but the deal goes through. Only last month, arrangements were made final by which our good friends in Europe will finance a mammoth Fiat factory in the Soviet Union. There is some disagreement among the experts on whether the factory could be converted to tank production; but there is no disagreement that the plant will strengthen the Soviet domestic economy and make the Russian worker's life better under Communist rule.

Yet our own government is just as deeply involved as our European allies in giving aid and comfort to the enemy. Surely it is not questioned that the real enemy in Vietnam is the Soviet Union. The aircraft, the missiles, the rifles, the trucks, the grenades, the bullets—the whole array of weapons used to kill American troops—may be traced to Soviet sources. Russian ships continue to supply vital petroleum through the port of Haiphong. Without Soviet support, the Viet Cong and the North Vietnamese could not maintain their war.

So how does the President of the United States react?

"We are shaping a new future of enlarged partnership in nuclear affairs, in economic and technical cooperation, in trade negotiations, in political consultation, and in working together with the governments and peoples of Eastern Europe and the Soviet Union. . . . When we have differed with the Soviet Union, I have tried to differ quietly, and with courtesy, and without venom."

The President ticked off specific achievements—a treaty on the peaceful uses of outer space, an agreement on direct air flights between New York and Moscow, the removal of trade restrictions on more than 400 items, the granting of credits by the U.S. Export-Import Bank to Communist satellite nations, a renewal of the cultural agreement with the Soviet Union. He urged the Congress "to help our foreign and commercial trade policies by passing an East-West trade bill and by approving our consular convention with the Soviet Union."

And in the next breath, Johnson turned to the war in Vietnam. Our purpose in Vietnam, he said, is to prevent the Communist from taking over Southeast Asia. He described the enemy as a "stubborn adversary who is committed to the use of force and terror to settle political questions." If the Communists are not checked in Vietnam, now, "the world can expect to pay a greater price to check them later."

It is reported in Washington that the State Department is making the strongest possible representations and protests to Britain against England's financing of the deal with Communist Cuba. The British are not impressed by these remonstrances, and with good reason. If the United States itself persists in simultaneously treating the Soviet Union both as friend and enemy, why should Britain do otherwise? The policy may be illogical, inconsistent, hypocritical, and indefensible. But it's profitable, too.

Averting an Arms Race

EXTENSION OF REMARKS

OF

HON. WILLIAM T. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. MURPHY of Illinois. Mr. Speaker, the Chicago Daily News, among a host of others, welcomes the bipartisan support that has emerged for President Johnson's effort to avoid a new arms race between the United States and the Soviet Union.

Such competition—with regard to antimissle systems, for example—could be potentially disastrous.

Ambassador Llewellyn Thompson has carried with him to Moscow a message from the President. Its contents have not been disclosed, of course, but the President made clear his earnest desire to slow down the arms race in his state of the Union address.

Now, as the Chicago newspaper says, the country and the world hope Moscow responds in the spirit of reason that motivated the President.

Under unanimous consent I include the News editorial in the RECORD, as follows:

[From the Chicago Daily News, Jan. 17, 1967]

AVERTING A NEW ARMS RACE

Bipartisan support has emerged for President Johnson's effort to avoid a new and potentially disastrous arms race with the Soviet Union. Both Mike Mansfield, Senate majority leader, and Everett Dirksen, minority leader, have endorsed the attempt to reach an agreement against deploying antimissile systems.

Such a proposal is assumed to be the principal item in the message to Moscow carried by the reappointed U.S. ambassador, Llewellyn Thompson. A great deal hangs on the Russian reply, for if the Soviets turns thumbs down, the pressure to build an antimissile system in this country will become irresistible.

A sizable bloc in Congress favors going ahead with the Nike-X system anyway. And the revelation last November that the Russians have already installed some antimissile defenses adds to the pressure on Defense Sec. McNamara, who has thus far resisted doing more than experimental work on the system.

It is still unexplained why the Russians made the first move toward setting up a missile defense. In these days of satellite cameras—the "spies in the sky"—there was little hope that such preparations would go unnoticed. But the discovery forced some sort of response.

A few years ago, the response would have been nearly automatic. Regardless of cost—and the estimates run to $30 billion or more—the United States would have set to work to beat the Russians at their own game.

That President Johnson has chosen instead to seek an arms-limitation agreement speaks volumes for the change in the Cold War climate. The choice is left to Russia: If it's another spiral in the arms race they want, the United States will have to match the pace; if they are willing to halt work on their antimissile system, both nations can be spared enormous expense while maintaining the nuclear stalemate.

There are many imponderables in the situation, the principal ones being Red China's growing nuclear strength and the state of Sino-Soviet relations. But this country, and the world, must hope that Mr. Johnson's message to Moscow is received in the spirit of reason that prompted its sending.

Painful Percentages

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. YOUNGER. Mr. Speaker, in the January 26 issue of the Wall Street Journal, Mr. Vermont Royster had an excellent column on what he labeled "Painful Percentages." It is an excellent discourse on the high cost of living and its effect on the take-home pay. His column follows:

PAINFUL PERCENTAGES

(By Vermont Royster)

This is the season of chills and fever, especially for those of us who enjoy the rarefied air of New York City. And it's astonishing how little it takes to give you big miseries.

With the mouth thermometer registering no more than 100 degrees, your nose runs, your eyes water, your bones ache and every muscle feels like you just finished the Super Bowl game.

What makes the reaction seem incommensurate with the provocation is that the normal body temperature is 98.6 degrees. Thus 100 degrees on the Fahrenheit scale is barely a 1% increase. Let the rise top 2% and you're apt to face not only miseries but a big doctor's bill.

In such a state it's hard enough anyway to read the morning headlines, and you're certainly not in the best mood to react with proper gratefulness to the latest word from the Bureau of Labor Statistics.

Right there on page one it says that food prices this year should go up by "only" about 2%, and even this would be due mainly to price increases on beef and dairy products. Forgo the milk and shift to pork chops, and you might even shave off a percentage point.

Moreover, according to the Commissioner of Labor Statistics, the whole Consumer Price Index (which includes the price of clothes and such as well as food) may not rise any more than a mere 2.5%.

The especial cheer in this good news stems from the fact that in 1966, a lamentable year on several counts, the same Consumer Price Index shot up 3.3%, for the largest single year's rise since 1957. This chunk out of the household budget, so it says here, was offset somewhat by wage increases. But they in turn were offset by increased Social Security payments. On a net balance the drop in real purchasing power amounted to $1.35 a week for the average worker, or a decline of "only" 1.6%.

The difficulty with trying to keep all this straight in your mind is the aspirin. It makes your head ring. The lady of the house can tell you that the cost of living has been going up every year, almost since the memory of man runneth not to the contrary, but it's a struggle to explain to her that each year, most years, the rise was "only" a percentage point or so.

She gets out the World Almanac, which you can hardly read through puffy eyes, and points out that since 1959 the cost of living has gone up 15% everywhere, almost 18% in Mayor Lindsay's Fun City. It mounts up, she says.

That, of course, is one trouble with percentages. Just the other evening, for example, the man in Washington explained that he was going to have to raise our taxes, what with the war on and everything, but that it would be "only" 6%.

Take a married man with about $6,000 of taxable income. He'd only pay about $5 a month more, or $60 a year, the man said. It didn't sound like much; what can you buy these days with $60 anyway? But that doesn't count the $1,000 he is already paying, which is something else and no small percentage.

Then if he's lucky enough to get a raise this year, he'll pay 19% of the extra money to Uncle Sam right off, plus an extra 6% of that if the little old tax bill goes through.

Nor is that all. This week the man suggested raising Social Security taxes by a small amount; that is, "only" about 1% more than they would rise anyway. By 1969 that means a total Social Security and Medicare tax of 5% on the employe's wages covered plus an equal amount to be paid by the employer, or a total rate of 10% on a dollar's worth of wages.

And in case you've lost count, that 10% is in addition to the hereinbefore mentioned 19% and 6% of that. At which point, if you've got a headache, your arithmetic breaks down.

All you can remember is that somehow you've forgotten the Governor and the Mayor. The Governor in this case likes to remind everybody that he takes "only" 10% of their earnings at the most, and for most people it's hardly more than 6%, which by this time seems like a pittance indeed. Something, we suppose, must be left for the Mayor of Fun City, who takes away no more than 2% of net taxable income and only 5% of what you spend of what you have left.

Somehow you do have something left, and in the process you've taught the lady of the house a valuable lesson in the difference between gross and net. So perhaps there is some comfort in being told that this year what you have left will be worth only 2.5% less in the market place than what it would have been worth last year.

In any event, it's plain enough that the rise in the cost of shoes and groceries, even if it amounts to 3% all over again, still won't boost your cost of living as much as the cost of government. The BLS, incidentally and quite shrewdly, doesn't count the cost of government as part of the cost of living. You can always escape the cost of government by not earning anything, going on relief and living off the government. Which is something you can't do with the butcher.

To be sure it can get confusing again when you're lying there in the half-dark listening to the telly explain about the Government's new budget. On an administrative budget of $135 billion for fiscal 1968 the deficit is "only" 6% (that is, if you count in the 6% tax increase the President asked for), which doesn't seem so terribly much when you figure the lady of the house ran a bigger percentage deficit than that just last month.

But then the smiling TV reporter says that in this case 6% amounts to $8.1 billion and that between now and the end of 1968 the accumulated deficit will add up to nearly $20 billion. Like the lady says, percentages do mount up.

Or down. For if the cost of living rises 2.5% each year, that is just another way of saying that the dollar each year is depreciated by that amount in purchasing power. Now if each year the dollar shrinks by only 2.5%, and if you can work the calculus out in your head, how many years will it be before you can use dollar bills like Kleenex to blow your nose?

But the mental effort is exhausting, and besides, why bother if each year the government is going to let you keep fewer and fewer dollars anyway?

So you just stick the thermometer in your mouth and wonder why the devil you feel so lousy with only a 1% fever. Hardly seems reasonable.

TVA Director Frank Smith's "Politics of Conservation" Generates Discussion of Preserving and Promoting Nation's Resources

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. EVINS of Tennessee. Mr. Speaker, one of our former colleagues, Frank E. Smith, now a Director of the Tennessee Valley Authority, has written a provocative and challenging book, "Politics of Conservation" which comments upon the programs and operations of the Tennessee Valley Authority, the U.S. Corps of Engineers, the U.S. Soil Conservation Service and traces the conservation movement in the United States.

This is a timely discussion of the development of conservation and the conclusions reached are most interesting. The reviews emphasize Director Smith's own experiences as a former southern legislator in the House of Representatives, and his long experience in the American conservation movement.

These reviews are reported in the Nashville Tennessean. They included reviews by Col. Jesse L. Fishback, district engineer, U.S. Corps of Engineers, Nashville. The Wall Street Journal commented favorably in an editorial. The book has stimulated much healthy discussion.

Reviewer Sasser says Mr. Smith has written a fine book but failed to give a needed, precise definition of conservation. He sees the need for a "jet-age, direct dialing" definition and refers somewhat obliquely to the "almost divine origin" of TVA according to Director Smith in his conservation gospel.

Colonel Fishback in his review feels there is insufficient emphasis on the work of the Corps of Engineers. He defends the flood control role of the Engineers and points out that this program inaugurated 30 years ago has returned a dividend of some $3.40 in flood damages prevented for every dollar invested.

Without becoming involved in this learned discussion, it seems to me that conservation can be defined as the preservation of our natural resources and the careful, considered use and management of these resources to build a better life for all Americans. There must, of course, be a balance between preserving natural resources and the development of these resources by the Government in the construction of dams, reservoirs, waterways, and other facilities; and by private enterprise in mining, lumbering, homebuilding, and other activities. We must retain the heart of our natural heritage—but, at the same time, we must do what is necessary to provide flood control, transportation, power—as well as jobs and opportunities—for our exploding population.

We must preserve—but we must progress. I feel sure that Director Smith, Conservationist Sasser, and Engineer Fishback would accept this general, broad definition. The difficulties, of course, arrive when decisions are made as to what natural resources should be developed and which should be preserved—and how this should be done.

It is my feeling that the TVA, the U.S. Corps of Engineers, and the U.S. Soil Conservation Service all have shown excellent judgment in these matters in our own Tennessee Valley area.

TVA has built large dams on the primary river—the Tennessee—and is now moving ahead with tributary development which is necessary and essential. Its programs are well planned and well executed.

The U.S. Corps of Engineers plans in the development of the Cumberland River are similarly well prepared; its construction well executed and its projects efficiently maintained and operated.

There are those that agree with the Corps of Engineers that work on the Devils Jump Dam with high-peaking power production in northeast Tennessee and Kentucky should be initiated as a part of this program. This is one of the few remaining sites in the TVA service area where such a dam can be built. It is difficult for some to understand TVA's reluctance to recommend this project. Growth and progress should certainly not be deterred by the opposition of the private power interests.

Friends of TVA also feel that TVA should proceed expeditiously with its tributary development—on the Obed and Emory Rivers, the Elk River, the Duck River, and others.

The Wall Street Journal in its laudatory review praises Author Smith's recommendations for closer coordination on resource development between all governments and between the components of government. This is certainly a goal worthy of fulfillment.

Director Smith's book has generated much helpful discussion on the general subject of conservation, discussion which is bringing to the attention of millions of Americans the importance and significance of our conservation effort.

Because of the great interest of my colleagues and the Nation in this important field of conservation, I ask unanimous consent that the reviews by Mr. Sasser and Colonel Fishback appearing in the Nashville Tennessean, and the editorial in the Wall Street Journal with reference to "Politics of Conservation" be reprinted in the Appendix of the RECORD.

These comments follow:

[From the Nashville Tennessean, Jan. 22, 1967]

SOME OBSERVATIONS ON BOOK, "THE POLITICS OF CONSERVATION"

(By Col. Jesse Fishback, District Engineer, Corps of Engineers)

Being aware of the Nashville Tennessean's continuing interest in the development of natural resources in this area, I considered it appropriate to present some observations on Mr. Frank E. Smith's book, "The Politics of Conservation," which recently received attention in the paper.

Mr. Smith is particularly well qualified to discuss the subject of conservation with a great degree of authority, for his background provides a broad base of experience seldom equaled. In addition to serving in the congress of the United States for 12 years, and as a director of the Tennessee Valley Authority, a nationally-recognized agency in the conservation field, he has, undoubtedly, made the subject of "conservation" one of extensive study. His experience as a journalist and a newspaper editor also contributed not only to his wealth of experience, but to the readability of his book as well.

I am particularly impressed with the broad coverage of the history of conservation which Mr. Smith was able to accomplish in a relatively short book. Of particular interest was his insight into the contribution of individuals and groups which were most influential in shaping our national conservation policies and programs.

I am perhaps sensitive to omissions of significance to the Army Corps of Engineers, but I do believe the interrelationship of military and civil functions has been of immense significance not only in furthering success in wars but also of fostering vitality, integrity and high morale on the civil side. Mr. Smith alludes but briefly to this interrelationship in connection with the Civil War.

A second omission of significance in the history is the part played by the land grant colleges of the nation. I am uncertain as to the date of legislation authorizing their establishment, but shortly after the end of the Civil War these institutions were beginning to turn out the trained personnel needed in large numbers in the rapidly-expanding nation.

Until that time the Military Academy of West Point, under the Corps of Engineers, as Mr. Smith indicates, had supplied a large share of the talent required to manage conservation projects. After the land grant colleges got going, West Point was separated from the Corps of Engineers, although its top graduates continued, as a general rule, to choose to enter the officer corps as engineers.

Deserving particular attention was his analysis of the proper concept of "wilderness preservation." As Mr. Smith states, "the ansfers to the kind of unreasoning opposition to any change from the original as espoused in too much of the preservationist-conservationist doctrine is, of course, that, the growth of civilization being what it is, man must utilize his environment to sustain and improve his life. In the process of growth, the evolution of values refines the the standards that are the means by which we accept change, but the inevitability of change itself remains elemental." His observation that "some rivers can be too wild" is most appropriate.

Mr. Smith also presents a sound observation on the "single agency concept of resources development" when he comments that it is obvious that improvements will have to be made from time to time as their need is recognized to eliminate duplicating functions, but major one-sweep reorganization would be a vast waste of energy and effort and would leave scars in our conservation programs that would be long in healing.

Mr. Smith makes repeated references to so-called "pork barrel" legislation, a term especially applied to the civil works program of the Corps, and which is used quite freely across the nation. Having served in the Congress and being knowledgeable of this program, I thought it would have been fair to point out that all projects which receive a recommendation for construction by the Corps of Engineers, after extensive studies and economic analyses, must conform to the basic criteria of having projected benefits well in excess of cost.

As an example, the facilities which have come into service nationwide since the general flood control program of the Corps of Engineers was inaugurated 30 years ago have already returned a dividend of some $3.40 in flood damages prevented for every dollar invested in protection. Comparable benefits are also realized from the hydropower, navigation, recreation, low flow augmentation, water supply and related features of the projects. Apparently the term "pork barrel," as used nationally means that the representative of each Congressional District is attempting to have the water resources of his area developed by the construction of economically feasible projects. Under our government system, can you find a more equitable means of spreading the program of sound water resources development projects to the benefit of all regions?

The author states in a discussion of hydropower that "under the power amendments, the costs attributable to power will be repayable to the Government, but under no specific time." Mr. Smith failed to state that each project of the Corps of Engineers is projected on an economic life span, during which the project costs must be amortized. In the case of power, the value of the power is determined by the Federal Power Commission and all repayments for power go directly into the Treasury of the United States, and must recover the costs within the economic life span of the project. Monetary returns to the Treasury will not cease at that time, however, but will continue throughout the actual life of the project.

I believe that Mr. Smith's statement that "the Authority (Tennessee Valley Authority) built demonstrative parks, donated shorelines to State and local government units for parks, and quickly put the Tennessee Valley states ahead of most of the rest of the Country in providing public recreation" may have been true for the 1930's, for there was very little comparable reservoir development in other areas adaptable for widespread recreational improvement.

Today the situation is quite different, and although we, in the Corps of Engineers, have not reached the desired degree of development of public use facilities, we do not hesitate to offer the recreation projects in the Cumberland River Basin for comparison with any other areas. Corps of Engineers projects in other areas of the Southeast and Southwest can claim equal attention in the field.

Apparently Mr. Smith does not reflect the thinking of the entire TVA Board of Directors in his statement, "in today's operation, the fullest employment of hydro is primarily a means of cutting generating cost averages," for while TVA continues to recommend construction of marginal hydro plants such as Melton Hill and Tims Ford in the Tennessee Valley, the Board is on record as seeing no need for power from the Devils Jumps Project in the Cumberland River Basin, but in TVA's power service area. Devils Jumps is one of the few undeveloped reservoir sites in the eastern United States which have large power potential.

Mr. Smith makes reference to the Corps of Engineers use of construction contractors in its major development program, and infers that TVA's use of agency-owned equipment and hired labor provides a more efficient method of construction. I feel that the record will not support such a conclusion. While the availability of a large work force and equipment will permit rapid construction operations, the incentive of cost consciousness is never as keen as that between contractors under competitive bidding. In addition, when the construction program diminished, as it frequently has over the past decade, the plant rental of equipment continues and the unproductive work force is invariably held over for the next job.

I consider "The Politics of Conservation" recommended reading for all persons having an interest in the conservation and development of our natural resources, and commend Mr. Smith for his fine work.

[From the Nashville Tennessean, Jan. 22, 1967]

Politics of Conservation: Author Notes Past, Future

(By Joseph R. Sasser)

"He is not a true man of the world who knows only the present fashion of it," Woodrow Wilson wrote in his early papers, Frank E. Smith, a director of the Tennessee Valley Authority, sets out to mend mankind's cultural slippage by writing a book on "The Politics of Conservation." Smith's historical journey into politics and conservation takes him from the 1789 lighthouse . . . near the entrance to Chesapeake Bay" to "most of the days of the future . . ."

Smith is neither a political, delinquent nor a conservation dropout. He served in Congress from Mississippi for 12 unbossed years. Much of this time he wielded sledge hammer seniority on the House Public Works Committee.

President Kennedy appointed him to the board of directors of TVA in 1962. It would be difficult to find one qualified to reflect more preceptively or to proclaim more knowledgeably on the common law marriage of conservation and politics than author Smith.

"The Politics of Conservation" is a solid book with a practical ring to it. It will engage the concern of those whose interests lie in the art of politics and political history. It will frighten and perhaps depress the emotional purist of the conservation movement who seem to acquire a bad case of heebie jeebies when conservation and politics start billing and cooing together.

The book will add distinction to personal libraries. It will be of special interest and profoundly useful as a cornerstone reference to students of American history, politics, as well as to professional conservationists.

But, let it be noted that The Politics of Conservation has imperfections. The author has failed, after 310 pages of rhetoric; to adequately define conservation. Is it beast, fish, or fowl? Smith, rowing in the shallows, seems to define it as economic justice an equal share for all.

"The Politics of Conservation" thunders the ecclesiastical judgment, "The profit of the earth is for all. The King himself is served by the field." Smith is watchful that the king does not overindulge at the expense of his subject.

Meanwhile professional conservationists cry out for a non-ecclesiastical, non-skid, down-to-earth, workable definition of conservation. They want and need to be released from the Maginot mentality that forms a halo of ionized smog around the term conservation. A jet age-direct dialing definition for conservation joins the five-cent cigar as a paramount national need.

Given our "free and open society" one doubts that Smith's dream of a strong conservation president, omnisciently riding tall in the saddle, will likely emerge again soon. The presidency, during these stirring times, somehow gets waterlogged in such ranking matters as Vietnam, aid to education, foreign exchange, civil rights, Medicare, inflation, urban development, and the like.

Even Theodore Roosevelt, the first presidential patron saint of conservation, in his maiden message to Congress, synthesized conservation with other noble tasks, ". . . the ending (of) maltreatment of labor, (of) the exploitation of women and children, (of) the overcrowding of cities, (of) the waste and depletion of natural resources." This was his elixir for the good life.

Effective strong national conservation leadership means concentration of political power. Author Smith is fully aware that Congress, dedicated as it is to individual liberty, generally is not equally dedicated to forking over its powers to the presidency.

So ignobly as the pork barrel process performs it will undoubtedly be with us a long long time. While we proclaim a spirit of political self-righteousness, the log-rolling process, like old man river, rolls on.

Caught in our comic plight, we can take some comfort from St. Augustine's dilemma, who when he was a very young man, was said to have addressed a prayer to heaven. "Oh, Lord," he prayed "make me chaste, but not now."

The Politics of Conservation has its fair share of esoteric bookishness and prudent ommissions. There is the nerve-pinching claim of the publisher to having "the first political history of the conservation and development of America's natural resources;" the imposing bibliography yet a complete absence of footnote documentation; the familiar, almost divine, origin of TVA dutifully recorded followed by the missionary marches to new programs and processes and its self-acclaimed unbounding feats; the utterances of various conservation saints, who, like dead lovers, can be molded into lovers, can be molded into the desired images; the sly winks at bureaucratic naughtiness; the historical struggle of TVA with the New Deal resource conservation agencies, especially the Soil Conservation Service; the continuing competition among engineering bureaucracies to outbid and outbuild one another, and to equate their rock and cement slabs with regional economic growth; the complex political-fiscal-nostrum of water project analysis that brings on economic juggling and political struggling. * * *

As if to prove his nimble perceptiveness and the elasticity of the term conservation author Smith, as a final thrust, sees environmental planning as a certainty during the final third of the 20th century. "New Concepts," "Joint Planning," "Urban Growth," "Massive Transportation Techniques," etc., are some of the new watchwords of Smith's conservation for the seventies.

Perhaps he will find Pro. Kenneth Boulding's newly coined word "Eiconics" more to his liking for this massive process. Boulding's new science of planning purports to apply celestial mechanics to earthly things.

Who shall do this envioronmental planning of the future? Smith sees most of the response coming from the federal level. Sober-minded students of government are apt to agree.

Will TVA have a significant role? Sadly, author Smith observes, "Political reality . . . makes and new TVA unlikely and virtually impossible. Perhaps so, but America will be the lesser if the experiences and talents of TVA are lost in this new process; especially the talents of author Frank E. Smith.

[From the Wall Street Journal, Dec. 27, 1966]

Toward Realism on Resources

Until fairly recently many Americans seemed to regard conservation as an exceptionally dull conversation piece. But no longer.

Anyone who has experienced a water shortage or driven through ruthlessly cut-over timberland or visited a poluted lake is bound to realize that the nation's resources, though vast, are neither limitless nor particularly well handled.

As Frank E. Smith says in a new book, "The Politics of Conservation," the U.S. so far has been mostly content to muddle through, and that just isn't going to be good enough for the future.

Since Mr. Smith is a director of the Tennessee Valley Authority, it's scarcely surprising that he calls for a huge expansion of Government efforts to prevent future waste and destruction of vital resources. Still, he is sufficiently realisitc to see that Washington neither can nor should try to solve every problem single-handed.

The TVA official also argues for better coordination and planning of Federal resource programs. Matter directly touching on conservation and development now are scattered among dozens of agencies around Washington. While bureaucratic dukedoms don't topple easily, some of the ridiculous overlapping certainly could be eliminated. The nation can ill afford to further entrench the pork-barrel politicking of the past and present.

Equally important, an intelligent middle course must be found between two bitterly opposed groups that never did find conservation a bore: Those who want to preserve most of the remaining untouched land largely in its natural state and those who want to develop most of it.

The preservationists often imply that the wilderness must be kept "for only that small fragment of the population considered capable of proper appreciation," Mr. Smith remarks. On the other hand, the all-out developers are prone to labeling their foes as anti-free enterprise, almost un-American.

Sooner or later each side will have to give. Obviously the nation will need to use more of its resources in the future if its expanding population is to be fed, clothed and housed. Just as surely it will be the loser if it unthinkingly despoils its heritage of clear lakes, green forests and towering mountains.

Reasonable compromises will vary widely for various areas, which is one reason Mr. Smith is correct when he discerns an important role for states and local governments in future resource management. For another, governments on the scene usually can move more quickly and efficiently than the distant Federal Government. The TVA official notes with approval that Kentucky started to curb abuses of strip mining before Congress was able so much as to agree to make a general study of the subject.

Even where resource questions cross state lines, as they frequently do, Federal control isn't necessarily the best answer; in some cases interstate cooperation may operate more effectively. Though such proposals don't always work, Mr. Smith mentions the Delaware River Basin Compact, involving New Jersey, Pennsylvania, New York and Delaware, which "has proven an instrument for action and progress."

What the TVA director does not stress is that private industry increasingly is realizing that it has a role not only in developing resources but in conserving them. Aside from public relations benefits, the efforts can achieve real economic gains. Tree farming, for example, may not satisfy the rabid preservationists but it is a far cry from the reckless forest destruction of the past. And it helps to assure a continuing supply of lumber and other wood products.

Nearly every segment of the population, in fact, can contribute to conservation and development of the country's resources. In each case the right question is who can handle the task most efficiently for the public good, not solely whether the job should be public or private.

Though progress has been made, no one is so optimistic as to think that the wasteful strife will be ended easily. If the nation is not realistic about its resources, however, the future reality could be not only wearisome but downright grim.

Grissom, White, and Chaffee

EXTENSION OF REMARKS

OF

HON. EDWARD J. GURNEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. GURNEY. Mr. Speaker, rarely has the news of any tragedy stunned so many Americans as did the announcement from the Kennedy Space Center Friday evening. To most, it was as if the three men had been personal friends, so great was the admiration and esteem in which these men were held.

Virgil I. Grissom, Jr., Edward H. White II, and Roger B. Chaffee were not strangers to risk or danger. They had constantly faced the unknown; they and their families lived with the knowledge that unexpected tragedy could happen at any time.

But perhaps even more than their bravery and heroism, it was their dedication that is the greatest legacy to us. They knew and understood what it means to be an American and to be willing to make any sacrifice for their Nation. These three men knew, and the others who work with them in our space program understand, what real patriotism means.

They all understand the reasons for their work and they know its dangers. The heroism lies in their decision to go on and to do their work despite its risks because they care deeply enough about the mission.

Nothing any of us can say can lighten the loss to the families and friends of these three men. But they can be certain that they are not alone in that grief, that to all Americans, these men were not just means in the news. They were and are our heroes. We followed their work and we looked to them as an example of what we all wish we could be in our own lives.

Their names are already deeply imprinted in the history of this Nation, and indeed in the history of the world. Nothing we can do could be a more significant memorial than the place they themselves have carved in the story of mankind's quest to conquer and understand the unknown. It is for those of us who stay here behind them to rededicate ourselves to carrying on their work.

Waite Hoyt Honored by Big Brothers Association

EXTENSION OF REMARKS

OF

HON. DONALD D. CLANCY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. CLANCY. Mr. Speaker, it gives me great pleasure to bring to the attention of my colleagues the selection of Waite Hoyt to receive Cincinnati's Big Brother of the Year Award. Mr. Hoyt, who was one of the country's best baseball announcers and whose name is a household word in Cincinnati, was honored last Thursday for his enormous contributions to the big brother movement.

I have known Waite for many years and am pleased to see him receive this well-deserved recognition.

Also, we are very proud that the big brother movement, which has accomplished so much good, originated in Cincinnati.

I join the Cincinnati Enquirer in paying tribute to the Big Brothers Association for its singular achievements and to Waite Hoyt for his contributions. The following editorial tells of their work:

[From the Enquirer, Jan. 25, 1967]

BIG BROTHER OF THE YEAR

The selection of Waite Hoyt to receive Cincinnati's Big Brother of the Year award at Thursday night's second annual meeting of the Big Brothers Association serves a twofold purpose. For one thing, it recognizes the enormous contribution Mr. Hoyt has made over the years to the ambitious principles on which the Big Brother movement rests. For another, it reminds the community of the unique niche the Big Brothers Association occupies in the life of the Queen City.

This latter purpose is a singularly appropriate one. For it was from Cincinnati that the Big Brother idea began to grow. Early in this century, Irvin F. Westheimer, a director in the brokerage firm of Hayden, Stone, Inc., found a youngster trying to eke out a bite to eat from a garbage heap. Mr. Westheimer concluded upon inquiry that the boy needed, even more than a square meal, an adult male friend and confidant. That is what today's Big Brothers Association seeks to provide.

The boys who are beneficiaries of the movement do not necessarily come from impoverished homes. But they are likely to be youngsters of impoverished spirit—boys who have no male adult to whom they can turn for counsel, for guidance, for companionship and for challenge.

The volunteers who fill that need for thousands of American boys across the country are living demonstrations of the old axiom, "No man ever stands so straight as when he stoops to help a boy."

We salute the Big Brothers Association for its splendid achievements and Waite Hoyt for embodying the ideals to which the association is committed.

Rep. Claude Pepper's "Interama" and Its Economic Impact on Florida

EXTENSION OF REMARKS

OF

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. ROYBAL. Mr. Speaker, I would like to take this opportunity to place in the CONGRESSIONAL RECORD the text of an inspiring and thought-provoking address—by our most distinguished and esteemed colleague from the State of Florida, the Honorable CLAUDE PEPPER—entitled "Interama and Its Economic Impact On Florida."

"Interama," the Inter-American Cultural and Trade Center to be opened in Miami on July 4, 1968, is the culmination and fulfillment of a unique 30-year-old dream of outstanding Florida leaders with the kind of imagination and vision and faith so well exemplified by CLAUDE PEPPER.

The dream was first turned into an idea with legislative form in 1941 when Mr. PEPPER was representing the Sunshine State in the U.S. Senate—and he has been working on it ever since.

The Interama Center that will open next year will be just what its sponsors intended that it would be: an international meeting place for the business, industrial, cultural, and governmental leaders of the Americas, and a great and unique institution playing a growing and ever more important role in the development of closer Western Hemispheric relations.

As a member of the House Foreign Affairs Subcommittee on International Organizations which considered and approved the necessary congressional legislation to authorize essential Federal participation in this project, I am proud to have had a part in the realization of the Interama dream.

So; it is with a deep personal interest that I take pleasure in placing in the Congressional Record the following address by Representative Claude Pepper, of Florida:

INTERAMA AND ITS ECONOMIC IMPACT ON FLORIDA

(Address by the Honorable Claude Pepper, Member of Congress, at the 50th Anniversary Convention of the Florida State Chamber of Commerce, Tuesday, November 22, 1966, Jack Tar Hotel, Clearwater, Fla.)

It is indeed a great pleasure for me to accept your gracious invitation to address you at this luncheon on the occasion of your 50th anniversary.

It is particularly gratifying to me to be here among so many friends who have been connected for so many, many years with the Florida State Chamber of Commerce. My memory of your State Chamber, you know, runs back to 1929–30, when I was in the Florida House of Representatives—a mere 28 years old during the 1929 session—and your present Executive Vice-President, my able and good friend Harold Colee, was President of this State Chamber.

And during my later years as a United States Senator and Representative, I have always been very pleased to have the most cordial cooperation of your Chamber and its members in projects affecting our state. We have always been in the forefront together in the fight to develop the great potential of this state. And I wish today—for both of us—another half-century of constructive work for the betterment of Florida and of our nation.

Your distinguished President and your Executive Vice-President extended to me the courtesy of selecting my own topic for these luncheon remarks. But they knew well that I would choose a subject close to your hearts and to mine. They knew I could not resist—especially now that we are on the threshhold of success—talking to you about Interma and about the great impact this great project will have on the economic life of Florida, on the United States and our Latin American neighbors, an on the development of a fuller and more meaningful cooperation among the nations of the Western Hemisphere.

When I speak of Interama, of course, I am reminded of a famous proverb: "Failure is an orphan; success has many fathers."

Well, Interama is indeed on the verge of a fabulous success, and it indeed has many fathers.

This is partly in the nature of a project of vast scope and conception. Its concept has matured over many years, and has become one of striking originality and practicality. It is unlike anything we have known in the way of world's fairs and trade fairs, and the best economic experts tell us that—where most of these fairs have run large deficits—Interama will be assured of ample revenue to meet its initial obligations and to continue to grow into a greater and ever more exciting exposition.

This development of the Interama concept has been the function of the thinking of many men over the many years. The concept and the effort to realize it have depended upon the initiatives, the dreams, and the hard work and dedicated support of many persons, in private life as well as in positions of public responsibility.

My own interest in Interama goes back to the early 1930's when, at the height of the Great Depression, the City of Miami spent $10,000 to make a study—and to publicize the results of that study—showing that it was feasible to create a great international trade mart for the Western Hemisphere here in Florida. The concept of Interama has grown far beyond a mere trade mart today. But that was a beginning, and an ambitious beginning for those difficult times.

And then in 1939, right across the bay from here at Tampa, your delegates to the 23rd annual meeting of the Florida State Chamber of Commerce passed a resolution that a Pan-American trade mart should be established in Miami. You pointed out that Miami was the geographical and population center of the Western Hemisphere—and despite the population explosion, Miami is still the geographical center. It is still conventionally located for visitors from throughout the United States and the hemisphere. Its climate, as your Chamber noted then, is still attractive, and its hotels and its reputation for hospitality are still famous throughout the world.

Yours was the first state organization to envisage Miami as the center, the international meeting place, for the business, industrial, cultural and governmental leaders of the Americas.

Today, 27 years later, your vision—and mine—is close to being translated into a great cultural, economic and diplomatic institution of our hemisphere.

My faith in what Interama could become was expressed in legislative form as early as March 20, 1941, when as your Senator, I introduced S. 1150, a bill to provide for the establishment of a "Pan-American Center at Miami, Florida, for the coordination of commercial and cultural relations between the American Republics."

My bill would have directed the Secretary of State to establish such a center for Pan-American, or as we now style it Inter-American, cooperation in Miami. It would have authorized the appropriation of $10 million to make the creation of this center possible.

By this time, I was a member of the Senate Foreign Relations Committee and a member of its Subcommittee on Latin America. I felt then, as now, that we had not done enough to strengthen our relationships with our closest neighbors in the family of nations. I thought we were neglecting the opportunity to bring representatives of Latin American culture and trade to the United States to strengthen the understanding of the American people of the oneness of our hemispheric community—of the rich variety of western man's search for the good society, but of the essential oneness of the human impulse for well-being, for meaningful existence, for beauty and culture, and, most of all, for the dignity and freedom of the individual.

Unfortunately, soon after the introduction of my Pan-American Center bill, we became involved in World War II's great struggle between the forces of freedom and free men and the barbaric totalitarianism that exalted the "superman" and aimed at giving him a reign of 1,000 years in Europe and domination in the world.

This legislative forerunner of Interama had to be put aside. But it was not forgotten. At the end of the war, when we began to rebuild a devastated Western Europe, I felt again even more strongly the need to direct a greater part of our attention toward the strengthening of our relationships with our Latin neighbors. The Inter-American Center, quite apart from my special interest in it, offered a unique vehicle for focusing greater attention on our hemispheric relations, and Miami's claim for the center was strengthened in the post war era by Florida's rapid population growth and by the increasing popularity of the state as a vacation site for the American family.

We re-introduced the Inter-American Center idea and The Congress by a joint resolution approved on September 27, 1950, "expressed its endorsement of the establishment of the Inter-American Cultural and Trade Center in Miami as a permanent year-round nonprofit self-sustaining enterprise for the development of improved relations and increased trade with the republics of Latin-America."

The President was authorized by this resolution to invite the Latin American countries to participate and on January 30, 1952—after the 1951 Florida Legislature had created the Inter-American Center Authority to develop Interama—President Harry S. Truman issued a formal proclamation in which he did "hereby call upon officials and agencies of the Government to assist and cooperate with the Inter-American Cultural and Trade Center in Miami" and "invite the participation of all the nations of the Western Hemisphere."

This was to have launched an almost wholly, privately-built Interama, although under the auspices of a state agency. All of the funds for this development were to come from a large private bond issue and, we now know, it could not have given us the Interama of our dreams—an Interama in which the United States and the countries of Latin America meet officially on a common ground, with official government exhibitions of the respective countries' cultures and products, with official government representatives as well as private visitors from all over the hemisphere meeting on a permanent site of Inter-American cultural and commercial interchange.

But again a war intervened. This time it was the effort to resist a different totalitarianism on the opposite side of the world. Korea and its impact on the bond market destroyed this second of our efforts to bring Interama into being.

I have found in my public service that a truly new idea, an original concept or project, often takes a generation to mature and obtain the final approval of the Congress and the nation.

And Interama is such a unique project.

The unique character of the Interama concept has been both our glory and our greatest source of frustration in dealing with some of our Federal Government officials. We were constantly compared to the World's Fairs at Seattle and New York, and we, as constantly, had to fight against the widespread feeling that these large fairs that operate for six months or a year were going out of style—were being considered by industry and governments as a burdensome investment with too little return for their money.

We had to explain over and over again that Interama would be a permanent institution, that its pavillions would continue to attract large numbers of visitors year after year and would continue to benefit the exhibitors, including the Federal Government. This strangely enough impaled us upon another bureaucratic horn. The Federal departments and particularly the Bureau of the Budget kept reminding us that there would really be no trouble about an appropriation for Interama if it were only another of those one-shot deals, but that frankly they had just never had any experience with a permanent exposition.

I am sure may of your have encountered in other fields the same tendency to deplore the lack of new ideas, only to run from the first new ideas that come along.

You may wonder why, in the face of this resistance and lack of understanding, we continued to press so hard for Federal participation in Interama. Why did we not simply concentrate on getting a wholly-government institution built or moved to Miami? For example, the headquarters of the O.A.S.—the Organization of American States—which should be nad we hope eventually will be located in Miami.

Or why not forget about the Federal Government altogether and aim for a privately financed Interama? After all, most of the more than $350 million wihch will be invested on the Interama site when the project is completed will come from private sources. All we are getting from the Federal Government is a $22 million loan from the Community Facilities Administration, which must be repaid with interest in Interama's first years, and up to $9.5 million initially for the construction and operation of the Federal exhibit.

But this question of Federal participation goes to the core of the Interama concept, and I think it is only faintly understood—even among many of our people in Miami—why Federal participation with an official United States Exhibit is so important that the Inter-American Center Authority felt it would have to abandon Interama if we could not get it this year.

The Federal appropriation of $5.87 million for the construction work on the United States Exhibit during this fiscal year—and the $22 million loan which it releases—constitute together the guarantee to U.S. industry, to the Latin American governments, to the Florida Road Board which must build the interior and access road, to the power company and telephone company which must put in the utilities at their own capital expense, to the City of North Miami which must put in the water and sewer lines—to all of these the Federal commitment serves as a guarantee that Interama will move ahead to completion with the support of the Government of the United States. This guarantee is especially important for industry because we are asking the major companies and industries of our country to build permanent pavillions, not temporary structures, built cheaply to be abandoned at the end of six months or a year.

We now have this Federal "reinsurance" of all the other investments to be made in Interama.

But we have something even more important: Official United States Participation has given us the means of assuring official participation by the governments of the Latin American countries. This is something that has never happened before in the history of U.S. international exhibitions.

Those of us who have seen Latin American pavillions at other world's fairs have seldom been aware that these pavillions were built and furnished by private interests—in many cases by American business interests which operated an exhibit and sales concession under some country's name.

In past U.S. exhibitions, I understand, no more than three Latin American governments have installed official exhibitions of their countries' culture and trade. Interama already has the written agreement of 17 Latin governments to put in official exhibitions and two more countries are currently studying the question of participation.

How did this happen?

On the one hand, Interama decided not to try to get the Latin American governments—which are hard pressed for foreign exchange—to build expensive pavilions in the United States. The $22 million Community Facilities loan will make it possible for Interama to build the pavilions for the Latin governments and make the space available to them without charge. Interama will also build the United States pavilion—another first in exhibitions history.

Instead of the Federal Government building a pavilion and then giving it to the local community when the exhibition ends, Interama will pay back the money used to build the U.S. pavilion, with interest, and give the Federal Government permanent, free use of a $4.5 million building.

How will Interama be able to do it?

It will be able to repay $22 million to the Federal Government in 10 years or less, $21 million to private lenders for development of other Interama facilities, $10 million for a spectacular Tower of Freedom, and other indebtedness, from the receipts of 12 to 15 million visitors a year.

The leading exhibitions research firm in the nation, Economic Research Associates, Inc., of Los Angeles, has found that Interama can expect more than 12 million visitors a year. This, the firm estimates, will produce revenues five times what Interama will need to repay its first $43 million in indebtedness. Indeed, the firm's experts found that Interama will be able to cover its operating expenses and handle the repayment of these two loans—$21 million from private sources and $22 million from C.F.A.—from the gate receipts of only six million visitors a year. The Tower of Freedom, which will offer a sweeping view of Biscayne Bay and Florida's Gold Coast, will be financed separately from the revenues of the Tower and the revolving restaurant at its top.

Thus we will have in Interama a great public attraction which will harness the revenues of the nation's greatest flow of family tourists to the creation of a unique meeting place of the Americas—where the governments of the hemisphere will have official and permanent presences, continuing national displays of their cultures and economics, and a meeting of these governments and their citizens with the showcases of American industry and American culture.

I have no doubt in my mind that tourists from all over the United States and all over the hemisphere will stream into Interama by the millions year after year.

Interama will have something for everyone—but quality has been the key to its planning, and its variety of attractions will not have the cheapness of the bazaar.

There will be a recreation area—emphasizing the sports and leisure and amusement aspects of the American way of life. There will be a cultural.area, where Interama and private investors will provide facilities for live theater, ballet, opera, and the other arts on a scale not before available in Florida.

In the industrial area, 25 to 30 major U.S. industries will have an opportunity to tell the story of their industries' role in making Progress with Freedom the American way of life. That is the theme of Interama: The American Way of Life—Progress with Freedom. And it is the way of life of all the free countries of the Americas, not only North America, which is meant in this context.

The U.S. Department of Commerce, which somewhat skeptically surveyed U.S. industry's attitude toward Interama, found to its surprise that more than 40 major U.S. companies were actively interested in putting permanent exhibitions in Interama. They recognize the unique opportunity it offers to present their story to receptive audiences of millions of visitors and to the business and government leaders of the Americas who will be drawn to Interama by its location in Miami and its multitude of attractions in the cultural, industrial and international areas.

The international area will be the soul of Interama. This will not be a dead collection of musty exhibits in warehouse exhibition halls that close tight at 10 o'clock each night. Six of the nation's leading architects have already designed six strikingly beautiful groups of buildings to house the U.S. and Latin exhibits. Edward Durell Stone, the brilliant architect of the U.S. Pavillion at the Brussels World Fair and the U.S. Embassy in India, has designed the U.S. Pavillion for Interama. Joining him in making the International Area an outstanding architectural achievement have been Dr. Luis Sert, dean of the Harvard University School of Architecture; Paul Rudolph, former dean of the School of Architecture at Yale; Marcel Breuer, Louis I. Kahn, and Harry M. Weese.

What these men have designed are not a row of pavillions, but groups of exhibition facilities around common area features such as an auditorium for international meetings with multilingual translation facilities, a ceremonial parade ground, and a theater for projecting motion pictures on a 360-degree screen.

In these buildings in the International Area are apartments for the Resident Commissioners of each nation, restaurants for the presentation of their native foods, and dormitory facilities for students from each country who will work with the exhibits and study in the United States. These will be national homes for these countries in Miami, and they will be occupied 24 hours a day—in the manner of a university campus rather than a world's fair.

It is one of my great dreams that Interama will become the focal point of a great University of the Americas. Only 680 acres of the 1700-acre Interama tract on upper Biscayne Bay will be used initially. This much has been drained and filled, the roadbeds and waterways have been prepared for the construction which is about to begin. There will be abundant room for the expansion of Interama (which will include in its United States pavillion a working Library of the Future with 40,000 to 50,000 volumes, films and tapes of Pan-Americana), for the development of a great university, for the construction of facilities for O.A.S. meetings in Miami, and for related purposes we have not yet conceived.

This is, to me, the key to the economic impact of Interama on Miami and Florida.

Interama will be a unique focal point for the development of Florida's potential as a great center of hemispheric trade and culture. It is the magnet which will attract, as well as create, facilities and enterprises of all types.

As the junctures of two rivers or two railroads formed the basis for the economic greatness of other cities, as the joining of Flagler's railroad with the unrivaled climate of South Florida gave us today's Miami and Miami Beach, as Tampa Bay and Cape Kennedy have served as magnets to attract economic activity, so Interama will be a great economic resource for Florida and for the nation.

This is why we set our sights increasingly higher as Interama's potential became clearer. This is why we were not willing to settle for another trade fair, another amusement park, another tourist attraction. This is why we were determined to enlist the interest of President Kennedy and then President Johnson in getting the kind of Federal commitment which would make Interama a great Florida institution, a great national institution, a great hemispheric institution.

We have been exceedingly fortunate in this most recent effort to realize this dream in having the right men in the right places at the right time. We have been very fortunate in having in Dr. Irving Muskat, the operating chairman of the Inter-American Center Authority, a man of great integrity, great determination, and unwaivering belief in the importance of making Interama a quality project.

I will not try to recount for you the many times in which, I believe, we were saved from defeat in getting this essential Federal participation only by our ability to demonstrate that Interama was free from corruption, honest in its intentions, and capable of producing the kind of great institution which would warrant full support of our national government.

We were fortunate to have in President Kennedy both a man who valued excellence and a man whose imagination could be fired by a new concept in hemispheric relations. Through his encouragement we were able to find in the Community Facilities Administration a program which would enable us to build the pavilions for the Latin American countries. But this was a program which had been used previously for more prosaic construction of sewer and water lines, city halls, and other similar community facilities. And then the brilliant light of John F. Kennedy was so tragically snuffed out.

But we pressed ahead. I was then on the House Banking and Currency Committee, which handles housing loan programs, including community facilities. I undertook to demonstrate that congressional intent would support the Community Facilities Administration in a loan of $22 million to Interama. I initiated a petition urging C.F.A. to make the loan and we obtained 228 signatures in the House and 51 in the Senate—a majority of both Houses. We followed this up in the debate on the housing bill—Senator Holland brought out in the Senate and I in the House that the language of the community facilities section would permit a loan of this kind. We also obtained the public support of President Johnson and Vice President Humphrey.

President Johnson has stood with us—even when he was urged from within the Administration to veto my bill, H.R. 30, which authorized Federal participation with an appropriate exhibit, and when he was urged to withhold his recommenadtion of the appropriation required to implement that bill in the current fiscal year. I believe history will properly record Interama as one of the great achievements of his Administration.

In the passage of the exhibit bill, we had the full support of the Repulican members of our Florida congressional delegation as well as the Democratic members. Interama has always been and I am confident it will remain a Florida project, rather than a partisan project.

It was our good fortune to have in our congressional delegation my distinguished colleague from Dade County, Dante Fascell, as chairman of the Subcommittee on International Organizations of the House Foreign Affairs Committee, which considered the Interama exhibition bill; our distinguished Senior Senator, Spessard Holland, in a key position on the Senate Appropriations Committee, and the distinguished dean of our Florida delegation in the House, Bob Sikes, on the House Appropriations Committee. And I was fortunate enough in the last Congress to now be on the House Rules Committee where my cooperation in that closely divided committee could be valuable to the House leadership and to the White House.

Together we have made is possible for Interama to go to the Latin American governments with an invitation to join the Government of the United States in building a real meeting place of the governments and peoples of the Americas in Miami.

For the Miami economy and the economy of our state this has immediate consequences in terms of jobs, building materials, transportation, services of all kinds, and all the rest of the economic activity generated by a large building program.

The construction which must begin early next year in order to open Interama on July 4, 1968, will total $350 million on the actual site and an estimated $135 million additional in related investment in the Miami area.

It is estimated that nearly $300 million of this nearly $500 million total investment will be in labor costs for approximately 54,000 man-years of employment.

After Interama is open it will provide more than 5,000 permanent on-site jobs and generate approximately $27 million in additional annual income. This will almost be matched by the spending of the additional tourists Interama will draw to Florida.

The economic studies indicate that Interama will bring at least 600,000 additional visitors to Florida each year, generating an additional income of $21 million for our people.

The State of Florida and our local governments will benefit from additional tax revenue, and I believe the Federal Government will soon find that it is receiving more additional revenue each year from Interama's investment than the government's initial investment in its official exhibit.

This will be wonderful, but as I have indicated I think the real economic benefits of Interama will come from the power of Interama as a unique institution to give to all Florida business and industry, to our universities and our schools, the special quality of involvement with Latin America and a special understanding of its problems and the economic opportunities that exist in helping with the development of this vital area of the world.

I think our banks will be more knowledgeable in helping their business clients because Interama and the vibrant culture and commerce of the hemisphere will penetrate the atmosphere in which the officers and employees of the banks work and live. The same thing will be true of our law firms, of our builders, our technical laboratories, our advertising and public relations firms, our management, new product development and marketing survey concerns, our airlines and railways and port authorities, our manufacturers—large and small, our state government agencies and the field offices of our Federal agencies—all of these will be touched by the hemispheric spirit of Interama and will be better equipped than their counterparts in other areas to assist in the development of the economic, cultural and political life of the hemisphere.

I am leaving this weekend with your Chamber President and his lovely wife and a group of other Florida businessmen and women for a 13-day visit to four of our South American countries. I will try to convey to the friends we meet there in those governments and in their business communities something of the great hopes we have here in Florida for the development of Interama.

I am sure that, as Interama moves toward its formal opening, it will generate increasing excitement throughout the Americas and especially here in Florida.

I look forward to seeing all of you at the opening of this great Inter-American Cultural and Trade Center on the Fourth of July, 1968. Dr. Muskat has assured me that the opening ceremony will begin promptly at 10 A.M.

If you will put it on your calendar, I think you can count on both Interama and Claude Pepper being there on time.

I thank you for this wonderful opportunity to be with you.

Streambank Erosion Control Action Needed

EXTENSION OF REMARKS

OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. WRIGHT. Mr. Speaker, I am introducing today a bill with important provisions for putting a stop to soil erosion along the banks of our rivers and streams.

Our current efforts to halt this costly damage are not getting the needed job done. This is so for several reasons.

One reason is that there is not sufficient financial support. Another is lack of concerted action along the streambanks needing treatment.

Streambank erosion usually covers a large area and affects many landowners and communities. Yet the most damaging results of bank erosion may be felt downstream from the points where the erosion occurs. The eroded soil settles down in the stream channel and fills it up so that there is not enough channel left to carry the water. That is how a lot of floods happen. And this silt pollutes the water of the stream so that it has to be filtered and treated at great expense before it can be used.

In Texas, we have an estimated 31,200 miles of eroding stream channels. That is over a third of the 80,000 miles of stream channels in the State. Nationwide, streambank erosion along 300,000 miles of waterway each year destroys land along the channels valued at approximately $11 million.

But a much bigger cost is that of dredging streams and harbors so they can be used for navigation; and removing soil from reservoirs needed for water storage for cities and industry. The cost of doing this is estimated at $250 million a year.

Another price we pay for allowing streambanks to wash away is the damage done to the natural beauty of the landscape. It is a loss that cannot be measured only in dollars.

It will take more financial investment to restore our river and stream banks. And it will take group action, along the courses of the waterways.

State and local, public and private agencies must become more actively involved, and the Federal Government must be prepared to provide more help.

The individual landowner cannot do the job acting independently, even with such assistance as he and his neighbors may receive under the agricultural conservation program. Nor does the small watershed program, which provides for assistance to local units of government for community streambank erosion control projects, permit that broad attack on the problem, extending beyond the watershed project area, that often is required.

The River and Stream Erosion Control Act, which I propose here, aims to give the Secretary of Agriculture authority to:

Assist State and local governments and other local nonprofit public and private agencies in the preparation of plans for controlling bank erosion; and

Provide through cooperative agreements Federal technical assistance and financial aid up to 75 percent of the total cost for carrying out the bank erosion control plan.

Under this proposed legislation, a streambank protection plan would apply only to those areas that require protective measures. Moreover, all plans carried out under the act would be in keeping with the objectives of other resource conservation programs receiving Federal support.

The required attack on streambank erosion is possible only if we bring the organized group with taxing authority under the Federal assistance umbrella. It is possible only if the Federal contribution under cost-sharing arrangements is increased.

The general public interest is deeply involved. Consider that an estimated 500 million tons of soil are washed into our waterways every year from unprotected streambanks and fields. In Texas, an estimated 31 million tons of soil enter our waterways every year from streambank erosion. That is a fourth of the total annual silt load carried by Texas streams.

Control of streambank erosion is an essential part of the total effort to keep our waterways clean. I believe we can be successful in this total effort only if our approach is total.

Streambank erosion, as a major cause of stream pollution, must be controlled. I believe it can be controlled with present programs made more effective by the proposed River and Stream Erosion Control Act.

I ask my colleagues to consider this proposed legislation in light of the present urgent need for it. And I invite the support of those who wish to join with me in sponsoring this bill.

"Wasted Years" in the New Left

EXTENSION OF REMARKS

OF

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. ASHBROOK. Mr. Speaker, fortunately, most of our young people of college age are discerning enough to see through the guises of misdirected political or social front organizations and directly into their tactics and final purposes. A few are not. While we must not make the mistake of wholesale condemnation of American youth, neither should we lessen our concern for the possibility of their being covertly corrupted and misguided when in fact they are sincerely concerned about contemporary problems.

Phillip A. Luce, in an article found in the February 1967 edition of Reader's Digest, traces his history as a concerned, or, to use the coined phrase, "angry" young man of the "new left," and shows how easily these tendencies can be manipulated by Communist front groups to disrupt American life.

His case is not average, but his remarks show how the small cadre of infiltrators—direct agents of Communist countries, some of whom are trained outside the United States—can prey upon frustration and sympathy, merely for their own ends.

As Mr. Luce states:

> Many find it virtually impossible to believe that a tiny handful of communist professionals, using glittering slogans like "peace," "freedom now," "equal rights," or "academic freedom," can manipulate thousands of innocent young rebels into violent street demonstrations and explosive confrontations with police. On the surface, it is incredible. But having studied the arts of mass manipulation and hate propaganda, and having practiced them myself, I know the power of a few expert hidden persuaders.

The personal account of Mr. Luce follows closely the predictions of FBI Director J. Edgar Hoover who recently stated that the Communists are expected to increase their activities this year in areas such as civil rights and anti-Vietnam war demonstrations.

For those who may still need be convinced that internal subversion exists on a scale large enough to pose a threat, this article will help. It will also serve as a warning that many of the "new left" groups have been seriously infiltrated by the Communist underground.

The entire Reader's Digest article follows:

WHAT THE "NEW LEFT" DID TO ME

(By Phillip Abbott Luce, author of "The New Left")

(Note.—An angry young man discloses the full cycle of his thinking—from rebellion against all authority, to communist "activism," to disillusionment with communist demands, to defection. And he sees a way to avoid such "wasted years").

A communist must be prepared to act upon command. Once he begins to develop scruples, he's on his way out. How and when the break comes depends on the man and the circumstances.

I began dabbling in "revolution" in 1958, when I was 20. I became a free-wheeling "activist" of the New Left in 1960 and a secret member of the Chinese-oriented Progressive Labor Party in 1963. By the winter of 1964 I was trusted enough to be selected to join a special group to go underground.

The plan was discussed for weeks in quiet restaurants and coffeehouses in New York City. We would be trained in the techniques of disguise, forgery, wiretapping, karate, evasion of surveillance. Later, this education would be rounded out abroad, in Cuba or China. Then we would change our names and trades, drop all open contacts with communists and blend into the submerged world of secret operatives.

As a start, I was instructed to give up my friends, my relatives, my girl, my job, my apartment. Since I was at the time awaiting trial under federal indictments for my connection with trips to Cuba, I would become a fugitive from justice. There would be no turning back.

I chose *not* to go underground. A few months later, I decided to break away. It was not a sudden thing. The underground project was only the climax. For months I had been worried by scruples, but I was kept too busy with meetings, picketings, sit-ins and editorial writing to think things through. Now I was forced to reappraise communism and my own relationhip to it—not the abstract ideas, but the grim facts.

I defected because, when the chips were down, I couldn't accept total obedience. Sucked into the movement by hunger for absolute freedom and rebellion against all authority, I finally recognized that there were no margins for personal freedom among hard-core communist revolutionary organizations.

I defected because I saw young people being deceived and possibly destroyed by lies which we, as leaders, were telling them; by actions in which they were just expendable pawns. Some were my friends, drawn into the movement in part by my example.

I defected not because I was reconciled to the injustices of American society as I saw them, but because I realized that communism would bring more and infinitely worse injustice.

The Inner Frustrations. My story is not unique. Thousands of young people through nearly half a century have believed that revolutionary radicalism held the answers to their own grievances and the world's problems. Few joined the movement for bad reasons. Mostly we were naive, romantic, mis-informed—above all, angry and impatient.

I was born in Ohio of middle-class, Republican parents. I graduated from Mississippi State University in 1958, then earned a master's degree in political science from Ohio State University in 1960. By the time I got to Ohio State, I had begun to flirt with communism. My inner frustrations led me to the illogical conclusion that only the overthrow of the whole political and economic structure of the country could cure its ills.

These inner frustrations are difficult to explain, being more emotional than reasoned. I was in rebellion against parents, school, society—any authority. I wanted things changed and changed *now*. The normal democratic tempos seemed to me too slow, the "establishment" too entrenched to yield to anything but violent pressures.

My rebellion was fed by the reading of communist hate propaganda and sustained by the itch to "do something." The civil-rights struggle seemed made-to-order for my mood—not only a thrilling cause in itself, but an outlet for protest generally. I was expelled from the staff of the Mississippi State newspaper for my attacks on the state legislature and the White Citizens Councils. I found the experience of "struggle" with "reaction" intensely intoxicating. As a graduate student, I joined picket groups, sit-ins, boycotts. I was becoming an "activist," quite sure what I was *against*, but pretty hazy about what I was *for*.

Upon finishing at Ohio State, I went to New York. I wrote for the communist *Worker* under several pseudonyms, and I fellow-traveled with a variety of communist organizations, coming to know the whole spectrum of ultra-left groupings, some of them communist creations, some infiltrated, some independently radical. I was searching for a "home" in the frezied world of revolution. It was not until the summer of 1963, however, that I became fully involved.

Action, Color, Power. By then the so-called New Left was in loud and violent eruption, an outgrowth of the stage of romantic anarchy called the Beat Generation. The movement was "new"—or so we told ourselves—because it rejected the conventional Marxist jargon and working-class mystique. We had only contempt for the Old Left, with its patience and restraints. We relished stirring up trouble for trouble's sake. We were for police baiting, riots, undergrounds. *Ours was an attitude rather than an ideology.*

Ironically, today only a few New Left groups remain financially and ideologically out of communist clutches. Some of these, such as the Students for a Democratic Society and Student Non-Violent Coordinating Committee (SNCC), are being rapidly penetrated.

Considering the noise it makes, the New Left is surprisingly small—perhaps 5000, with another 5000 at the fringes. Most are social anarchists, with no more than 2000 communists of all stripe in their midst. These self-willed utopians and most other Americans find it virtually impossible to believe that a tiny handful of communist professionals, using glittering slogans like "peace," "freedom now," "equal rights," or "academic freedom," can manipulate thousands of innocent young rebels into violent street demonstrations and explosive confrontations with police. On the surface, it *is* incredible. But having studied the arts of mass manipulation and hate propaganda, and having practiced them myself, I know the power of a few expert hidden persuaders.

In the late spring of 1963, I was approached by a leader of the Maoist Progressive Labor Party to join an expedition to Cuba. No one can overstate the influence of Red Cuba upon immature, alienated minds.

Fidel Castro and Che Guevara were to us what Lenin and Trotsky had been to others in their time. Here was action, color, our own kind in power—and all of it only 90 miles from the mighty Yankees. Here was David defying Goliath. I jumped at the chance to go. The fact that it might be in violation of federal law added spice to the adventure.

When I returned, I plunged into Progressive Labor activities. I helped organize, in 1964, a second trip to Cuba. I was arrested while trying to kindle a riot in Times Square—forcing a "confrontation with the cops," we called it grandly. I helped secrete guns in New York City for future "self-defense." I drafted the original declaration calling on young men to refuse to fight in Vietnam, took part in a violent fracas before the House Committee on Un-American Activities, marched and sat and shouted slogans as directed.

"True Truth." It was a frenetic life I led, as thoroughly "involved" as any of the communist string-pullers could wish. The change in me was evidenced in a new willingness to lie and deceive others in pursuit of our goals. Looking back, I recognize how utterly self-righteous and intolerant we were, not only of the "enemy"—meaning everyone from conservatives to "bourgeois radicals"—but of all other elements in the New Left. *It was the totalitarian mentality in action.* We were toddling totalitarians, and uncarded communists demanding instant idealism and "Millennium Now!" We alone had the "true truth" from which dissent was heresy.

By August 1964 I had begun editing the magazine *Progressive Labor,* but without being "identified." This deception was based on the hope that a secret party member would be more successful in recruiting. Not until December, only three months before I defected, was my name listed as editor.

Meanwhile, the riots broke out in New York's Harlem. We were not the immediate spark, but we did everything possible to provoke them and to harvest the credit. For weeks we had been preparing the requisite explosive climate, calling for a "long, hot summer" in Harlem.

One hour before the rioting actualy began, Bill Epton, a vice-chairman of Progressive Labor, told a street rally: "In the process of smashing this state, we're going to have to kill a lot of cops, a lot of these judges, and we'll have to go up against their army. We'll organize our own militia and our own army." (Epton was in due time arrested and convicted of criminal anarchy.)

The 25-year-old editor of our party's newspaper, *Challenge,* proclaimed: "I advocate precisely that the people disturb the peace. There is no lawful government in this country today. Only a revolution will establish one." We prepared the infamous posters, "Wanted for Murder—Gilligan the Cop," which helped to spark the mobs.

By dint of sheer activity I was becoming more and more entrapped within the narrow communist world. If you are a good communist, your time—including evenings and weekends—is not your own. You sell party literature, do volunteer mailings and office work, paint signs, picket, demonstrate, attend endless meetings.

Yet some part of my mind was uneasy, questioning. The caches of arms left a bitter taste. It bothered me to see our individual members time and again become patsies in plans and plots outside their knowledge or consent, so that they often were jailed or injured for reasons beyond their control.

The Break. Finally, all my doubts and grievances seemed to crystallize when the scheme for going underground was sprung on us. Making the conscious decision to join the communists had taken a certain kind of guts. Now, defection proved even more difficult. The temptation is to slink away in silence; if you decide to break away publicly and try to save others from the morass, you have to be prepared for slander, harassment, even physical attack.

I chose the latter alternative. Then I walked into the FBI office in New York to clinch it. At this, the wrath of my former "comrades" knew no bounds. They accused me of every crime in the book, contended that I was always a "police agent." I was in the outside world but not yet part of it. It took some time before I discovered not only that I was indeed free but that others had gone through the same ordeal of disenchantment and that, like them, I could ultimately readjust myself to a rational society.

The Wasted Years. I've thought a lot about by involvement, and its meaning. It is not enough to condemn impatient, rebellious youth as communists or dupes. The public must distinguish between young communists and young rebels. Youth has always been rebellious. The problem is to understand and channel their zeal for a more just world, and to keep them out of the clutches of communists and other messianic extremists.

I think often that I might have been spared the wasted years if my schooling had included the study of communism—not as a beguiling doctrine through its sacred texts, but as living history on view in Soviet Russia and Red China and in the story of its many mass deceptions and manipulations in the Free World. It seems incredible that I could have acquired a graduate degree in political science without having been encouraged to read *Witness* by Whittaker Chambers, *The God That Failed* by Arthur Koestler and others, *Child of the Revolution* by Wolfgang Leonhard, *The Red Decade* by Eugene Lyons. There is a rich literature on communism. Surely our colleges have an obligation to use it effectively.

Most of the young rebels in and around the New Left are not, in their hearts, communists. In most cases, their actions are more dangerous to themselves than to the country. But we must win them over to the side of democracy before they get themselves and others into serious trouble.

Hon. Walt Horan

SPEECH

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. FISHER. Mr. Speaker, I join with my colleagues in eulogizing the late Walt Horan who ably represented the Fifth Congressional District of the State of Washington for some 20 years. His untimely death came as a shock to many of us who knew him well and admired him greatly. He was a man of dedication, wisdom, and devotion to the loftiest of principles.

Walt Horan was elected to the 78th and succeeding Congresses. He came to the House of Representatives at the same time I did, in 1943. Affable and articulate, Walt went his way, always well informed and convincing. He was a knowledgeable man, and had a way of impressing his views on others in a most agreeable and acceptable manner. Universally respected and admired, Walt seemed to number his friends in the Congress by the number who knew him. He was my friend, and I shall always feel that I was enriched by that acquaintance.

Mr. Speaker, this country needs more Walt Horans. This Congress needs more men of his caliber.

Ukrainian Congress Committee of America, Inc.—Ukrainian Independence Day Resolutions

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the Appendix of the Congressional Record a resolution adopted by the Detroit-East and Hamtramck Branch of the Ukrainian Congress Committee of America, Inc., on Ukrainian Independence Day, calling to mind the 49th anniversary of the proclamation of the free and independent Ukrainian National Republic.

Ukrainian Congress Committee of America, Inc., Detroit, Michigan

UKRAINIAN INDEPENDENCE DAY RESOLUTIONS

We, Americans of Ukrainian descent, assembled to-day on the 22nd of January, 1967 at the Ukrainian National Temple, to commemorate the 49th Anniversary of Ukrainian Independence and 48th Anniversary of the Act of Union, declare as follows:

Whereas, January 22, 1967 marks the 49th Anniversary of the Proclamation of the free and independent Ukrainian National Republic and the 48th Anniversary of the Act of Union, by which Western Ukraine was united with the Ukrainian National Republic in Kiev, capital of Ukraine, and

Whereas, Ukrainian people by the act of restoration of freedom and independence to Ukraine demonstrated their quest and desire for self-determination and political liberty, supported by the heroic struggle with the invading forces of all intruders, particularly those from the Communist Russia, and

Whereas, Ukrainian people are still continuing their valiant struggle for freedom and independence, paying high prizes with blood and lives, and

Whereas, Communist Moscow is striving to completely annihilate Ukrainian national culture applying the policy of terror and Russification, and

Whereas, Moscow is presently destroying all traces of Ukrainian culture by the way of liquidating Ukrainian State Archives, burning libraries and destroying monuments of architectural esteem and at the same time is arresting, secretly convicting to long terms of imprisonment, or concentration camps and even executing all those Ukrainian writers, artists and scientists who are raising their voices in defense of Ukrainian language and culture, and

Whereas, Moscow occupational government in Ukraine is separating the Ukrainian nation from the rest of the free world, barring all writers, literary workers and artists from voluntary visits to the West and at the same time is striving to show Ukraine to the free world as a province of Russia without any political and independent cultural aspirations, and

Whereas, Reliable information from the Ukraine reveals that many literary workers and critics were taken into custody and convicted in such cities of Ukraine as Kiev, Odessa, Lviv, Lutsk, Ternopil and Ivano-Frankivsk; furthermore this was acknowledged by the USSR delegation to the United

Nations during their tour of this country, and

Whereas, Ukrainian people are deprived of any rights to demonstrate freely their own protest,

Now, therefore, we are protesting to our Government of USA, to the Members of the congresional bodies and to all countries of the free world against Communist Russian terror in Ukraine. Since arrests and convictions of the literary workers of Ukrainian culture constitute an integral part of the Moscow Communist colonialism in Ukraine, we, as free citizens of the United States of America, urge our Government in Washington to place this case on agenda for investigation by the United Nations and to lodge a complaint about the governments of the USSR for violation of the UN charter and declaration of human rights adopted by the general assembly of the UN on December 10, 1948 and for the violation of the convention against genocide, requesting at the same time that the Ukrainian people without any intervention and control of Moscow government would be able to choose their own government in compliance with the democratic principles.

Detroit, January 22nd, 1967.

Financial Costs of the War

EXTENSION OF REMARKS

OF

HON. ROBERT W. KASTENMEIER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. KASTENMEIER. Mr. Speaker, the most compelling reason for seeking a peaceful solution to the Vietnamese conflict is, of course, the humanitarian one. A day does not go by without some report relating to the human tragedies that are occurring there.

There is also the need to end the war because of the financial burden that has been imposed upon the American economy. It is in this respect that I would like to call to the attention of my colleagues an editorial which appeared in the January 22, 1967 Milwaukee Journal:

BILLIONS DOWN THE DRAIN

There are many reasons for wanting an end to the war in Vietnam, the most important being the humanitarian one. But consider it for a moment just in terms of money.

From 1961 through the end of 1966 the war cost the United States $20 billion. But costs are escalating faster than the bombing and are now running $2 billion a month. At that rate it would cost $24 billion in 1967—but the actual cost will be still greater because the rate is still skyrocketing.

That $24 billion alone is more than the federal government spent in its entire budget, military and nonmilitary, in any year before the World War II year of 1942.

Our total defense budget for the coming year will be almost $75 billion, not far from the high yearly expenditure in World War II of $81 billion. Except for three years during World War II, next year's defense expenditures will be more than the federal government spent for all purposes in any year prior to 1959.

At current costs of conducting the war we could, if we used cash instead of bombs and war materiel, give every Vietnamese, young and old, North and South, $700 a year—which is seven times the present per capita income.

Job Corps Adding to America's Wealth

EXTENSION OF REMARKS

OF

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. WILLIAM D. FORD. Mr. Speaker, the distinguished columnist, Carl T. Rowan, writing in the Washington Evening Star on January 20, paid eloquent tribute to the Job Corps, which is increasingly being regarded as a real triumph in the war on poverty. As Mr. Rowan puts it:

> Still, the Job Corps has become one of the most inspiring things in America today. In a nation whose spirits are sagging because of a grim, frustrating war and a host of lesser irritations, the Job Corps is the kind of thing that ought to keep Americans believing in themselves and in their country.

Mr. Speaker, as Mr. Rowan points out, the first 10,000 Job Corps graduates are expected to produce $5 million a year in tax revenues, whereas without their Job Corps experience they would be costing the public more than $15 million a year in welfare, prison, and other expenses. That is a difference of $20 million—including a tremendous multiplier effect—to American taxpayers for these first 10,000 Job Corps graduates alone. Mr. Speaker, that is what I call winning the war on poverty.

Mr. Rowan concludes by saying that he thinks—

> The Job Corps is one of America's best defenses against a foreboding future. And it is just one of the several domestic programs Congressmen ought to know more about before they put the cleaver to the Federal budget.

Mr. Speaker, I congratulate Mr. Rowan for his excellent statement on the Job Corps, and include it at this point in the RECORD:

[From the Washington (D.C.), Star, Jan. 20, 1967]

JOB CORPS ADDING TO AMERICA'S WEALTH

(By Carl T. Rowan)

Few things seem as unworthy of sympathy as an 18-year-old boy who is out of school, out of work and out of step with the world.

And that is why the Job Corps will probably never be as popular as Head Start, a program to give innocent, underprivileged little kids something close to an even chance in the race we Americans call "the pursuit of happiness."

The Job Corps is a program of rehabilitation for school dropouts aged 16 to 21—youngsters many Americans have assumed to be ruffians and nogoodniks by choice.

This part of the antipoverty program has been lambasted as "the great boondoggle," and the 112 Job Corps training centers around the country have been assailed as "reform schools," which were rarely welcomed into the communities where they were located.

Still, the Job Corps has become one of the most inspiring things in America today. In a nation whose spirits are sagging because of a grim, frustrating war and a host of lesser irritations, the Job Corps is the kind of thing that ought to keep Americans believing in themselves and their country.

And if the 90th Congress is really determined to cut domestic spending so as to finance the Vietnam war more easily, it had better shy away from the facts of the Job Corps. For this program has free enterprise, Horatio Alger, the rags-to-riches concept written all over it. It is positive, adding immensely to America's wealth, while the war is negative, consuming America's abundance with an ever-growing appetite.

And I can't believe even the most economy-minded congressman is so blind that he thinks the priorities for a negative war are so great that we must kill what is positive, human, decent.

The boys and girls admitted to the Job Corps were nobody's candidates for Mr. or Miss Teen-age America. In fact, most were heading for the human slag heap where many of their parents and grandparents had wound up.

The average Job Corpsman had spent seven years in school but could read only at just above a fourth-grade level. Almost one out of every two of these youngsters had been declared ineligible for military service, some because of physical defects, most because of educational deficiencies.

Nine out of every 10 of these youngsters were unemployed; 65 percent came from families where the head of the household was jobless; one kid out of every two came from a family that was on relief. About 10 percent had been in serious trouble with the law and another 27 percent had records of "anti-social bahavior."

They constituted a real challenge to the great industries that teamed up with government in a program to see if America could salvage some of her greatest resource, her young people.

The results have been remarkable. The average Job Corpsman, after nine months of training, achieves a reading level just above the seventh grade. He has gained 10 pounds, had some teeth pulled and others filled. A third of the corpsmen have been fitted with eyeglasses.

Most important, most of these youngsters have been imbued with the notion that American society, American business and their government do care about them.

As of Dec. 26, the Job Corps had placed 9,766 youngsters—7,341 in jobs paying an average of $1.71 an hour, 1,491 in the armed forces and 934 back to school (75 in college).

Someone did a study of the first 10,000 Job Corpsmen and their police, welfare and other records. Without the Job Corps, according to this study, these youngsters would be costing the public more than $15 million a year in welfare, prison and other expenses. Instead, they are expected to produce about $5 million a year in tax revenues.

I think the Job Corps is one of America's best defenses against a foreboding future. And it is just one of the several domestic programs congressmen ought to know more about before they put the cleaver to the federal budget.

Lester R. Brown: One of America's 10 Outstanding Young Men

EXTENSION OF REMARKS

OF

HON. THEODORE R. KUPFERMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1967

Mr. KUPFERMAN. Mr. Speaker, my colleagues who have had an opportunity to receive the Department of Agriculture volumes entitled "Man, Land, and Food" and "Increasing the World's Food Output" will be interested in Lester R. Brown, who at the age of 32 was chosen as "One of the 10 Outstanding Young Men of 1966" by the junior chamber of commerce.

Mr. Brown is special assistant to Agriculture Secretary Orville Freeman and has an article in the January–February 1967 issue of the Columbia University Journal of World Business, entitled "The Stork Outruns the Plow" which deserves further consideration:

THE STORK OUTRUNS THE PLOW

(By Lester R. Brown) *

One of the most disturbing problems facing man today is his apparent inability to balance his numbers and his food supply. Populations growing by 3% a year double within a generation and multiply eighteenfold in a century. To an agriculturist the demographic arithmetic is frightening. Man-land ratios are rising sharply throughout the less-developed world as the stork outruns the plow.

Thirty years ago the less-developed regions of Asia, Africa and Latin America were all grain exporters. Collectively, they sent some 11 million tons of grain yearly to the developed regions, principally Western Europe. During the war decade of the 1940's, this flow was reversed and the less-developed world became a net importer of grain, losing a valuable source of foreign exchange earnings. Net imports of grain reached four million tons in 1950 and 13 million tons in 1959. As population growth rates in the less-developed countries accelerated further during the 1960's, the net in flow increased sharply, reaching an estimated 31 million tons in 1966. This rapidly growing food deficit is causing a sharp diminution in the world's food reserves.

Five years ago the Untied States had the world's two major reserves in the race between food and people. It had in its grain elevators 50 million tons of *excess* grain; i.e., above and beyond normal reserve requirements. In addition, a sizable fraction of its cropland was idled under farm programs. As of 1966 the surpluses of grain are gone. There are no excess stocks of wheat, rice or feedgrains. As recently as 1965 we had 56 million acres of idled cropland. Actions taken during 1966 to expand acreage of wheat and feedgrains will bring back into production at least half of this one remaining reserve. With the U.S. reserves fast disappearing, the less-developed countries must now provide for increased food needs from their own resources.

FRONTIERS FADE

Why is the less-developed world losing the capacity to feed itself? Throughout most of recorded history man was able to increase his food supply by expanding the area of land under cultivation. He matched his increase in numbers with increases in the area under the plow. This was a moving force in the colonization of new lands. As long as he had this option, maintaining an adequate food supply was relatively simple. But on a finite earth this period of land expansion had to come to an end.

The area of land under cultivation in North America and Western Europe, ceasing to expand several decades ago, has actually declined over the past 30 years. This has not caused serious problems. Both of these regions developed an impressive production capability on the existing land area, doubling production within the past generation. The large-scale investment of capital and widespread application of technology enabled these regions to compensate for the lack of new land.

Until quite recently, most of the less-developed world was still expanding the area under cultivation to feed its rapidly growing population. In recent years, however, country after country has furrowed the last of the "new" land readily cultivatable.

During the Fourth Plan Period ending in 1971, India plans to expand the net area sown by less than 1%, though the nation's population is expected to increase by 14%. Clearly, most of its additional food needs must be met by raising productivity per acre.

Nearly all of Asia, the Middle East and North Africa share this land hunger. Only Subsaharan Africa and parts of Latin America [Editor's Note: See the article by Felipe Herrera on page 33.] can expect to significantly expand the area under cultivation. Most of the increases in world food needs over the remaining one-third of this century must be met by increasing the productivity of land already cultivated.

But many of the less-developed countries are faced with a dilemma. Although they have run out of new land to bring under cultivation, they have not yet achieved a takeoff in food output per acre. The result is growing food deficits. In order to keep food production increasing in line with demand, these countries must now begin using massive capital inputs and advanced technology.

As long as there is an abundance of new land to cultivate, continuing population growth does not pose any serious problems for traditional agriculture. The frontier is simply pushed back a bit further. Land and labor, the key inputs, are readily available. Seed and draft animals, the principal capital inputs, are self-generated on the farm. Next year's seed is saved from this year's crop. Technology does not change. Inputs are not needed from the rest of the economy.

THAT SECOND BLADE OF GRASS

An economy running out of new land to plow, however, must begin using large amounts of purchased inputs to raise the productivity of land. Under these circumstances; agricultural growth is entirely dependent on the rest of the economy for the goods and services needed to generate and sustain a takeoff in yield per acre. Fertilizer, pesticides, implements, improved plant varieties and a wide array of other inputs are needed. All must come from the nonfarm sector. Required services are as essential as the physical inputs themselves. These include research, credit, transportation and marketing facilities. Gains in food production in a "fixed-land" economy depend directly on the ability of the nonfarm sector to supply the necessary goods and services.

The extent of capital investment and technological change required to "make two blades of grass grow where one once grew" is not generally appreciated. Consider the variety and scale of purchased inputs in the United States. The farm inputs purchased by U.S. farmers totaled $21.5 billion in 1965. Approximately $9 billion of this represented feed and livestock purchases, many of them from other farmers. The remaining $12.5 billion of purchased inputs came from outside the farm sector. The wide variety of inputs used included such things as fertilizer and lime ($1.7 billion), petroleum products ($1.5 billion) and equipment parts and repairs ($525 million).[1] A sampling of other items includes electricity, containers of all kinds, binding twine for hay bales, veterinary services and animal antibiotics. The complete list of purchased inputs is pages long. For each of the 300 million acres they cultivate, American farmers spend $42 annually on production requisites supplied by the nonfarm sector.

JAPAN: "HORTICULTURE NOT AGRICULTURE"

The average size of the U.S. farm is quite large, but it must not be thought that a system of small holdings is a deterrent to either the sharply expended use of inputs or to greater agricultural output. Japan and Taiwan, with farms averaging only 2.5 and 3.1 acres respectively, have two of the world's most technologically advanced farm sectors. Consider Japan. [Editor's Note: For a brief analysis of Taiwan's success story, see the article on page 23.] Her farmers, with a high-rainfall rice culture and a more intensive mode of cultivation, spend even more per acre than do their American counterparts. Their per-acre expenditures for agricultural chemicals alone—fertilizer, insecticides, fungicides and herbicides—now exceed per-acre expenditures for all production requisites in the United States. In addition, though Japanese farmers typically operate on a small scale, they spend each year more than five dollars an acre for farm implements and power equipment. This is almost exactly the same expenditure per acre as in the United States. Whereas U.S. farmers buy one large tractor for, say, 150 acres, Japanese farmers buy a number of small garden-type tillers for the same area.[2]

U.S. farmers last year spent $599 million for improved seed. India, with a slightly larger area under crops, represents a potential market of comparable size. The entire less-developed world, with a cultivated area roughtly five times that of the United States, represents a fantastically large market for seed alone. By 1980 most of this vast area of cropland must be planted to improved varieties if the projected population is to be adequately fed. Few traditional varieties of foodgrains are genetically capable of the rise in yields required over the next 15 years. [Editor's Note: The possibility of genetic improvement of varieties is discussed by Wm. B. Murphy on page 94.]

NEEDED: 900 MILLION TONS OF FOOD

The demand for food in the LDC's, reflecting both population growth and modestly growing incomes, is rising 4% a year. Compounded over the next 15 years, this rate of growth will increase the demand for food by 80% between now and 1980. Grain consumption, now totaling just over 500 million tons, must climb to 900 million tons. Assuming this target, and using the rule of thumb of one pound of plant nutrients for each 10 pounds of grain, the current yearly fertilizer consumption of 7 million tons in the less-developed world must climb to 47 million tons in 1980. At $150 per ton of fertilizer, this prospective market could well expand from the present one billion dollars a year to at least $7 billion 15 years hence. This volume of fertilizer, averaging about one-fourth the Japanese rate of usage, would still be far from optimal.

The ability to support this and other essential inputs rests in large part on two developments: the adoption by the developing nations of (1) enlightened price policies and (2) measures to encourage private foreign investment. In an area-expanding agriculture, food prices received by farmers have relatively little bearing on production levels. Once a country turns to raising output per acre, however, its farmers must be assured of a price for their products which makes the use of modern technology profitable. A farmer cannot be expected to use fertilizer if its cost exceeds the value of the additional grain it helps produce. Yet, governments in most LDC's, with political bases in the urban areas, traditionally have a consumer-oriented food price policy. Their aim is to hold retail prices down. This generally involves keeping farm prices down, aggravating food supply problems. [Editor's Note: For an emphatic amen, see page 27.]

SUPPORTS AND SUBSIDIES

The rash of takeoffs in yield per acre occurring in the late Thirties and early Forties in the advanced industrial countries was closely associated with the adoption of farm price support policies during the de-

---

Footnotes at end of speech.

pression years. Some countries have chosen to achieve the same end by subsidizing farm inputs. The Government of Pakistan, for example, has been making fertilizer available at half the cost, stimulating demand to the point where it now exceeds the available supply. Farm price supports or input subsidies, or some combination of the two, can be effectively used to speed the adoption of modern technology, telescoping into years developments normally taking decades.

Once it becomes profitable to use modern technology, farmers catch on quickly, even though they may be largely illiterate. The problem then becomes supplying the inputs rather than overcoming the farmer's reluctance to use them. In India, where a price support system is now operating, the effective demand for nitrogenous fertilizer is estimated at 1.5 million tons this year. Since India produces only 400,000 tons, some $120 million of scarce foreign exchange is being used to import 600,000 tons from abroad. Even so, a serious shortage, reportedly resulting in fertilizer riots in some localities, remains. * * * Fertilizer riots are admittedly preferable to food riots, but nonetheless it is unfortunate that farmers are deprived of the inputs they want and the country deprived of the food it so desperately needs.

The clamor for inputs is not limited to India or to fertilizer. It exists in nearly all those developing countries where the use of modern agricultural technology is now profitable. Unfortunately, the industrial sectors of these countries lack the resources and technology to provide the necessary yield-raising inputs on the scale needed. Nor can the gap be filled with government-to-government assistance.

We have heard many times from many sources that the world now has the know-how to banish hunger. Unfortunately, however, the know-how is concentrated in one part of the world and the hunger in another. The resources—capital and managerial, technological and distributive—to meet this need are largely not in the hands of government. These resources have been developed by those large industrial firms producing and distributing agricultural inputs in North America, Western Europe and Japan. The problem is how to transfer these existing resources across national boundaries to the areas where they are needed. If the developing countries had unlimited time, they could eventually develop with their own resources an industrial sector capable of supporting a modern agriculture. But populations that double within a generation leave little time. Feeding populations that are 3% larger each year, on a fixed cropland base, requires a lot of progress in a short period of time. The transition from expanding area to raising yields must be quick. The progress of centuries must be compressed into decades; that of decades into years. Time is the new and single most critical dimension of the food-population problem. This is why the developing countries must seek a massive injection of private resources from abroad.

FLAG WAVING'S ON THE WANE

In the past, internal policies affecting foreign private investment in the land-scarce, food-hungry countries have been heavily weighted with ideological considerations. Fortunately, this is on the wane. People in the developing countries seem less and less willing to accept slogans and flag waving as a substitute for progress and better living conditions. An enlightened political leadership is beginning to heed the words of Berthold Brecht in his celebrated *Three Penny Opera*:

> *"Now all you gentlemen who wish to lead us,*
> *To teach us to resist from mortal sin,*
> *Your prior obligation is to feed us:*
> *When we've had our lunch, your preaching*
> *can begin."*

The technology, capital and management and marketing know-how to overcome the energy-sapping food shortages in the developing countries exist. The problem these countries face is how to obtain them. Some countries, particularly Mexico, Taiwan and Israel—all three of them agricultural success stories—have successfully tapped this international resource. [Editor's Note: Further material on the Mexican experience appears on page 59.]

GET GOV'T. OUT OF DISTRIBUTION!

Production of the needed farm inputs solves only part of the problem. They must also be distributed in an efficient, timely manner.

Too many leaders in the developing countries feel that government agencies can distribute farm inputs more efficiently than can private industry. Although governmental bureaucracies are not very adept at producing farm inputs, the record indicates they are even less adept at distributing them. Horror stories about seed arriving months after planting time and fertilizer not arriving at all are commonplace throughout the less-developed world. Private distribution systems reward the distributor for a successful distribution and sales effort and penalize him for failing to deliver the product in time for use. Government distribution agencies seem not to notice.

The distribution of agricultural inputs is incredibly complex compared with that of most industrial raw materials. The small-scale distribution systems with high mark-ups characterizing most developing countries will not serve the needs of a modern agriculture. Modern mass-distribution methods of the kind used in the advanced countries must be introduced.

The concept of servicing customers seems not yet to have caught on in most developing countries. Firms distributing inputs in the more advanced countries use customer servicing as a competitive tool. In the fertilizer business, for example, the quality of soil-testing services and advice on fertilizer usage provided to farmers is often a more important competitive tool than pricing. Advice meted out must be reliable. Next year's sales depend on it.

The lack of customer servicing in the LDC's is perhaps most obvious in the case of farm equipment. Governments in many developing countries import farm tractors and equipment directly, but fail to assume the responsibility for providing the spare parts and skilled maintenance men needed to keep equipment operational. The weaknesses of such an approach are evident in the abandoned farm equipment, particularly tractors, dotting the countryside.

The extraordinarily farsighted research and extension concept developed in U.S. agriculture during the latter part of the last centruy is the counterpart, and perhaps forerunner, of modern industry's research and development effort. During the earlier part of this century nearly all of the agricutural research in the United States was government research, conducted by the Department of Agriculture and the State Experiment Stations. The Federal-State Cooperative Service was the institution responsible for getting the results of this research to farmers.

This picture has altered dramatically since World War II. As of 1966 private industry is doing the major share of the agricultural research. Industry, through its highly trained sales and service force, is also now doing much of the extension of technology from the research plot to the farm, a job once belonging almost exclusively to the Extension Service. The innovative character of U.S. agriculture in the postwar period is due in good measure to the large-scale entry of industry into agricultural research and extension. At no time has the U.S. Government burdened itself with the production and distribution of inputs.

Today government and industry are effectively teamed, producing one of the most progressive and efficient farm sectors in the world. Government contributes importantly with its price support programs where they are needed, ensuring a minimum price to the farmer for his product. On the basis of this, the farmer and the lending institutions are willing to invest in both short-term production capital and long-term improvements. Government supports basic research and industry translates this into a bewildering array of new and advanced inputs, many of which did not exist 10 years ago.

To the extent that developing countries can tap this research and extension capability through investment from abroad in their farm supply industries, they can move much faster.

In recent years, at a time when the need for additional resources in the have-not countries is growing, the actual flow of government-sponsored assistance from the advanced industrial countries has leveled off. Government aid as a share of gross national product of the donor countries has, in several important instances, declined sharply. Legislators, reflecting the mood of taxpayers, are reluctant to approve the expansion of funds for aid. These taxpayers, most of whom are stockholders either directly in the market or indirectly in the form of insurance or pension funds, seem not at all hesitant about having the firms in which they share ownership to some degree invest in the LDC's. Stockholders apparently feel that their capital will be used more effectively if subjected to the discipline of a profit-and-loss statement. The transfer of resources through private investment may over the longer run result in a much healthier relationship between the haves and have-nots. It is no longer a donor-receiver relationship. Investment agreements are entered into by both parties with the expectation of eventual benefit.

NO STRAIN ON EXTERNAL PAYMENTS

Given the present tenor of things, this may be the only way to get the much-needed expansion in the flow of resources from the haves to the have-nots. This expanded flow need not aggravate balance-of-payments problems in the advanced countries. Large industrial firms in all of the more advanced countries are currently investing heavily abroad, but largely in other industrialized countries that are supplying most of the payments pressure. The times call for the redirection of at least a small share of this capital to the developing countries, particularly in the industries supporting agriculture.[3] Such a redirection could effectively supplement the meager and decidedly inadequate resources of the developing countries.

The world must prepare to feed, by 1980, an additional one billion people. Fully four-fifths of this one billion will be added in the food-short developing countries. Expanding the food supply sufficiently may seem an awesome, almost impossible task, considering that the current 3 billion are so poorly fed. It is. But we have no alternative but to seek a solution. If the developing countries fail to generate an agricultural yield takeoff, the future will not be worth contemplating.

The know-how and the wherewithal to make the takeoff in land productivity possible resides within the advanced economies of Western Europe, Japan and North America—most of it in those firms which today provide the billions of dollars in purchased inputs used each year by the farmers in these regions.

A new approach to the problem of hunger is clearly required. This is reflected in the food aid legislation just signed by the President. The key word in this legislation, designed to replace the Food for Peace Program, is "self-help." On July 21, Secretary of Agriculture Orville Freeman enunciated one aspect of the new U.S. world food policy before

---

Footnotes at end of speech.

a meeting of the 20-nation Organization for Economic Cooperation and Development:[4]

"In response to the growing need for agricultural inputs, we are making available sharply increased quantities of these items under our aid program. . . . Over the longer term the aid-recipient countries must develop their own agricultural supplier industries. To fail to do so will simply result in a shifting of dependence on aid in the form of food to aid in the form of agricultural inputs, creating an impossible burden for the advanced countries. We must assist the developing countries in creating the investment climate needed to attract capital and the accompanying managerial, technical and marketing know-how."

The Secretary's comments reflect a growing consensus among those working closely with development problems in general and agriculture in particular. As a nation we must now exercise the same imagination and resourcefulness which brought us to our current position of world economic and technological leadership. We must devise more effective ways of linking food producing know-how and resources at home with the needs of the less-fortunate multitudes abroad. The challenge has never been greater. Or the stakes higher.

Destruction Among the Redwoods

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. COHELAN. Mr. Speaker, the crucial importance of early action on legislation to establish a Redwood National Park is clearly set forth in an article, by Mr. Harold Gilliam, in the San Francisco Sunday Examiner and Chronicle of January 22.

Mr. Gilliam is one of the Nation's foremost conservation journalists and a former special assistant to Secretary of the Interior Stewart Udall. He speaks with knowledge and understanding on this subject.

In commenting on Governor Reagan's request for a 3-month delay on any congressional action on the redwoods, Mr. Gilliam quite correctly points out that the public is entitled to know what this delay will mean.

It will cost—

He points out—

the destruction of thousands of additional virgin redwoods within the proposed park areas.

It will mean the further chewing up of the forest in park localities already seriously damaged by logging that has taken place since the park was proposed.

It will constitute a serious setback to hopes that a sizeable block of primeval redwoods now in the hands of the loggers can be preserved intact as an ecological unit.

Mr. Gilliam is quite correct in suggesting that "the matter of deciding which redwoods should be preserved is too important to be left to the loggers."

I hope, Mr. Speaker, that we will take note of the urgency of this warning and that action will be taken in this session of the Congress to make good on our last real opportunity to establish a great Redwood National Park.

I include Harold Gilliam's timely article for our colleagues' information and attention:

DESTRUCTION GOES ON AMONG THE REDWOODS

(By Harold Gilliam)

In view of the inevitable pressure of business at the beginning of a new administration in Sacramento, it is perhaps understandable that Governor Ronald Reagan has asked Congress to suspend action on a Redwood National Park for three months.

The public is entitled to a clear understanding, however, of what this delay will cost.

It will mean the destruction of thousands of additional virgin redwoods within the proposed park areas.

It will mean the further chewing up of the forest in park localities already seriously damaged by logging that has taken place since the park was proposed.

It will constitute a serious setback to hopes that a sizable block of primeval redwoods now in the hands of the loggers can be preserved intact as an ecological unit.

NO MORATORIUM

Unfortunately the concerned public and many officials are under the impression that there is now a moratorium on the logging of redwoods within the proposed park boundaries. There is no such moratorium.

Logging continues within the boundaries proposed in both major park bills introduced in the last session of Congress: The administration bill for a 45,000-acre park principally in the Mill Creek area of Del Norte county, sponsored by Senator Thomas Kuchel, and the Sierra Club bill for a 90,000-acre park on Redwood Creek in Humboldt county, sponsored by East Bay Congressman Jeffrey Cohelan and others.

Last summer there was pressure from Washington to suspend logging while Congress was considering the park bills. As a result the redwood lumber companies in September made some qualified statements that were overoptimistically hailed as an agreement on a logging moratorium—although the industry itself never used the term.

MOVE TO THE RIDGE

At Mill Creek the Miller Redwood Company was cutting magnificent groves on the flats adjacent to Jedediah Smith Redwoods State Park, scheduled for inclusion in the national park under the administration bill.

Normally at the beginning of the rainy season Miller suspends logging on the flats and moves to the ridge and slope areas where there is better drainage. In September Miller agreed to move to the ridges at that time rather than wait until the rainy season some weeks later.

"This timber," Miller maintained, "can in no way be construed as park-type caliber."

It is possible to be grateful to Miller for temporarily sparing the remaining trees on the flats and still to question the company's statement that it is logging only "non park-like trees."

LOST MAN CREEK

When National Park Service officials included these trees in the proposed park, they obviously regarded them as park-quality trees.

The matter of deciding which redwoods should be preserved is too important to be left to the loggers, who too often seem to define "non park-like trees" as any trees that are not in a park. In at least one area Miller is currently logging all the way down the slopes to Mill Creek itself.

In the Redwood Creek region the Arcata Redwood Company promised in September to refrain from logging "in the Redwood Creek main watershed." However, the company is cutting redwoods on an important tributary, Lost Man Creek, within proposed park boundaries. It is using the clear-cut method, which levels everything in sight.

RESIDUAL CUTTING

The Simpson Lumber Company is doing "residual" cutting on upper slopes in the same watershed and in the Redwood Creek mainstem area as well.

Georgia-Pacific Corporation in September agreed only to "minimize cutting in proposed redwood park areas." Since then the company has logged slope stands in the Redwood Creek main watershed, within proposed park boundaries.

It is clear that there is no real moratorium and that giant trees in the proposed Redwood National Park areas are falling day by day.

It is scarcely realistic to expect the companies to shut down their mills while waiting for Congress to act.

THE BIG DELAY

The best hope for creation of a national park before it is too late has been to get early action from Congress. This was the plan of Senator Henry M. Jackson, chairmen of the Interior Committee, who had scheduled hearings for January in the hope that a bill could be passed in February. However, at the request of Governor Reagan he agreed last week to postpone hearings until the latter part of April, which probably means no action on the bills until at least May or June.

There doubtless will be further delays of many months before the money is available for the National Park Service to begin the long hard job of acquiring the land. Meantime the chain saws continue their destruction.

Surely America can well afford to preserve a major forest of the trees that stand at the summit of all plant life on earth. It is difficult to conceive of anything now taking place in Sacramento that will be as important to our great-grandchildren and their great-grandchildren. What else will be remembered 500 years from now?

We may hope that the Governor takes the long view and uses his vast prestige to speed action.

Happy 90th Birthday to Dr. Rudolph Ganz

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. YATES. Mr. Speaker, one of the leading citizens of Chicago is Dr. Rudolph Ganz who will shortly celebrate his 90th birthday on February 24. Beloved by all who know him, he has been in the forefront of the musical world, both as a pianist himself and as a teacher.

In introducing works of new composers such as Ravel, Debussy, Webern, he consistently brought the best of Europe to U.S. audiences. When he appeared on the concert stage, whether with the New York Philharmonic, the Chicago Symphony or in the Hollywood Bowl, the music critics hailed him as a music great.

He always returned to his main love, the teaching of promising students. The result is that Ganz-trained men and women are now making their contributions as faculty members of university music schools across the Nation, as orchestra members and soloists, as conductors, as directors of civic music programs in cities and towns.

From his early days in this country, Dr. Ganz championed the right of Americans to hear good music. His innovation of children's concerts indicate his concern for the cultural development of young people. Many times he wrote compositions just for children, such as his famous "Animal Pictures" collections. For the past 10 years he has financed, organized and developed the Rudolph Ganz Biennial Midwest Piano Competition for young students who either live or have studied in the Midwest.

He feels strongly that there is more musical talent being developed in the United States than in any other country, and that we are leaders in all phases of music creation and performance.

On the evening of February 24, this man with the magic in his fingers and the twinkle in his eye will don his broad cravat, place his rosette identifying him as an officier in the French Legion of Honor in his lapel, and go forth to his birthday party, given for him by Roosevelt University where he is president emeritus of Chicago Musical College.

Guests at the party will toast the 90 year young gentleman and establish the Rudolph Ganz Scholarship fund in his name.

With a little encouragement, Dr. Ganz will regale those sitting near him with tales of Hofmann—Josef that is—Brahms, Paderewski, Rachmaninoff, Rubinstein and other legendary greats of music who were his friends and associates over the years.

I am sure my colleagues in the Congress in both Houses will join me in saying "happy birthday" to Dr. Ganz—and may you have many more.

Mrs. Ellen Proxmire Analyzes "The High Cost of Public Office"

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1967

Mr. REUSS. Mr. Speaker, the February 1967 issue of the Progressive includes an excellent article by Mrs. Ellen Proxmire, "The High Cost of Public Office." She speaks from experience in six statewide campaigns in Wisconsin, in two of which she served successfully for her husband, Senator WILLIAM PROXMIRE, as fund raiser and campaign manager. After analyzing the problem crisply, Mrs. Proxmire suggests five ways in which the 90th Congress can act to bring a solution to the scandal of political fundraising. Since the high cost of public office is of practical and moral concern for all Members, Mrs. Proxmire's useful proposals merit their attention.

The text of her article follows:

THE HIGH COST OF PUBLIC OFFICE

(By Ellen Proxmire)

The old saw that "politics makes strange bedfellows" was affirmed in the national legislature in the haste to adjourn the 1966 session of Congress. A significant amendment concerning funds for financing Presidential campaign expenses, introduced by Senator Russell Long, Louisiana Democrat and Majority whip, was tacked on to the so-called "Christmas Tree" bill (which provides for a change in rules for taxing foreign investors). The bill and the amendment were passed and signed by the President. Long's rider is designed to provide Federal funds from personal income tax payments to the major political parties for the conduct of their Presidential campaigns, yet its passage has implications far beyond the races for the Presidency. Political campaigns in general will probably never be the same. But unless further measures are enacted, the financial problems of campaigning for political office may be infinitely worsened.

Election campaign costs climbed to new peaks in 1966, and though everyone seems to agree it cost too much either to win or to lose, no one really knows how much was spent. However, published figures (only a fraction of what was actually spent) stun the senses with their scandalous size.

Early in 1966 headlines inside and outside of Pennsylvania shouted the story of a "bought" election. Milton Shapp, an amateur and virtually unknown politician, defeated the Democratic organization candidate for the Pennsylvania gubernatorial nomination by spending about $2 million, $1 million of which was his own money. According to *Newsweek*, "he drummed home his anti-boss theme in some 7,000 spot radio announcements, thirty-four half-hour prime-time television shows and heavy newspaper advertising. One Shapp pamphlet went directly to 1.6 million voters at a cost of some $80,000. Shapp himself admitted that he had been accused of buying the election, but countered with the statement, 'I'm not buying, I'm selling myself. It does cost money.'" In the general election it was estimated by some sources that he spent $4 million trying to win a job which pays $45,000 a year. (He lost.)

New York's Governor Nelson Rockefeller reportedly spent $5 million in his successful bid for re-election, with the Democrats mounting a campaign costing $1 million. In the Reagan-Brown contest in California the two candidates spent at least $2 million each. And it has been estimated that in Illinois, Republican Senator Charles Percy spent $2.5 million to unseat incumbent Democrat Paul Douglas.

Elections have long been "bought," in the sense that it takes big money to run campaigns. Until recent years, however, rarely has such a large proportion of campaign funds tended to come from so few sources. And not until recent years, the years of television campaigning, have the costs of running for office been so staggering. There is urgent need to deal seriously with the important problem of financing political campaigns.

A common belief in the 1960's about politicians is that the requirements for success are hard work, a handsome face, a good television image, and a likable personality. This is true, at least to some extent, but more essential than any of these, in my experience, is the ability to raise money. A good candidate might possess all the traditional political assets, but without the necessary money he will most certainly remain unknown, unwanted, and politically unemployed.

The subject of campaign money, how it is raised, and what is done with it has become a national scandal. It is my conviction that the politicians from Capitol Hill to the White House are to blame. Too often their statements are all too bland, and too often those who are primarily responsible for shaping legislation in this sphere merely sweep it into the dust bin.

To illustrate how the problem has grown, Abraham Lincoln was elected President in 1860 without making a single speech, or leaving his home town of Springfield, Illinois. The two major parties spent a total of $160,000 in the campaign. A century later, John F. Kennedy traveled 40,000 miles to deliver 360 speeches. The two national parties together spent $20 million in an effort to get their respective Presidential candidates elected.

Recent disclosures of advertising in political fund-raising dinner program books as a gimmick to acquire large sums of money from corporations, and the furor over Senator Thomas J. Dodd's testimonial dinners serve to emphasize the need for concrete action. Political program books with the inevitable advertising have been a mainstay of local, state, and national party financing for years. Corporations buying an "ad" were allowed to deduct the cost as a business expense, and were thus able to make a substantial contribution (as high as $15,000 a page) to a candidate or a party and write it off at income tax time. Congress finally disallowed this deduction during the 1966 session. A freshly-aroused public interest in response to revelations of recent election costs, the program book device, and the accusations that Senator Dodd used campaign cash for personal expenditures, might conceivably force politicians to be more severe about policing themselves.

Sound, enforceable laws would make it easier, rather than more difficult, for each candidate to run his campaign. Limits on allowable spending would then be specific; members and numbers of committees would be clearly defined; and all contributions would be honestly reported. This would put each campaign on a fairer basis and would relieve the inevitable sense of worry that hovers over every politician as he faces the chore of raising money for his campaign.

Evidence can be found in my own personal experience. I have worked in six statewide campaigns in Wisconsin, and have lived through the agony of raising money for my candidate husband, William Proxmire, Senator from Wisconsin since 1957. Each time the cost of running has mushroomed, and I see no end in sight unless something is done. We felt that our 1964 campaign for his re-election would require a minimum of $200,000—a huge sum of money, but still modest in comparison with the amounts needed in some of the more populous states. So in the summer of 1962 we began the long road toward achieving this goal. There was a Wisconsin-style buffet in Washington—scheduled for outdoors—at $25 a person. The rain poured down that night. Everything imaginable went wrong. But we picked up the pieces, someone counted the money, and our campaign chest held $18,000. It was a great start, but a long way from $200,000. Barely were the deposits made before we set to work on the next project, a dinner in Milwaukee. That September almost 1,000 Democrats and a few independents paid $50 a plate for a $3.75 turkey dinner. Thus with the election fourteen months away we had a campaign kitty of about $55,000—one quarter of the way home.

Then there was a New York reception that raised about $5,000; a Chicago party with about 100 people present at $50 a person; and other dinners in Milwaukee that raised about $60,000. As the campaign began in earnest, there came individual contributions, help from the Wisconsin Democratic Party and the National Senatorial Campaign Committee. We finished the campaign with a victory, but, even after all the careful planning, a big debt. It was not until July, 1965, that our political fund-raising was over—for a brief time. That was three years of seeking money—a long time, a lot of money, and a terrible burden for a family not only involved in political life, but in all the problems that every family has.

I feel strongly the need for greater understanding by each citizen of this problem, the need for concrete action stimulated by Presidential leadership, and the need for a tougher Federal corrupt practices law—the law that governs campaign spending.

Because the laws are not explicit, because the area of campaign spending is muddied by confusion, pressure, and shadowy suspicion, the problems concerning the sources of money a politician receives occur frequently. What does a politician do when someone offers him cash (to avoid reporting the contribution)? How does a campaign committee chairman handle a generous contribution from one who insists on giving his check directly to the Senator (illegal under most circumstances in Wisconsin, but often done so the giver can know that the candidate is aware of the gift)? How does one handle promises of money, and what does a candidate do with corporation checks? In the midst of the enormous effort to plan fund-raising functions, there is the constant worry about compromising the candidate, often unknowingly, or offending a contributor. I worry, too, about operating within an unenforceable law.

The Federal Corrupt Practices Act defines a political contribution as an individual gift, subscription, loan, or "anything of value." In addition, the law forbids contributions by any corporation or labor organization (union treasury money). State laws are similarly worded, but they are frequently, or even consistently, violated, ignored, or not enforced. Wisconsin newspapers have often commented that the laws governing reporting of political contributions are not worth the paper on which they are printed.

In a post-1966 election comment, columnist Clayton Fritchey wrote: "As usual the official reporting of campaign contributions and expenditures will disclose only a fraction of the total involved. A fairly reliable rule of thumb is to multiply the admitted sum by four or five." For example, the present Corrupt Practices Act limits total annual contributions to national political committees to $3 million, yet some estimates of the Johnson and Goldwater campaigns run as high as $55 million.

This is the time for citizens to demand genuine reform. For something of substance to ask for from the Ninetieth Congress, here are some suggestions which could bring a solution to the scandal of political fund-raising:

One—A Registry of Election Finance could be established. Each candidate or committee spending $1,000 a year or more in a Federal election would be required to file a detailed report with the Registry four times a year, revealing the full identification and address of each contributor. In addition, a listing of the total amount of money received would be required, along with an itemized statement showing how it was spent and a record of unpaid bills. There would be a limitation on the allowable number of committees. Since seventy-five per cent of the total spent in elections comes from contributors of large amounts ($500 or more), there might well be a tax incentive to stimulate small contributions.

Two—A proposal made by President Theodore Roosevelt more than fifty years ago could be enacted into law. He felt then that the best method of financing campaigns was for the Federal treasury to pay to the major candidates for Federal office a specific amount—such as ten cents for each prospective voter. Campaign expenditures would be limited to these amounts. Illinois' former Senator Paul Douglas has said that in this way, "Campaigns would be adequately financed, candidates freed of any obligation, and the public protected."

Three—Television stations could give candidates more free time and limit the number of paid political broadcasts a candidate could buy. This would prevent well-financed candidates and political organizations of any party from monopolizing the airwaves. As Jack Gould commented recently in *The New York Times*, "Much of the whopping costs of politics on television is by design and lies in the weakness of the [Federal] Communications Act that exempts paid political broadcasts from the criterion of equal time. Upon selling hours of time to one candidate all a broadcaster must do is agree to make similar time available to other contenders. But if the other contenders cannot come up with the money they are for all practical purposes kept off the air."

Four—Full public disclosure of their financial interests and income by all members of Congress and by top Congressional employees would be the best possible assurance to the people that their representatives are not engaging in affairs which pose a conflict of interest and are not receiving income from questionable sources. So far only a handful of elected officials or their employes have done so voluntarily.

Five—Starting with the hastily-conceived Long amendment, Congress can perfect the machinery it sets up for public involvement in campaign financing. Basically, the Long amendment provides that in 1967 on the 1040 income tax form there will be an opportunity for each taxpayer to earmark $1 of his tax ($2 on joint returns) to finance the Presidential contest in 1968. If all taxpayers followed this procedure, as much as $100 million could be made available to the major national parties.

It is clear that this new law is only a beginning, however. Criticism revolves around the following: First, reforms in the soliciting and reporting of contributions were not touched. Second, the effect on "third," or all minor parties could well be devastating under the provisions of the law. Third, no reference is made in the amendment to the election of members of Congress. Fourth, Constitutional questions have been raised which require further study—for example, Congress alone is empowered by the Constitution to determine how Federal tax money is spent; if a taxpayer may now earmark part of his tax payment for Presidential campaign costs, why not for something else? Fifth, and perhaps most important, the amendment does not state that no other contribution would be accepted. This Federal money could therefore become a huge slush fund with individuals of wealth still allowed to influence government by giving substantial amounts to a Presidential candidate.

Despite these grave flaws, this hastily passed legislation does insure a broader base of political giving, in itself a healthy development. It is now up to Congress to refine it if true election campaign reform is to be achieved.

If it requires great fortunes to run for office, the vast majority of Americans are automatically excluded from serving their country, unless they mortgage their future performance in office by soliciting funds from big vested financial interests. The way things stand now, the dollar sign looms as the most important qualification a man can have to run for office—not whether he is dedicated, has great ability, or high character. And often that dollar sign is tainted. Financial pressures are frequently so acute that even the most ethical public officials are exposed to the temptation of accepting questionable money to meet the crushing costs of winning elections.

The principal obstacle to reform in this area of campaign spending is the fact that most people just do not realize the vital need for regulation, for general participation, and for broader understanding when it comes time to raise money in a campaign year. Since not more than ten per cent of the American people ever contribute to the campaign costs of a political candidate, the reform of laws within the existing framework of giving is an immediate necessity.

Responsibility for failure to enact such laws falls squarely on the shoulders of the elected men in Washington. Congress in the past two decades has shamefully neglected to act on a single one of seventeen proposals designed to destroy the legal sham that governs campaign expenditures today.

I deeply believe that the will of the people cannot be translated into action until we have conscientious candidates who do *not* have to mortgage their homes and their political souls to get elected. The seeds of reform have been sown. It is up to the politicians to act to dispel the clouds of corruption that hang over so many elections.

Ukrainian Independence Day

SPEECH

OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. DELANEY. Mr. Speaker, I am pleased to join my colleagues in honoring the courageous freedom-loving Ukrainian people as they commemorate the 49th anniversary of Ukrainian Independence Day.

As Americans, proud of our own successful fight for independence, we share a common bond with all those who seek to determine their own destiny. Therefore, it is appropriate that we pause to remember the brave Ukrainian people who keep the light of liberty glowing in the bleak world of captive nations.

Except for a brief period of freedom during 1918–20, the valiant Ukrainian people have been dominated by foreign powers since the 17th century. But that brief period, when the long frustrated hope of liberty became joyous reality, has served as an inspiration to Ukrainian peoples everywhere for the last half century. It was on January 22, 1918, in the aftermath of the Russian revolution, that the Ukrainian Parliament proclaimed the Ukrainian National Republic as completely independent. The Ukrainian people tried hard to fashion their destiny; but, unfortunately, their gallant efforts were smashed within 2 years by the brutal Red army. All opponents of Soviet Russia were ruthlessly eliminated, and the independent Ukrainian Republic ceased to exist.

Since that time the hearts of the brave Ukrainian people burn brightly with the hope, once realized, that they will live again in freedom. We salute their courage and steadfastness of purpose, and sincerely hope their aspirations soon will be fulfilled.

How Business Employs the "Unemployable"

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1967

Mr. CURTIS. Mr. Speaker, the basic flaw in the Job Corps, and a number of other ill-conceived Federal training programs, is that it has failed to make optimum use of the most powerful institution in the American economy—private business. If job training programs are to be successful they must be related to meaningful employment and monetary reward.

There is a great responsibility which must likewise be undertaken by business in providing job training. This responsibility is not unrelated to profit, however. It is heartening to see the increasing number of businesses which are becoming aware that training programs for the unskilled are a sound investment.

An article in the January 1967 edition of Nation's Business—"How Business Employs the Unemployable" describes some outstanding examples of the success of private job training programs run by individual employers and private business associations. I commend this article to my colleagues to be compared with reports of the Job Corps. The article follows:

[From Nation's Business, January 1967]

How Business Employs the "Unemployable"—Companies—Large and Small—Are Bringing New Worth to the Lives of "Disadvantaged"

There's something new and important in the life of Jim Gonzales, a heavy-set, soft-spoken young man with a Spanish accent.

He notices this special feeling when he arrives at work, opens his kit and gazes upon his own set of tools. It comes when his hands command a drill that shapes metal into a product he knows people are going to pay for.

It's there also when he chats with journeymen mechanics from whom he expects to learn so much in the months ahead.

It is a feeling that more and more persons with Jim's so-called "disadvantaged" background are getting to know for the first time. It's called pride in work.

Jim never had that feeling during his two yearlong stints in the federal government's Job Corps—once in New York and once in Michigan. In both places he was paid for supposedly learning about auto mechanics. "It was like some charity," Jim recalls.

After giving up on the Job Corps, Jim wandered across the country searching for . . . well, he wasn't quite sure.

In Los Angeles he heard about Monogram Industries, Inc., an organization someone said would "hire anybody."

Jim was surprised to learn that Monogram was not a government project. It was instead, a money-making manufacturing firm that wanted Jim for solid business reasons.

Monogram, which hired Jim for its on-the-job training program, is no different from hundreds of firms all over the country that have taken it upon themselves to do something about the high unemployment among the unskilled persons in the midst of a tight labor market.

These private firms are quietly, but successfully, opening job opportunities to tens of thousands of "unemployables." Meanwhile, expensive federal manpower programs, promoted with thunderous bureaucratic ballyhoo, have produced a mere trickle in results.

Why are private companies spending so much time and money on these projects? Martin Stone, Monogram's bustling 38-year-old president, explains that it is partly due to the same motivation businessmen have when they contribute to community chests. Such programs reduce welfare rolls and provide a source of labor.

Mr. Stone says his training program has given Monogram a stable and continuing force of sheet metalworkers while other plants in the area are desperately seeking them.

Mr. Stone started his 10-month training cycles in the summer of 1965.

The program was specifically designed for men who had no previous job skills.

Trainees start at $1.75 an hour. After 90 days of training, their wage jumps to $2.15. This continues until they make the regular rates of the trained sheet metalworker. The once unemployables are thus built right into Monogram's regular work force.

Mr. Stone purposely sought out men with limited education from many racial and ethnic backgrounds to fill his trainee lists. The first group consisted of two Samoans who spoke no English, one Japanese, 10 Mexican-Americans, six Negroes and two white Anglo-Saxons.

IMMIGRANT TO METALWORKER

One trainee is Florentze Veron, 48, who showed up at Monogram's personnel office one day accompanied by his son, Hector, who was on crutches. Hector, an A student in junior high, interpreted for his father.

The boy explained that he had been stricken with polio when he was two and his father had taken him to the United States from Argentina two years ago to seek better treatment for him.

Hector said his father did odd jobs in New Jersey and New York. They moved to Los Angeles after learning that a hospital there offered hope for treating Hector. Hector told the personnel man at Monogram that his father spoke no English but was willing to sweep floors, wash dishes, anything.

Within an hour Mr. Veron was in Monogram's training program. He quickly caught on to metalworking and advanced through the trainee ranks. The pay and the firm's hospitalization plan have enabled Hector to get the treatment sought. Doctors say the boy may be able to walk without crutches one day.

Mr. Veron's only complaint is that he has not picked up English as quickly as he had hoped, so he cannot yet attend a blueprint reading school.

"Very hard, my head," Mr. Veron says, pounding his forehead with his palm.

Another trainee in the Monogram program was William T. Rose, a 24-year-old Negro who had a rough time finding a job before trying Monogram. He swiftly advanced through the program, making enough money—through three raises and Monogram's employee profit-sharing plan—to rent a handsome apartment, buy a car and get married.

Mr. Stone keeps from 15 to 20 trainees on his payroll at all times and plans to increase the number when possible.

WHY FEDERAL PROGRAMS FLOUNDER

He believes a basic flaw in the federal government's poverty program is its failure to use powerful institutions already present in the American economy.

"The government tried to set up huge administrative federal organizations to carry out the job creation phase of the poverty program when industry could have comfortably and effectively handled the problem," Mr. Stone maintains.

He says that the business community would have been even more enthusiastic about fighting the problem if any effort had been made to enlist its support in solving it.

The Monogram program had been underway only about a month when, in August, 1965, six days of bloody riot rocked the nearby Watts section of Los Angeles.

To loosen tensions, many other businessmen suddenly sought to set up programs similar to that at Monogram, exclusively for the Watts unemployed.

At the center of the effort was the Los Angeles Chamber of Commerce and energetic H. C. McClellan, who is board Chairman of the Old Colony Paint & Chemical Co. in Los Angeles and Under Secretary of Commerce during the Eisenhower Administration.

"It's a sin against common sense to deny a man a job because of his race," Mr. McClellan said often as he mustered support for the Chamber's program.

He got seven leading Los Angeles businessmen together and helped form a 50-member committee of Negro businessmen from the Watts area.

Working together—without funding or staff—the groups eventually formed a nonprofit public service corporation called the Management Council for Merit Employment, Training and Research.

The council is a cooperative effort by industry to:

Create enthusiasm among employers for hiring the unskilled in the Watts area.

Drum up a desire among the people in Watts for going after the new jobs being made available.

The group agreed that adequate staff and facilities would be needed, but that no government funds would be requested or used. Six aerospace firms contributed $23,000 and the Haynes Foundation of Los Angeles and the Ford Foundation of New York City gave $50,000.

"We have been seeking out the heads of families," Mr. McClellan told a Nation's Business editor at the council's office in the Los Angeles Chamber of Commerce Building.

"We don't offer them jobs as janitors, fieldworkers or car washers—even though there's nothing inherently wrong with such jobs. It's just that most Negroes resent them."

The council has been working, too, with privately financed projects to train some persons who need training—in such matters as how to change a dollar bill—before they can attempt to enter on-the-job training.

The council set up an Opportunities Industrialization Center (OIC) similar to those already running in Philadelphia and Boston. Based on a self-help philosophy, the OIC's are run by the Negroes themselves. They provide remedial training in fundamentals, some skilled training and counseling to build the right attitudes toward work.

The council administers the funds and equipment for another project in which professionals from the American Society for Training and Development train OIC officials.

The council coordinates and counsels still other skill centers and holds meetings individually and in groups with leaders of Negro and Mexican-American communities.

DROPOUTS AND DELINQUENTS

The results have been impressive. The council, which now has 2,600 companies in its program, has placed more than 5,500 persons from the Watts curfew area in steady jobs. The numbers include some of the hardest of the so-called hard-core unemployables.

Mr. McClellan says members firms have requested: "Send us the worst person you can. Give us the dropout with a long police record—and we'll give him on-the-job training at $3 an hour to start."

Mr. McClellan, who has donated hundreds of hours to the council, says he never presents the programs to firms as social or moral obligations. Rather he refers to them in terms of simple economics and common sense.

He points out the shortage of semiskilled and skilled workers in the Los Angeles area and the fact that Los Angeles County welfare costs exceeded $400 million last year, about a quarter of which went to the Watts area.

Mr. McClellan sees the whole problem as being really nationwide, however, and believes other business communities can set up similar programs to hasten the hiring, training and promotion of their "unemployables."

BUSINESS PITCHES IN

An example of what private firms are doing on there own to relieve tensions in the Watts area was the opening there, last November, of a new subsidiary of the Aerojet-General Corp. Known as the Watts Manufacturing Co., the new firm makes large tents for the Defense Department for a variety of uses, including field hospitals.

When in full production, the new firm will provide jobs for more than 200 low-skill Watts area persons in two shifts. Training is being given to those persons who have the manual dexterity to use the tent-making machines but have never worked on this type of equipment.

"This is no philanthropic undertaking," says R. I. McKenzie, Aerojet president, "but a sound business venture designed to get a return on our investment."

Twelve electronic firms in the San Francisco area helped finance, equip and provide instructors for another self-help training program, called Opportunities Industrial Center West in East Palo Alto. Classes started last October in a donated industrial park building.

Already the program has trained and placed 154 "disadvantaged" persons in good jobs as secretaries, mechanics, sheet metalworkers, welders, draftsmen, key-punch operators and electronic technicians and assemblymen.

The advantage of having firms supply teachers and equipment for such a program is that the trainees get the most current training on the latest equipment, not on obsolete machinery, as in many vocational schools.

IN THE EAST, TOO

The efforts of businessmen to fight the "unemployables" problem is hardly confined to the West Coast. For instance, across the continent is the work being done by the Buffalo (N.Y.) Area Chamber of Commerce.

Buffalo area businesses last spring gave $40,000 to set up and staff the nonprofit Opportunity Development Corporation (ODC). The organization's chief undertaking is called Project JET, because its aim is to give the unskilled a combination of jobs, education and training.

The program is run for 1000 "economically and educationally indigent" from the Buffalo area welfare and unemployment rolls. They are mostly male heads of households.

The ODC's aim is to hire these men, mostly Negroes and Puerto Ricans, put them to work and at the same time raise their educational level to at least the eighth grade. This is done through daily two-hour tutoring in classrooms, supplemented by intensive home counseling if needed. This is in addition to their regular on-the-job training.

Every employer in the program gets up to $30 a week for each trainee on his payroll through the 44 weeks of the trainee program.

By providing jobs and training to individuals once on welfare, Project JET will save the Erie County welfare authorities an estimated $1,542,000 which would otherwise have been handed out to the trainees. This savings represents more than 51 per cent of the operating cost of JET for the first year.

The projected average annual income of the trainees is $3,637.60, which is $421 higher than the nationwide median annual income for nonwhites.

"In addition to savings to welfare agencies and increased contributions of taxes, the program has had some important, but less measurable returns," says Dr. Allan H. Bush, executive director of ODC.

"These include a restoration of a sense of human dignity for the chronically unemployed, increased family stability as a result of employment and a greater sense of social stability as a result of being able to conform to the socially dictated responsibility of providing for oneself and family."

The Buffalo Chamber attacks the unemployables problem in other ways. It publishes a brochure designed to persuade potential school dropouts to stay in school. It has a speakers bureau program so that representatives of minority groups can take their messages to white residents in outer areas.

The Chamber engages, too, in programs to solve problems of transporting members of minority groups between the inner city and outlying plants.

"We told ourselves that either we join in a strong, realistic community effort to turn despair into new hope, or Buffalo risks involvement in the surging national pattern of turmoil and voilence," explains Charles F. Light, executive vice president of the Buffalo Chamber.

TURNING JOBLESS INTO ASSETS

"Either we turn unemployables into assets or we slowly crush the vitality of our community under the increasing weight of relief rolls and welfare taxes."

Intensive campaigns promoting job education—spearheaded by local businessmen—are underway in many other cities, including Philadelphia, Charlotte, Indianapolis, Chicago, Dallas and Seattle.

The Seattle Chamber of Commerce last fall held a series of Merit Employment Workshops designed to acquaint Negro unemployables with the job world and to thrash out problems encountered by labor-short employers in hiring and retaining the unskilled. The general idea was to assist both Negroes and whites in working together.

The Greater Cincinnati Chamber of Commerce last September held an all-day seminar on the same topic. The night before, the Chamber, along with the Cincinnati Business League, an organization of Negro small businessmen, gave out 60 plaques. Half went to Negro workers who had improved themselves through on-the-job training. The other plaques went to firms with outstanding hiring and training policies.

The Cincinnati Chamber last June established a new department dealing with human relations. It is launching an Opportunities Industrialization Center in Cincinnati.

RCA recently assigned 15 of its top engineers and scientists to deliver weekly classroom lectures at four Brooklyn, N.Y., high schools. They described opportunities opening up for young people in the fields of jet propulsion, nuclear physics and space technology.

It worked so well that eight other industrial firms have joined with RCA in the project and more schools have been added to the list.

Petroleum companies are using teaching machines in stepped-up programs to train low-skilled persons to be gas station attendants. The firms pay all expenses for the trainees at centers scattered across the country.

PLANS FOR PROGRESS

Some 350 large firms, employing more than 8.6 million persons, participate in the national voluntary Plans for Progress (PFP) program. In this, firms pledge to take affirmative action in recruiting Negroes for all levels of jobs. In addition, member companies carry out a wide variety of in-plant, community and multifirm programs.

PFP firms are increasing their Negro work forces at a rate of more than 19 per cent a year, including many break-throughs in white-collar employment.

It was a group of PFP companies that helped launch the first Opportunities Industrialization Center, Inc. in an abandoned Philadelphia jail. More than 1600 persons have been trained and placed in jobs through the Philadelphia OIC, which carries the slogan, "We Help Ourselves."

PFP has an administrative staff in Washington run by full-time executives on loan for a year from their firms, which continue to pay the executives' salaries.

The staff oversees national projects. One such project is the communications campaign, coordinated by the Advertising Council. Its goal is to encourage more employment of persons from minority groups and to encourage Negroes, especially young ones, to get a good education and take advantage of the increasing career opportunities in business.

The campaign involves millions of dollars worth of donated advertising space and radio and television time.

PFP also conducts speeches, conferences and recruitment programs at schools having high Negro enrollments.

A group of some 200 young executives from minority backgrounds—all employees of PFP firms—has been visiting colleges and high schools in large cities as living witnesses that opportunity exits for those who prepare for it.

PFP is setting up local merit employment councils. There are now some 40 of them extending equal opportunity principles and practices to companies of all sizes.

PFP conducts seminars on man-power development and training, too. After one such seminar in Milwaukee, companies quickly committed 200 openings for on-the-job training of so-called unemployable young people.

PFP firms contributed more than $150,000 to Vocational Guidance Institutes which bring together local businessmen, guidance counsellors and administrators of inner city high schools having large numbers of minority students.

Plant tours, lectures and discussions with personnel experts provide school officials with a better insight into how to prepare their students for the changing job market.

SOLVING THE WELFARE PROBLEM

R. H. Mulford, president of Owens-Illinois, Inc., a PFP firm, says: "For every young Negro man or woman whom we employ in a professional or managerial capacity, 20 young Negroes will remain in school who would otherwise become dropouts. If we can get this mathematical formula moving, we will be well on the way to eventual resolution of this great problem.

"It is in our obvious self-interest to help bring these people into the mainstream of our economic life, so they can be contributors and participants, rather than recipients of welfare programs and the cause of higher taxes.

"We have a rare opportunity to demonstrate how our great publicly owned industrial enterprises can be a constructive power in solving the social, as well as the economic, problems of our nation."

Noting the present tight labor market, PFP participants point out how much better off firms are that instituted training programs long ago in the nonshortage years.

To solve part of this labor shortage, Robert O. Snelling, Sr., president of the nationwide employment agency of Snelling and Snelling, Inc., has been campaigning to encourage male high school graduates who don't plan to go to college to take business school courses and become secretaries.

HANDICAPPED HELPED, TOO

Another group of so-called unemployables that private firms have been providing with jobs are the handicapped.

A good example is the policy of Alvey-Ferguson Co., Cincinnati conveyor equipment manufacturer. About 10 per cent of the firm's 450 employees are handicapped.

Jane Baker Spain, the firm's president and owner, claims the handicapped are the most reliable workers, can outproduce nonhandicapped, have a lower accident rate and never present problems in absenteeism or alcoholism.

"They don't stay off work for a headache," she told Nation's Business. "They're so delighted to have a job, they come regularly and enjoy it. It's good for the other workers, too. They think: 'If he comes in, handicapped liked that, I should come in, too.'

"This is in no way to be considered charity, as the handicapped do not want charity, and a corporation is not in business to give charity of this kind.

"It is up to us to see that man is measured by his ability, not his disability. If we don't do this both as individuals and as corporations, we cannot hope to preserve the free enterprise system."

The philosophy of many businessmen who have joined in the battle to wipe out unemployment is summed up by George Champion, chairman of Chase Manhattan Bank:

"This is no mere exercise in altruism, but just good business sense. Improving the quality of our society is simply another step in the process of taking a broader gauged view of return on investment.

"The times in which we live have made this as necessary as investment in plant and equipment, in research and development, or in enlightened industrial relations. The distinction between capital investment and social investment is much more a difference of degree than of kind."

The Late Honorable Christian Herter

SPEECH

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 24, 1967

Mr. O'HARA of Illinois. Mr. Speaker, I join with my distinguished colleague from Ohio [Mrs. BOLTON] in the tribute of an admiring heart to the memory of the late Honorable Christian Herter. I was enriched by his personal friendship and our association in the Congress. No Secretary of State was ever closer to the members of the Committee on Foreign Affairs. A former member of our committee we felt, when he was Secretary of State and came before us, that he was still one of us. When he came to the high office of Secretary of State he was not in the best of health, and in the later months of his administration he was painfully crippled up, but he performed his duties with the same high order of ability, mental grasp and dedication that had marked his long and brilliant public career. Christian Herter followed Secretary of State Dulles, whose influence in foreign policy was all powerful, and his tenure of the office was relatively brief and his health was not good; toward the end the pain must have been unbearable. Under other circumstances Christian Herter well may have gone down in history as one of our greatest Secretaries of State.

No Politics at Berkeley?

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. COHELAN. Mr. Speaker, a column by James Reston and an editorial from the New York Times of January 27, both speak pointedly to the recent firing of Dr. Clark Kerr as president of the University of California.

I include them for our colleagues' consideration:

[From the New York Times, Jan. 27, 1967]

NO POLITICS AT BERKELEY?

With straight face, Ronald Reagan says no "politics or partisanship" entered into the dismissal of Dr. Clark Kerr as president of the University of California. Indeed, he says, the university "is not in the political ring at all" and "won't be sullied by partisan politics" while he is governor.

Possibly, as has been reported, Governor Reagan had not intended to force the dismissal of Dr. Kerr at last week's meeting of the Regents, but it is indisputable that he had helped generate the political climate in which the dismissal took place.

Governor Reagan is the man who deliberately made the university a key issue in his campaign as long ago as last May, and exploited events on the Berkeley campus as recklessly and relentlessly as he exploited the "white backlash" in race relations.

It was at a rally in San Francisco's Cow Palace on May 13, 1966, that Mr. Reagan called on the California legislature "to hold public hearings into the charges of Communism and blatant sexual misbehavior" at Berkeley. This is the man who now says he has "no intention of ever trying to overrule" the Board of Regents on university matters.

The Cow Palace speech provides insights on Governor Reagan's tactics and vision. He based his charges of Communism and immorality at Berkeley and his demand for a public investigation on a report by California's notorious State Senate Committee on Un-American Activities—which he admitted he had not read.

He also promised in the speech that he would not cut spending for education or state salaries. But almost of his first act as Governor was to propose the drastic slash in appropriations for higher education, and the introduction of tuition charges, that precipitated the crisis with Dr. Kerr.

By September, Mr. Reagan was projecting yet another investigation of problems at the university, including that of "unconstitutional political interference." This probe would be headed by John A. McCone, former director of the Central Intelligence Agency, he said. Mr. Reagan on that occasion charged "that there has been political interference, which has resulted in the appeasement of campus malcontents and filthy-speech advocates under the pretense of preserving academic freedom."

This is the man who now faces fourteen television cameras and asserts that the great University of California "is not in the political ring at all." It is not low comedy on the late show that all of the United States is witnessing here; *it is high tragedy whose impact will be felt far beyond the borders of California.*

BERKELEY: THE DISMISSAL OF CLARK KERR

(By James Reston)

BERKELEY, CALIF., Jan. 26.—It is a maxim of Democratic politics that strong men eventually and almost inevitably inspire the opposition forces that bring them down.

This is happening now in Washington, where every victory by the strong-willed Secretary of Defense, Robert McNamara, assures him another few enemies, and brings him closer to retirement. And this rule of politics and physics—that force creates an equal counterforce—is apparently what ended the remarkable career of President Clark Kerr at the University of California.

He was the commanding figure of this great institution. At one time or another he fought the politicians, the Regents, the faculty, the Birchers, the far right, the far left, the students and the nonstudents, and in the end this episodic struggle created an atmosphere of contention and a coalition of forces that led to his dismissal.

KERR'S PHILOSOPHY

"A great university," he wrote in his university plan for the next decade, "has a duty to the future as great as its duty to the present. . . . Intellectually, it must be both more conservative of established values and more bold in trying innovations than may be fashionable at any given moment. It must maintain scholars in studies which a layman might consider archaic. It must support novel exploration which most people consider speculative. . . . It must take the long view and may often have to defend the unpopular. . . .

"Neither immediate benefits, nor the desire to allay criticism, nor honest exasperation with troublemakers must tempt the University of California to impair the right of scholars to search and discuss what they find."

These are not the words of a man who believes in "consensus leadership," if there is any such thing. He was not really the victim of a partisan conspiracy or even of an ideological conflict. He was merely the strong man in the middle, tilting one day against those who wanted to go slower and the next against those who wanted to go faster, or take a different route.

THE CROSSFIRE

In the process, he got caught in the crossfire of a great many contending forces. In building the largest institution of higher education in the nation, he was blamed by the students who felt overwhelmed by its bigness. In temporizing with the so-called "free speech" movement, he not only aroused all the anti-intellectual forces in the state but troubled the moralists and split the faculty.

In threatening publicly to resign in 1965, he irritated the Regents, already embarrassed by what they regarded as the moral indifference on the campus at Berkeley. In standing out against tuition for university students, he lost the support of those in the Legislature who felt that middle-class parents in California could pay more than they were, and he envenomed his relations with the Regents and the Legislature by seeming to react too sharply to the tuition issue with a sudden freeze on all university admissions.

Besides all this there are natural conflicts in the state educational system here which hurt him. The fast-growing and conservative south of the state has always resented the intellectual superiority, the liberalism and the larger endowments of the Berkeley campus. The chancellors of the nine state university campuses are under, but not always with, the president on critical questions of planning and finance. And the State College system has its own aspirations and resentments against the more prestigious State University leaders.

THE TARDY SUPPORT

The feeling against Governor Reagan and the Regents for their clumsiness, insensitivity, and even brutality in dismissing Kerr like an incompentent janitor is very strong here. Faculty and students, who were remarkedly silent when he really needed them, are now all rallying to his support, but it is too late. As usual, the articulate and activist extremes have prevailed over the moderate and indifferent middle.

Nevertheless, Clark Kerr did not lose his struggle at California; he only lost his job. This university could easily lose its freedom under a weak "consensus" president who didn't fight and merely stayed on. Kerr was neither. Like Frank Graham at the University of North Carolina, and many other university presidents, he may very well have dramatized and perpetuated the idea of a free university by fighting and losing.

No doubt California is going to have a faculty recruiting problem for a while, but even this will pass—for Clark Kerr helped build an institution and a tradition that will survive even his departure and Governor Reagan's bad manners.

Culver Cites Outstanding Educator and Leader: Dr. Arland Christ-Janer of Cornell College

EXTENSION OF REMARKS

OF

HON. JOHN C. CULVER

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. CULVER. Mr. Speaker, the State of Iowa has established a reputation over the years for excellence in education, both at the elementary and secondary level and in its colleges. It is a source of pride that none of the 66,000 college students need travel more than 50 miles to find one of the State's institutions of higher learning.

The Second District of Iowa has assumed a significant role in the development of higher education in the State, and one of its most progressive and dynamic schools is Cornell College in Mount Vernon.

The growth of Cornell has resulted from a combination of factors including a dedicated faculty, a vigorous and aggressive administrative organization, and interest and involved members of the community and the alumni body. It would be difficult to set aside any single individual as the primary force in this effort, but certainly the president of Cornell, Dr. Arland Christ-Janer, has had a very major role to play.

Dr. Christ-Janer has just recently been appointed to the presidency of Boston University, and will be leaving Cornell in the very near future. The Cedar Rapids Gazette recently printed an article about Dr. Christ-Janer and Cornell during his tenure, and I insert it at this point in the RECORD as an appropriate recognition of this outstanding educator, administrator, and community leader:

[From the Cedar Rapids (Iowa) Gazette, Jan. 15, 1967]

CHRIST-JANER REFLECTS ON EXCITING YEARS AT CORNELL

(By Phyllis Fleming)

Mr. VERNON.—The last six years have been exciting ones of growth for Cornell college.

Enrollment has risen from 792 to 996; five new buildings have been erected; older buildings have been renovated; 250 acres has been acquired for campus expansion; grants have totaled close to $2 million.

There has been academic excitment, too, in the form of curriculum revisions designed to place much of the burden of learning on the student and designed to show him how the liberal arts are interrelated.

Recounting the accomplishments, Dr. Arland F. Christ-Janer, president since 1961, said, "When you say it, it seems very simple, but we worked very hard."

Christ-Janer, who will be leaving Cornell in March to become president of Boston university (enrollment 23,000), was asked to reflect on the gains made by Cornell during his tenure.

MANY SHARE

Dr. Christ-Janer, 44, credits the forward movement to the fact that "a lot of people have wanted to share in Cornell's growth." He said, "An institution can't move forward unless all are responsive to the needs of the college."

He cited seven responsive "constituencies" that played a part in the growth—Cornell alumni, trustees, the local community, the church, the campus community, the students, and the administration.

From the alumni came financial and moral support. Dr. Christ-Janer, who spent a great deal of time meeting and talking with alumni in various parts of the country and seeing what they are doing, found that from Cornell they "had gotten a sense of mission."

He praised the active support Cornell gets from the trustees, the Cedar Rapids-Mt. Vernon community and the North Iowa conference of the Methodist church.

He said, "The conference has responded magnificently in helping Cornell to achieve what it wanted to become." That goal was to enhance Cornell's physical environment and to secure additional money for scholarships and faculty salaries. Statistics seem to show that Cornell is reaching this double goal.

He said the conference provided not only financial help but individual ministers often guided promising students to Cornell.

VITAL ENVIRONMENT

Dr. Christ-Janer said the Cornell faculty is "characterized by a commitment to the finest kind of educational experience. Nothing is perfect, but we've been working toward establishing a creative and vital academic environment."

He believes that the student body is characterized by "acceptance of responsibility for upholding their end of the educational mission of the college. There is all sorts of evidence of purposefulness of the student body.

"Under the curriculum revision an increasing burden of learning is placed on the student. There is little spoon feeding. It takes a student body that is committed."

In the last three years Cornell students have won two Rhodes awards, two Danforth awards and nine Woodrow Wilson fellowships.

The faculty had also begun work on the curriculum revision before Christ-Janer's arrival on campus and the program has been successfully carried out under him.

The program involves much independent study, seminars and student participation. Ideas from many fields are brought together to show their interrelation.

JUNIOR EXAM

An important part of the program is the junior examination. For this year's juniors, the examinations begin later this month. One student meets with three professors for an hour. They talk about why the student is here; about what has been going on in his intellectual life; about whether the curriculum is having the desired effect; about the student's sense of responsibility as a citizen. This is not an examination a student can "cram" for.

Successful money-raising has been a part of the growth at Cornell, too. The capital assets total has risen from $11,000,000 in 1960 to $20,000,000. A decade growth program, launched in 1963, with a $12,000,000 goal has already acquired some $6,000,000 in cash and pledges.

The college received a $1.4 million matching Ford Foundation grant in 1963, a $61,000 Carnegie grant in 1964 and a $375,000 Sloan grant in 1966 as well as many smaller grants during the last few years.

Asked to detail some high points from his tenure at Cornell, Christ-Janer smiled and said, "It's just been one long romance, it's hard to isolate instances."

He mentioned the "thrill of sitting in a chair at an oratorio performance or at a play." He said, "You can't pass out diplomas to kids without being excited about what they intend to do." He also mentioned the excitement of "gathering a creative and productive faculty".

CAMPUS PLANNING

Since he has had a great deal to do with campus planning even to the point of helping decide where bushes went or deciding that there should be no right angles in roads, he has gotten pleasure from walking across the campus. There is not "the rigidity of order as on a city campus."

He was happy to see the inclusion of the small pond behind the new student union, "It's a decoration," he said, designed "to provide a moment of experience as you go through the campus." In the winter students ice skate on the pond.

He acknowledges that his recollections are "pretty personal things".

Asked if his moves from Maryland's St. John's college (220 students) where he was an instructor and assistant to the president, to Cornell as president and now to much larger Boston university, were part of a personal plan, he said, no.

A Nebraska native, he said, "I know I wanted to be in higher education." Counseling was his first interest. This was later replaced by teaching and administration. Referring to Cornell, he said, "We'd unpacked," but "you have a job and you do the very best in it. Another opportunity comes along and you accept it."

He was quite firm in saying that he doesn't consider his move to Boston university as a promotion.

NEW EXPERIENCES

Referring to liberal arts college, he said, "In that class of college I've been in one of the best." Boston university will provide new experiences and new opportunities "you just can't gain in a small liberal arts college."

Christ-Janer believes that Boston university has many of the characteristics of a smaller institution because of the ways it is divided into 16 divisions.

"Institutions I have known and admired have maintained a sense of humanness," Dr. Christ-Janer said. He expects to find this at Boston. He acknowledges that "it is a very hard job to provide an individual student with a sense of identity" and expects this to be a special challenge in his new job.

He is expecting the job to provide "innumerable opportunities for educational adventures." Problems are expected but solving them will be part of the adventure. He said, "Life is problem solving, (it is) just the nature of what puts excitement into life. Problems are what makes the world advance."

Despite the difference in size of the two institutions, he feels that the fundamental mission of the two are similar—learning, discovery, education. Both seek to provide conditions that are the most conducive to educational experiences that will enable students and faculty to fulfill that mission. Admittedly the larger institution is able to provide more of the conditions.

At institutions of both sizes the president works through other people and provides an articulation of the sense of direction.

LIVING IN FUTURE

Dr. Christ-Janer believes that every institution, large or small, "needs someone who is living in the future and that is the president. If everyone is thinking of today, the institution can't have much vitality or sense of direction. Someone has to think of the goals of the institution."

The Christ-Janers will leave Cornell about March 1 for a vacation. Dr. Christ-Janer sees the upcoming vacation as a "kind of a beach-combing deal where we can read and loaf." He also wants to do some painting (in a modernistic style) and do some general reading about Boston university.

They will arrive at the university in early May where for several weeks he plans to "become acquainted with the environment in which the university exists." He plans to visit buildings, walk across the campus, look over alumni lists, meet people, drop into campus places for coffee. "Until you get the feeling of the tone and style and heritage of an institution it is difficult to make decisions."

He looks forward to getting acquainted "as a wonderful time. I'll never have the opportunity again." Dr. Christ-Janer followed the same practice when he arrived at Cornell six years ago.

Dr. Christ-Janer, who has just completed a year as president of the Iowa College Presidents' Assn., had a word of warning for Iowans.

He said, "Iowa is extremely fortunate in the number of excellent educational institutions in the state at the public and private level. Sometimes these are so easily taken for granted." He believes that it is going to be necessary increasingly for the citizens of Iowa to support these institutions "more generously" if they want them to continue as excellent institutions.

"The state has been living on the assumption that the private schools will always be available," he said, citing the large number of students being educated in the private schools. He noted competition from other states and said, "If the state starts to slide behind, other states are waiting to gobble up students and faculty."

Dr. Christ-Janer's appointment to his new job is effective July 1. Reflecting on leaving Cornell, he said, "If you've ever been at Cornell you leave a part of your heart here."

Connecticut Plans for Future Environmental Needs and Resource Use

EXTENSION OF REMARKS
OF
HON. WILLIAM L. ST. ONGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1967

Mr. ST. ONGE. Mr. Speaker, the January issue of Soil Conservation, an attractive and informative publication of the Soil Conservation Service, U.S. Department of Agriculture, has a very thought-provoking article on the programs being undertaken in my State of Connecticut in anticipation of greatly expanded conservation and recreation needs.

The authors, Richard B. Erickson, executive director of the Southeastern Connecticut Regional Planning Agency, and Robert E. Laramy, Jr., assistant State conservationist, point out that Connecticut is the fourth most densely populated State with an average of 500 persons per square mile, and that this figure is expected to double by the turn of the century. To deal with expanding land use problems, Connecticut has evolved a unique planning structure that permits conservation districts and the Soil Conservation Service to participate at regional, as well as local, levels.

Soil information, including the potential of various soils for different uses, is supplied by the Soil Conservation Service. Soil maps and interpretations provided by the SCS are used to determine the location and extent of the most favorable agricultural land, potential open space and recreational sites, future residential and industrial areas, and for identifying areas that would present problems of onsite sewerage disposal, flooding, hillside slippage, and in general to insure that this vital natural resource is properly protected and developed in the best interests of the community.

This approach seeks an intelligent and planned land use program that minimizes conflicts within communities or between different activities, and provides adequate facilities, such as highways, parks, water supply, and sewerage disposal systems. It also allows a community to prepare its own plans with an understanding of how it fits into the larger region.

The Connecticut program is reassuring in these times when there is evidence everywhere about us of scandalously poor land use practices, and of the irrevocable despoilation of what was beautiful countryside just a few years ago. Now is the time to plan and build for our present and future environmental needs while there is yet land to be saved from the scourge of misdirected developers, and while prices are still within the reach of local governments.

Mr. Speaker, I ask unanimous consent to insert this excellent article in the RECORD:

PLANS FOR MORE PEOPLE—TOWNS IN CONNECTICUT MAP FUTURE RESOURCE USE WITHIN FRAMEWORK OF REGIONAL GOALS

(By Richard B. Erickson and Robert E. Laramy, Jr., *Executive Director, Southeastern Connecticut Regional Planning Agency, Norwich, Conn., and Assistant State Conservationist, SCS, Storrs, Conn.*)

Can a State expecting a population of more than 1,000 persons for every square mile provide a high-quality living environment for its people?

Resource planners throughout Connecticut are facing this question today and devising new approaches to meet the problems it will pose.

Connecticut is the fourth most densely populated State in the Nation, with an average population density of more than 500 persons per square mile. By the end of the century, the population is expected to double.

To prepare for the problems ahead, Connecticut has evolved a unique planning structure that provides conservation districts and the Soil Conservation Service opportunity to participate at regional as well as local levels.

Statewide planning is coordinated through the Connecticut Interregional Planning Program—a joint effort of the Connecticut Development Commission and the Departments of Agriculture and Natural Resources, Highways, and Finance.

Regional planning is not imposed by the State Government but is initiated by the communities in 15 planning regions defined by the Connecticut Development Commission after careful study of physical, social, and economic factors. There is no county government in Connecticut.

Since 1958, when the first regional planning agency was created, the citizens in 10 regions have voted to form agencies. These now serve 90 percent of the State's population. Each agency is managed by representatives appointed or elected by its member municipalities. Being midway between the local and State levels, the regional agencies are well placed to serve as coordinators of the overall program.

At the local level, municipal and town planning and conservation commissions define local needs and plan natural resource development. The SCS works through soil and water conservation districts to help integrate soil and water conservation into the planning process.

Information provided by SCS on resources helps to answer the question: "How can our limited amounts of land and water best be used to serve the needs of an expanding population?"

Information about the soils and their potentials for different uses was supplied by the SCS through soil conservation districts. Soil maps and interpretations were used to determine the location and extent of prime agricultural land, potential open space and recreation sites, future residential and industrial areas, and for identifying areas that would present problems in onsite sewage disposal, flooding, hillside slippage, and the like. These data are used in analyzing present land use problems and projecting potential land use to meet future population needs.

Through text and maps, the regional plan indicates the type of environment the people are striving for and points to ways of achieving the desired objectives. Basically, the plan seeks a sound pattern of land use that minimizes conflicts within communities or between different activities and that provides adequate facilities, such as highways, parks, water supply, and sewage disposal systems.

Within this broad framework, a community can prepare its own plan with understanding of how it fits into the larger region.

Specific projects, whether concerned with urban development or natural resources, can be more closely focused on the area's needs.

For instance, current planning for a watershed-protection project on the flood-prone Yantic River is being closely related to land use and resource proposals of the southeastern regional plan.

On a broader scale, regional planning has led to an application for a Resource Conservation and Development Project for the State's three eastern planning regions, about 900,000 acres.

Activities in North Stonington, 1 of the 17 communities in the Southeastern Region, illustrates the role of SCS and the districts.

Within the framework of the regional plan, the North Stonington Town Planning Commission is preparing its own comprehensive plan for urban growth and natural resource development, with the help of a private consultant financed by a Federal urban planning assistance grant. SCS provides soils information and other technical assistance through the New London County Soil and Water Conservation District.

Based on five main soil and landscape patterns, the town area was divided into units meaningful in land use and natural resource planning. The delineations are shown on a transparent overlay for use with various planning maps.

A system of stream belts, totaling about 6,500 acres, was delineated on the basis of the water-courses, adjacent wet lands, soils subject to overflow, adjoining areas with severe limitations for urban uses, areas of high open space potential, water-resource development sites, and areas with pollution hazard if developed for urban use. Sixteen water-impoundment sites of regional concern were identified.

About 16 percent of North Stonington consists of very poorly drained soils and marshes. These wet lands present serious limitations for urban development but have many conservation and open space values. As part of the resource planning, the location and acreage of the significant wet lands were shown and an evaluation made of their value and potential for wildlife habitat.

Plans for multiple use of the woodlands that make up three-fourths of the area are considered in North Stonington's plan. Other conservation needs considered include farmland conservation, watershed protection, a system of hiking and riding trails, historic and scenic sites, and public recreation sites. The town conservation commission has embarked on a program to promote conservation among landowners who control most of the area.

Beginning with a nucleus of 10 cooperators in 1965, the conservation district increased the number of its cooperators to 75 by the fall of 1966. Both farm and nonfarm properties are involved, and the conservation plans cover cropland, grassland, woodland, wildlife, and recreational land uses.

In Connecticut, broad plans for the State, the regions, and the towns provide the framework for integrated resource development and use. However, the individual property is still considered the basic unit on which conservation must be done.

Address by the Honorable Wright Patman, of Texas, at Conference on "the Tight Money Crisis"

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mrs. SULLIVAN. Mr. Speaker, on this anniversary of the birth of Franklin Delano Roosevelt, I think it is appropriate to call to the attention of the House a hard-hitting address in the Roosevelt tradition made last Friday by a colleague who came to Congress 4 years before F.D.R. was inaugurated, and who fought before, during and after the Roosevelt years—and is still fighting—for the freedom of the American people from the economic bondage of oppressive interest rates. I am referring, of course, to the Honorable WRIGHT PATMAN, of the First District of Texas, chairman of the Committee on Banking and Currency, who believes that sound money is the kind of which the average family and the small businessman can afford to borrow and utilize economically, and which the Government can also borrow at reasonable rates.

Congressman PATMAN spoke at the final session—a luncheon meeting—of the 2-day conference on "The Tight Money Crisis" sponsored by the Consumers Information Committee on Resources and Energy, which represents millions of Americans who are members of consumer cooperatives, farm organizations, labor unions, and other consumers of credit for personal or business use. It was my pleasure and privilege to attend the luncheon and to hear the gentleman from Texas discuss, out of a unique and limitless storehouse of knowledge about our monetary system, the origins and dimensions and consequences of "tight money" and some of the solutions he believes will be most effective.

PROPOSAL FOR FEDERAL USURY STATUTE

A subject he raised of particular interest to me, and, I am sure, to other consumer-minded Members of Congress, was a provocative suggestion for a Federal usury statute which would set a limit on the rate of interest which could be charged on consumer loans or other credit transactions. As chairman of the Subcommittee on Consumers Affairs of the Committee on Banking and Currency, which has jurisdiction over consumer credit legislation, I will certainly be happy, as Mr. PATMAN indicated in his talk, to give consideration to the pros and cons of this idea when we hold hearings on consumer credit issues in this Congress.

There were many things in Mr. PATMAN's speech on Friday which could be considered controversial, because Congressman PATMAN is, undoubtedly, a controversial person. He has many enemies—and they are very powerful forces and interests in this country which have stood in fear of him for the 38 years he has been serving in Congress. But in addition to powerful enemies, which resent his efforts in behalf of the public, he also has vast legions of admirers and supporters, as demonstrated by the enthusiastic reception he received Friday from an organizational group primarily representing the people.

SPONSORS REPRESENT LARGE CROSS-SECTION OF PUBLIC

The Consumers Information Committee on Resources and Energy is sponsored by the following national organizations: Amalgamated Clothing Workers of America; American Public Power Association; Communications Workers of America; Cooperative League of the U.S.A.; Industrial Union Department of the AFL-CIO; International Ladies' Garment Workers Union; International Union of Electrical, Radio, and Machine Workers; National Farmers Union; National Rural Electric Cooperative Association; Oil, Chemical, and Atomic Workers International Union; Textile Workers Union of America; United Automobile Workers of America, and the United Papermakers and Paperworkers.

Under unanimous consent, Mr. Speaker, I submit herewith as part of my remarks the address delivered at the conference at the Statler-Hilton Hotel by Congressman PATMAN, as follows:

THE TIGHT MONEY CRISIS

(Remarks of the Honorable WRIGHT PATMAN, chairman of the House Banking and Currency Committee)

I want to thank you for the opportunity to participate in this vital conference. Needless to say, I was delighted to learn that there was to be a conference in Washington entitled "Tight Money Crisis". I hope that this conference marks the end of a long drought in public concern about monetary policy.

For two days you have heard some very illustrious speakers and certainly some of the country's leading economists and monetary experts. You are to be congratulated on the tremendously fine program you have put together. If the thousands of words you have heard here are turned into meaningful action, this conference will go down as a major milestone in our progress towards sound monetary programs.

I have always been deeply appreciative of the support which your organizations have given me through the years in our fight against high interest rates. I well remember the great help which was provided by what was then "ECIC" in the late 1950's when we were fighting to hold the 4¼% interest rate on long-term Government bonds. We won that fight against great odds and the organizations and the leaders that made up ECIC had a great deal to do with this success.

As I remember, you people had a conference in 1959 during the height of this monetary crisis. This conference helped to pull together the maximum effort to hold the 4¼% rate. You did a great job.

Now, today, we return to another conference in a time of another monetary crisis. This illustrates a sad situation in which our economy is faced with a constant series of crises caused by special-interest monetary policy. We have these recurring crises because of a Federal Reserve Board which ignores national policy and which concerns itself only with the care and the feeding of the big banking community. As a result, the economy dangles like a dimestore yo-yo which is pulled up and down to accommodate the banking interests.

So long as this situation exists, we will be faced with crisis after crisis. And you will be called back, year after year, to discuss something akin to the "Tight Money Crisis." Yes, we were here in 1959 with a monetary crisis. And we are back here in 1967 with another moneary crisis.

We need to find some solutions and some keys to action between these crises and between these conferences. It is not enough to wait until we have a crisis to call a conference and to mobilize our forces. Monetary policy—and all of its ramifications—cannot be regarded as a part-time job. It cannot be successfully dealt with through an occasional conference. It cannot be handled through high-sounding resolutions, or even the most eloquent rhetoric.

Many of you people in this audience are sophisticated in legislative work. You know what it takes to push major legislation through the Congress. You know that it takes a hard-nosed, day-to-day, effort with strong support from the grass roots of your organizations. Words alone will not do the job.

Many of you come from the rural electric cooperatives. You are represented here by one of Washington's most capable organizations—the Natural Rural Electric Cooperative Association. I am sure that Clyde Ellis and your other legislative leaders can tell you that REA would have been out of business long ago if their lobbying efforts had been on a part-time basis. The same is true for programs of the American Public Power Association, the National Farmers Union, the Cooperative League, the AFL–CIO and other labor organizations. All of you know that you have to be on the job just about seven days a week to keep your place in our economy.

Yet, somehow the battle for sound monetary policy and low interest rates has been relegated to a part-time position. There really has not been a concrete full-fledged, full-time action program from the consumer side of this issue since I have been in Congress.

The special interests, unfortunately, have regarded monetary policy as a full-time problem and the success of their position is all too evident. The American Bankers Association is on the job full time and it has been perching on the doorsteps of the Congress for just about 100 years. This lobby works hand-in-glove, day-to-day, with the Federal Reserve Board; and between them they have compiled a fantastically high percentage of legislative successes. Too many times, these successes have been won by default. They have not had consistent, determined opposition from your side of the fence.

The ABA—let me assure you—is watching this conference carefully. They are watching to see if the conference ends in a simple adjournment this afternoon—or whether this is a forerunner of a full time consumer effort.

Make no mistake about it, they are worried about your group. The ABA knows that you have a great weapon that they cannot match—and that is people. They are hoping—and so far their hopes have been fulfilled—that the people will never be unleashed in this battle.

But I am just optimistic enough to believe that we will see the day when the people who are represented by NRECA, by APPA, the National Farmers Union, the Co-Op League, and the AFL–CIO, will be brought into the front lines of this battle. Let me assure you that the Congress of the United States cannot resist the determined efforts of the millions of people your organizations represent. But, they must know beyond any doubt that the people in your organizations—that is, the grass roots—are solidly behind the fight for lower interest rates.

If you really want to do something about this problem, bring in the people from the local unions, from the rural electric systems, from the farmers' union chapters, from the municipal systems, from your cooperative organizations. They don't have to be sophisticated in every little detail of monetary policy. Just let them express their basic views—which I know they hold—that the people from the grass roots of this nation want lower and lower interest rates.

I don't plan to dwell on this problem. You know what has to be done in a fight like this. If you undertake it on a full-time basis, you are probably picking up the biggest fight of your legislative lives. Your enemy—the banking community—is loaded with cash and is quite willing to make use of the rawest kind of political pressure. So there are no easy solutions. No quick answers. No part-time remedies.

I would welcome a full time effort from the consumer side of this question. But that is not a decision for me. It is a decision for you. You must determine just how fully you are committed to bringing sound monetary policy and low interest rates to this country and to your members.

I am sure there are many in this audience who feel that they have their own particular legislative problems. Some undoubtedly feel that a full time effort on monetary policy is asking too much. But looking down the list of sponsoring organizations, I do not see a one that is not directly affected by high interest rates.

The pressure is on the rural electric cooperatives when interest rates, paid by the United States Government, skyrocket to around 6%. It makes it difficult to hold 2% money, or to institute any supplemental financing program at a reasonable interest rate. Six per cent money would drive most rural electric cooperatives out of business. And that is exactly where your systems are heading if the current high interest rates continue. High interest rates, more than anything else, will bury your hopes of getting a supplemental financing bill through the Congress.

The Farmers Union has done a brilliant job of protecting the family farmer and it is largely responsible for the success of many farm programs. But it is meaningless to raise the income of the family farmer only to have the increase turned over to the bankers in the form of higher interest rates. The members of the Farmers Union—and farmers everywhere—depend heavily on credit and as a result they are the early victims of every money squeeze.

Likewise the municipal systems which make up the bulk of the membership of the American Public Power Association have a direct stake. Much of the expansion needs of municipal power systems are met through the sale of bonds and, therefore, the conditions of the money markets bear heavily on your operations. Eventually, high money costs must be translated into the form of higher electric power rates. In too many cases, high interest rates will actually stop the sale of municipal bonds, and thereby slow the expansion and the improvement of local power systems.

I am sure that the labor representatives in this audience do not have to be reminded that high interest rates pick the pockets of their workers. A wage increase, which is wiped out by high interest charges to the worker, is an empty package. And, in 1966, there is little question that the increased interest charges for automobile loans, home loans, installment purchases, far outstripped any gains which labor may have made at the bargaining table.

In short, high interest rates are a full-time burden on the little people of this country—the people your type of organizations represent. For the homeowners, the small businessman, the farmer, the factory worker, the average consumer, the paying of interest is a constant and burdensome fact of life.

The Federal Reserve Board's December 6, 1965, interest rate increase unleashed new forces against this segment of our population. As a result, today, there are efforts throughout the nation to ratchet in high interest rates—usurious interest rates.

Right here in sight of the Capitol—there are major attempts being made to eliminate state usury laws. Both Virginia and Maryland legislatures are being bombarded with demands that the 6% usury laws be wiped out and that the consumer be left without even the most minimal protection. These usury laws are limited already and apply primarily to big loans like real estate. Nonetheless, these blatant efforts to destroy usury limits—weak though they may be—are strong indications of the public-be-damned attitude that has multiplied since the December 6, 1965, interest rate increase.

The truth is the country really has no effective usury laws. There is no national statute limiting interest rates and the state laws are shot through with loopholes. State usury limits range up to as high as an effective annual interest rate of 48%. In fact, a so-caled uniform small loan law, which has made the rounds and has been adopted in many states, recommends a 36% limit.

To me, such laws do not limit usury; they simply legalize it.

The only meaningful usury limits imposed by the states are on large transactions, such as real estate. And even here, the usury laws are winked at through under-the-table discounts, points, and other devices.

In view of the states' failure to provide any meaningful limit on interest rates, I strongly feel that the Congress should consider its responsibility in this area. I would look with favor on some type of Federal statute that would provide a fair and reasonable limit on interest rates, including those imposed on small loans.

The consumer—and particularly the poor—are completely without protection on small loans. These are the people who often have to borrow $200 or $300 to keep their families together, to meet medical expenses, and to buy some of the basic necessities of life. Yet, these are the people who are left out in the cold by the so-called state usury laws and who have been ignored by the Congress.

In his State of the Union message, the President once again endorsed the concept of "truth-in-lending". As a result, there is renewed talk on Capitol Hill for this type of legislation in the 90th Congress. I think such public disclosures of the effective annual interest charges would be beneficial.

However, such a disclosure law, by itself, would have little meaning for the people who need protection the most. The poor, unfortunately, are regarded as bad credit risks, and they have little opportunity to shop around for credit. They have little chance to gain credit at the magnificent department stores; they are at the mercy of the facilities of the ghetto. So, for this group, disclosure by itself can be empty. I would hope that any such disclosure law would contain specific provisions limiting the amount of interest that could be charged on any loan or purchase.

The Distinguished Congresswoman from Missouri, Mrs. Leonor K. Sullivan, is one of the leading experts on this legislation and has already introduced a "truth-in-lending" bill. As Chairman of the Consumer Affairs Subcommittee, she will be conducting hearings on the legislation during this session of Congress.

The problems concerned with truth-in-lending are, of course, only symptoms and not the root cause of the monetary disease which afflicts the country. Behind the loan sharks and behind the sharp-practice finance company is the so-called "respectable" banking community. It is this banking community that feeds the loan sharks through direct loans, lines of credit, and by the purchase of all types of debt paper.

In turn, it is this banking community that walks in lock-step with the Federal Reserve Board. It is this banking community that sits inside the councils of the Federal Reserve System which, presumably, is an agency supervising the banks. It is a neat system that goes all the way from the fly-by-night loan shark to the Federal Reserve on Constitution Avenue in Washington, D.C.

Until we have the courage and the determination to reform this system, we will continue to have high interest rates at all levels of the economy. We will continue to have an uncertain economy, moving at the whim of the financial community and not at the will of the people.

Many of you here have worked hard to enact major parts of the Great Society. You should be proud of your accomplishments. However, it is regrettable that so many of the Great Society programs have been curtailed, or almost vetoed, by high interest rates and the restrictive policies of the Federal Reserve Board. The Congress has appropriated billions to build schools. The Federal Reserve has raised interest rates and has prevented hundreds of schools districts from selling bond issues to finance new construction.

The Congress has appropriated billions to help build housing, in both rural and urban areas. The Federal Reserve has raised interest rates and, thereby, has wiped out 500,000 housing units in a single year.

The Congress has appropriated billions of dollars to fight poverty throughout our country. The Federal Reserve has raised interest rates and has taken more cash from the pockets of the poor. The Federal Reserve has created poverty while the Federal Government has declared war against poverty.

The list goes on and on. The people have moved in one direction and the Federal Reserve in another.

In the next fiscal year beginning July 1, the American taxpayers will shell out $14.2 billion in interest on the national debt. This sum is second only to the total defense budget. About $2 billion of this interest charge can be traced directly to the December, 1965 action of the Federal Reserve Board.

In fiscal years 1967 and 1968, interest charges in the Federal Budget will have gone up $2.1 billion. At the same time, the increase for Great Society programs will be only $1.9 billion. So, galloping interest rates are far outstripping our domestic programs. Interest rates are getting the priority.

To this audience I do not have to talk about what these billions spent for unnecessary interest charges would have done for the country if channeled into worthwhile, meaningful, and needed programs. It is a shame—a national shame—that we have allowed this money to be poured down the drain when so many needs have gone unmet.

Today we are in what might be called a "lull" in our monetary crisis. The Federal Reserve, with much fanfare, has attempted to indicate that it is loosening credit and seeking to nudge interest rates downward. We have seen much of this propaganda in recent weeks. But, this is only a lull. In many ways, it is simply a smokescreen behind which the Federal Reserve hopes to hide its grievous errors of December 6, 1965.

The errors of that infamous day have not been corrected and it is unlikely that they will be, so long as the Federal Reserve Board remains in the hands of its present policymakers. For those who trumpet so loudly about the minor changes in the money markets in recent days, I suggest a look at the interest rates being charged in November, 1965. Look at these rates and you will see how far we have to go to return to normalcy.

This is one of the tragic problems of these periodic high interest binges of the Federal Reserve. They jack rates up so high that even a microscopic nudge downward is greeted with great relief. In these high interest storms, we develop new floors and new benchmarks from which to measure what are high and what are low interest rates.

This constant ratchet-like effect on interest rates is disastrous to the long range hopes of this nation. The country cannot meet its goals if high interest rates become a permanent element in our economy. Full employment would be no more than an empty slogan if this should come to pass. The building of necessary public facilities and the rebuilding of our poverty-stricken areas would have to be forgotten if the United States joins the league of the high interest nations.

So, my friends, do not be deluded by any momentary lull in our monetary crises. This crisis remains with us and remains a constant danger so long as you—the people—are shut out from the consideration of policy-making in this area.

To accomplish a lasting solution will require that the Federal Reserve System be reformed from the ground up and returned to the control of the people and their elected representatives. The Federal Reserve must be required to join the American democracy.

Whenever this subject is brought up the apologists for the Federal Reserve come up with the old cliche that "monetary policy must be kept out of politics". This is a high-sounding slogan which translated means: "Let's leave the monetary policy to the banking community." This group does not trust the people. But strangely enough, they do trust the bankers.

Such a theory of policymaking by the economic elite has great appeal in totalitarian states. But it has no place in a democracy.

It is strange that these same people do not suggest that farm policy or labor policy or other governmental policy be relegated to some secret, unelected committee. No, for some strange reason, only monetary policy is accorded this special niche in the American system.

Every other segment of the government is subject to review and ultimate control by the people and their elected representatives. The special treatment accorded the Federal Reserve System sticks out like a sore thumb.

There is not a single member of the present Federal Reserve Board who can even remotely be described as a representative of the American consumer. There is not a single member of that Board that can be said to recognize, even slightly, the problems and the needs of the organizations gathered in this room today. As far as monetary policy is concerned the co-ops, the working man, and the farmer are the forgotten people.

You should demand—yes, demand—that you have representation on the Federal Reserve Board. You should demand that you have a voice in a monetary policy that affects you every single day. It is absurd that this policy is left only to the bankers.

As part of its special treatment, the Federal Reserve Board does not come to the United States Congress for appropriations. Instead, it has $42 billion worth of government bonds in the New York Federal Reserve Bank on which it draws $1.7 billion in interest every year. It finances its far-flung operations out of this slush fund. And among other things, it pays $90,000 in dues to various lobbying organizations—including the American Bankers Association.

The Federal Reserve System, along with its sister banking agencies—the Federal Deposit Insurance Corporation, and the Comptroller of the Currency—totally escape review by the appropriations committees of the Congress. They are the only agencies accorded this unusual favor.

To keep the use of its money secret, the Federal Reserve, through the efforts of the American Bankers Association, avoids audits. Its books are not audited by the General Accounting Office as are other agencies of the government.

Even more startling, are the tremendously long terms to which members of the Federal Reserve Board are appointed. These terms are for 14 years and they are staggered in such a manner as to prevent a President from appointing a majority of the Board until his very last year in office. As a result, the Board is never under effective direction of any President or of any Congress. It is therefore, far removed from any control or direction by the people of this country. No one in this country, except a handful of elite within the banking community, really knows what goes on in the Federal Reserve System on a day-to-day basis. The Federal Reserve's Open Market Committee—which sets the basic monetary policy—meets in total secrecy in Washington, D.C. This Open Market Committee—which is anything but open—is composed of the seven members of the Federal Reserve Board and five of the twelve presidents of the Federal Reserve Banks. In practice, the other seven Federal Reserve presidents participate in the meeting; therefore, we have a tight little group of 19 men setting monetary policy for a nation of 195 million people.

These meetings are super-secret—as tightly-guarded as any session of the National Security Council. No member of Congress and not even the President of the United States can gain access to these meetings. Only the banking community is allowed inside. The minutes of these meetings are locked up and are not released until six years later—long after the statute of limitations has run on any possible illegal acts.

How can anyone reconcile this type of secrecy with a democratic system?

These practices must be corrected if we are not to return to crisis after crisis on interest rates. I have introduced legislation—H.R. 11—which I believe would provide some of the basic reforms. This bill would reduce the terms of the members of the Board from 14 to 5 years and would make the term of the chairman co-terminous with that of the President of the United States.

The bill would require that the Federal Reserve System come to Congress for appropriations and that its books be audited.

H.R. 11 would also require that the policies of the Federal Reserve be fully coordinated with the programs and the policies of the other Federal agencies. This would require the Federal Reserve Board to comply with the Full Employment Act of 1946.

In December, 1965, the Federal Reserve, of course, ignored the Full Employment Act and failed to coordinate with even a single agency of the Federal Government. It was open and blatant defiance of the President, the Congress, and the people of the United States. The Board carried out this defiant act under what can only be described as its "seized independence." This "independence" has not been granted by law, but the Federal Reserve nonetheless operates as if it were a separate, autonomous branch of government.

Such a situation, in my opinion, has serious implications for our entire country. The Federal Reserve, in its powerful position, is actually able to negate the will of the people. In 1964, the country elected President Johnson by an overwhelming margin and, in effect, gave the Congress a mandate to go ahead with new programs.

Needless to say, the banking community and the big business corporations did not agree with the people's mandate. But this group still had one out—the Federal Reserve System. This system was not touched by the huge majorities recorded for the Democratic Party.

Since that 1964 election, the Federal Reserve has carried out monetary policy in such a manner as to block and diminish as many programs as possible. They have, through high interest rates and tight money, accomplished much of what Senator Goldwater promised in his campaign.

Today, President Johnson is faced with a serious problem regarding the Federal Reserve. It is becoming more and more difficult for the President of the United States to carry out programs in the face of the Federal Reserves' open defiance. This fact is heightened by the heavy financial requirements of the Vietnamese War.

In his State of the Union message, President Johnson called attention to the Federal Reserve's high interest policies. He pleaded for lower interest rates and pledged that he would do everything to accomplish this aim. But he is faced with this autocratic Federal Reserve Board that will not give in without a price.

Currently, the Federal Reserve is demanding a tax increase before it does anything meaningful about interest rates. The Board is holding a gun at the head of the President saying: "Raise taxes or else," Yes, the Federal Reserve wants taxes raised to hide the mistakes it has made since December 6, 1965. It wants a face-saving device.

We in the Congress should not give in to this kind of political blackmail by the Federal Reserve. I do not intend to vote for a tax increase just to please the Federal Reserve System.

Instead, the Congress should face up to its responsibility and do something about reforming the entire Federal Reserve. What we need is an immediate rollback of interest rates to at least the levels prevailing before December 6, 1965.

Again, I hope you jump into this battle with all of your people behind you. Now is the time to put an end to all monetary crises.

Thank you.

Robin Hood in the White House?

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 18, 1967

Mr. ROBISON. Mr. Speaker, as most of us have previously noted, there were few surprises in this year's state of the Union message—at least for those of us who had predicted that the President would ask for some kind of an income tax increase—but, certainly, Mr. Johnson's suggestion for a whopping 20-percent increase in retirement payments under social security would have to fall in that category of "surprise."

Fortunately, 1967 is not a congressional election year so maybe—just maybe—this Congress will be able to resist the evident political appeal inherent in the President's generous proposal; though I wonder. I believe that an increase commensurate with the recent increases in the consumer price index is indicated as badly needed by those retired citizens who must depend upon their social security benefits for the greater part of their subsistence, and I shall most certainly support any reasonable proposal along these lines.

However, before going beyond this sort of an adjustment of benefits it is devoutly to be hoped that the members of the Ways and Means Committee will seriously look at the other side of the President's proposal—which is, of course, the inevitable question of just how his suggestion is to be paid for. The cost has to come from somewhere, and I think we must carefully balance the obvious needs of the retired citizen against the equally important needs of those younger persons who will be called upon to shoulder that cost.

As I understand the President's proposal, here, if it is adopted, about an extra $2 billion in benefits would be paid to retirees during 1967, and an additional $4.5 billion would be handed out in 1968. Of these amounts only about $1 billion would be offset by existing social security taxes but, then, if Congress is to be able to avoid the fateful day when it will have to dip into General Treasury funds to finance social security payouts, there will have to be substantial increases—further increases—in social security taxes which, for obvious reasons, the President is suggesting be deferred until after the 1968 elections.

This is the Presidential tax-increase timetable, as I understand it: The current 3.9 percent tax rate for individual workers would be increased to 4.5 percent on January 1, 1969, and then on to 5 percent by 1973. Incidentally, the rate is already scheduled to rise to a maximum of 4.85 percent, by virtue of our earlier determinations. But, in addition to these rate increases, Mr. Johnson suggests lifting the earnings ceiling on wages subject to tax from the current $6,600, yearly, to $7,800 in 1968, and on to $9,000 in 1971, and finally to $10,800 in 1974. This means, for many of our citizens—or perhaps I should say many more of them, for some are already in this category—that they will be paying substantially more in social security taxes than they do in income taxes, which is something that ought to be of concern to all of us as we consider which type of tax is the fairest in application considering one's supposed ability to pay.

We ought also to consider just where social security, itself, is heading—as the winds of economic and political change blow strongly upon it as an integral and accepted part of our social structure. Specifically, we need to give further consideration to its impact upon the younger worker, just entering the labor market for the first time. It was recently brought to my attention that the tax foundation has figured out that a 21-year-old person starting work today at "maximum covered earnings" of $6,600 a year or more, who retires at age 65, unmarried, can expect the value of his social security pension benefits to total about $12,792 less—note this—less than the value of his taxpayments plus compound interest.

Over 44 years of working, he will have paid in social security taxes totaling—at present rates—$32,496, including interest compounded at 3½ percent, but the value of his expected benefits will amount to only $19,704, based on the estimated 13 years he will live after reaching age 65. Not such a bargain, is it?

Mr. Speaker, it is time we did some thinking about all this—if for no other reason than that our constituents, who often are well ahead of us, have already begun to do so, as witness this well-phrased letter from a constituent of mine living in Big Flats, N.Y., whose name I have deleted as I do not have his permission to use his letter in this fashion, but whose thoughts I now wish to share with my colleagues under permission granted me on January 18:

BIG FLATS, N.Y.,
January 25, 1967.

HON. HOWARD ROBISON,
House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE ROBISON: If a typical American is one who has never written his elected representatives, I guess I qualify. I vote, pay taxes and gripe but never let anyone that might be able to do something about it know my feelings. When I begin to let thoughts of leaving the United States for good flit through my conscious mind, it must be time to write my congressman.

My problem at the present moment is Social Security. One who can throw stones at this sacrosanct institution must also be against motherhood, the Boy Scouts and Abe Lincoln too, but I really am not.

The recent message of the President on increasing Social Security payments really makes one wonder if we have finally reached the point of no return to self-reliance, self-respect and all the good-old American traits. Do we have a Robin Hood in the White House who feels that we all ought to be earning the same amount? How much longer can we go in increasing Social Security taxes?—upon which we have to pay income taxes, too?

To put a proper perspective on my lament, I am 41 years old, a wage earner with 24 years to go before I can become eligible. However, my mother is presently drawing Social Security payments so I am in close touch with the day to day realities of retirement on a limited income.

From this level of your constituency, it would appear that a concerted effort in Washington to maintain the value of the dollars presently being received by the elderly would be more in order than a rise in payments and taxes.

Sincerely yours,

—— ——.

The Fast Deployment Logistic Ship Program

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1967

Mr. BENNETT. Mr. Speaker, the Department of the Navy, the Department of the Army, and the Department of Defense are now presenting to Congress requests for the construction of a new type of ship to be built for rapid availability of war materiel wherever needed in the time frame of need.

Long ago, President Washington, stated:

> The path to peace is through the preparation for war.

As times change, the needs of our country in being prepared, also change.

For many years, our country has relied upon American-flag merchant marine vessels and the vessels of friendly countries to provide the necessary transportation of war materiel and personnel to places where wars must be fought or where strength must be shown to prevent war. We have found in the Vietnam war that these sources of shipping are not adequate for modern times. Our own maritime industry has shown a reluctance to make the ships available because of the world shipping losses which would occur to them and to our Nation. Our allies have not furnished the ships which we need.

Although our immediate needs have been met, the handwriting of warning is on the wall; and something must be done to prepare for a future that will give us overseas, prompt availability of the needed tools of war.

Two things have already been done. In the first place, we have already shipped and stored across the seas, in various localities, large quantities of military materiel to be available in general localities for ultimate shipping to specific spots where the need may arise.

Second, we have, in the last few years, greatly increased our combat airlift capacity. It is not, however, economically feasible to move by air the tremendous quantities of materiel needed in any large operation; for the cost of this procedure would be prohibitive; much greater than what the proposed new type of ship program would cost.

Therefore, there remains a need for speedy placement of the needed weapons in quantity, without the long leadtimes of advanced notice which would be required if merchant ships were to be used.

The Department of Defense has come up with the idea of the fast deployment logistic ship, a vessel specifically designed to carry all that would be needed in he way of weapons and to have these loaded ships placed around the world in a quickly movable manner. Of course, even with such vessels there would still be, in any great war, a need for calling upon the merchant marine for a reserve capacity.

It is planned to have perhaps 30 such FDL ships. The cost of the construction of each is estimated to be about $30 million apiece for construction. The cost of maintaining each of them through their life span, including the cost of the crews, maintenance men and communications personnel, would run another $30 or $40 million. Thus the cost of the program is about $70 million a ship times 30 ships or $2.1 billion.

A giant step forward occurred this week when the President in his annual budget message to Congress asked for five of these ships, to begin the program. When this group of five ships is added to the two experimental ships previously authorized and funded, the total package asked for is seven ships now, with 23 yet to come. And the request includes contract cancellation costs if all are not later approved.

The personnel aboard each ship would consist of Army personnel who would maintain the equipment; Navy personnel who would man the communications activities; and finally, civilian maritime personnel who would operate the ship itself.

Next week the contract definition stage will be completed by the three bidders on the FDLS project, Lockheed Corp., Litton Systems, and General Dynamics. These three companies have received during the last 6 months a total of $16 million to present their proposals. The total package contract for the ships will be awarded in June 1967, providing Congress approves.

Capt. Lloyd Sheldon, president of the International Organization of Masters, Mates & Pilots, said in an interview in the New York Times last Sunday that the program should not be approved and that—

> Both the unions and private business will be knocked out of the military end of the shipping business if this program is approved.

Some others in organized labor have taken a similar view.

But when all of the facts and data are presented in the coming hearings before the House Armed Services Committee, organized labor may find that this program will be in no way detrimental to them, but actually of assistance. The reason for this is that, as I have already indicated, there will be certain permanently employed civilian martime personnel in this program which would be added to the job opportunities for those now employed in maritime activities. The number of such new jobs would be somewhere between 1,000 and 2,000. When this becomes clear, I would think that the maritime unions would support the program.

There is some opposition from parts of the maritime industry and that opposition can probably be best summarized by the statement of Congressman LEGGETT in his letter to the President dated January 9, in which he said:

> Far better it would be to build a fleet with a function, i.e., a true modern fast merchant fleet that would be available on priority call to the Department of Defense.

The weakness of this position is that no merchant fleet which is engaged in active maritime voyages can be readily available in the time frame that is needed and contemplated for these FDL ships, even if all of the difficulties of obtaining the ships for the military can be overcome in time of war.

Currently, the United States ranks only sixth among the world's active fleets—behind the United Kingdom, Liberia, Japan, Russia, and Norway.

At the present time, owners of the merchant fleet argue that they do not wish to furnish ships which have been financed with Federal assistance because to do so interferes with theirs, and the U.S. world trade.

So, what Congressman LEGGETT argues for is not likely to be a real solution to the problem confronting our country. Moreover, the presence of these FDL ships will, to an extent, allow the maritime industry to have a more solid and permanent base for their investments and operations on a continuous basis, regardless of whether war occurs or not.

There will, in all probability, be something written into the legislation which will protect the maritime industry against competition from these ships. The 30 FDL ships would, in any event, be but about 2 percent of the number of ships in the total U.S. merchant marine.

The decline of merchant marine shipbuilding in the United States has been well publicized. Russia is outbuilding us by a ratio of 12 to 1 on numbers of ships and 8 to 1 by tonnage.

In addition, Soviet shipyards are operating at near capacity; about half of the capacity of this country is today idle. Some shipbuilders feel that the increasing Russian fleet will be her principal economic weapon against the West; the Soviets having the power to control ocean freight rates.

What they overlook is that these ships in key positions throughout the world can position materiel where needed at a cheaper cost in time and money than having to airlift thousands of tons of equipment by air in time of crisis. The merchant fleet could not be depended on to have the capability, to be loaded and assembled in the positions needed to deliver, a division-worth of Army equipment with complete unit integrity in less than a few months.

America suffers a serious disadvantage in shipbuilding: We now rank 14th among the 15 chief shipbuilding nations in the world.

Some shipbuilders now have positive thoughts on this project because they feel the new assembly line type production of ships, similar to the well-known Arendal yard in Sweden, which has developed a standardization in design will help mold modern yards. Some individual shipyards may be hurt by the new concept; but, overall good will be felt by the industry.

There have been questions of the need for a new shipyard to build these ships. The program could be undertaken in several shipyards now in existence, but the cost would be much, much higher and at a reduced level of standardization. There is no single shipyard presently capable of delivering all of these ships at the requisite rate.

Greater economies in shipbuilding from this program will result in overall benefits to the merchant marine as well as to the Navy. The FDLS program will represent only 6 percent of the total U.S. shipbuilding effort on an annual basis for the next 6 years. It is difficult to see how this could create a monopoly.

What of the small shipbuilder? There will continue to be many ship programs involving relatively small numbers of ships and others involving larger numbers of small ships.

In view of the realities of the present situation in shipbuilding in the United States, there are now a goodly number of shipbuilding companies who are giving approval to the FDLS program. This is not to say that all are in agreement but the trend is in the direction of approval.

I did not approach this program and its implications with any prejudgment; and I sought out the facts in a quest only for what is best for our country. After this study it appears clear to me that the program is needed and that the benefits from it will be experienced not only in the added defense strength of our country, but in the upgrading of our shipbuilding and maritime industries, which greatly need any assistance they can get.

Cutback of Highway Funds

EXTENSION OF REMARKS

OF

HON. G. ELLIOTT HAGAN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 19, 1967

Mr. HAGAN. Mr. Speaker, I wish to reiterate a statement which I made on December 19, 1966, concerning the cutback of $700 million in Federal highway construction funds during the curent fiscal year. I remain just as strongly opposed to this action as I did on that date.

The following is an article that appeared December 19, 1966, in the Savannah Evening Press, Savannah, Ga.:

CUTBACK OF FUNDS RAPPED BY HAGAN

U.S. Rep. Elliott Hagan said today he has filed a strong protest with the White House over the cutback in Federal highway construction funds.

"The curtailment of federal funds for roads, difficult to understand under any circumstances, is made even more unpalatable in view of the numerous Great Society programs that could be trimmed with little anguish throughout the nation," Hagan declared.

The federal government recently ordered a $700 million cutback in highway construction funds during the current fiscal year. The reduction severely crippled the Georgia road building program.

In the Savannah area, an extension of Abercron to U.S. 17 and I–95 and the completion of the Westside Bypass were immediate victims.

"I am deeply concerned over the federal cutback in highway construction money—severely limiting road construction in the First District—and have already contacted the proper Washington officials strongly protesting the action," Hagan said.

Hagan's office has received protest letters from throughout the First Congressional District. The cutback particularly curtails construction on primary, secondary and urban road projects.

A move is expected to be launched in Congress when the new session opens in January to restore the highway money. The funds were appropriated specifically for highway purposes by the last Congress.

The federal government said the cutback was necessary because of the growing expense in connection with the waging of the war in Vietnam.

Dr. Marie L. Fetsch Receives a Citation and Award From His Holiness, Pope Paul VI

EXTENSION OF REMARKS

OF

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 26, 1967

Mr. WOLFF. Mr. Speaker, it gives me personal pleasure to call the attention of my colleagues to the ceremony held at the Sands Point Day School Academy, on Wednesday, October 26, 1966, when my distinguished constituent, Dr. Marie L. Fetsch, was honored by Pope Paul VI, in recognition of her contributions to education, with special emphasis on education for gifted children. This took place in the presence of high ranking officials of the church. Dr. Fetsch is the founder-director of the nonprofit school for gifted children.

Dr. Fine, headmaster, former education editor of the New York Times, presided.

Father Dwyer, Manor Haven Catholic Church, Manor Haven, Port Washington, Long Island, N.Y., delivered the invocation. Thereafter he spoke briefly and extended his congratulations to Dr. Fetsch in being recognized by Pope Paul VI.

Sister Esther Regis, chairman of the Department of Education, Molloy College for Women, Rockville Center, Long Island, N. Y., then translated a message received from the Education Secretary to the Pope, Paul VI, from Italian to English, as follows:

> I am grateful for the opportunity of joining my voice to so many others that are with you to express the admiration, praise, and inaugural wishes: admiration for your generous devotion, with which you aim to the best future of humanity, for the accomplishments already obtained; hope for the future and better developments in your work, and the happiest attainment of its purposes.
>
> It is right and dutiful to celebrate this occasion because it witnesses the good work, to overcome difficulties, and the courageous initiative, promoted in the delicate field of education; it also proves the effort accomplished for the improvement of the systems, the qualification of teachers, and the formation of the students.
>
> Desirous of assuring society a finer future, you have with maternal care, tended to the young plans of the new generations, guiding their growth towards the true and the good. In the years in which external reality begins to take shape for them, while the notions of good and evil replace the sensations of sweet and bitter, of beautiful and ugly, of pleasant and dangerous, you have tried to impress in their souls the real vision of things and the right conduct of actions. Not unaware that to educate well is above all to prevent—and this is true, too, in its meaning "to succeed before others," namely, before error and fault, and that to prevent is certainly easire than to intervene, to correct and remedy, you have known in an atmosphere of liberty and of expansive serenity how to work in the mysterious labyrinth of the child; have taught others to trust not only the validity of the modern equipments and methods, but also in the great potentialities of the child, even if he is little gifted. Not indulging to a gratuitous optimism, you have invited the modern man not to consider the little gifted with a systematic pessimism. And, not denying his limits, you have defended his dignity and capacity to surpass himself. You have lead the absent minded to reconsider that "a child is worth more than the whole world!". Thus, while it is a stop to the predominant pessimism, your work is a proof of the vitality of initiatives and methods that encourage and rejoice the sociologists.
>
> This inauguration then, does not only wish to look back, for a secret desire to count and measure the already achieved, and to boast of it; it wishes to be a stimulus to complete what remains to be done because, in the renewed atmosphere that carries with it an unforeseen number of new and difficult problems for which evaluation and solution it requires a generous task, it demands excitement and leaven for the lift of tomorrow; it measures its step with the world's life, in which the children walk, looking towards its activities in perennial transformation.
>
> So much the worthier, then, of admiration and praise is your initiative, because its program aims not only at a generic education of the child, but intends to form him wholly to become part as a normal citizen of his society, to which he will give his collaboration for a better progress; for the economic, pedagogic, and cultural advantages that the Nation itself may get.
>
> Allow me, once again, a consideration, perhaps a little personal: our world, although feeling far from God, feels deeply the need of Him, and is moved as soon as he comes to know Him, as soon as he meets Him in the reality of life. The world needs a living evidence and becomes good whenever such an evidence is realized.
>
> Your work, Mrs. Fetsch, is a living reality, that witnesses God, and invites the world to meet Him.
>
> Renewing my most fervid wishes for the fruitful increment of your beneficial work, I salute you, Dr. Fetsch, colleagues, friends and students.

ACCEPTANCE SPEECH OF DR. MARIE L. FETSCH

> I am deeply moved by having this high honor conferred on me by that distinguished representative of the Judiciary of the State of New York, that distinguished former Chief Judge of the Court of Appeals of New York, to Dr. Fine, Sister Esther Regis, the Rt. Rev. Dr. Benjamin C. Eckard, my distinguished colleagues, Father Dwyer and Sister Mary Theresa Brentano, Dr. Ewald, and all other personalities who have participated in this ceremony, particularly the high ranking officials ofthechurch. I shall continue to dedicate my life to culture and humanity, in improving the education of Gifted Children in the United States and throughout the world.
>
> I humbly accept this high honor in behalf of my colleagues, the teachers and students of the Sands Point County Day School.
>
> I shall always regard this single honor as a constant reminder of the debt each of us owes to other human beings and endeavor to honor that obligation all the days of my life. Thank you very much.

National Gallery of Art Calendar for February 1967

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a real pleasure to call to the attention of my colleagues in Congress, and to the American people, the excellent and rewarding National Gallery of Art calendar for February 1967:

THE NATIONAL GALLERY OF ART CALENDAR OF EVENTS, FEBRUARY 1967

> Three lost masters: Paintings by Rembrandt, Ter Borch, and Tischbein, stolen from Germany's Weimar Museum in 1922, continue on view in Lobby D through the month. They were discovered in Dayton, Ohio, and seized by the United States Government as alien property in 1947. A special Act of Congress will return them to Germany next month.
>
> Special loan: Sixty-six French paintings from the private collection of Mr. and Mrs. Paul Mellon are exhibited in Galleries 69 through 72.
>
> Continuing exhibition: *Master Prints from the Collection of the National Gallery of Art*. Central Gallery. Through March 1.
>
> New reproductions: *Color Postcards:* Joos van Cleve, *Margaretha Boghe, Wife of Joris W. Vezeler;* Modigliani, *Gypsy Woman with Baby; National Gallery of Art, View of the Rotunda; The Andrew Mellon Memorial Fountain.* 5¢ each. Mail orders under $1.00, add 25¢ handling charge.
>
> Radio picture of the week: *"A History of Western Painting"* is the subject of the third Radio Picture of the Week series broadcast over Station WGMS during the intermissions of the Sunday evening concerts. Twenty National Gallery paintings, ranging from the era of Duccio to that of Picasso, will be discussed in chronological sequence from February 5 through June 18. The talks will be rebroadcast on Wednesdays at some time between 2 and 4 p.m. over WGMS–FM. By ordering color reproductions, suitable for framing, listeners can follow the course at home. The reproductions, on 11" x 14" heavy paper, come with printed résumés of the broadcasts in a portfolio cover.
>
> To subscribe send your name and address to Radio Picture of the Week, National Gallery of Art, Washington, D. C. 20565. Orders are taken only for the complete set of twenty. $5.50 postpaid; checks payable to N.G.A. Publications Fund.
>
> The Gallery is open on weekdays from 10 a.m. to 5 p.m. and on Sundays from 2 p.m. to 10 p.m. Admission is free to the Gallery and to all programs scheduled. The cafeteria is open on weekdays from 11 a.m. to 4 p.m. and on Sundays from 4 p.m. to 7 p.m.

MONDAY, JANUARY 30, THROUGH SUNDAY, FEBRUARY 5

Painting of the week:[1] Rembrandt, *Self-Portrait* (Widener Collection), gallery 45 Tuesday through Saturday, 12:00 and 2:00; Sunday, 3:30 and 6:00.

Tour of the week: *Techniques of the Decorative Arts.* Central lobby, Tuesday through Saturday, 1:00; Sunday 2:30.

Tour: *Introduction to the Collection.* Rotunda, Monday through Saturday, 11:00 and 3:00; Sunday, 5:00.

Sunday lecture: *Art and the Flood in Florence. Guest Speaker:* Frederick Hartt, Professor of Fine Arts, University of Pennsylvania, Philadelphia, Lecture Hall, 4:00.

Sunday concert: Rita Shane, *Soprano;* Lawrence Smith, *Pianist.* East Garden Court, 8:00.

MONDAY, FEBRUARY 6, THROUGH SUNDAY, FEBRUARY 12

Painting of the week:[1] Corot. *Ville d'Avray* (Gift of Count Cecil Pecci-Blunt), Gallery 77, Tuesday through Saturday, 12:00 and 2:00; Sunday, 3:30 and 6:00.

Tour of the week: *Techniques of Print Making.* Central Lobby, Tuesday through Saturday, 1:00; Sunday, 2:30.

Tour: *Introduction to the Collection.* Rotunda, Monday through Saturday, 11:00 and 3:00; Sunday, 5:00.

Sunday lecture: *Psychology and Art. Guest speaker:* Michael F. Andrews, Professor of Art and Education, Syracuse University, Syracuse, Lecture Hall, 4:00.

Sunday concert: Roman Rudnytsky, *Pianist.* East Garden Court, 8:00.

Inquiries concerning the Gallery's educational services should be addressed to the Educational Office, 737–4215, extension 272.

All concerts, with Radio Picture of the Week intermission talks, are broadcast by Station WGMS–AM (570) and FM (103.5).

MONDAY, FEBRUARY 13, THROUGH SUNDAY, FEBRUARY 19

Painting of the week:[1] Holbein the Younger. *Edward VI as a Child* (Andrew Mellon Collection), Gallery 40, Tuesday through Saturday, 12:00 and 2:00; Sunday, 3:30 and 6:00.

Tour of the week: *Early Techniques of Painting.* Rotunda, Tuesday through Saturday, 1:00; Sunday, 2:30.

Tour: *Introduction to the Collection.* Rotunda, Monday through Saturday, 11:00 and 3:00; Sunday, 5:00.

Sunday lecture: *Art and the Irrational in Works by Bosch and Goya. Guest Speaker:* James L. Foy, M.D., Professor of Psychiatry, Georgetown University School of Medicine, Washington, D.C.; Lecture Hall, 4:00.

Sunday concert: Flore Wend, *Soprano.* Reynaldo Reyes, *Pianist.* East Garden Court, 8:00.

MONDAY, FEBRUARY 20, THROUGH SUNDAY, FEBRUARY 26

Painting of the week:[1] François Clouet. *"Diane de Poitiers"* (Samuel H. Kress Collection), Gallery 41, Tuesday, and Thursday through Saturday, 12:00 and 2:00; Sunday 3:30 and 6:00.

Protest Resolutions

SPEECH

OF

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. MINISH. Mr. Speaker, it was my privilege to be the guest speaker at the Ukrainian Independence Day program held Sunday, January 22, in the Irvington, N.J., High School to mark the 49th anniversary of the proclamation of independence by the Ukrainian National Republic. The memorable program was conducted by Dr. W. Huk, chairman, Ukrainian Congress Committee of America, Inc., branch, for Newark, Irvington, and vicinity.

Over 1,200 persons were in attendance to affirm their dedication to the cause of Ukrainian independence. Believing, as members of this great democracy, in the concept of individual freedom and liberty, Americans of all races join their good fellow citizens of Ukrainian descent in mourning the tragic fate of the captive peoples and in hoping for the restoration of sovereign independence that the brave Ukrainians so gloriously proclaimed 49 years ago.

I am honored to submit to the Congress the following protest resolutions adopted on this significant occasion by the Ukrainian Congress Committee, branch for Newark, Irvington, and vicinity.

The resolution follows:

PROTEST RESOLUTIONS OF UKRAINIAN CONGRESS COMMITTEE OF AMERICA, BRANCH FOR NEWARK, N.J. AND VICINITY

We, Americans of Ukrainian descent, of City of Newark and its vicinity, County of Essex, State of New Jersey, appeal to our President and his Secretary of State and to our legislative bodies, the Senate and the House of Representatives of the United States, to raise their voices in defense of the recent ruthlessly persecuted Ukrainian culture by the Communist Government of the Union of Soviet Socialist Republics in the so-called Ukrainian SSR, which is only the administrative region of the centrally ruled Soviet State. There an iron-clad assault on the culture and intellectual life of the Ukrainian people is presently going on with an intensified furor of the Russian chauvinism using the means of suppression of the Ukrainian language in the schools and press and by means of arrests, imprisonments, sentencing and deportation of the Ukrainian writers, poets, and scholars, whose only guilt was writing and speaking Ukrainian and defending the Ukrainian culture against the mass harrassment by the official Soviet Russification policy.

We ask our government to speak up in defense of the rights of the Ukrainians to develop their own culture in their home land by direct talks with the Soviet leaders and through the channels of the United Nations in the name of justice and humanity.

On this day of 22nd of January 1967, the Forty-Ninth Anniversary of the proclamation of the national independence of Ukraine and establishment of the Ukrainian National Democratic Republic in Kyiv, and the Forty-Eighth Anniversary of the unification of all Ukrainian lands and provinces into one national state, we take the liberty to remind our government and all its branches that the Ukrainian political sovereignty was then ruthlessly crushed by the Soviet government by means of military invasion and the incorporation of Ukraine by force into the USSR, giving it the Russian-marinette status of the so-called Ukrainian Soviet Socialist Republic, where the Russians have ruled since and the Ukrainians being there the second ranked subjects of the Bolshevik regime.

On this commemorable anniversary, we take the liberty to remind our government that since that compulsory incorporation of the Ukraine our brethern and sisters there, have been continually exposed to persecution both physical and spiritual. The Soviet regime had but one end in mind and it was extermination of the Ukrainians as a separate nationality.

Genocide was practiced by the Soviets in Ukraine on a large scale. Mass arrests, mass imprisonments, mass deportations to distant parts of the USSR and mass executions, man-made famine in 1932-33 and ruthless suppression of Ukrainian language, folklore, writing, poetry and scholarship were the chief devices of the Soviet-Russian unceasing drive to "solve" the Ukrainian question, of which the present intensified Russification policy in the Ukrainian SSR is only a link in the long chain of Russian policy toward the non-Russian nationalities in the USSR in general.

We call to the attention of our government that the Russians did not hesitate to suppress also the religious life of the Ukrainian people which has been a factor in their intellectual and spiritual development as a separate nationality. Hundreds upon thousands of the faithful of the Ukrainian Orthodox and the Ukrainian Catholic Churches perished under the atheistic drive of the Soviet rulers, along with several bishops and thousands of clergy of both denominations.

We Americans of Ukrainian descent assert, that during the Second World War and thereafter the Ukrainian Insurgent Army fought for years against the Soviets to testify the will of the Ukrainian people to live a free and independent national life in the tradition of the 22nd of January 1918.

We recall the words of the great American, Abraham Lincoln, that no house divided against itself can long endure—half free and half slave. In the world of ours tyranny, persecution and colonialism must be abolished in order to save mankind from a catastrophe. Hence, we appeal to our government to speak up in defense of all those enslaved by the Soviet Russian colonialism.

DR. W. HUK,
Chairman.
VOLODYMYR HUERTYMAC,
Secretary.

EXTENSION OF REMARKS

OF

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. COLLIER. Mr. Speaker, on November 29, 1966, the General Assembly of the United Nations organization defeated a resolution which was designed to expel Nationalist China from the organization and seat Communist China in its place. The vote was 57 to 46, with 17 abstentions and one absence.

It is worth noting that the 46 nations that voted to seat Red China have, almost without exception, received assistance under the various foreign aid programs sponsored by the United States. A total of $37,592,100,000 has gone to these coun-

tries; this does not include aid that cannot be differentiated by country.

Under leave to extend my remarks, I include the breakdown by nations for the period July 1, 1945, to June 30, 1965:

	Million
Afghanistan	$307.1
Albania	20.4
Algeria	161.9
Burma	111.0
Burundi	7.4
Cambodia	343.1
Ceylon	90.9
Congo (ex-French)	2.4
Cuba	52.1
Czechoslovakia	193.0
Denmark	923.1
Ethiopia	246.5
Finland	135.4
France	9,401.6
Ghana	165.5
Guinea	70.2
Hungary	31.5
India	[1]5,882.4
Indonesia	368.2
Iraq	99.0
Kenya	35.7
Mali	15.8
Mauritania	2.8
Nepal	[1]86.1
Nigeria	160.7
Norway	1,254.4
Pakistan	[1]2,937.3
Poland	548.2
Senegal	19.2
Somalia	47.4
Sudan	89.8
Sweden	109.0
Syria	83.0
Tanzania	44.0
Uganda	17.3
U.S.S.R.	186.4
United Arab Republic	1,080.9
United Kingdom	8,958.8
Yemen	39.1
Yugoslavia	2,733.3
Zambia	30.2
Total	37,592.1

[1] Military aid classified.

Byelorussia and the Ukraine, both of which voted to seat Communist China, are included with U.S.S.R., Bulgaria, Mongolia, and Rumania, received no aid from the United States.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer shall arrange the contents of the daily RECORD as follows: the Senate proceedings shall alternate with the House proceedings in order of placement in consecutive issues insofar as such an arrangement is feasible, and the Appendix and Daily Digest shall follow: *Provided,* That the makeup of the RECORD shall proceed without regard to alternation whenever the Public Printer deems it necessary in order to meet production and delivery schedules.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10(a). *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the sine die adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

10(b). *Makeup of the Appendix.*—The Appendix to the CONGRESSIONAL RECORD shall be made up by successively taking first an extension from the copy submitted by the Official Reporters of one House and then an extension from the copy of the other House, so that Senate and House extensions appear alternately as far as possible throughout the Appendix. The sequence for each House shall follow as closely as possible the order or arrangement in which the copy comes from the Official Reporters of the respective Houses.

The Official Reporters of each House shall designate and distinctly mark the lead item among their extensions. When both Houses are in session and submit extensions, the lead item shall be changed from one House to the other in alternate issues, with the indicated lead item of the other House appearing in second place. When only one House is in session, the lead item shall be an extension submitted by a Member of the House in session.

This rule shall not apply to extensions withheld because of volume or equipment limitations, which shall be printed immediately following the lead items as indicated by the Official Reporters in the next issue of the CONGRESSIONAL RECORD, nor to RECORDS printed after the sine die adjournment of the Congress.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of theHouse or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Robert E. Lee

EXTENSION OF REMARKS

OF

Hon. G. V. (SONNY) MONTGOMERY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MONTGOMERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following commemoration of the birthday of Robert E. Lee on January 19, 1967, with excerpts from Dr. Frank Rose, president of the University of Alabama, and Mr. Benjamin H. Hill:

ADDRESS OF DR. FRANK ROSE, KAPPA ALPHA-TRANSYLVANIA, PRESIDENT OF THE UNIVERSITY OF ALABAMA, AT THE KAPPA ALPHA CONVENTION IN MEMPHIS

Robert E. Lee was born the son of one of America's most distinguished Revolutionary heroes, "Light-Horse Harry" Lee, a gentleman of impeccable manners and flashing conversation, often mentioned as Washington's successor and as a member of the Continental Congress was the one who eulogized George Washington as "First in war, first in peace, and first in the hearts of his countrymen." His first wife had died early and he had married the lovely Ann Hill Carter, age twenty, and the daughter of one of the richest men in Virginia. This lovely lady was to become the mother of our spiritual founder, Robert E. Lee.

Henry Lee did not have the capacity to retire to the quiet and prosperous life, and soon after his marriage to Ann Hill Carter, he became involved in highly speculative land deals that lost all of the family resources and brought embarrassment to many of his old friends, among them Washington, Monroe and Jefferson. In the summer of 1813, he left his young wife and young son to take a chosen exile in the Barbados, never to see his family again.

Young Robert gave his every attention to his mother and the Episcopal Church and grew into a fine young man. By the end of 1823, he had completed the course at Alexander Academy and enrolled at West Point. He was an outstanding cadet, without demerits and with outstanding marks in all subjects taken. His service in peacetime was excellent and on September 1, 1852, he returned to West Point to become the ninth superintendent of the United States Military Academy. He rebuilt the Academy and inaugurated new courses and instituted new disciplines. In 1855, Lee was ordered to Texas, and it was six years later that he had to declare his faith to the Union or to Virginia. On April 18, 1861, Colonel Robert E. Lee was summoned to Washington and offered the Command of the Northern Army which he declined with a fervent appeal that all differences between North and South be settled without troops. General Scott asked for his immediate resignation, and a few days later, Lee reluctantly assumed command of the Northern Virginia troops.

The War took its heavy toll of Lee's men and his vitality, and following his surrender, he was offered many opportunities to reclaim fortune, but chose instead to become president of Washington College. He was so respected by both faculty and students that they would pause outside his home in the morning in the hope of speaking to him or to see him on his way to his office. Life was not to be kind in the aftermath, as extremists on both sides were to attack him until his death. He accepted his punishment with courage and won many strong friends and the praise of outstanding men on both sides. The New York Herald, in an editorial, submitted Robert E. Lee's name as the Democratic nominee for presidency of the United States on July 1, 1868.

What was it our founders saw in Robert E. Lee? One cannot read the volumes that have been written on his life without being greatly moved.

He was a man of great discipline. This is seen in his life even at an early age—in his care for the wishes of his parents, his attendance and attention to his Episcopal Church, his excellent mastery of subjects taken in school and at West Point, his devotion to duty as a soldier in the Mexican War and later as Superintendent of the Academy. He fought successfully for four years, outnumbered four to one, and with few of the instruments of war. He accepted defeat in honor, and refused great financial fortune to return to his native Virginia to begin rebuilding the lives of those who would become the leaders of tomorrow. His sorrows, he would not allow to become rancor; his defeat, not bitterness; his losses, not helplessness. For Robert E. Lee and his native South there were no Marshall Plans or Reconstruction Finance Corporation. There was no Point Four Program.

He returned home to teach his boys the manhood out of which reason prevails and intelligence conquers. With courage and wisdom and perseverance, he started rebuilding. The South was the frontier and he led the way. This is what our founders saw in Robert E. Lee and this is why they gave us our heritage.

He was a man of great character. Embarrassed by the conduct of his father in early life, poor in the midst of relatives that were rich, left with the care of a mother ill in health, and tempted by the frivolous ridicule of those his own age, he set his mind on higher goals and achieved most of them. He did not want to be a party to those who would destroy the Union, neither would he be made a party to those who would destroy the South. But he would defend his State of Virginia. He surrendered his slaves before the War. Grant did not free his until after the War. Our founders saw justice, goodness and Godliness in Robert E. Lee, and this is our heritage.

Further comments were made by Benjamin H. Hill commemorating the birthday of Robert E. Lee:

"He was a foe without hate; a friend without treachery; a soldier without cruelty; and a victim without murmuring. He was a public officer without vices, a private citizen without wrong, a neighbor without reproach, a Christian without hypocrisy, and a man without guilt. He was a Caesar without his ambition, Frederick without his tyranny, Napoleon without his selfishness, and Washington without his reward."

A Tribute to Gentry Dugat, Scholar and Writer, of Bee County, Tex.

EXTENSION OF REMARKS

OF

HON. RALPH YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 31, 1967

Mr. YARBOROUGH. Mr. President, there have recently come to my attention an editorial and biographical sketches, published in the Beeville Bee-Picayune, of Bee County, Tex., on the death of an able writer, Gentry Dugat.

Gentry Dugat was born on a ranch, and after growing up there, going through school and law school, obtaining a law license, and becoming an assistant county attorney in Hidalgo County, he began to serve as a reporter on the McAllen Monitor; then on the Donna newspaper, in Hidalgo County; the Lufkin Daily News in Angelina County, as city editor; and then as a reporter for the Dallas Morning News.

Later he was the managing editor of the Edinburg Review, then the city editor of the Corpus Christi Caller, and then an editor of the Cotton Ginners Journal, in Dallas. Thereafter, he was Dallas County purchasing agent, but he moved back to Bee County, his native county, to become a reporter for the Bee-Picayune, a position he held until his death in 1966.

With his varied experiences in many parts of Texas, Gentry Dugat was more than a reporter, more than a writer. He was a student and a scholar. He studied the development of writing from the cuneiform writing of the Mesopotamian era, through parchment, and through our present printing. He assembled a valuable collection illustrating the development of writing in different languages by the human race. This collection he donated to the Southwest Texas State College at San Marcos, Tex., the alma mater of President Lyndon B. Johnson, where it is displayed in the Dugat Room.

While in his early twenties, he wrote and published "A Life of Henry W. Grady."

Gentry Dugat was my friend. He supported me in my political and governmental activities and was wise in counsel, energetic in action, diligent in his advocacy. I miss him; the State of Texas misses him.

Mr. President, when one soul of such attainments passes from our midst, it is fitting that note be taken of his accomplishments and that they be preserved in a permanent record.

I ask unanimous consent that there be printed in the Appendix of the RECORD a feature article from page 1 of the Bee-Picayune, of Beeville, Tex., of Thursday, February 10, 1966. It is entitled "Gentry Dugat, Oil Editor of Bee-Picayune, Succumbs to Heart Attack Saturday," and was written by Camp Ezell, editor of the Bee-Picayune.

Also, I ask unanimous consent to have printed in the Appendix of the Record an editorial from page 2, section C of the Bee-Picayune for February 10, 1966, entitled "Many Hearts Are Saddened Throughout the Country," a tribute to Gentry Dugat; and also in an article from pages C1 and C6 of the Bee-Picayune entitled "Gone, Not Forgotten," all being sketches of, or tributes to, the late Gentry Dugat, scholar, writer, advocate, and friend.

There being no objection, the items were ordered to be printed in the Record, as follows:

Gentry Dugat, Oil Editor of Bee-Picayune, Succumbs to Heart Attack Saturday

(By Camp Ezell)

Gentry Dugat, 70, oil editor, feature writer, and reporter for the Bee-Picayune the last 18 years, died at his home Saturday, February 5, at 11:30 p.m., apparently as the result of a heart attack.

Mr. Dugtat had suffered several heart attacks and three light strokes during the last several years, and although he passed away unexpectedly, he knew and his friends knew that his life on earth was nearing the end.

Funeral services were held Monday at 4 p.m. in First Methodist Church at Beeville. The officiating ministers were the Rev. Charles Dunn, pastor of First Christian Church at Pettus; the Rev. J. E. Mack of San Antonio, a former pastor of the Methodist Church at Pettus, and the Rev. Leo Ross of Edcouch, also a former Pettus Methodist Church pastor.

With Miss Pam Chandler at the Organ, Mrs. George Brown sang Abide With Me and Where We'll Never Grow Old.

Pettus Masonic Lodge No. 1508 had charge of graveside rites. Camp Ezell, a past-master of Beeville Masonic Lodge, delivered the oration. Interment was in the Dugat family plot of the Mineral Cemetery. Galloway-Wilson had charge of arrangements.

The pallbearers at the church were Ronald Dodillet, Gil Champagne, Bob Bates, Fred C. Latcham, Jr., Bernard McWhorter, and Cameron Devereaux, Masonic pallbearers at the cemetery were C. G. Barnard, John Pogue, W. K. Bateman, D. Passoit, J. B. Vanhooser, George Anderson, James Beauchamp, and Doyle Parker.

Named as honorary pallbearers were Camp Ezell, Dr. Scott McNeill, Sr., Norris Rider, Grady Harrison, Irvin McWhorter, Judge Gus Mattingly, and Davis Delony, all of Beeville, and John Shaw, Kenneth Leggett, Rev. J. C. Horton, Joe Wroten, Fern Harris, and J. V. Witt, all of Pettus.

Gentry Dugat was born on a ranch near Mineral on April 25, 1895, a son of Charles Alexander Dugat and Martha Elizabeth (Page) Dugat, pioneer settlers of Bee County.

He attended A. C. Jones High School three years, but graduated from Mineral High School. He attended a preparatory school in Austin, then entered Cumberland University Law School in Tennessee, where he graduated with a law degree. He obtained a license to practice law in Texas and established an office in McAllen, where he served as assistant county attorney.

The McAllen Monitor editor was short of help one day and asked Mr. Dugat to report an important meeting for the newspaper. The editor liked the story so well that he offered Mr. Dugat a position on the reportorial staff. Mr. Dugat was so well pleased with the life of a journalist that he abandoned the practice of law.

Later Mr. Dugat worked for the Donna newspaper, then went to the Lufkin Daily News as city editor. After serving two years in that capacity, he was offered a position as reporter for the Dallas News, and he changed jobs for the experience that it would give him. He was called by the publishers of the Edinburg Review and asked to assume the duties of managing editor, and he converted the weekly newspaper into a daily publication. Later he served as city editor of the Corpus Christi Caller, and still later he was editor of the Cotton Ginners Journal in Dallas.

Mr. Dugat served as Dallas County purchasing agent, which took him out of the journalism field for a few years. However, in 1948 he felt both the call of newspaper work and the anticipated thrill of living at the ranch home where he was born near Mineral. He moved back to Bee County and became oil editor and reporter for the Bee-Picayune, a position he held until his death.

He was married to Miss Lena Ross on November 16, 1948, in Fort Worth, and Mr. and Mrs. Dugat made the move to the ranch between Pettus and Mineral shortly after their marriage. They lived on the ranch until a few years ago, when they moved to Pettus, because of Mr. Dugat's impaired health.

Mr. Dugat served with the United States Army in World War I, although he did not serve overseas. He was a lifelong member of the Methodist Church, was chaplain of Pettus Masonic Lodge at the time of his death, and was a 32nd Degree Scottish Rite Mason and a member of Alzafar Shrine in San Antonio. He was a member of the Pettus Rotary Club.

During the Bee County Centennial celebration in 1958, Mr. Dugat took the lead in organizing the Bee County Historical Commission, and served as its president for several years, retiring of his own volition. He was still a member of the organization at the time he passed away.

He is survived by his wife, Lena, of Pettus; a daughter, Mrs. J. E. Bullen of Corpus Christi; two granddaughters, Barbara Bullen of Corpus Christi and Diane Dugat of Dawsonville, La., and two grandsons, Johnny Bullen and Arthur Bullen of Corpus Christi. Seven nieces and one nephew also survive.

This writer first met Gentry Dugat at the opening of school in Beeville in September, 1910. Gentry, a lad of 15 years, came to this city to start his high school work. (There were only 11 grades at that time.)

All of the students were amazed at the unusual flow of beautiful English that came from the mouth of this youth from the village of Mineral. We called him the "walking dictionary." He did not employ rare or obsolete words that the students could not understand, but rather he always seemed to have at his command an easy ripple of choice and fitting words that completely expressed the thoughts that were in his mind.

Gentry's vocabulary was an inspiration to me and to all of the students, and he encouraged all of us to improve our English.

The teacher—Prof. J. A. Risenhoover—placed Gentry and this writer at a double desk, and we remained deskmates until the end of the first semester, when I passed into the ninth grade.

Gentry showed me an advertisement in the Beeville Picayune which stated that they wanted a boy to learn the newspaper trade. I took the job, and that began my newspaper career. Gentry also started Morris Frank, sports editor for the Houston Chronicle, as a reporter, and Mr. Frank wrote a feature story in the Chronicle giving him credit for steering him into journalism.

Gentry Dugat was generous, and was always ready and willing to share with others. He had a clean mind, and when he told a story, it was one that any man, woman or child could hear and appreciate.

Although he slowed down the last few years of his life, Gentry had been a prolific writer, as well as an eloquent speaker.

Throughout his life, Gentry had many hobbies. During the last decade he centered his attention on the study of Mexican archeology and the collecting of artifacts in Mexico. He made several trips to Mexico City and brought back many interesting items. He gave one collection of antiquities to the Southwest Texas State College, and the figures were effectively displayed in a place called the Dugat Room.

Mr. Dugat, was a collector of books, and his library at his home was something unusual to visit. He had many rare and valuable volumes.

As a young man, Gentry became an ardent admirer of Henry W. Grady, the brilliant writer and speaker who made the Atlanta Constitution famous. Gentry made an exhaustive study of Grady's life and wrote and published a book, The Life of Henry W. Grady, when he was in his early '20s. When he and Mrs. Dugat visited Atlanta a few years ago, they visited a daughter of the famous newspaper man, and a close friendship was generated between the three.

Gentry was unusually kind to children and polite to women. He had a tender heart for elderly people, and, for that matter, for anyone who was depressed or ill.

Gentry and I did not always agree, especially on politics, but we did not let this divergence of opinion affect our friendship of more than half a century.

Gentry Dugat was one of a kind. There was no one else like him. He was an individual. He was Gentry Dugat!

Gone, Not Forgotten

Pettus, February 7.—The Death Angel took from our midst Saturday night about 11 o'clock the friend of all mankind, Gentry Dugat. For quite sometime Gentry had been suffering from heart attacks, and perhaps other ailments, but he never gave up. When he needed medical attention it was a severe trial for him to have to obey orders. He wanted to be up and doing, and he usually did just that. But when stricken Saturday evening, that was the last and final call.

Gentry was born near the Mineral community almost 71 years ago. He was a son of the late Mr. and Mrs. C. A. Dugat, and the last of a family of 12 children. It was truly wonderful to see the devotion that he felt for the members of his family. He would drive miles to see any member of his family who might be sick or needed his advice or help. He was free with his money. Whenever a call of any kind was made, it was almost a certain fact that Gentry would respond without hesitation.

People of all ages were his friends—regardless of race, creed or color. Seldom a Sunday went by that he was not in his pew at church. He loved to sing, especially the old songs that were so dear to his heart, and now his rich bass voice has been added to the heavenly choir. How he will be missed.

Gentry enjoyed newspaper work, and the greater part of his life was given to it. At the time of his passing he was oil and agriculture editor for the Bee-Picayune. He was also interested in ranching and stock raising.

The old Dugat home was a part of his holdings, and when he was away in other cities working, he would come regularly each summer for a community get-together at the old home place. What fun he would have! Friends and relatives from far and near would come with covered dishes which they spread at noontime out under the trees, and there everyone would feast. Sometimes he would have some contests with attractive prizes, and then when "dinner" was over pictures would be taken and singing would be enjoyed. Such gatherings were his delight and were continued until he returned to make his home here permanently.

He was especially interested in archaeology, and the June 25, 1965, San Antonio Express carried a nice write-up about him and his chosen hobby written by Arthur Moczygemba. The last paragraph was a statement made by Gentry which certainly applies to his very own life. It was concerning some of his collection that he was explaining to Mr. Moczygemba when he said, "Although these people are gone, they left their mark on the face of the earth that is practically indestructible."

Survivors include his wife, Mrs. Lena Dugat, a daughter, Mrs. Margaret Elizabeth Bullen, Corpus Christi, four grandchildren seven nieces, one nephew and a host of other relatives.

Services were held in the First Methodist Church in Beeville, Monday, February 7, at 4 p.m. with the Rev. Charles Dunn, pastor of the Pettus Christian Church, conducting the service. He was assisted by the Rev. J. E. Mack of San Antonio and the Rev. Leo Ross of Edcouch. Burial was in the Mineral Cemetery in the family plot under the direction of Galloway-Wilson Funeral Home of Beeville. Masons had charge of the last rites.

The many friends of the deceased offer sincere sympathy to the bereaved.

Many Hearts Are Saddened Throughout the County

Nothing is permanent except change. And change has again come to the offices of the Bee-Picayune. We are, of course, referring to the passing from the scene of our oil and agriculture editor, Gentry Dugat, Saturday night.

Mr. Dugat was a gentleman of the old school, and as such practiced an unfailing courtesy toward ladies of all ages. He had the blessing of an inquiring mind and his consequent interest in many and varied fields kept him studying continuously. He particularly loved encyclopedias and almanacs and kept a generous supply of various editions where he could refer to them whenever necessary.

His interest in history was well known, and the Bee County Historical Commission will be among those who miss him most. He recently became an avid fan of trains and nothing was more fun for him than reading accounts of the old steam engine.

His love of children and young folks kept him young. No child ever entered the Bee-Picayune office unnoticed by him. A highlight of his day would be to guide a tour of the newspaper plant for groups of wide-eyed and somewhat awestricken youngsters from schools and various youth organizations from over the county.

Gentry was also noted for his unusually large vocabulary and his ability to use it either on his feet or on the written page. Once we took a story back to him, commenting that it could have been written in much more concise form and in simpler language, so that everyone could more easily understand it. He replied that if he encouraged even one person to consult a dictionary, he would consider it a major feat. He added that the good Lord gave us an eloquent native tongue and that we should always strive to excel in its usage.

Mr. Dugat should have been given the title, "Mr. Democrat of Bee County," for he dearly loved his political party and worked in its behalf whenever the opportunity occurred. He sometimes admitted a better candidate could have been the party choice, but he still said that if his own brother were running for office on another ticket, he wouldn't get his vote. Thus, through all types of political weather, he loyally voted the straight ticket.

Although born and reared in Bee County, Gentry had wandered to other cities in his early life, but when he began to feel the call of his native land again, he returned here 18 years ago and settled down for good.

He was a great believer in the soil, and was a staunch advocate of agriculture in all its many aspects. Farming, ranching, soil conservation and related subjects were his dish, and under his leadership in those fields, the Bee-Picayune acquired many prizes from agricultural and press associations. The oil industry also received his intense scrutiny, and his weekly column was eagerly awaited by many subscribers both in and out of the county.

In the last few years, he had a choice to make. He could have become a semi-invalid and perhaps lived several years longer, but being a man of action, this was out of the question. He attended the Masonic Lodge meetings in Pettus by being hoisted up the steps to the hall and helped downstairs after each meeting. He made them all in all kinds of weather. He also followed the Pettus school's teams to their games all over South Texas.

Gentry made a poor patient, his doctor said, for he would not dally long in the hospital following an attack, after he found he could get to his feet once again. His decision, when he realized his failing health, must not have come easily, for he was a man who loved life and enjoyed every minute of it.

Over the last ten years or so, Gentry had developed an interest in archaeology, and his excursion to Mexico were the highlight of his vacations. Just last summer, when a trip to the hospital had threatened to cancel his long-awaited vacation plans, he ignored his doctor's and friends' advice, boarded the train with his loyal wife by his side, and off they went south to the border to have a good time.

The Bee-Picayune is richer by far by having had Mr. Dugat on its staff these 18 years. And, for that matter, so is everyone with whom he came in contact. He was a man who will be sorely missed by every resident of Bee County.

The Challenge of ZIP Code Can—and Must—Be Met

EXTENSION OF REMARKS

OF

HON. JOE R. POOL

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. POOL. Mr. Speaker, I should like to call to the attention of House Members an article entitled "The Challenge of ZIP Code Can—and Must—Be Met," written by Mr. Emanuel Cohen of Mailmen, Inc., Syosset, N.Y. No subject is more complicated than the Post Office Department's mandatory requirement that bulk mailers presort their mail by ZIP code sequence. Business firms are being asked to do the sophisticated mail scheming task performed since Franklin's day by postal clerks. Well over a quarter of a billion dollars has been spent by 300,000 bulk mailers to add the five-digit ZIP numbers to their nameplates and computer tapes. In addition to that tremendous cost, business mailers are being called upon to spend quite large additional sums to presort their mail by ZIP code sequence.

Mr. Cohen, a former postal worker, now in private business, is the foremost expert on the handling of ZIP-coded mail. The House Post Office and Civil Service Committee, of which I am a member, has had the distinct privilege of hearing his testimony on the ZIP code program. Moreover, a subcommittee visited Mailmen, Inc., some months ago to learn just how difficult and expensive it will be for mailers to comply with the mandatory order. Mr. Cohen was also generous enough to invite top postal officials to view his operation. Much was learned from these visits.

Inasmuch as individual Members will be hearing from constituents about the complexities of mandatory ZIP coding, Mr. Cohen's article on the subject will be of great value to all concerned with the problem.

The article follows:

The Challenge of ZIP Code Can—and Must—Be Met

(By Emanuel Cohen)

The second phase of ZIP Code is at hand. Until now, most of us in direct mail have been concentrating on adding ZIP numbers to the address without, unfortunately, giving too much thought to phase *two*, the sorting and sacking of mail to 3-digit sectional centers and 5-digit direct sacks. The 5-digits represent either a single ZIP city or the carrier delivery station of the multi-ZIP city.

The time has come to set the record straight on many things. Some of us, and particularly those of us who have served on the unofficial Harry Maginnis Technical Advisory Committee, have been misrepresented as obstructionists, as being opposed to ZIP Code and to progress. The facts are that we "obstructionists" may be the best friends the Post Office has. Unlike the sycophants with their horse blinders who have said an automatic "yes" to anything proposed, it has been the so-called obstructionists who have advocated proper tools to work with and a proper time allowance in which to apply the tools.

We would remind those of you who are now discovering the complications of the new sacking and sorting requirements that this was pointed out in chart form in testimony before the Olsen subcommittee about a year and a half ago and that the validity of this chart has not been refuted to this day. In that same testimony we endorsed ZIP Code as a solution to the internal problems of the Post Office and offered testimony about applying these principles of ZIP Code as far back as 1949. We cannot but wonder about those among us who mouth stirring generalities, offer no solutions, answer no questions and help no one.

Now the "obstructionists" are back again. This time our hope is that we can explain some of the problems we are faced with.

DIVIDE LISTS INTO SIX CATEGORIES

The facts are that in order to mail at bulk rates, we must realize that the sorting and sacking requirements are paramount and that lists will have to be prepared in accordance with these requirements if their use is to remain economically feasible. Based on the amount of handling required, we have divided *fully-ZIP Coded lists* into six categories.

We do not say that these six categories are definitive. We are open to all suggestions. What we are striving for is a standard nomenclature to apply to lists so that purchasers will know that no matter from whom these lists are secured (whether direct or from a list broker) the list category will automatically indicate to the purchaser how complicated the sorting will be and enable him to properly evaluate his total package cost.

Category one. ZIP numerical sequence

This is the easiest type of list to sort and sack. Theoretically, it should not require more than one sack at a time to handle the list. It is the closest equivalent to the handling of an alpha-geo list before ZIP. However, mailers are faced with increased costs since there is a potential usage of 930 sacks (there are approximately 930 3-digit numbers already assigned out of a possible 999) as opposed to 50 sacks—one for each state under the old system.

Category two. Alpha-Geo with multi-ZIP cities in numerical sequence

There are a number of ways to sort and sack such a list. Basically, however, since sectional centers are geographic by definition, it is necessary to use a set of sack racks when working an alphabetic list. There should be a separate sack for each section of the state being worked. Thus Alabama would require only 15 sacks. California would take 31 and Utah would need only 5.

It would be advisable to have an additional sack in each case for use for each multi-ZIP city as you come to it. This requires a lot of floor space, many racks, etc. and is slower than working a *Category One* list.

Category three. Alpha-Geo list with multi-ZIP cities in random sequence

Everything discussed in *Category Two* applies. In addition, however, the 314 multi-ZIP cities must be pieced out to the last two digits. In a representative national list, the 314 multi-ZIP cities can be as much as 50% of the list. Obviously the processing of this list takes more time, requires more work and will necessarily cost more.

Category four. SFC (sectional center facility) sequence

This is a list that is already by 3 digits. Each piece must now be sorted down to the last two digits for the sectional center facility or the multi-ZIP city for proper tying and sacking.

Category five. State sequence

All the names for each state are together but the cities are in random sequence. Such a list requires two full handlings. The first handling is by 3 digits, thus reducing the list to a *Category Four*. The second handling is for the last two digits within the SCF or the multi-ZIP city.

Category six. Random

Theoretically, this requires three full handlings; the first by state reducing to a *Category Five;* secondly, each state is sorted to 3 digits, becoming a *Category Four;* and finally, each SCF or multi-ZIP city is sorted by the last two digits and tied and sacked. It must be realized that every shop must establish its own internal procedures to shorten the number of handlings without sacrificing proper handling of the mail.

WHY PROBLEMS ARISE

Up to now every list we have seen has fit into one of these six categories. There are variations. For example, the list that runs from Alabama to Wyoming but is in numerical sequence within each state is still a *Category One* list.

Comments of Retired Gen. Curtis E. LeMay on Conduct of War in Vietnam

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 31, 1967

Mr. THURMOND. Mr. President, the El Paso Times of January 21, 1967, contains an Associated Press article which quotes retired Gen. Curtis E. LeMay on the conduct of the war in Vietnam. General LeMay is one of the best generals this country has produced. He is more free to speak out, now that he is retired. I commend his remarks to the careful study of Senators.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the El Paso Times, Jan. 21, 1967]

LEMAY SAYS UNITED STATES MUST WIN WAR QUICK

WASHINGTON—Retired Gen. Curtis E. LeMay, calling for a stepped up air and naval offensive, says the United States has no choice but to win the Vietnam war "and win it quickly."

LeMay, who was Air Force chief of staff from June 1961 until January 1965, sees no hope of trying to negotiate with North Vietnam.

"The only thing I can see is a military victory. To pull out of Vietnam now would mean that dozens of Vietnams would break out all over the world, immediately," he says.

LeMay, now a private citizen who says he is deeply concerned about his nation's defenses, was interviewed during a brief visit here.

He said:

"I just cannot stomach planning a long drawn out war in the jungle. It's inhumane. That's not the way to do it."

"I see no chance of drawing these people to the conference table. Even if we did negotiate, I don't think it would stop the war unless we completely gave in and accomplished none of our objectives to protect the free peoples of Southeast Asia."

"We are at war. We ought to conduct an efficient military operation."

"It is not our aim to invade North Vietnam or destroy North Vietnam. What we want to do is stop them from carrying out their aggression."

"It looks like the only way to do it is to get down to the direct destruction of their capability to do this, or at least go a long way to convince them we are going to do it."

"I would do this with air and naval power rather than put our people in the jungle. Certainly there would have to be some land fighting, but I would do as little of it as possible."

In calling for the progressive destruction of North Vietnamese support and supply bases, LeMay said he would start by closing the port of Haiphong, and other ports.

While not ruling out the possibility, LeMay said he doesn't think his proposals would bring on a world war.

"I don't think World War III will come on due to the flap in North Vietnam," he said. "I don't think the Russians are stupid enough to do this.

"The Chinese may not be quite as stable, but I don't think they are in a position to take us on in an all-out war now."

Since retiring after 3½ decades of military service, LeMay and his wife, Helen, have lived most of the time in the Los Angeles suburb of Bel Air. He is head of Network Electronics Corp., Chatsworth, Calif.

LeMay has nothing to say publicly on his policy differences with Secretary of Defense Robert S. McNamara. But in areas where he says he feels discussion is constructive he answers questions readily.

LeMay said there is "a very small minority in this country that makes a lot of noise about being against this war."

"I don't think the bulk of the people in this country are against the war," he said. "They want to protect South Vietnam against aggression. They want to fulfill our commitments to these people."

Declaring that "no guerrilla operation can succeed unless it gets support from the outside," LeMay said: "The only way to stop the resupply of guerrillas in South Vietnam is to use direct force against North Vietnam and make it so expensive they will stop it themselves."

He said most of the hard-core South Vietnamese Communists have been killed off.

"But now they are putting the North Vietnamese into the picture in large numbers," he continued.

New Jersey Welfare Costs Rising Despite War on Poverty

EXTENSION OF REMARKS

OF

HON. PETER H. B. FRELINGHUYSEN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. FRELINGHUYSEN. Mr. Speaker, perhaps no single piece of domestic legislation has had such a fishbowl existence as the war on poverty program. It has attracted widespread publicity and editorial comment since its inception and I am sure all of us here are well aware of the program's shortcomings as well as its successes.

The Newark Sunday News edition of January 29, published on its front page an article by Douglas Eldridge, one of its staff writers, on the antipoverty effort in New Jersey and its apparent failure to slow the increase in that State's welfare rolls.

This article by Mr. Eldridge graphically points up the weaknesses of the program, and the disappointment of officials at the steady increase in welfare budgets.

Mr. Speaker, I commend this article to my colleagues. The article follows:

[From the Newark (N.J.) Sunday News, Jan 29, 1967]

NEW JERSEY WELFARE COSTS RISING DESPITE WAR ON POVERTY

(By Douglas Eldridge)

All the antipoverty activity in New Jersey—more than $77 million worth of it—has so far scarcely slowed the steady rise in welfare rolls across the state.

The War on Poverty enters its third year in Newark and other cities this month, yet costs and caseloads of most welfare agencies contiune to climb.

While the economy reached new peaks last year and Economic Opportuntly Act programs trained and employed thousands of New Jerseyans, and ranks of the dependent still grew.

Some 14,700 adults and children were added to the rolls last year alone. This is as big a rise as in 1965, and considerably larger than in 1964—before a single shot had been fired in the poverty war. By the end of 1966, there were more than 187,000 people receiving public assistance in New Jersey.

There are some faint glimmers of hope—municipal relief rolls are down in Trenton, and the rate of increase in Essex County slowed a trifle. But most welfare statistics give no sign that victory over poverty, despite the infusion of $77 million in New Jersey, is in sight.

PROBLEM PINPOINTED

On the contrary, lingering expectations that poverty programs might produce savings in welfare were laid to rest at recent budget hearings for the City of Newark and

Essex County. As usual, appropriations had to be upped.

Meanwhile, figures from many sources only point up the dilemma:

Since December, 1964, the U.S. Office of Economic Opportunity has granted $77,022,304 to New Jersey—more than half of it for work and training projects.

OEO grants to Newark and Essex County total $21,269,389 for the last two years, with more than $19 million just for the city. This is on top of $10 million in Labor Department grants for manpower training projects here since 1962.

But in spite of all this spending . . .

—the number of persons collecting welfare in New Jersey rose from 158,550 in December, 1964, to 187,668 in December, 1966.

—the Essex County Welfare Board's rolls swelled from 46,365 persons in late 1964 to 54,324 last month, and its budget from $34 million to $43.2 million in the two years.

—Newark's relief rolls reached 3,070 cases on Dec. 31, the highest year-end figure in years, while total expenditures hit a new high of $5.7 million.

PAINFUL PARADOX

It seems like a painful paradox—both for the taxpayer and for the welfare recipient, who may both have expected the antipoverty army to liberate them from some burdens.

Top welfare and antipoverty officials still see no early end to the upward spiral, either. But this, they insist, doesn't mean the War on Poverty is making no gains. Rather, they say, it shows the need for increased effort.

These officials argue it is still too early to judge the lasting impact of antipoverty efforts. Many training projects have been slow in starting, they say, and are just moving into high gear. All allocations haven't been spent, they add.

Even if there is little or no drop in welfare rolls, they say, many recipients have been helped to become self-supporting—even if others quickly take their place on the relief rolls. The welfare load might be even worse without the antipoverty drive, they say.

The officials blame the continued rise on many factors—particularly the high birth rate in slum areas (half those on welfare are dependent children) and the lag in employment in central cities. Some cite the migration of the helpless to the cities, and the new efforts by civil rights groups to recruit all eligible persons for welfare.

UNABLE TO WORK

These officials contend that most of those now on welfare are unable to work—they are too old or too young, too disabled or too illiterate, or too burdened with child care or personal defects. The most intensive services would make only a fraction of them employable, the officials claim.

Irving J. Engelman, director of the N.J. Division of Public Welfare, concedes there has been no slackening in welfare applications, and the general relief load—normally down in prosperous times—climbed 9.7 per cent last year.

But, he said it is unfair to use welfare "as the key measure of antipoverty programs—the key measure is their long-range impact." And he added: "Who knows whether, without these activities, there would not have been a greater rate of growth in welfare?"

"All the antipoverty programs," Engelman says, "will not reduce the number of aged persons . . . the disabled . . . the blind . . . and they are not going to significantly reduce, at least in any short run, the number of deserted, widowed and abandoned mothers."

And the state's top antipoverty official, John C. Bullitt, director of the N.J. OEO, says many of the major Economic Opportunity Act programs cannot produce quick cures for social ills.

"You don't reduce the welfare rolls or halt their rise through Head Start classes," said Bullitt. "The only thing in our arsenal is manpower training."

Many training projects have been slow in getting under way, he said. But he expects a steadily increasing emphasis on manpower development.

More than 90 per cent of the cases added to the rolls in New Jersey in the last two years are in one category—Aid to Dependent Children (ADC), most of them without fathers in the home. Last year alone some 9,300 mothers and children were added to the ADC rolls—more than a third of them in Essex County.

RISE SLOWED

Philip K. Lazaro, director of the Essex Welfare Board, notes that the rise has slowed a bit—the average increase in cases was 75 a month last year, compared with 90 a month in 1964. And 2,674 cases were closed last year, compared with 2,400 in 1965. But still there was a net gain of 899 families during the year—and Lazaro sees no reversal of the rise until the 1970s.

Lazaro also sees no immediate effects of antipoverty activities on the county caseload.

"I believe in training, I believe in work experience, I believe in all that," he asserts, "but to break the cycle of dependency, we will not make the headway desired by the community through these programs."

"The real solution to ADC goes over and beyond that," he declares, to "a greater focus on working with the children, not just those on ADC but the low-income kids who are our cases of tomorrow."

Lazaro says he has been trying for two years to get funds under Title V of the Economic Opportunity Act to train some ADC mothers. But Washington keeps turning it down because it wants only one to a county—and Newark got there first.

Lazaro thinks only about 500 of the 11,000 women collecting ADC in Essex could be trained and employed. The majority have small children and ought to stay at home to care for them, he said. One study found that only 20 percent have finished high school, he added.

SEVEN PROJECTS UNDER WAY

Of the $77 million allocated to New Jersey by OEO, some $10 million is specifically for training unemployed fathers and mothers on welfare under Title V. Seven projects are now under way, with total enrollment of 1,150.

The Newark Welfare Division has received $5.8 million in these Title V funds, and has spent $2.7 million so far to support and train 972 adults from the relief rolls. More than 250 have been placed in jobs—yet the rolls are higher today than when the project started in mid-1965.

Mayor Hugh J. Addonizio says he is disappointed there has been no appreciable saving. "We were led to believe this would be tremendously successful," he said, "but it hasn't reduced the welfare rolls, even though it has taken people and trained them."

Asked why he thinks the rolls are still going up, the mayor cited recent reports that there were 1,200 illegitimate births at City Hospital last year—many to girls under 16.

In Trenton, meanwhile, a similar but smaller Title V project has produced some apparent results—the average relief load has been cut from 450 to 400 in a year, and the city wound up 1966 with a drop of $73,083 from its 1965 welfare budget of $653,445.

Some observers think Trenton has made headway because its antipoverty agency, United Progress, Inc., gives top priority to manpower and works hand-in-hand with city government. In Newark the United Community Corp. until recently gave low priority to manpower, and many agencies run their own training projects, with little coordination.

ABOVE AVERAGE

But officials of the Newark Title V project—run by the city, with no UCC connection—claim their placement rate of 49 per cent is above the national average. Preliminary figures show the placement rate for all seven New Jersey projects averages 37.

John Taylor, state coordinator of Title V, said Newark is "doing a remarkable job." Those being trained, he said, "are not a bunch of ablebodied, well-motivated men—these are people who are pretty sad."

Mrs. Grace Malone, city welfare director, said Title V "has produced a saving * * * but it's not a numbers game project." If the 440 persons now in training were returned to the city welfare rolls, she said, it would add at least $600,000 to the budget.

She also noted that the project—limited by federal rules to heads of families with children under 18—cannot admit many adults now on relief. In the last 18 months the project has taken in 972 trainees, but has turned away 613 ineligible or disabled volunteers.

And many of those who were trained, she said, "were different from ordinary workers—they had been sapped of their inspiration."

The city's rolls are on the rise again, she says, because many people are being encouraged to apply for welfare by civil rights and antipoverty workers. In addition, she says, some people are applying just to take part in the Title V training.

She and William P. Burrell, acting director, concede that their project—the biggest antipoverty effort in the state—was slow in starting. Some $1.4 million of the first grant of $3.2 million was returned unspent to OEO.

But now it is moving well, they said, and is changing attitudes of employers and welfare clients. Job training and placement are becoming integral parts of the welfare system, they say.

LOAD NOT

The city's manpower director, Donald Malafronte, contends that Title V has been "reasonably successful," although it produced no cut in the relief load. "It's the most interesting and complex of the antipoverty programs," he said, and it's been difficult to mesh it with all the training, education, health and social services the trainees need.

As to the persistence of the relief load, Malafronte cited a report showing the Newark unemployment rate since 1960 has dropped only from 11.3 to 8.2 per cent, while the nation's decreased from 5.6 to 3.8.

He also cited a study which found that most of those who remain on relief for any length of time are unfit for almost any employment. "These are persons beyond the reach of rehabilitation," said Malafronte, and antipoverty programs will have little impact on them.

While the antipoverty effort has done little to ease the city's financial squeeze, Malafronte said, the "overall impact of the programs is really significant, not only in terms of jobs and help . . . the expectations and movement aroused are really fantastic."

The city is now trying, he said, to develop more comprehensive training projects, with more stress on basic education and pre-vocational preparation.

Various officials also note that many of the federal programs so far are not aimed directly at the hard core of adult pool. Manpower training has been geared mostly for those with some education, while antipoverty projects have emphasized youth. Newark's antipoverty agency, the UCC has spent more on play streets than on training projects in the last two years, and is only now shifting emphasis.

But heads of UCC say their success should be measured in involvement of the poor in local affairs—not just by welfare figures.

"We're not geared to replace welfare on a quota basis—one antipoverty job equals one less welfare recipient," says William K. Wolfe, UCC director. "And for everyone that we take off," he said, there is another poor person who is eligible for welfare and isn't collecting it.

And the UCC's associate director, Donald M. Wendell, said most of the UCC's programs so far have been aimed at young people. "Our initial thrust was on preventive programs," he said. "We've been addressing ourselves to them before they become casualties."

More than half the $8.3 million allocated to UCC so far has gone to education of the young and less than 10 percent to manpower programs. But recently the agency's board decided to put more emphasis on training, and less on education.

The rising cost of welfare is due mainly to the growing caseload, but increased allotments and rising administrative expenses are factors too. Average grants to ADC families have risen $15 in the last two years, and grants to individuals on relief are up about $10. In Essex, welfare administrative costs have gone up 36 percent in two years, although the amount given to recipients went up only 23 percent.

Welfare and antipoverty officials recommend many steps to slow or stop the rise—intensified training, education and social services; extension of ADC to discourage desertion by jobless fathers; creation of "one-stop opportunity centers" to combine training and services in slum areas, and modernization of the whole welfare structure.

THE RISING ROLLS

The following figures from the N.J. Division of Public Welfare show the numbers of persons in various welfare programs since the start of the War on Poverty:

	November 1964	November 1965	November 1966
Old-age assistance	13,872	13,992	14,878
Disability assistance	8,635	8,906	9,206
Aid to dependent children	102,218	112,835	122,170
Blind assistance	944	913	906
Medical aid to the aged	5,287	5,849	6,266
General relief	30,475	28,160	29,138
Total	161,431	170,455	182,564

Detailed figures for December are not yet available.

These figures from the Essex County Welfare Board show the numbers of persons it was aiding:

	December 1963	December 1964	December 1965	December 1966
Old age	3,502	3,523	3,650	3,655
Disability	2,535	2,675	2,772	2,752
Dependent children	34,260	39,094	43,006	46,685
Blind	253	262	255	262
Aged medical	867	811	1,028	1,060
Total	41,417	46,365	50,601	54,324

And these figures from the Newark Division of Welfare show the total number of families collecting relief:

	1963	1964	1965	1966
June	2,068	2,538	2,723	2,673
December	2,516	2,909	2,440	3,070

Urgency of Proceeding With Nike X System

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 31, 1967

Mr. THURMOND. Mr. President, the Nashville Banner of January 18, 1967, contains an editorial entited "Treaty Wouldn't Protect—Get On With Nike X." The most urgent task facing the 90th Congress is to spur the administration toward immediate and decisive action in beginning forthwith the preproduction engineering on the Nike X system as authorized and funded by Congress.

The editorial wisely points out the sheer folly of further delays in the program. I heartily commend it to the consideration of Senators and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Nashville Banner, Jan. 18, 1967]

RIGHT, REPRESENTATIVE RIVERS: TREATY WOULDN'T PROTECT—GET ON WITH NIKE X

President Johnson's proposal that the United States negotiate a pact with Soviet Russia to "freeze" anti-missile defenses at current levels—hoping thereby to halt proliferation of the arms race—has evoked some elementary questions and blunt warning by House Armed Services Committee Chairman L. Mendel Rivers.

He is not alone in that view. Competent military authorities—as personified by the Joint Chiefs of Staff—have backed the urgent necessity of an effective Nike X system.

The South Carolina Democrat has cause for concern. And so has every American.

Even if the proposed U.S.-USSR paper agreement were reached, it would leave this country starkly vulnerable in a shooting war; with reference particularly to protection at home, in the absence of any completed anti-missile system.

Intelligence reports indicate that both Moscow and Leningrad are ringed with anti-ballistic missiles—and have been for more than three years. The same sources reveal that these devices which intercept and explode nuclear warheads have been proven effective, and are being relied on by the Reds for protection from outside attack.

Despite the fact that Congress appropriated some $153 million last year for initial procurement steps toward anti-missile hardware, and at least a start to match Russia's capabilities, Johnson-McNamara & Co., turned thumbs down on the proposal.

As a result the United States has no such defenses in its arsenal. Neither are any on the drawing board being readied for construction.

To "freeze" production under a mutual agreement with Russia under such circumstances would, even if it were enforced, be stupid folly. Furthermore, since there would be no way to check by on-site inspection, nor guarantee that Russia would live up to the pact, any non-production treaty signed by the U.S. would invite disaster.

This, Chairman Rivers pointed out when he said "even if we could get a treaty, it wouldn't be worth anything" since the Russians repeatedly have demonstrated that pacts provide a ruse and cover for clandestine military production.

Rivers' indignation spilled over in referring to the administration's foot-dragging policy in "delaying the production of our Nike X while it begs the Russians not to install any more of theirs."

In the chilling light of Russia's progress the U.S. military establishment's needed course of action seems clear.

We must not merely match Russia, weapon for weapon, but maintain a distinct advantage militarily in the interests of preserving world peace.

Significantly, the White House and Secretary McNamara seem to be alone in their contention that the Nike X is unnecessary to maintain military superiority.

The Joint Chiefs of Staff have unanimously recommended it as essential to survival of the nation against Red agression.

Rep. Rivers has termed the delay "disgraceful". It is more than that. It partakes of folly.

It's time to quit indulging in illusionary hopes that Russia will curtail her military production and abandon new techniques for war by agreeing that an arms race is too costly and futile for nations involved.

The ability to meet every known threat should be the test of America's defenses. In this instance the Nike X represents a gap to be filled.

"Let's Hold on for Dear Life to Our Desire To Do Good, But—"

EXTENSION OF REMARKS

OF

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MIZE. Mr. Speaker, a friend of mine called my attention to a sermon which his pastor, the Reverend Richard Post Williams, vicar of the Holy Cross Episcopal Mission, 3 Carderock Court, Bethesda, Md., delivered on Sunday, January 15. My friend felt that his pastor had a message particularly appropriate for the new session of Congress where the desire to "do good" in omnipresent. After reading the sermon, I agree.

Under leave to extend my remarks, I include Vicar Williams' sermon in the RECORD so that my colleagues can have the benefit of this thoughtful message.

The sermon follows:

SERMON, JANUARY 15, 1967, HOLY CROSS EPISCOPAL MISSION, BY THE REVEREND RICHARD POST WILLIAMS, VICAR

Every one of us knows how deeply we want to do good. We resolve to be better citizens and to have the welfare of our fellow men on our minds and hearts.

Yet every one of us is constantly conscious of the possibility of becoming over-emotional and acting in a foolish way—or, because we over identify with a problem, that we will not recognize our incompetence and innocency and therefore what we do may be destructive rather than creative and productive.

Last week I mentioned the following analogy, which to some may be shocking, given to describe innocency in the nineteen-sixties. Innocency is like a deaf and blind leper who does not know that his disease is contagious, who has lost the bell around his neck, wandering through the crowded streets of a city thinking that he is doing no one any harm. To this I would like to add, the same leper is giving away free samples of unwrapped candy.

To make this clear to our imagination, consider two aspects of the current scene, one from public, the other from private life:

Individual clergymen and groups of clergymen are today offering specific solutions and are claiming to be taking leadership in the enactment of these solutions to almost every social, economic, and political problem that exists on a national, international, or interplanetary basis. It seems to me, speaking as one clergyman, that it is the conviction that some specific program is "the answer" or "the solution" that gets us into trouble.

Clergymen, whether we like to admit it or not, are generally speaking guilty of over-simplification and not competent when it comes to anti-poverty legislation or appropriations, urban development, farm subsidies, housing and fair employment practice. Planning and execution can only be carried out by experts with years of training in their field.

It is a great temptation to side-step the difficult and often humbling task of endeavoring to change the hearts and minds of men and to replace it by proposing programs and schemes as the solutions to the ills of men.

In fact, after last week, if taken at face value it would seem some clergy would lead one to think that if you are not 100% for a specific plan to protect Adam Clayton Powell from due process of law, you are against Motherhood and the Flag.

While we are on the subject, we would do well to recognize that there is more possibility of theological heresy couched in political terminology than there is in language of religion. The Presiding Bishop's new Committee on Freedom in the Pulpit I hope will keep this in mind.

Turn now to an illustration from private life. More and more young couples are coming to their clergymen today because they feel that the war is going to have disastrous results on their marriage. When they got married they did not take into account that the husband would be sent overseas for many months. His departure now interferes with all of their well-made plans. The plans include children, savings, small investments, purchase of a house, vacations, and the wife a part of a team to assure vocational advancement. Now all of that has vanished. A good marriage is what they deeply wanted but to have it become a reality somehow or other got to be dependent on a blueprint or a program. Now, faced with separation and the vanishing of carefully laid plans, the more important things of the heart and mind had to have some rethinking and reviving.

What is the conclusion of our thoughts? Let's hold on for dear life to our desire to do good. But let us never over-simplify the fact that the means demand more than just wishes, programs and schemes. And let us with determination be on guard against that kind of innocency that leads us down a primrose path of disappointment.

"Howlin' Mad" Smith, Marine General, Dies

EXTENSION OF REMARKS

OF

HON. GEORGE W. ANDREWS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. ANDREWS of Alabama. Mr. Speaker, I am sure those of us who were familiar with Gen. Holland McTyeire "Howlin' Mad" Smith, the tough, colorful leader who commanded marines in the bloody Pacific campaigns in World War II, were saddened to learn of his death recently.

A marine to the very last, he suffered a heart attack while attending ceremonies commissioning the 1st Marine Reserve Officer Training Corps at the Marine Military Academy in Harlingen, Tex.

He held the Distinguished Service Medal with three gold stars, the Purple Heart, and numerous other decorations. Gen. Wallace M. Greene, Jr., Commandant of the Marine Corps, said:

> None will miss General Holland M. Smith more than the Marines who were privileged to know and serve with his devout patriot and brilliant military leader. We who "carry on," as General Smith would have ordered, do so with a deep feeling for the loss to our country and Corps. Our final salute is rendered with greatest respect, admiration and sadness.

General Smith was born at Seale, Russell County, Ala., which is located in the district I serve. Besides his son and grandson, who survive him, the general left many friends not only in Alabama but throughout the United States. Out of admiration for the wonderful contribution he made to our country, I would like to submit the following article which appeared in the Brewton Standard on January 19, 1967:

> [From the Brewton Standard, Jan. 19, 1967]
>
> MARINE GENERAL SMITH, COUSIN OF LOCAL WOMAN, DIES AT 84
>
> News of the death of Retired Marine Corps General Holland McTyeire (Howling Mad) Smith, the Alabama native who became the architect of modern amphibious warfare, was learned with regret in Brewton where he had often visited his cousin, the late Mrs. G. W. L. Smith and Mr. Smith. Since their deaths he has returned to visit their daughter, Mrs. Malcolm McMillan and the late Mr. McMillan.
>
> General Smith spent sometime here with his relatives when he came to Alabama for the 60th reunion of his Auburn graduating class in 1961. He came again in the fall of 1965 for a visit.
>
> Born in 1882 at Seale in Russell County, he received his Bachelor of Science degree from Alabama Polytechnic Institute in 1901 and a bachelor of laws degree from the University of Alabama in 1903. His illustrious career stretched from the trenches of Verdun in World War I to Iwo Jima, the last major battle of the famed commander's contribution to the heroic history of the Marine Corps. Since his retirement from the Corps in 1946 at the age of 64 he lived quietly in La Jolla, California with his wife, Ada. Mrs. Smith died in 1962.
>
> General Smith died in Balboa Naval Hospital where he had been under treatment for a heart attack he suffered November 14 while in Harlingen, Texas for a marine academy dedication. He is survived by a son, Rear Admiral John V. Smith, assigned to the office of Chief of Naval Operations in Washington, a grandson, Holland M. Smith II, a navy ensign ticketed for duty in Vietnam and a granddaughter Mim.
>
> Military services were held Saturday in San Diego at the chapel of the Marine Corps Recruit Depot. Burial was at Ft. Rosecrans National Cemetery where Marines fired a final 17-gun salute.
>
> The passing of the retired general has been noted in headlines and editorials in his native state as well as the San Diego Union, Los Angeles Times and other publications throughout the nation. Among those paying tribute were Secretary of the Navy Paul H. Nitze, Marine Commandant, General Wallace M. Greene, Jr., and other fellow officers with whom he served during his 41 years in the Corps.
>
> Smith took the First Marine Brigade to Cuba in 1940 for 7 months then with Pearl Harbor returned to the U.S. to train army and Marine units in amphibious operations. In September 1943 he took command of the Fifth Amphibious Corps and when the Fleet Marine Force of the Pacific was created in 1944 he became it's commander. He helped to plan and personally direct every Marine conquest in the central Pacific from Tarawa, Guadalcanal, the Marshalls, and the Solomons through Iwo Jima and was the commander of the four island campaigns.
>
> In an editorial in the Birmingham News, General Smith was noted as "A man with a dual personality, who like many of the intrepid military leaders of men fretted before battles, cried over the casualty lists but showed no mercy in his intensive drive to win battles."
>
> Smith's nickname "Howlin' Mad" came as a result of his now legendary status as a forceful and controversial leader of victorious Marines in battle in the Pacific. Severe and unsparing of himself and others, he drove his men with an iron will. If troops couldn't move up, he wanted to know why; if they could and didn't, he was likely to take their commanders to task. Withdrawal had no place in his tactics. "Get ground and hold it," he demanded.
>
> The Saturday Evening Post published his war memoirs in installments during 1948.

Tax Sharing: A GOP Strawman

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. RHODES of Pennsylvania. Mr. Speaker, in his inaugural address, as Pennsylvania's new Governor, Raymond Shafer, echoed the Republican tax-sharing cry.

Here is what Robert Gerhart, a newly elected State legislator, reports on the inauguration speech and tax sharing:

> As I sat high in the stands behind Governor Shafer my thoughts wondered from the serious to the ridiculous and back again. Where, I thought, will he go for the new tax revenue we are hearing is so desperately needed. And what happened to the $100 million or more of surpluses which were allegedly the legacy of the Scranton Administration? Wasn't this part of the campaign fodder?
>
> Everyone shares the new governor's desire to make Pennsylvania first in the nation.

The question is, how do you go about achieving that goal? Democrats have their program and Republicans have theirs. It is our view that four years ago a similar aspiration was enunciated by the then new governor, William Scranton. This multi-millionaire from the coal regions presented a professional public relations picture unrelated to achievement. He sold his personality—but after four years we were still way down the totem pole in education, industrial growth, transportation, solution of urban problems, and health and welfare.

Now the refrain is not very different but a new feature has been added—a straw man. Governor Shafer's straw man is a federal subsidy for use as the state sees fit. In every speech since he was elected in November, Shafer has reiterated his views that federal revenues should be piped back into the states with no strings attached. There is as much chance of this happening as of LBJ kissing Mao and making up in a public square in Hanoi. But Shafer is cleverly setting up the straw man so that when it is knocked down he will be able to blame the federal government for conditions requiring more taxes in Pennsylvania. Or, Shafer will employ this ruse to reject social welfare reforms as being too costly. We'll see.

Tax-Sharing Legislation

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. BERRY. Mr. Speaker, I have introduced legislation which would provide for the sharing of Federal taxes with the States and their local political subdivisions. I am hopeful that the House can take favorable action on this proposal in the near future as it represents a new direction for America which was mandated by the voters last November 8.

The proposal would return 2.2 billion Federal dollars directly to State and local governments without Federal earmarking or control. The President's budget proposes an increase of more than $2 billion in existing Federal grant-in-aid programs for the next fiscal year and a major cutback in these proposed expansions could be the start for an effective tax-sharing plan.

The bill would allocate 3 percent of Federal personal income tax revenue for tax sharing. The 17 poorest States would first receive 10 percent of the total funds as a form of equalization. The other 90 percent would then be divided among all States on the basis of population and a simple tax-effort ratio. Forty-five percent of the funds allocated to a State would have to be passed on to local subdivisions. The other 55 percent would be spent in any way the State desired. States reducing taxes would continue to receive tax-sharing funds, but in a comparably reduced amount.

There are two unique features of this tax-sharing proposal. First, at least 45 percent of the money would go to the local level for education and other municipal expenditures. Second, a new Council on Tax Sharing, with State representation, would administer the program to insure simplified distribution procedures and to preclude any Federal controls. The 10-man bipartisan Council would be appointed by the President and five of them would be State Governors.

As a further explanation, I would like to insert at this point in the RECORD a detailed discussion of the bill's provisions which has been prepared by the initiator of this approach, the gentleman from New York [Mr. GOODELL], who, in my opinion, has come up with the finest new tax-sharing approach to meet the growing public problems of our State and local governments:

COUNCIL ON TAX SHARING

To avoid any possibility of Federal administrators imposing conditions, controls or excessive administrative paper work, the tax sharing program would be administered by a Council on Tax Sharing appointed by the President. Five members of the Council would be State Governors, with no more than three from the same political party. The Governors would be permitted to appoint alternates to represent them on the Council. No more than three of the other five members of the Council could be members of the same political party. The Council would determine forms and procedures with a requirement that they be kept as simple as possible. Only the Council could withhold funds for failure of State and local officials to comply with established procedures. Any decision to withhold funds would be subject to judicial review in a Federal Circuit Court of Appeals. The Council would also be charged with responsibility for assessing the impact of the tax sharing program and making recommendations to Congress for changes.

EQUALIZATION

Ten percent of the total tax sharing fund would first be distributed to the 17 States with the lowest per capita income. Distribution within the 17 States would be based on population and total personal income in such States.

TAX EFFORT RATIO

The other 90% of the tax sharing funds would be distributed to all States on the basis of population and a simple "tax effort ratio" for each State. The "tax effort ratio" is total taxes collected by the State and its political subdivisions (real, income, sales, etc.) divided by total personal income in the State.

DISTRIBUTION OF TAX SHARING TO STATE AND LOCAL GOVERNMENTS

A. 50% of the funds would go to the States for whatever purpose they wished, including State aid to political subdivisions. Another 5% could be used by the State to strengthen administration or could be added to the general fund at the State's sole discretion.

B. 45% of the tax sharing payment received by a State would be allocated by the State to its political subdivisions. The State would have sole authority to determine the proportion to go to educational subdivisions as distinct from political subdivisions.

How To Reform the Draft Act

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MADDEN. Mr. Speaker, Mr. C. W. Bader, president of the Bader Building Material Corp., of Gary, Ind., on several occasions has expressed some constructive suggestions on the reform of our Selective Service System. He has forwarded me the accompanying editorial from the Tucson, Ariz., Daily Star endorsing the comments set out therein on some constructive thoughts regarding our draft legislation.

I am hereby submitting it for the consideration of the Members and the American public:

HOW TO REFORM THE DRAFT ACT

(By William R. Mathews)

Published in other columns on this page this morning is a letter from the father of four sons who presents a program to replace the present draft act. The Star heartily endorses it as a plan vitally necessary to support the ever-expanding growth of our diplomatic relations, and to meet the contingencies of a possible nuclear war, probably many years away.

It believes, also, that such a program is vitally necessary to meet the needs of our youth at a critical time in their lives.

The Star for years has championed the cause of universal military training, with few if any exemptions. It believes that every youth, when he becomes 17 or 18 years of age, has a duty to his country, which he should be compelled to perform.

Eighteen months to two years of military duty could be of value to every youth in our nation. Every youth, rich or poor, intelligent or stupid, should serve this period between the ages of 18 and 20.

In this connection it should be emphasized that modern military training involves the teaching of all kinds of trades, that would be of lifetime value to all draftees. Military service could educate the illiterate, it could discipline the disorderly. It could, at this critical time in every youth's life, teach him moral principles and healthy citizenship obligations, as well as of the new and expanding technologies. In short, it could give him a firm basis, and more self-confidence, to venture into the world and complete his education and career after his military service. It could, for instance, wipe out illiteracy in all young men, which would be a notable achievement.

It would create a fluid, active army to support our military operations at home and abroad. The young men who would serve abroad in combat zones, would serve one year. Then they would be relieved from all future military duty save in case of a world war, where complete mobilization was necessary. Thus they could plan their lives with an unusual degree of certainty. Those who would wish to continue their military service would have the right to do it.

Another important nonmilitary aspect of this training would be the recognition that most of our youth are healthy, vigorous boys who get into mischief when they are idle. There are other boys who might be classified as the dropouts, who get discouraged and who, for lack of training and education, have difficulty finding work.

Service of 18 months to two years, between the ages of 18 and 20, in military training, and in the armed forces of our nation, could do much to rehabilitate them and let them know they are needed.

I can't help telling my personal experience. It took me seven years to get through college. Then I went off to war for two years in the Marine Corps. That strenuous service in the Marine Corps, with its stern discipline, has been of everlasting benefit to me.

A few years ago I made an official investigation of the Navy, Air Force and Marine Corps recruiting camps in San Diego. I was dumbfounded with satisfaction and surprise at this wonderful training, which turned youngsters into self-reliant men. It brought out their best qualities by the education, clean living and discipline that is still imposed on them. This same kind of military training goes on in the Army and Air Force, too.

It would be interesting to have Dr. George Gallup or Mr. Lou Harris take a poll of the high school students throughout the nation to see if they would favor such a program. In my opinion, they would.

The volunteer system suggested by some members of the President's committee that has been making a study of the draft is not only disgracefully unjust but would fail to provide the number of men that our military services need. Moreover, the encouraging number of American young men who do volunteer has been made possible by the very existence of a draft law.

The Refugee Problem in the Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1967

Mr. MULTER. Mr. Speaker, one of most difficult problems facing the Middle East is the problem of the Arab refugees presently residing in Arab camps.

The Zionist Organization of America is as concerned about this as any other group.

Dr. Joseph B. Schechtman, an authority on refugee problems, has made some constructive observations on this situation and I commend to the attention of our colleagues his December 1966 monograph which was issued by the Public Affairs Department of the Zionist Organization of America.

Dr. Schechtman's observations follow:

THE RECORD OF THE UNITED NATIONS RELIEF AND WORKS ADMINISTRATION

(By Dr. Joseph B. Schechtman)

Tension in the Middle East will not subside nor conflicts cease until the Arab refugee problem is solved.

UNRWA—the United Nations Relief and Works Administration, established 17 years ago to help the Arab refugee from Palestine, with a Mandate to undertake "at an early date constructive measures with a view to the termination of international assistance for relief," was to serve as an instrument for the solution of the Arab refugee problem.

Yet, in actual fact, UNRWA has become a potent factor for the perpetuation of the problem. Yielding to the Arab Governments' sabotage of every attempt on the part of the refugees' economic integration through constructive works projects, UNRWA has since 1955 abandoned every effort in this direction. It became a mere relief agency, with no prospect for determination of the costly international assistance and for winding up its activities. UNRWA's admittedly inflated relief rolls artificially magnify the actual number of Arab refugees. UNRWA thus serves the designs of the Arab Governments who are exploiting the plight of the refugees for their anti-Israel crusade.

This state of affairs should not be permitted to continue. The Arab States should assume, with such international assistance as can be mustered for a constructive solution, the responsibility for the re-settlement of the refugees among their own people in the vast and rich Arab territories.

This monograph is a constructive study of the Arab refugee problem and a contribution to its solution. It was prepared by Dr. Joseph B. Schechtman, an authority on refugee problems, and is distributed by the Zionist Organization of America Public Affairs Department, as a public service.

The abbreviation UNRWA stands for "United Nations Relief and Works Administration" for Palestine refugees in the Middle East. It was established by a resolution of the UN Assembly on November 30, 1949, with the proviso that direct relief was to be terminated not later than December 31, 1950, unless otherwise directed by the Assembly.

The UN resolution called for "constructive measures to be undertaken at an early date with a view to the termination of international assistance for relief." Several works programs were presented by the Clapp Mission in 1949, and by UNRWA's second Commissioner-General, John B. Blandford, in 1951, who insisted that "there must be a firm goal of terminating relief operations: sustained relief operations inevitably contain the germ of human deterioration." Blandford believed that "with the fullest cooperation from Arab governments and the international community, homes and livelihood could be provided for 50,000 families (about 150,000 persons) annually."

In January 1952, the UN General Assembly established a $200 million reintegration fund to finance the refugees' resettlement and rehabilitation. "Program agreements for a series of work schemes were negotiated with the governments of Jordan, Egypt, and Syria. But not a single one of the constructive projects of integration, based on the UN funds and recommendations, has materialized. Henry R. Labouisse, who succeeded Blandford as head of UNRWA, frankly said in his 1955 Annual Report that they were frustrated not because of their impracticability, but because of "resistance to self-support programs" and "political objections to large-scale projects" on the part of the host governments. Asked on February 11, 1957 why UNRWA could not help the refugees to settle and work in countries where they are, the UNRWA director said: "The answer lies in the realm of politics and in deep-seated human emotions . . . unscrupulous political agitators have consistently exploited the understandable bitterness of the refugees."

After Labouisse retired in 1958, his successor, Dr. John H. Davis, fully endorsed the Arab attitude. In his Annual Report for 1959–1960 he averred that after ten years of the Agency's existence, "the rehabilitation function of UNRWA, which was intended to render a substantial number of refugees self-supporting, has failed to achieve any appreciable results"; and in November 1959, he also warned the United Nations that direct relief would be needed "for a decade or more." For all practical purposes, the "W" (Works) in the Agency's title has been dropped. It became a mere UNRA—a purely philanthropic relief organization.

Moreover—and this is much more disturbing—Dr. Davis has not merely acquiesced in this amputation of the second part of UNRWA's twin assigment of "relief and works": making a virtue out of alleged necessity, he also made a determined attempt to condone and justify the failure by arguing that the bankruptcy of the rehabilitation effort was not caused (as his predecessor admitted) by obstruction of the Arab governments and "unscrupulous political agitators," but by objective economic "facts of life" in the Middle East. In his address before the 1961 World Refugee Year Conference in Geneva, UNRWA's head categorically rejected what he called "the misconception" that "the Arab host governments have been mistreating the refugees by neglecting them and even 'holding them as hostages in their struggle with Israel.'" "The truth is," he asserted, "that in general the host governments have been sympathetic and generous, within their means." Having thus absolved the Arab regimes of any blame, Dr. Davis proceeded to disprove another "misconception," namely, "that the refugee problem could and would have been settled long ago except for the conniving of unprincipled Arab politicians who have sought to hold the refugees idle." In his view, the real stumbling block to economic integration was that the great majority of refugees were not only unemployed but also unemployable owing to a lack of necessary skills: in the stagnant economy of the Arab host countries, he argued, there is no place for them and no prospect of their obtaining gainful occupation; any project for the refugees' integration is doomed in advance.

Continuing this defeatist approach in his 1961–62 Annual Report, Dr. Davis recalled "the frustrated attempts of UNRWA during its initial year in sponsoring projects to settle refugees," and expressed his "considered opinion" that such projects were bound to fail "because they have been unacceptable to the people (refugee and nonrefugee) indigenous to the region and to the governments who represent them;" UNRWA should, therefore, "not again attempt work projects designed to settle the refugees."

This considered opinion of UNRWA's head represents an outright capitulation to the position taken by governments "indigenous to the region" and to their constant sabotage of any constructive development project. Knocking the "W" out of UNRWA's name, this shift also violates the clear and definite United Nations mandate, which speaks of "economic and social rehabilitation of refugees." Precluding any effort towards the refugees' integration, UNRWA's Commissioner-General was duty bound to ask the U.N. General Assembly for reconsideration and revision of the Agency's original terms of reference. He refrained from doing so, apparently realizing that he had little chance to find support for his new line on the part of U.N. members, in particular those carrying the main burden of UNRWA's budget. But, apparently reluctant to force a showdown, those member-states have also abstained from challenging this *de facto* turnabout. It was by default rather than by assent that this reversal of UNRWA's authentic aims was permitted to become the Agency's stated policy. The only tentatively dissenting voice was that of Carl T. Rowan, a United States Deputy Assistant Secretary of State, who, on December 11, 1962, told the United Nations General Assembly's Special Political Committee that his country endorses Dr. Davis' report *pro forma* only: "My Government did not and does not associate itself with all the views expressed in the current UNRWA report."

2. INFLATED AND FRAUDULENT RELIEF ROLLS

All the refugee statistics bandied about since UNRWA came into being are based not on a census of the refugees, but on the number of never checked applications for refugee ration cards.

The original number of Arabs who had actualy left the territory of Israel in 1948–1949 was grossly misrepresented in the years that followed.

As late as November 30, 1960, Ahmed Shukairi of Saudi Arabia—now the head of the Palestine Liberation Army—told the Special Political Committee of the United Nations General Assembly that "a million human beings had had to cross into exile." Five days earlier, the representative of Lebanon, Nadim Dimechkie, told the same body that "more than one million Arabs had been expelled." He was outdone on November 29 by El Nur Ali Suleiman of Sudan, who spoke of "the expulsion of a million and a half Arabs." Prior to all these statements, on November 17, Emil Ghoury, vice chairman of the Mufti-headed Arab Higher Committee, put the figure at two million.

All these and similar figures are in the first place sheer demographic impossibilities.

The number of Arabs residing in the present territory of Israel never reached a million—to say nothing of a million and a half or two million. The latest available statistical data on Palestine's population are those submitted by the British Mandatory Power in 1946 to the Anglo-American Committee of Inquiry: these data were recognized and accepted as correct by both Arabs and Jews, as well as by United Nations agencies. A close inspection of the detailed lists, on the basis of which the British *Survey of Palestine* (Vol. 1) was drawn, establishes that on December 31, 1944, a total of 640,000 Arabs were living in the present area of Israel; the natural increase during the following 40 months, till May 1948, would amount to about 56,000, making a grand total of 696,000. Not all of them fled: some 142,000 remained; 35,000 were subsequently permitted to return to Israel to be reunited with their kin. That leaves a maximum of 519,000 refugees, who could have "crossed into exile"—to use the terminology of Ahmed Shukairi. But not only the astronomical figures advanced by Arab spokesmen, but also those submitted at various times by the UNRWA (960,000 in 1950; 916,489 in 1953; 1,174,760 as of June 30, 1962; 1,280,000 as of June 30, 1965, and 1,317,749 as of June 30, 1966), and accepted unquestioningly by the United Nations budgeting bodies, as well as by public opinion, are either guesswork or based on fraud.

The First Interim Report of the United Nations Economic Survey Mission for the Middle East, headed by Gordon R. Clapp, candidly stated in November, 1949, that "no one knows exactly how many refugees there are." Testifying three months later before the House Foreign Affairs Committee, Mr. Clapp admitted that his mission "did not undertake to count the refugees" and that "population statistics in the Middle East are tricky." Years elapsed and in 1955 Dr. Marguerite Cartwright, a sociology professor at New York's Hunter College met in Lebanon Henry R. Labouisse, then head of UNRWA, and asked him, "How close do you feel that you have come to estimating the actual number of people in the camps?" "Not very close," he confided. "In fact, we really don't have any idea. . . . We just can't get in for an accurate count." When Dr. Cartwright raised the question of an accurate count with one of the camp workers in Lebanon, his answer was: "We try to count them, but they are coming and going all the time; or we count them in Western clothes, then they return in aba and Kaffiyah, and we count the same ones again." He admitted that "fingerprinting had never been tried, nor did it seem that the counting had been taken very seriously." (Plain Speech on the Arab Refugee Problem," in Land Reborn, organ of the American Christian Palestine Committee, November-December, 1956).

This early indiscrimnate, slovenly registration was the "original sin" of the UNRWA's refugee statistics; it had a cumulative effect in the years that followed. Since then, children of alleged refugees have been automatically inflating the relief rolls and perpetuating an artificially magnified, blatantly distorted picture of the true size of the refugee population.

UNRWA's Commissioner-General acknowledged this in 1962 in a statement which appeared in the Agency's Information Paper No. 6:

"In practice, the statistical records maintained and published by the relief agencies ministering to the needs of the refugees have never purported to be more than an account of the way in which the funds entrusted to these agencies for the relief of the refugees have been disbursed and of the number of persons to whom, rightly or wrongly, rations and other relief services have been given."

Since then, the refugees have been using every imaginable stratagem and subterfuge to keep the number of those cards growing. As early as October 1950, the UNRWA Commissioner-General acknowledged that "there is reason to believe that births are always registered for ration purposes, but deaths are often, if not usually, concealed so that the family may continue to collect rations for the deceased." (United Nations Document A/1451).[1] In the years to come, every UNRWA report contained almost identically worded statements to the same effect. Stating that 1,120,000 Arabs have been receiving relief during the period July 1, 1959–June 30, 1960, the UNRWA annual report admitted:

"The above statistics are based on the Agency's registration records which do not necessarily reflect the actual refugee population owing to factors such as the high rate of unreported deaths, undetected false registration, etc."

In October 1959, UNRWA's Director Dr. John H. Davis, averred that ration rolls in Jordan alone "are believed to include 150,000 ineligibles and many persons who have died." Simultaneously, two United States Senators, Albert Gore of Tennessee and Gale W. McGee of Wyoming, who had been touring the Middle East investigating for the Senate Foreign Relations Committee and the Senate Appropriations Committee, cabled from Amman to President Eisenhower, Secretary of State Christian A. Herter, and the United Nations that, according to UNRWA's officials, fraudulent possession and use of ration cards was widespread. "Ration cards," the Senators stated, "have become chattel for sale, for rent or bargain by any Jordanian, whether refugee or not, needy or wealthy. These cards are used as security for loans from money lenders for credit from merchants almost as negotiable instruments. By mortgage, foreclosure and various other means, including concealment of dead, many have acquired large numbers of ration cards, which in turn are rented or bartered to others who unjustifiably receive (organization) rations, much of which are now in the black market."

George B. Vinson UNRWA organization Field Registration and Eligibility Officer stationed in Old Jerusalem, told the Senators that 20 to 30 per cent of rations distribution was unjustifiable. Dr. Harry Howard, United States representative on the organization's Advisory Committee confirmed this and added: "I have actually seen merchants openly weighing and buying (organization) supplies from recipients of distribution centers."

Even some Arab sources have admitted the existence of a thriving black market in ration cards. On July 23, 1955, the *Mideast Mirror*, a weekly news review published by the Arab News Agency of Cairo, wrote:

"There are refugees who hold as many as 500 UNRWA ration cards, 499 of them belonging to refugees long dead . . . They are dealers in UNRWA food and clothing and ration cards to the highest bidder . . . 'Refugee capitalists' is what UNRWA calls them."

Eleven years later (June 1966), Senator Edward M. Kennedy, Chairman of the Senate Subcommittee on Refugees, disclosed preliminary findings of his staff director George Abrams who visited Jordan, Lebanon and Egypt:

"Powerful Arab merchants holding 1,000 or more refugee ration cards may be seen collecting sacks of food supplies from UNRWA distributors in refugee camps in Jordan. He said they wield political influence to protest and block refugee rectification."

As early as 1957, the Jordan daily *Ad-Difaa* reported UNRWA's charges that cases even of forgery of ration cards have occurred. In mid-1957, UNRWA discovered that there were cases of more than one card bearing the same serial number. It notified the Jordan Ministry of Welfare and Rehabilitation of this fact and of its intention to conduct an investigation that would lead to the cancellation of the unauthorized "doubles." The answer was that the Ministry was opposed to any action designed to re-examine the refugees' ration cards or to cancel a part of them, regardless or the situation prevailing. The UNRWA leadership tacitly accepted this rebuke.

3. ABORTIVE ATTEMPTS AT RECTIFICATION AND AT FURTHER INFLATION

In August 1964, eight months after he took over the post of UNRWA's Commissioner-General, Laurence Michelmore was quoted by the Arab press as intending to implement the repeatedly announced drastic revision of the notoriously inflated rolls of ration card cardholders by removing some 100,000 names of dead persons; a clause to that effect was to be included in his forthcoming yearly report of the U.N. General Assembly. The original Arab reaction was an indignant denunciation of such a plan. Palestinian refugees in Nablus and Jenin cabled the U.S. Secretary-General, U Thant, charging that UNRWA, "inspired by the imperialist powers which created Israel," was now "turning the Palestine problem from the problem of a homeland and people into the problem of the number of refugees," a move designed to "liquidate the Palestine problem." The cables warned that the refugees would boycott the revised ration cards. Jordanian Prime Minister Bahjat al Talhouni declared in Amman that his government would oppose any "compromise on the refugees' rights." UNRWA headquarters in Beirut reacted with a brave statement that the Agency "should not go on wasting funds on issuing rations to thousands of persons who are dead or absent" and that the contemplated changes were aimed at taking rations from those who did not need them" so that they could be "given to those who did." As a specific measure, UNRWA was reported issuing instructions to buy up ration cards belonging to persons who have died or gone abroad, which were pawned with shopkeepers; if not returned, such cards would be invalidated from November, 1964.

The UNRWA Annual Reports for 1964–65 and 1965–66 averred, however, that not a single ration card holder had been removed from the rolls in Jordan, Syria or Lebanon, because the governments of these countries refused to cooperate with any attempt at verifying the eligibility for relief (in the Gaza Strip, 14,240 rations were cancelled in 1965 and the first part of 1966, and simultaneously alloted to 11,307 children on the waiting list); the total number of those receiving rations was reduced by a mere 0.5 per cent.

Apparently unperturbed by this failure, the Commissioner-General asked for a far-reaching extension of the term "refugee," which would lead to further, practically unlimited, swelling of the refugee rolls. His proposals for expanding eligibility went in three main directions: (Paragraphs 17, 19, 21, 25, 26 of the Report for 1964–65).

A. To include the so-called "Other Claimants for Relief," the inhabitants of certain border-villages *in Jordan* who lost their income (but not their homes) because of the 1948 hostilities.

B. Throughout the first sixteen years of its existence, UNRWA adhered to the principle that only those whose "normal residence" has been in Palestine for at least two years prior to the 1948 conflict were eligible for relief. Now, refugee eligibility was to be stretched to cover "persons who may have lived in Palestine in 1948, but for less than two years, or persons who previously lived in Palestine but not during the two years 1946–1948".

C. By far the most important issue raised by the new eligibility proposals is the intention to extend relief to the third generation of refugees, i.e. to the children of persons who were born after May 14, 1948, as well as to subsequent generations. "Instead of the (refugee) problem shrinking, it would go on expanding, and would be projected into the indefinite future," commented Israel's Ambassador Comay. He expressed doubt whether the contributing governments who have paid the UNRWA budget till now, would want to see their generosity as a blank-check commitment to succeeding generations.

---

[1] Footnote at end of speech.

4. A REALISTIC BREAKDOWN

In an earlier report (for the period July 1, 1963–June 30, 1964), the Commissioner-General has for the first time in the Agency's history offered an at least tentative breakdown of the percentages of refugees who are not totally destitute and who might, for that reason, be taken off the rolls entirely or have their UNRWA aid reduced.

Noting obliquely that the Arab host governments—U.A.R., Jordan, Syria, and Lebanon—and the refugees themselves have not cooperated with his efforts to obtain precise statistics on the extent of the need among the refugees, and admitting that "reliable information about the economic status of individual refugee families is hard to come by," Mr. Michelmore nevertheless found it possible to classify three categories of refugees:

1. The destitute and near destitute—40 to 50 per cent.
2. The partially self-supporting, who are still in need of some help from UNRWA—30 to 40 per cent.
3. The securely re-established—10 to 20 per cent.

In absolute figures, this break-down would mean that of the 1,280,000 Arab refugees maintained by the UNRWA to 256,000 (one-fifth) were already self-supporting last year and no longer needed UNRWA's help. The actual number of refugees in a similar position seems, however, to be considerably higher. On p. 13 of the Report for 1965/66, we read that of the 1,317,749 refugees under UNRWA's care only 861,122 were registered for rations: The remaining 456,627 apparently did not need them (their number increased by 88,943 in comparison with 367,684 of the same group mentioned in UNRWA's report for the previous year). Of the 861,122 still on relief rolls, at least 100–150 thousand are admittedly dead, absent or ineligible for ration cards (see p. 6). Thus, more than half a million among the 1,317,949 who are now paraded by the UNRWA administration as "uprooted Arab refugees" are no longer refugees in the commonly accepted sense of this term.

In the report for 1965/66, the Commissioner-General made it unmistakably clear that he has no intention of pressing further the rectification effort, is largely satisfied with the present state of affairs, and is willing to accept the position taken by the Arab host government. Mentioning that "detailed discussions of outstanding problems in relation to the ration rolls . . . have taken place between the Agency and the governments concerned." Mr. Michelmore found it necessary to put on record "his appreciation of the constructive spirit in which the host governments have approached these discussions. At the same time," he continued, "it is clear to him that, in varying degrees, the host governments had real difficulties in associating themselves with action (rectification of fraudulent ration cards) which might have the effect of disturbing the pattern of ration distribution established over so many years past." The Commissioner-General has thus fully endorsed the policy of *status quo* long advocated by the Arab governments.

Moreover, he finds the present state of affairs in Lebanon "unreasonably satisfactory," and "the registration of births and deaths among the refugee population" in Syria, "reasonably accurate and up to date." The report admits that "additional measures to confirm the presence of ration recipients in the country would be desirable," and that "little progress has been made in the efforts to ensure that rations are distributed on the basis of proven need." During the first half of 1966, UNRWA "renewed its approaches to the (Syrian) government on this matter," but "these approaches had not produced a result at the time of presenting this report." Apparently because he considers such verification only "desirable," the Commissioner-General left it at that.

He is equally complacent in regard to the situation in Jordan. The report admits that "no systematic verification" was attempted since 1953 because of "disorders in the refugee camps," and that "subsequent attempts to deal with particular elements of the problem, such as the activities of the so-called merchants, who traffic in ration cards and ration commodities and who have a vested interest in the existing inaccuracies in the rolls, have also often failed, owing to adverse reaction among the refugees."

During thirteen years, UNRWA has thus unconditionally surrendered to refugees' sabotage, instigated by the merchants' "vested interests." In the second part of 1966, prompted by the specific and clear-cut 1965 resolution of the U.N. Assembly, the Assembly, the Agency and the Jordan Government "were able to agree" on a very limited modicum of verification. But again, "shortly before submission of this report, the implementation of these measures was temporarily deferred, at the (Jordan) Government's request." The *status quo* is once more being perpetuated.

In regard to the Gaza area, the report merely makes an evidently intentionally vague reference to the "continuance" of some undefined "action among several different lines with the cooperation of the governmental authorities." No results, no matter how modest, of this "action" are even hinted at.

The true meaning of this obviously deliberate procrastination becomes clear when the Commissioner-General, "turning to broader issues," does not hesitate to announce his own concept of the policy to follow:

"The vexed problem of rectification is often based on a presumption that a clear dividing line exists between those refugees who are totally indigent and those who are totally self-supporting. The number of persons on the rolls is sometimes given exaggerated importance as a presumed index of the extent to which refugees have or have not recovered the ability to support themselves.

"The Commissioner-General feels that in order to view the problem in proper perspective it should be borne in mind that what is at issue is a meagre allowance of dry foodstuffs costing less than one dollar twenty cents a month for each refugee and providing only two-thirds of the normal intake of food of a poor person living in the Middle East.

"Although the original purposes of the rations was to keep body and soul together, they were never in fact adequate for that purpose. Now, with the passage of time and changes in economic circumstances, they have become for many of the recipients a modest economic subvention from the international community, to assist them in their struggle to support themselves and improve their economic condition."

The Commissioner-General therefore "believes that it would be misleading to attach undue importance to the number of ration recipients as an index of the dependence of the refugees on international aid."

In plain language, this latest version of UNRWA's policy means that "international aid" in the form of rations may—or should—continue indefinitely, even in regard to those who have in the meantime established themselves economically, in order to further "improve their economic conditions." The criterion of eligibility is thus completely abandoned. If endorsed—or tacitly acquiesced to—the United Nations—such a concept is bound to preclude any constructive effort of ever rehabilitating the refugees economically and making them independent.

5. THE UNITED STATES SPEAKS UP

The U.S. government is aware of this state of affairs. On July 20, 1966, Joseph J. Sisco, Assistant Secretary of State for International Organization Affairs, told the Senate subcommittee on Refugees and Escapees:

"We have been troubled for many years by irregularities in the ration rolls. We have known for a long time that rations are being drawn in the name of people who are dead, who have left the area, or who no longer require food from UNRWA. We also know that certain merchants have bought up these cards and have made a profit through the sale and exchange of UNRWA foodstuffs. . . We have sought through every practical means available to encourage UNRWA and the host governments to put an end to these abuses through a complete rectification of the relief rolls. U.N. General Assembly resolutions have at various times called for rectification. There has been over the years, a steady but slow process of rectification, and Arab officials on many occasions promised much more vigorous action in cooperation with UNRWA to remove, wholesale, from the lists those who are not truly in need. Unfortunately, these promises remain largely unfulfilled."

Even more outspoken and precise was Secretary of State Dean Rusk who told the subCommittee, in a prepared statement, that half-a-million Arab refugees now have jobs, "live reasonably normal lives" outside the camps and should be removed from UNRWA's rolls. He also stated that "the basic responsibility for helping refugees lies with the sovereign government of the country of asylum."

6. THE IMPLICATIONS

If translated into practice, such an approach would not only ease UNRWA's budgetary problem, but could also pave the way for reducing the Arab refugee problem to its realistic proportions and for its realistic solution. As things stand now, UNRWA continues to operate with admittedly inaccurate, inflated, ever-increasing refugee statistics, which obscure and distort both the scope of the problem and the possibilities of its solution. By maintaining the fiction of more than 1¼ million Arab refugees and preserving the existing pattern of distributing the ration cards, UNRWA is actually perpetuating and reinforcing collective existence of Arab refugeedom. As Dr. Don Peretz put it in the report on his 1962 study mission to the Middle East, the relief ration cards of UNRWA serve as "a token of continued identification as displaced Palestinians . . . in effect, the UNRWA ration card has become the identity card of the displaced Palestine Arab."

UNRWA thus appears as something of an overgrown umbilical cord, which is artificially keeping alive the refugees' vanishing identification with Palestine. It intensifies their feeling of apartness from their Arab kin in the host countries and impedes rather than encourages their integration in these lands. As things now stand, UNRWA, a United Nations agency which has thus far received a total of $535,397,505 of international financing, is actually defeating the purpose for which it had been established: to extend temporary philanthropic assistance to the displaced Palestinians with a view to gradually putting an end to their refugee existence. What the UNRWA leadership is now practicing and planning is just the opposite of this assignment.

7. UNRWA, FOREVER

In his 1964–65 report to the UN General Assembly, Commissioner-General Michelmore expressed his belief that in spite of the progress made in education and vocational training of the younger generation, "the large hard core of refugees will continue to live in poverty and dependence on charity for an indefinite future." He also asked for an extension of the Agency's mandate (which was to expire on June 30, 1965) "for a reasonably long period, such as five years" (p. 7). The voteless General Assembly has on February 10, 1965, by unanimous consensus, approved extension for one year only, to June 30, 1966. Later in the year, extension of UNRWA's mandate was discussed in the Assembly's Special Political Committee, where delegates of the Arab member states, while mildly critical of UNRWA's "meager aid," strongly supported a five-year extension for the Agency. For obvious tactical reasons, in the forefront of this Arab pro-UNRWA crusade were, characteristically enough, delegates of such countries which have no refugees in their territory and where UNRWA is not functioning: Adnan Tarcici of Yemen, Morocco's Younes Neckrouf, Kuwait's Rashid Abdul-Aziz al-Rashid. As against these demands, the delegate of France, Claude Arnaud, advocated the prolongation of UNRWA's mandate for three, and not five years. His proposal was later accepted by the General Assembly: UNRWA's term now runs until June 30, 1966.

UNRWA's leadership and personnel are obviously determined "to stay in business." At the hearings of the Senate Subcommittee on Refugees and Escapees in July of this year, the Committee's counsel, George Abrams, who returned from a study trip to the Near East, reported that there was "some feeling that the UNRWA is becoming a self-perpetuating body."

8. THE ROLE OF UNRWA'S ARAB STAFF

A major, too often disregarded, element in UNRWA's predictament is its own Arab administrative staff.

In the earlier stages of the Agency's existence, its executive personnel consisted mainly of non-Arab career people and technicians. Such composition was dictated by the inherently political and strongly controversial nature of the Arab refugee problem, which from its very inception became a matter of international concern and was overwhelmingly financed by the United States and other Western powers. But by December 31, 1963, the international administrative staff had been reduced from 194 to 151, plus 29 seconded and loaned from other United Nations organs: a total of 180. By December 31, 1964, only 124 permanent UNRWA employees belonging to this category remained, plus 24 on loan from other U.N. bodies—a total of 148. By the end of 1965, the Agency's permanent international staff was cut to 101. They are confined to UNRWA's headquarters in Beirut, with no access to the refugee camps, no direct contact with the refugees themselves, and no possibility whatsoever to check eligibility or registration.

All statistical records originate nearly exclusively from the "locally recruited staff," to use the terminology of the UNRWA report; the report adds that "virtually all in this category are refugees." Their number increased from 11,609 in 1962 to 11,936 by December 31, 1964. While 3,968 of that total were "paid daily" in 1962—indicating the temporary character of their employment, they were all in 1964 transferred to regular jobs and paid a monthly salary. Many of them are in positions of responsibility. Their reports on the numbers of refugees eligible for relief are subject only to a few limitations: two per cent increase, deregistration of the few refugees settled with UNRWA's financial assistance, transfer from "rations to service" register and vice versa owing to changes in UNRWA's staff employment, etc. And by far not all of them are likely to be eager to care for the accuracy of the relief count and to check the rolls scrupulously. The refugees they are supervising are violently opposed to any revision of the rolls, let alone to a genuine census, and the field workers in the camps either sympathize with this attitude or yield to the pressure of their wards. Dr. Don Peretz, wrote in his already quoted report on the study trip to the Middle East:

"The Agency employs thousands of former Palestine mandatory Arab officials, physicians, teachers, and clerks. The number of individuals in families who depend upon UNRWA for employment is approximately 50,000. They constitute a great political pressure group, especially in Jordan. No politician in any of the host countries dares to recommend abolition of their livelihood."

An authoritative confirmation of this statement offers the last report submitted by Dr. Davis before his retirement in January 1964:

"The most difficult aspect of rectification is that of removing names of persons who have become self-supporting. Certain influential refugee elements press UNRWA to halt any major effort with regard to revision of the rolls. They still suspect that UNRWA's motives for rectification are in some way connected with an effort to liquidate the refugee problem in a manner which would deny them their basic rights."

For all intents and purposes, UNRWA is now a prisoner of the vested interests of its large Arab staff,[2] to whom are being turned over ever more executive and specialized positions. Mr. Michelmore argued that the latest reduction of international management and transfer of jobs and authority to Arab functionaries, would result in administrative payroll savings, up to $200,000. But it is also bound to increase the Arab political control over the refugee mass.

UNRWA's Arab employees in charge of the refugees' local needs and interests have become their leaders and spokesmen. Under such leadership, the refugees are being indoctrinated in a spirit of uncompromising militancy and tense expectancy of imminent return to Palestine. After a visit to a 40,000 inmate refugee camp near Jerico in November 1964, where he talked to the camp leaders and listened to their solemn pronouncements that they "would accept no solution except to go back, even if the (Arab) governments agreed on a different arrangement," Samuel William Yorty, Mayor of Los Angeles, came to the conclusion that any possible solution would be feasible only on an individual basis and not through the refugees' leaders who are "consumed with hate and emotion." He felt that "their implacable attitude may be a bluff, and most of the refugees would take compensation if it is offered . . . there is, however, no way of calling the bluff except by making the offer." When Yorty suggested to the refugee leaders that the United States might one day stop its aid, they replied, "You can't, it may start a war." Yet, his feeling was that "if they are told firmly that the aid program will be phased out, the situation may change and it is possible that the attitude, particularly of the younger ones, may change."

9. BRAINWASHING THE YOUNGER GENERATION

Of the 1,317,749 Arab refugees registered with UNRWA by June 1966, over 500,000 are under 18 years of age: they were born outside of what is now Israel and have never been in Palestine; together with those who were infants during the 1948 exodus and have little, if any, firsthand recollection of that country, they constitute more than half of the refugee population. A whole new generation of former Palestinians is growing up, possessing only second-hand knowledge and spirital experience of Palestine.

And yet, UNRWA reports invariably lump them together with the older generation in the "longing to return to their homes," in the feeling that "a nation has been obliterated and a population arbitrarily deprived of its birthright . . . this injustice still festers in their minds." The report for 1964–1965, from which these sentences are quoted, refers to such refugee attitudes without any qualifications, with obvious sympathy and implied assent. It also adds that "during the past year, their (the refugees') emotions have if anything increased with the additional focus for their feelings provided by the Palestine Liberation Organization which came into being in June, 1964, (in order) . . . to consolidate the Palestine entity, and as a vanguard for the collective Arab struggle for the liberation of Palestine. Apart from the view expressed by that organization, the refugees themselves use every opportunity to stress the intensity of their aspirations and hope to return to their former homeland."

Mr. Michelmore repeated this statement, in an even stronger form, in his report for 1965–66: "As year succeeds year, there is no sign that the refugees are becoming any less embittered by their conviction that a grave injustice has been done to them."

If the above description of the refugees' attitude is correct in regard to the younger generation, it can be valid only if such emotions are also being cultivated in the UNRWA's vast educational network (139,826 in primary schools, 34,145 in secondary schools). All these institutions are manned exclusively by a refugee teaching staff, and the pupils are known to be exposed to a systematic barrage of propaganda, incitement and brainwashing. Characteristic of this system is the UNRWA-maintained school for refugee children in Beirut, where the pupils stand every morning at attention and chant the following dialogue with their leader:

"Young men!" "Aye!"

"Young men!" "Aye!"

"Palestine!" "It's our homeland!"

"To return!" "That's our aim!"

"Struggle!" "That's our history!"

"Knowledge!" "Our light!"

"Faith!" "Is our armor!"

"Sacrifice!" "Is our duty!"

"Martyrs!" "Are our people!"

"Death!" "We shall not fear!"

"Palestine." "Ours! Ours! Ours! Our Palestine, we shall not forget you! No other land is ours! Our Palestine, we swear by you, before God and history, that we shall spill our blood to get you back! Long live Palestine, and we shall live for our revenge!"

With this kind of educational conditioning, UNRWA schools are bound to be largely responsible for the younger generation's intransigence and nationalistic fervor. They offer fertile grounds for Ahmed Shukeiry's Palestine Liberation Organization (PLO). On September 30, 1966, the Reuter New Agency reported from Beirut that more than 1,000 Palestinian students boycotted classes in schools run by UNRWA; a spokesman for the students, some of whom sat in the offices of the P.L.O. explained that they demanded that UNRWA schools in Lebanon be put under supervision of Lebanese Ministry of Education in cooperation with the P.L.O. and the Directorate General of Palestine Refugee Affairs.

The United States has repeatedly urged UNRWA to identify and remove from the ration rolls the reported 8–12 thousand recruits of Shukeiry's Palestine Liberation Army (P.L.A.). The reply the State Department received, last August, was that "without cooperation from the (Arab) host governments, it would be virtually impossible for UNRWA to identify P.L.A. members."

7. THE UNITED STATES PRESSES FOR A CHANGE

The United States, both government and Congress—though to a different degree—are growing increasingly dissatisfied and impatient with the record of UNRWA, to whose budget the United States has during the period 1950–66 contributed $364,488,069, about 70 per cent of the $534,397,505 the Agency received in international financing.

Announcing in February, 1965, the U.S. contribution of $24.7 million to the UNRWA budget, the U.S. delegation to the United Nations made the pledge—for the first time—subject to the condition that the Agency's relief rolls be purged of persons currently ineligible for rations and that funds as-

---

Footnote at end of speech.

signed for education or health purposes be not diverted to the relief services budget. The same year, the Administration proposed to reduce U.S. contribution in foodstuffs by $1 million; in addition Congress slashed the country's cash contribution by $800,000; the total contribution was thus reduced from $24.7 million to $22.9 million for the fiscal year 1966. Then, in June, 1966, the House Committee on Foreign Affairs, continuing last year's program of gradual retrenchment, voted to cut the U.S. contribution to UNRWA by five per cent; subsequently, the House slashed $700,000 from the proposed $22.9 million allocation for UNRWA.

Testifying on July 20, 1966, before the Senate Subcommittee on Refugees and Escapees, chaired by Senator Edward M. Kennedy, Joseph J. Sisco, Assistant Secretary of State for International Organization Affairs, declared however, that the Administration was opposed to this latter, additional cut, and expressed the hope that it will not be adopted: "We believe that this cut, coming on top of last year's reduction, might well result in some undesirable cuts in health service and education. If the Commissioner-General has to choose between food for the stomach and food for the mind, he must choose the former."

Apparently to meet this objection, the chairman of the Sub-Committee, suggested that the controversial amount of $700,000 be used to build a vocational training school for the refugees to be operated by one of the four Arab host governments; his proposal, he said, would be consistent with the United States government's continuing efforts to induce the host governments to undertake more responsibility for the refugees' needs. Mr. Sisco told the Subcommittee that he was in general agreement with the Kennedy proposal and would give it study.

The House of Representatives has already in August, 1965, devoted four successive sessions to a critical scrutiny of U.S. policy in the Near East, paying considerable attention to the work of UNRWA.

Representative Frank J. Horton called on UNRWA to concentrate its program on works rather than relief: "We can aim our aid at constructive development of abilities rather than burdening support of what is, in actuality, a manifestation of Arab aggression." Representative William F. Ryan bluntly said that "the Arab refugees do not need relief from the U.N. or the Arab states: they need an opportunity to work; it is the shame of the Arab States that they have not received it." Representative James Roosevelt, who spoke four times in the debate, called for the establishment of an international committee by the United Nations to supervise the gradual transfer of UNRWA activities to the Arab government and insisted that the U.S. contribution to UNRWA should not be wasted on refugees who are partially absorbed or dead, or on those who are being conscripted to fight in a Palestine Liberation War." Representative Leonard Farbstein urged that the United States gradually "phase out" her contribution to UNRWA, with greater emphasis on vocational training and education. At an earlier (June 7th) session of the House, Mr. Farbstein urged that "Congress instruct appropriate officials in Washington to insist that a current census of Arab refugees should be taken by the United Nations." He also introduced legislation which "would make U.S. contributions to UNRWA dependent upon the gradual transfer of responsibility for refugee and refugee camps from UNRWA to the (Arab) host countries . . . The U.S. contributions will be turned over to UNRWA as usual, but UNRWA, in turn, will distribute yearly appropriations to the governments of all the host countries for the actual management of refugee relief. With the contributions will also go the responsibilities for fiscal accountability and for the progress of the integretion of the refugees into the respective economic life of the host countries . . . Transfer is a *sine qua non* to a constructive settlement of the refugee problem . . . Once immediate responsibility for the refugees is transferred to Arab administrations, much of the psychological and emotional obstacles to (the refugees') integration will be removed. Winding up of UNRWA's direct management and responsibility will gradually put an end to incitement and illusion and a dangerous political irredentism."

Feeding the Palestine Liberation Army

In the face of the U.S. Government, the U.S. delegation to the U.N. repeated protests against UNRWA's failure to remove the refugee-soldiers from UN ration rolls, and particularly of the Congress amendment to the Foreign Assistance Act forbidding the use of any part of $22 million U.S. contribution to the UNRWA budget for rations for the PLA,[3] the embarrassed Commissioner-General took recourse to a cunning device to circumvent the unequivocal ban. We read in his report for 1965–66:

"Doubts have been expressed by some governments about the propriety of the Agency's isuing rations which may be consumed by young men in military training under the auspices of the Palestine Liberation Organization. The host countries do not consider these doubts well-founded. In the light of these differences, arrangements have been made for special added donations to the amount of $150,000 which meets the cost of any rations consumed by the young men in question.

"The Commissioner-General is satisfied that these arrangements provide a practical means of disposing of the problem in so far as the Agency is concerned."

"Contributors to UNRWA, who may have been concerned about this matter, may thus be assured by the Agency that their contributions will not be used to furnish assistance to refugees receiving military training under the auspices of the Palestine Liberation Organization."

This statement did not indicate who was putting up the $150,000. But the Jordan daily *Falastin*-(October 16, 1966) revealed that the money came from Egypt, whose Foreign Minister, Mahmond Riad, on October 13, 1966 appealed to "all peace-loving nations . . . to give their support to the Palestine Liberation Organization," the parent-body of the Palestine Liberation Army.

Whatever the source of the "special added donations," the Commissioner-General has made it clear that the monies are being channeled through UNRWA in the form of rations. Mr. Michelmore's new stratagem is nothing more than window dressing. For UNRWA will remain in the same position of administering relief to members of a para-military body whose declared aim is armed aggression against, and destruction of a UN member state. Technically, UNRWA "may be carrying out the letter of the law voted by Congress,"[4] commented *Near East Report* (October 18, 1966).

"But the procedure is unprincipled and repugnant to the intent. Incredible, a UN agency is raising money to feed guerrillas being trained for war against a UN member. UNRWA will not merit confidence or support unless it insists on a complete recheck of the Palestine Arab refugees which, once and for all, will eliminate the dead, the departed and the would-be killers." Any setup which continues providing rations to soldier refugees flies in the face of the very principle on the basis of which the Agency was established.

The manner in which the United Nations and the Western Powers, who had been financing UNRWA's activities deal with this flagrant violation of the UN Charter under which UNRWA's mandate exists, will show whether they are really determined to prevent the rising tension in the Middle East. For eighteen years those Powers have been paying the piper; now the time has come to call the tune.

Footnotes at end of speech.

[1] Between July 1950 and June 1966, a total of 570,785 births and only 112,275 deaths have been registered with UNRWA: a unique, utterly unbelievable ratio.

[2] It is also a very costly and demanding staff. In August 1965, UNRWA employees in Lebanon, who since 1960 had received a 7.7 per cent raise, amounting to about $525,000 a year, went on strike for higher pay, which would amount to another $400,000. A spokesman for the Agency stated that it had a deficit of $2 million in 1964 and 1965, was expecting a $3 million deficit next year, and cannot afford the pay raise: "We must consider that every dollar that goes to the staff is one dollar less to the refugees, whom, after all, this Agency was established for."

[3] The British government has also protested against the misuse of UNRWA funds.

[4] A subsection of the Foreign Assistance Act approved by the Congress and signed by the President, reads: "No contributions under this subsection shall be made except on the condition that the United Nations Relief and Works Agency take all possible measures to assure that no part of the United States contribution shall be used to furnish assistance to any refugee who is receiving military training as a member of the so-called Palestine Liberation Army."

Dr. Glenn T. Seaborg, University of Miami Commencement Speaker

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. FASCELL. Mr. Speaker, recently Dr. Glenn T. Seaborg, Chairman of the Atomic Energy Commission, delivered the commencement address at the University of Miami in Coral Gables.

In a world where so many are engulfed by revolution, cynicism, and turmoil, Dr. Seaborg's remarks offer an enlightening and optimistic outlook for the future. His confidence in today's youth and tomorrow's leaders gives encouragement to those who might doubt the outcome of our changing world.

The address follows:

YOUTH—A VOTE OF CONFIDENCE

(Commencement address by Dr. Glenn T. Seaborg, Chairman, U.S. Atomic Energy Commission, at the University of Miami, Coral Gables, Fla., January 27, 1967)

As a former Chancellor of the University of California at Berkeley, I can tell you how pleased I am to be speaking at the University of Miami. When President Stanford was kind enough to invite me to be your Commencement speaker today he promised me that the faculty, parents and friends of the graduates would be the only "non-students" present. And I promised to refer to them more discreetly as "former students."

I think it is still somewhat of an honor to be a Californian invited to speak in Florida. As I recall, it was not too long ago that these states carried on quite a rivalry. In those competitive years it was claimed that someone from California could not survive the severe Florida climate more than 24 hours and vice versa. Today, of course, we know that a few Californians have managed to get through a winter or two here. And there are rumors of some Floridians now living on the West Coast—of the U.S., that is.

My own visit here is complicated by the fact that I come via Washington, D.C., a town whose people and pronouncements occasionally provoke a bit of controversy. Actually, what I have to say today may provoke some controversy—but not from the graduates. I hope they will interpret my remarks for what they are intended—a vote of confidence.

As some of you may have seen in a cover story done by a major magazine last summer, my generation—that is, everyone older than Jack Benny—has been named the "Command Generation." Now, that's a very impressive title, and one would imagine that the cover picture which accompanied that story would have been a picture of the President or perhaps one of our military leaders or captains of industry. But as I remember, it was a picture of Lauren Bacall. The point of the article, however, was not to prove that women are taking over, but only that those of us in the 40 through 60 age group—women included—were still the country's leaders in most fields of endeavor.

I bring up this article—which I'm sure was excellent therapy for many of us here—because what it did not say, as well as what it said, bears an important message for all of us here. What it did say, among other things, was that middle-age was a time of success and accomplishment, that the middle-aged were the leaders, the decision-makers, the high-earners of the country, and so on. It named astronauts and artists, senators and salesmen, engineers and executives, and even some Nobel Prize winners—all at their prime between 40 and 60. What it did not say, and what I would like to emphasize today, is how these people achieved their success. They arrived at their current status not merely by aging but because they were exceptional in their special fields—and particularly so in their youth. It was the attributes of youth—the energy, the questioning and open mind, the drive and deterination—all combined with their specific talents which brought these people to their positions of power and prestige in middle-age. In many cases their greatest accomplishments took place in their younger years and launched them on the road to an easier success later.

As a sort of footnote here let me add that the magazine which devoted its cover story to the Command Generation just recently did a cover story on the generation under twenty-five. Referring to you as the "Now Generation," they collectively named you—girls included—"Man of the Year." The article, incidentally, did more than give equal time to, or placate, the publication's young subscribers; it was strongly flattering of today's youth. But let me return to my original thought about the evolution of the "Now Generation" into the "Command Generation."

I know from my own experience that the young years are extremely productive years, and I am inclined to agree with Benjamin Disraeli's statement that "Almost everything that is great has been done by youth." Let me back this up with a few examples in history: Alexander the Great ruled Macedonia at 20 and the civilized world at 27. By the age of 26 Michelangelo had sculptured the famous Pietá. Pascal had written a book on geometry by 16 and invented an adding machine at 19. When he was 27 Charles Darwin began the observations which led to his theory of evolution. At age 21 Michael Faraday started the electro-magnetic work which led to his invention of the electric motor. James Watt patented the first practical steam engine at the ripe old age of 33. Einstein began work on his theory of relativity at 26. Alexander Graham Bell patented the first telephone at 29. The Wright Brothers initiated their aircraft experiments in their 20's. And if you're still not convinced—Mozart completed his first symphony at the age of 8. The full list is, of course, much longer and more impressive. It also includes accomplishments of the youth of today.

For a moment let me present some statistics on the position of youth in the world today. I think they are enlightening. Numerically, youth dominates the scene. While one-fifth of the population is between 40 and 60 years of age, over one-half is under 25. There are about 25 million teen-agers in the country today. By the mid-1970's more than two-thirds, and perhaps three-fourths, of the U.S. population will be under 35. And on a worldwide basis it is forecast that, by 1986, 35 per cent of all the people alive will be less than 15 years old. (It is also interesting to note—and certainly thought-provoking—that China today has more children under ten than the entire population of the Soviet Union.)

Now all these statistics on youth bear more significance than just promising a great market for transistor radios, surfboards and miniskirts. I think they point out, among other things, that "the *young* shall inherit the Earth." And with it they are going to inherit a world of both enormous problems and incredible possibilities. Furthermore, I believe that it is today's "Pre-Command Generation"—those of you now in the 20 to 40 year group—who will, before the end of this century, determine the course of human history perhaps for centuries to come. You may argue that every new generation determines the course of history as it comes of age, but this younger generation is in a very special position. You have arrived on the scene at a time when the Scientific Revolution of the past few decades—forged under the current Command Generation—is effecting the rapid evolution of a truly global civilization. And because of this you are inheriting the Earth morally as well as physically. For as Marshall McLuhan has often pointed out, in this electronic age we are developing a global consciousness. And he questions, "Can we possibly have a global consciousness without also developing a conscience?" I think it is clear today that we are well on our way to having both.

Perhaps it is this fact which heightens so much of today's differences between the younger and the older generations—differences which basically have always arisen between youth and their elders but which are so sharply in focus today. While those of us in the Command Generation feel we are struggling to narrow the gap between our ideals and the harsh realities of the world we experience every day, younger people want only the best of all possible worlds—and they want it now. Seeing more clearly than ever the world as it is, and the world as it should be and could be, rubs raw the impatience of youth. And your reactions disturb, anger, puzzle and exasperate many older people.

But if one has the imagination to project himself into your position, it is not difficult to imagine the feelings that many of you young people share. You are being asked to enter this world of developing global consciousness and conscience, of immense new physical possibilities confined by barriers of social inertia, of affluence existing adjacent to poverty, of knowledge and concern amid ignorance and indifference, of political turmoil and philosophical upheaval, of all this tossing about on a sea of change. You feel the urgent need for coping with this, for working to bring order from apparent chaos, to control and direct the tide of change. The whole thing cries out for action—meaningful action.

Yet there seems to be little opportunity for it—especially for you. Change seems to be made through the Establishment, the Power Structure, the Command Generation—and there are less flattering names—but they do not seem to listen to you. They only ask that you lean all there is to know (and today that's far more than they ever learned in school), join the rank and file and work toward goals you have not set and perpetuate values you wish changed. Unfortunately, if you believe all this, it is only a few steps further to being convinced that no meaningful participation is possible and that a psychedelic experience has more meaning than those experiences in the world of reality. Fortunately, most of you do not go this far, but recognizes that the real world still holds some excitement and purpose worth pursuing.

On the other hand, many of you feel the necessity to go still another route. Feeling powerless as individuals, but not about to retreat, you turn to group action. I will not go into details on the pros and cons of this. Naturally, much good can be accomplished in a democratic society by concerted action. And such action carried out in a responsible and constructive fashion should be encouraged. But I, for one, believe that most accomplishments of youth throughout the ages have come from the attributes of youth being applied through the individual. Perhaps in a free society the qualities which characterize youth become more productive when expressed through individual efforts. Let me spend a minute or two examining some of these qualities, because they are your greatest assets and they should be recognized and encouraged to the fullest.

The first one that comes to mind is sheer energy. I have occasion to speak about the usefulness of nuclear and other energy resources almost every day. And in this country we are all inclined to think of mechanical power as doing most of our work—which physically it does. But in a broader sense human energy is still the most productive force in the world and youth has most of it. Nothing is needed more today than the stamina and determination to see a difficult job through, to generate new ideas and find acceptance for them, to rebuild, renew and revitalize places, organizations and people, and to battle ignorance and injustice. All this is an endlessly wearing and enervating task demanding the vitality of youth.

In addition to physical energy, youth has the emotional energy—the ardor—to keep things moving. If I may use a somewhat mixed metaphor, of which I'm sure Marshall McLuhan would disapprove, youth is a hot item in a cool world. The cool world resists change—particularly social and cultural change. It tends to support the status quo, to perpetuate old institutions, to resist new ideas, and it takes a "show me" attitude, if it is willing to listen at all. But youth is restless and easily bored. It looks for and thrives on change. And change—rapid change—is the order of the day.

I often speak of this change and our new awareness of it. But the other day I was reminded that to some extent the forces of change have been recognized throughout the ages. In fact, some years ago Nicholas Murray Butler (the former president of Columbia University) stated that, at some time in the Garden of Eden, Adam must have paused and said, "Eve, we are living in a period of transition." But they were a young couple so I'm sure they looked forward to this change—even though it involved some temporary hardships.

But change today is different. It is rapid to the point of being "explosive." And it produces crisis after crisis because its effects are disruptive to old habits and traditional, highly-ingrained thinking. Today's rapid change may be painful to many of us, but it is necessary. Most importantly, it is necessary to deal with it effectively—to recognize it, to control and direct it and, above all, to use it to shape the future toward human goals. We have an unprecedented opportunity to do this today, but it is essential that we give great thought to and reach some agreement on those goals, and that we have determination, the staying power, the "guts" to follow through on our beliefs.

There is a vast gap between expressing dissatisfaction and impatience with the way things are going and taking the positive, well-planned action toward constructive change.

In dealing with change youth has a decided advantage. It produces and accepts change more readily because of two things. The first is it has less fear of failure and therefore is more willing to take risk. The world is filled with people who say "It can't be done," and they will give you many reasons, even from their own experience, why it can't. But young people, not having the benefit of that experience, are willing to try for themselves. And if they have the knowledge and skill to go with their courage—perhaps fool-hardiness—and stamina, they may succeed where others have failed.

At this point I must stress the knowledge and skill aspect because these days they make a bigger difference in the margin between success and failure. Last September, in speaking at Rutgers University, Vice President Humphrey made what I feel is a very cogent statement when he said: "The world is filled with the noise and clash of opinion. It is woefully shy of dependable knowledge." So I would not play up courage at the expense of knowledge. It takes both to do the job.

Another factor which gives youth an advantage in producing and working with change is the ability to innovate, to use imagination and a fresh outlook. Oscar Wilde is credited with having said, "In America, the young are always ready to give those who are older than themselves the full benefit of their inexperience." While there may be some truth in this, I think it is for the very reason that the young in America are not afraid to speak up that we have progressed so far. For, aside from the lesser fear of failure which I mentioned before, there is a freshness of outlook which is still present in the inexperienced. And sometimes it is this very quality which allows the imagination and intuition to produce a breakthrough.

In listening recently to an old recording of a lecture given in the early 1930's by Lord Rutherford, one of the founders of nuclear physics, I was struck by a particular phrase he used. In discussing details of the nucleus of the atom, of which so little was known at that time, he said, ". . . but we can look at it with the eye of imagination." "*The eye of imagination*"—this is something which youth is more apt to have and which it should try to retain and make the most of. The world can always use more people who think and act creatively and who can keep that creativity alive as they grow in knowledge and experience. These are the people who contribute the most to society and, I believe, also have the most rewarding lives. They are the ones who stay alive, in the fullest sense, as long as they live.

There is one final element in which most young people today are not lacking and which is so important. In the most old-fashioned and perhaps "squarest" sense, it would be called "brotherly love." Today it is more often referred to simply as "human concern." Whatever we call it, it is the most vital element in human nature and especially today when man is becoming so powerful through his science and technology. If science and technology amplify the power of man, then certainly concern should focus that power on the most human and humane goals. I think most of today's youth have that concern and are determined to keep it alive and growing.

Admittedly, these are trying times for anyone who wants to maintain a high ethical standard. As John W. Gardner has written in his book "Self-Renewal": "One difficulty is that man's moral aspirations rise more rapidly than his performance. Given relatively modest advances in the justice and decency of human life, he is soon dreaming that he can fashion a perfectly just and decent world. And this is a conviction that is certain to bring some measure of disillusionment."

I hope that, on this important day for you, you will rise above any disillusionment or doubts you may have about the state of the world and the state of man, and turn every fiber of your being toward helping shape them toward your ideals. If ever there was a time to act positively and constructively toward those ideals, to which so many give lip service but fail to act, it is now—and you are the "Now Generation."

Today's "Command Generation" feels the hot breath of youth on the back of its neck. But it is not altogether an uncomfortable feeling. In a way it is good to know you're right behind us. And when the time comes—and it is almost at hand—I have a feeling you will do as good a job as you think you can—perhaps even better.

We in the Farming Profession Need Help

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MICHEL. Mr. Speaker, under unanimous consent, I include in the Record at this point a very eloquent letter I just received from one of the farmers in my district. His is not one of the largest farms in my district, but it is not one of the smallest, either, and he is justifiably concerned about the present state of farming. President Johnson and his Secretary of Agriculture must heed this man's plea, which is the plea of so many of our farmers today: "We in the farming profession need help before there is no longer a farming profession."

The letter referred to follows:

Brimfield, Ill.,
January 24, 1967.

Representative Robert Michel,
House of Representatives,
Washington, D.C.

Dear Congressman: In his "State of the Union" address President Johnson told us he wants to have the farmers work hard to produce enough to feed the hungry of the world. What incentive are we farmers going to get for all this work? It certainly is not in the form of cash profit now. Since 1960 the price received for the sale of wheat has decreased from $2.15 to about $1.60. How could this be possible when in 1960 there was a huge surplus of wheat, and now we are asked to produce more because the supply will hardly meet the demand? We are living in an economy that is based on supply and demand which should mean that next year, since we are to produce a greater supply of wheat, the price will continue to go down. What are you in Congress going to do about our wheat price? I am sure I am not alone in feeling that the price must go up if I am going to produce *any* (not *more*) wheat.

In addition to grain I also produce milk. I am not the biggest, nor yet the smallest milk producer (500 to 1000 pounds a day). It is true that last October and November the price was raised in order to hold the dairymen in the barn instead of in the factory. Then the Federal Milk Marketing Order was passed for our area and now the price has started its downward trend. The feed price, supplies price, machinery price, even breeding fees have been raised; the only thing that has not gone up is the wage of the farmer and his family, because we can't strike against ourselves for a higher salary. If it is true that there is such a shortage of milk that we read about in the newspapers and magazines, it seems to me the first place to look for an increase in production is to the *American* farmer. Why can't the imported dairy products be kept out by an increase in tariff, so that they will not be in competition with our products and our farmers will have a fighting chance?

President Johnson seems to really be out to get the farmer. It was last year that he put the ax to the hog price, by his order to cancel purchase of pork for fighting men. When is the president going to cancel the order for war machinery, because that price was raised by many dollars not just a few cents a pound?

I am located just 20 miles from Peoria, and I can see the farmers leaving the farm for the factory and the high wages of industry. Many of these are not going to come back to the farming way of life. Those of us who would prefer to stay in farming will have to have some assurance that we are going to be able to afford to gamble with our investment and risk bankruptcy in order to continue in farming and expand in production of livestock and grain. It takes only a small change in the market price of beef to make the step from profit to bankruptcy for those who buy feeder cattle. It takes only a small drop in the price of milk to break those who have made a large investment in automatic feeding systems or dairy cattle to improve or increase their herd. How can the current grain prices justify the investment in the new, big, labor-saving machinery. We in the farming profession need help before there is no longer a farming profession.

Sincerely,

Orville L. Ziemer.

New Man on the Hill

EXTENSION OF REMARKS

OF

HON. JOHN N. ERLENBORN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. ERLENBORN. Mr. Speaker, on Thursday, January 26, 1967, an excellent article concerning my good friend and colleague, Tom Railsback, appeared in the Wall Street Journal. I submit the story herewith, believing that it bears reading by all:

New Man of the Hill

A Freshman in Congress Finds First Days Are Confused and Hectic—Representative Railsback Finds Staff, Housing, Social Worries Take Time From Big Issues—Rented Tux and Missing Files

(By Joseph W. Sullivan,

(Staff Reporter of the Wall Street Journal)

Washington.—The Congressman drives away from his new home in Washington's fashionable Cleveland Park section and sets our for the Capitol four miles away. But after missing a parkway turnoff in the morning traffic rush, he finds himself routed inextricably over a Potomac River bridge toward northern Virginia.

At his office, meantime, an aide goes hunting for some file folders in the Capitol stationery room and gets caught in a two-hour waiting line, while a big stack of mail from constituents goes unsorted. The office phones don't work, and incoming calls are routed to another Congressional office where they're greeted less than cordially.

To Rep. Thomas F. Railsback of Illinois, it wasn't quite how he had imagined his first day on the job in Washington as one of the 48 new Republicans who took House seats for the first time this month. "I'd been determined to get off to a fast start," he says with a grimace, "but even after I finally made it to the office, I still found myself rattling around quite a bit. There was so much to be done I hardly knew where to begin."

Such slipups and slippages of course, can be part of any newcomer's initiation to Congress. Actually, the eager, 34-year-old Mr. Railsback appears thus far to have avoided various graver pitfalls that will surely snare at least some of his freshman colleagues. For besides mastering the Washington traffic and Capitol Hill logistics, the first-term lawmaker must quickly come to grips with a host of other organizational problems whose handling may have far more bearing on his reelection chances than how he votes on legislation.

Prickly decisions on staffing, equipping and giving direction to his office, the development of communications lines back to the home folks, as well as sometimes-vexing personal and family adjustments to a new environment, all demand attention more urgently than any national and world problems.

LIKE STARTING NEW BUSINESS

Indeed, to many who've gone through it, setting up shop as a Congressman finds its closest parallel not anywhere in Government but in the launching of a diversified new business venture—by a stranger to the community. With a staff of 10 (no more than one of whom will deal in legislation) and an annual payroll in excess of $100,000, even the lowest-ranking House member's office is bigger than many a small business. Its mail volume, often exceeding 200 pieces daily, approaches that of some small mail-order houses. As for the Congressman himself, competing demands for his attention probably rival those imposed on nearly any corporate chief executive.

"I've been wearing at least a dozen hats these first few days," Mr. Railsback broods, midway through a working Saturday lunch in a Capitol basement cafeteria. "One minute I'm a personnel man sizing up job applicants; then I'm the comptroller trying to figure how to use all our office allowances; then it's playing systems engineer to devise a routing and filing system for constituent aid requests, or working with my district newspapers, radio or TV stations on how to handle news releases. I came to Washington thinking of myself as a Midwestern lawyer concerned about his Government, but I'm coming to realize that I've assumed a new career as a full-time politician. . . . It's a hard thing to get used to."

As Mr. Railsback readily concedes, neither his experience as a trial lawyer in his home town of Moline nor his four years in the Illinois legislature have fully prepared him for many of the roles he's now assuming. Nor were the lanky Congressional newcomer and his brunette wife, Pat, fully braced for the leap from living in Moline (1960 pop.: 42,705) to living in Washington (1960 pop.: 763,956).

"SHOWED US A SHANTY"

Pat's initial dreams of renting an antique-filled townhouse in Washington's picturesque Georgetown section soon were punctured. "For the $300 a month we'd told ourselves we'd probably have to pay, they showed us a shanty that ought to be condemned," she says indignantly. But after a week of searching through the city and far out into its Virginia and Maryland suburbs, Mrs. Railsback and the Congressman, whose pay is $30,000 a year, failed to turn up anything acceptable in their price range to accommodate themselves and their two daughters.

With exhausted resignation, they finally took their Cleveland Park dwelling sight unseen and at the $400 monthly rent being asked. It comes within one bedroom, a recreation area and a half-bath of matching their Moline home, which they want to hold onto "at least until after the 1968 elections." "With a lot of luck," the Congressman says, "I may be able to rent the Moline house for $100 a month to make up some of the difference."

Sudden invitations—to escort the Mexican ambassador and his wife to a dinner hosted by Moline-based Deere & Co. and to attend a birthday reception for Sen. Everett Dirksen—caught the young couple unawares and Mr. Railsback without formal attire. The hastily rented tuxedo he procured soon will be supplanted by a permanent addition to his wardrobe, but mixing with the diplomatic set still comes awkwardly.

There's plenty of less formal hospitality shown the newcomer during daylight hours, too. Reception-briefings held by various Federal officials and "get acquainted" sessions with Washington's corps of lobbyists could often fill a freshman's entire daily schedule if he let them. One day last week, Mr. Railsback managed to squeeze in four such affairs: A breakfast gathering with the Veterans Administration brass, an afternoon State Department reception at which Secretary of State Dean Rusk answered questions for two hours, then a welcome over cocktails from AFL–CIO President George Meany, and finally a cocktail-buffet gathering with newsmen, which the Republican Congressional Campaign Committee sponsored.

While no right-thinking young lawmaker would admit to being easily influenced, the first personal contacts with a Cabinet member or other high official often can make for warmer relationships. "I still have doubts about our Vietnam policy, but my personal respect for Dean Rusk went up quite a bit at that reception," says Mr. Railsback. "He was very charming, often very witty, and gave some straightforward answers to a number of hostile questions."

The Railsbacks' adjustment to capital life undoubtedly would be much harder if it weren't for the help of older hands. To help the new Congressman's wife get oriented, she has been assigned a "big sister"—Elsie Springer, the wife of a fellow Illinois Republican, eight-term Rep. William Springer. Among other useful nuggets of advice, Mrs. Springer assured Mrs. Railsback that a fancy cocktail dress would suffice for most evening social occasions here; a formal gown would not be necessary.

WINNING PROJECTS, WATERING PLANTS

To furnish guidelines for running the Congressman's office, another Illinois GOP colleague, Rep. Paul Findley, provided a copy of an intimate 50-page handbook of Findley office techniques. Besides detailing the responsibilities of every office aide, both for pursuing savory Federal aid projects and attending to such minutiae as watering the office flowerpots, the manual prescribes responses to ticklish situations: Just whose phone calls should or shouldn't be put through to the Congressman when he busy; exactly what to say in the congratulatory or sympathy note sent to constituents upon announcement of a birth, death, marriage, illness, graduation or civic honor in their families. Mr. Railsback also got a thicker how-to-do-it guidebook prepared by the American Political Science Association, along with lots of off-the-cuff advice from other Illinois lawnmakers.

While Mr. Railsback credits all his counselors with getting him on the track, he's finding it often takes a Solomon to put the many principles into practice. And when it comes to detailed operating procedures, he's not so sure he needs any more advice. "I'm afraid that here in Congress like everywhere else, the more helpful hints you get, the more likely they are to contradict each other," he ruefully oberves.

Take the assembling of an office staff, for instance. Acquisition of at least one top-flight secretary who knows the ropes on Capitol Hill is universally rated as a must for any Congressional newcomer. There's also widespread agreement on her prime attributes: She should be a take-charge type who'll keep the office humming, fight hard on behalf of constituents who tangle with the Federal bureaucracy and protect her neophyte boss from bureaucratic ruses, crank callers and the like. But the freshman likely will be admonished in the next breath to guard against hiring a "dragon lady" type. Some have been known to intimidate entire office staffs and even Congressmen.

Loyalty to the boss is considered a prime requisite in Congressional staffers. But among the two-score job applicants who sought out Mr. Railsback were the top male aide of two senior House Republicans, whose staffs were seeking to defect en masse. As the first aspirant for a key post as press-relation assistant, moreover, the relatively conservative Illinois Republican drew an aide from the office of Democratic Rep. Don Edwards of California, who is national chairman of the very liberal Americans for Democratic Action.

"For a time, my impulse was to administer a sworn loyalty oath to everyone I hired. But after satisfying myself about their backgrounds, I finally decided that an oath wouldn't really prove much," he says.

Amid conflicting advice, Rep. Railsback found himself in a quandary as to where to concentrate his legislative efforts. As a result, he made no strong pitch for assignment to any particular one of the House's 20 standing committees. (By contrast, one victorious Michigan Congressman called House Republican Leader Ford at 3 a.m. on election night last November to bid for a seat on the Labor Committee.) Despite his restrained approach, Mr. Railsback landed a prime assignment for any lawyer in Congress: Membership on the Judiciary Committee.

Even in the design of an office filing system, the newcomer may find the advice of seasoned hands conflicting. Everyone agrees that good files are vital in keeping track of the thousands of individual and community aid requests whose successful prosecution may spell the difference between a Congressman's reelection and enforced retirement. ("When Mr. Bigstick in the community calls about the status of his urban renewal project, you've got to have the file on it under the boss's nose in a matter of seconds and no excuses," observes one Capitol veteran.)

But the General Services Administration, Washington's official arbiter on such matters, advocates one filing system and the American Political Science Association's office handbook a radically different one. If the fledgling lawmaker wavers between the two, he may be digging himself a paper grave.

OUT WENT THE FILMS

Complicating the filing picture is the fact that it's one area where Congressional courtesy is sorely lacking. When Mr. Railsback took over Illinois' 19th Congressional district seat this month, not a single file went with it. No matter how urgent is, say, a constituent's appeal for admission to a veterans' hospital, all Congressional records of it departed along with Mr. Railsback's Democratic predecessor, Gale Schisler. Ditto for all status reports on Federal grant and loan applications pending in the district.

"When I first came in two years ago, I thought the files ought to go with the office, too," ex-Rep. Schisler recalls. "But I had to come in cold, and I'm damned if I'm going to give Railsback a big head-start when I may be running against him again in 1968."

However, Mr. Railsback in another respect is more fortunate than some newcomers in Congress. He found a desk in his office in the Longworth House Office Building; some freshmen discovered their offices lacked desks because departing Congressmen were allowed to take them.

Any similarities between a Congressman's operations and a private business end, of course, when it comes to paying the bills. An elaborate assortment of expense allowances permits Mr. Railsback and his colleagues to get reimbursed for their outlays (up to various dollar ceilings) straight from the Federal Treasury.

In addition to staff payroll funds and unlimited free mailing privileges, there are telegraph and long-distance telephone allowances that many members say are worth $50,000 or more a year to them, a $2,400 annual allotment for office supplies, $2,500 for special office equipment on top of standard furnishings and typewriters, plus six paid trips yearly back to the home district for the member or an aide, and numerous other prerequisites.

FINDING "NEW WRINKLE"

"I've gone over and over the formal list of services, but each new reading invariably brings out some new wrinkle or dimension that I'd missed before," Mr. Railsback says. One recent discovery: That a free envelope-stuffing, sealing and addressing service provided for all lawmakers may well be worth more than all the dollar allowances combined, save for payroll funds. With a full-time staff of 115, this Congressional "folding room" does nothing but channel members' newsletters, questionnaires and the like back to their districts—often in lots of 100,000 or more.

One reason why the young Illinoisan may still be missing things is the fact that some of the services available aren't listed on any formal roster. It may take a year or more, for instance, before many members get word of the Army Map Service's informal offer to furnish $50 a year worth of free maps. Some Congressional offices claim, moreover, to have discovered that the production of large campaign-poster pictures of the Congressman fits into the Army's broad definition of mapmaking.

Vietnam and Veterans: War Builds Pressure To Lift Benefits for All Former Servicemen

EXTENSION OF REMARKS

OF

HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. ROUDEBUSH. Mr. Speaker, with America once again involved in a major war, the question of veterans' affairs becomes increasingly important to Congress.

The Wall Street Journal has published an excellent article on this subject which I commend to all Members. The article follows:

[From the Wall Street Journal, Jan. 18, 1967]

VIETNAM AND VETERANS: WAR BUILDS PRESSURE TO LIFT BENEFITS FOR ALL FORMER SERVICEMEN—BILL MAY ADD 10 PERCENT TO ANNUAL $2 BILLION PENSION COST—JOHNSON FAVORS RESTRAINT—"FIRE BROADSIDE," SAYS VFW

(By Jonathan Spivak, staff reporter of the Wall Street Journal)

WASHINGTON.—The war in Vietnam is producing powerful political pressures for a substantial increase in benefits for veterans generally, not just Vietnam returnees.

Lawmakers and the influencial veterans lobbies already are primed to pass a new pension bill, raising regular monthly payments to nearly two million veterans of former wars all the way back to the Spanish-American—or to their dependents. These pensions, which can go to veterans of any age who served in the Korean or earlier wars, are based on financial need and non-service-connected disability such as loss of hearing; they're separate from other payments based only on disabling service injuries such as loss of a leg in battle. The best guess is that the planned measure could raise Uncle Sam's $2 billion-a-year veterans pension cost by as much as 10%.

For those who have served more recently, there's strong sentiment to increase the monthly schooling allowances offered under the 1966-enacted Veterans Readjustment Benefits Act, the so-called Cold War GI Bill. These allotments, ranging from $100 to $150 a month, are 10% lower than those that were offered to Korean War veterans, though education costs are said to have increased about one-third since then.

BRINGING IN VIETNAM VETERANS

President Johnson himself is likely to propose extension of certain traditional wartime veterans benefits to men serving since the start of large-scale Vietnam hostilities. Because many veterans benefits expired after the Korean War, Congress may insist on making eligibility retroactive to 1955 to equalize treatment for all recent veterans.

"Vietnam is the key; Congress is getting to be veterans-conscious," reasons one Veterans Administration official. Actually, much of the extra money would go not to Vietnam veterans but to World War I survivors and veterans of other past wars; the pension proposal probably will make specific provision for increased payments to Spanish-American War widows, among others. Yet the patriotic pressures on Capitol Hill to do something for ex-servicemen in general are hard to restrain while combat continues.

VA officials themselves are fearful that Congress could turn the pension program into an outright retirement bonus plan for all veterans. And Administration economizers in general are deeply concerned that a splurge of new veterans legislation will deepen the $8.1 billion budget deficit now projected for the next fiscal year, which starts July 1.

If the President cannot persuade Congress to exercise restraint, VA spending, now $6.4 billion a year, could increase by an unanticipated $300 or $400 million next fiscal year. VA outlays will rise $100 million or more anyway, because of increased applications for educationl assistance, more hospital and nursing-home care, and improvements in the VA's mammoth medical system.

THE PRESIDENT'S CHOICE

"The VA is the real sleeper," frets one White House man worried about budget-busters. So far, it's now known how Mr. Johnson will handle the situation, or even if he has made up his mind. His choice is whether to acquiesce in Congress' course and hope to curtail the cost of new legislation or to hold fast and oppose most veterans proposals entirely.

Adamant Presidential opposition could pay off by postponing passage of expensive pension legislation for at least a year. The delay would allow a more careful examination of the relationship of veterans assistance to Great Society education and welfare programs that also benefit servicemen. Also, 1968 is an election year. Congress might prefer to claim credit then for solicitude toward ex-servicemen.

There's a real chance, though, that the law-makers will push ahead anyway and enact an array of veterans proposals. Congressman Olin Teague of Texas, chairman of the key House Veterans Affairs Committee, and VA officials are convinced that the passage of pension legislation is inevitable this session.

Whether or not the White House goes for some broader compromise with Congress, the Administration is likely to endorse one proposal that is initially inexpensive—entitling Vietnam veterans to pension benefits. The first-year outlays would be less than $1 million, because the eligible ex-servicemen average only 24 years of age. But as they grow older and develop disabilities, the cost to the country will steadily swell. There is no way to tell for sure, but some officials estimate outlays of $2 billion a year could be required by the turn of the century.

FOR AGED, NEEDY VETERANS

These pensions are based on the assumption that the recipient is both poor and too disabled to earn much. To be eligible, veterans must show that their incomes fall below certain ceilings—ranging up to $3,000 a year for a veteran with dependents. Recipients must also demonstrate some physical disability not connected with miltiary service. But the required disability diminishes with age to only 10 percent at 65 years—a standard almost all veterans can meet. Thus this aid is widely considered a straight pension program for aged, needy veterans.

As for increases in these pension rates, the Administration flatly opposed 188 bills of this sort offered by members of Congress last year. There's no current sign of a change of heart. Nevertheless, Chairman Teague intends to hold hearings soon on new pension legislation, and his committee's departure point probably will be a pension-boosting bill that passed the House last year but died in the Senate.

This bill, sponsored by Democratic Rep. William Jennings Bryan Dorn of South Carolina, provided for a 5 percent average pension increase and other benefits to 1.8 million veterans or their dependents, at a first-year cost of $101 million. The veterans organizations bitterly blamed the White House for the proposal's demise and are likely to lobby even more energetically for its resurrection this session.

"The immediate task, however, is to fire a broadside that will put the Administration on notice that a reversal of its policies is in order," declared Leslie M. Fry, commander of the Veterans of Foreign Wars, in a message to 1.3 million members.

The veterans groups argue mainly that a pension boost is needed to compensate for recent cost-of-living increases. The VA says retail prices have risen between 3½% and 4% since the last pension raise. The veterans organizations also want to liberalize the income ceilings that determine the ex-serviceman's eligibility for a pension and its size. As the rules stand now, a single veteran with income of less than $600 a year receives a pension payment of $100 a month; with annual income of $1,800, his pension falls to $43.

Even the maximum income allowed, $3,000 a year for a veteran with dependents, falls below the Administration's poverty line, an American Legion leader protests. Indeed, a major veterans' complaint is that the President appears to place higher priority on his Great Society programs than on old soldiers' needs.

The Administration's answer is that the living-cost increases are not large enough to justify higher pension payments. Furthermore, an average 9% pension increase was enacted in 1965 to offset living-cost rises since 1960; those in the lowest income brackets received as much as 17%. Anyway, Federal planners prefer to provide for veterans' needs through broad welfare programs such as Social Security. Indeed, separate subsidies for ex-servicemen could ultimately be phased out, some officials insist.

Whatever the merits of the case, Congress is more likely to side with the veterans' organizations. The lawmakers are expected to pass an inflation-compensating increase in pension rates of 5% or so, and to liberalize income ceilings that determine pension eligibility. The main reason for the second step is to avoid the possibility that a prospective increase in Sovial Security income will penalize pensioners and produce angry complaints from some constitutents. The extra income would be enough to disqualify some veterans from pension benefits and would reduce the payments of others.

One solution would simply be to raise VA pension eligibility ceilings enough, perhaps $100 a year, to cancel out the effect of the Social Security increase. Another approach would be to permit veterans, in calculating pension eligibility, to ignore the extra Social Security payments or a proportionate amount of other retirement income.

Either way would undermine the Administration's efforts to tie veterans' pension payments closely to financial needs. Veterans already are permitted to deduct 10% of Social Security or other retirement payments from the income computed to determine pension eligibility.

A Congress New Boy Finds His Way

EXTENSION OF REMARKS

OF

HON. GARNER F. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. SHRIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that appeared in the January 13, 1967, issue of the London Times, which was sent to me by David Crockett, of Wichita, Kans., who is currently doing graduate studies at the University of London under a scholarship. During the summer of 1965 David Crockett was a summer "intern" in my office and the reason the article was sent to me is that it is based on an interview a London Times reporter had with our new Kansas Congressman from the Third District, the Honorable LARRY WINN, JR. I though the article would be of interest to other Members, and it follows:

HOW A CONGRESS NEW BOY FINDS HIS WAY: COURSE, SEMINAR, AND BRIEFINGS HELP

WASHINGTON, January 12.—The new congressman is from Kansas, the heartland of the United States, and on his desk lies a copy of *The Job of the Congressman*, a Washington guide to help the newly elected member to find his way about the Capitol, run his office, get Bills passed, and service constituents.

He has been reading up procedure before the first appointment starts at 9 a.m.—late by Kansas standards, as his secretary hints.

The congressman is one of the 47 new Republicans elected last November on a surge of "anti-L.B.J." sentiment, making the Kansas delegation now all "Grand Old Party". In his forties, open-faced, but tending to put on weight, he is a successful businessman from a prosperous farming state, who has never been abroad except for a trip once to Canada. He knows that Washingtonians expect all Kansans to be a little slow.

THINGS ARE ORGANIZED

How does a "new boy" to Congress, one amid 435, go about settling into Washington and serving the interests of 400,000 constituents he has sworn to uphold? Things are organized these days—both the Republicans and the Democrats hold two-day seminars, Congress itself runs a course, and the main Government departments provide briefings.

But colleagues from the state delegation, and any friends already established in Washington that the new congressman may be lucky enough to have, remain highly important. This is particularly so for the first, perhaps crucial, step up the ladder to congressional power and influence—getting on the committees you want.

Speeches on the floor of the House may bring publicity, but the bread-and-butter issues to all but a very select band of nationally respected congressmen are voted over in committee; and the "pork barrel" is as important to Republican Kansas today as any Democratic state.

His office, allocated among the freshmen representatives "out of the hat", is still not fully furnished by two women secretaries, one a Washington "career girl", engaged because she knows the paths of the federal bureaucratic jungle, the other, a former Governor's secretary, brought from Kansas. The new congressman is going to try keeping his administrative assistant, the No. 1 man usually in the office, back home in his district.

"Politics is a peculiar thing", he explains. "People may decide they don't like the way I chew gum—and I'm out. So I'm starting campaigning now for two years time, and intend to have a good man back there doing a good job of servicing."

The Congress course includes how to get your parking allotment, use of the gymnasium, hospital services, frank mail, pay and allowances, get the Library of Congress legislative service to ghost speeches (including, if requested, party-appropriate jokes), how to respect very senior colleagues, obtain time on the floor, and then insert brighter second thoughts for constituents in the *Congressional Record.*

WIVES ADVISED

The Republicans' seminar this year laid down some congressional strategy, telling the new members to cultivate the public's impression of a new power in Congress, able to stand up to President Johnson this time round, instead of being clobbered by the executive. The wives, meanwhile, received a quick going over of the political capital and tips when mini-skirts are acceptable.

It generally takes a full session before a new congressman has learnt the fundamentals of the job. Washington, according to the Kansan, strengthens the feeling that you have been elected to help your home state.

Fino Introduces Legislation To Pave Way for New York Lottery

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. FINO. Mr. Speaker, today I am introducing legislation to first, permit lottery tickets to be mailed in the U.S. mails in States where they can be legally sold; and, second, exempt bets placed in State-run lotteries from the Federal wagering tax.

As things now stand, the imminent New York State lottery will be hindered by two aspects of Federal law. In the first place, while State-run sweepstakes are exempt from the Federal tax on wagering, State-run numbers lotteries are not. The first of my bills would exempt bets placed in State-run lotteries from the Federal tax on wagering.

My second bill would deal with another absurd situation. It is presently illegal to mail lottery tickets. This is stupid, because as the Post Office well knows, thousands are being mailed out of New Hampshire—where they can be legally sold—each year. And then there are the Irish sweepstakes. My second bill would allow lottery tickets to be mailed from States where they can be legally sold. This will avoid the situation whereby a substantial volume of mail from New York and New Hampshire is outlaw mail.

I have asked my 40 colleagues in the House of Representatives from New York, and also our two distinguished Senators, to join me in sponsoring this legislation.

UAW Vice President Says That Aerospace Technology Is Needed To Make Life Better for People on Earth

EXTENSION OF REMARKS

OF

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. BROWN of California. Mr. Speaker, last week Vice President Leonard Woodcock, of the United Auto Workers, presented his views on the Scientific Manpower Utilization Act of which I am a House sponsor.

Mr. Woodcock pointed out:

> If our technology can hurtle a man through space around the world in 90 minutes, we can and must find better ways to get to and from work, design and build cheaper and better homes to live in, rebuild our cities, clean up our air and water, reduce crime and rehabilitate criminals, and improve the quality of life for all Americans.

The aerospace industry of California is a great national resource. North American Aviation—one of the largest aerospace companies in the whole Nation—has experienced unemployment because the space program is nearing its goal of landing a man on the moon by 1970.

Mr. Woodcock has suggested that the aerospace industry needs encouragement from the Federal Government in the form of supplemental grants. He has also suggested that the aerospace industry should make "the equivalent of a Chevrolet in designing and producing low-cost housing and school classrooms for a mass market."

Mr. Speaker, I commend the views of Mr. Woodcock to other Members of Congress who are searching for ways to solve the manifold social problems around us.

I also ask that the document called "Managing the Poverty Program in Detroit" be included as an extension of my remarks.

The document follows:

STATEMENT OF LEONARD WOODCOCK, VICE PRESIDENT, UNITED AUTOMOBILE, AEROSPACE AND AGRICULTURAL IMPLEMENT WORKERS OF AMERICA, AFL–CIO, BEFORE THE SENATE SPECIAL SUBCOMMITTEE ON SCIENTIFIC MANPOWER UTILIZATION, JANUARY 27, 1967

I am Leonard Woodcock, Vice President of the United Automobile, Aerospace and Agricultural Implement Workers of America and on behalf of our organization I am appearing before the Subcommittee to support the Scientific Manpower Utilization Act of 1967, S. 430.

One of my chief responsibilities as an officer of the UAW is to represent our membership in the aerospace industries, some of which have expressed interest in and support for this program.

We in the UAW believe that systems analysis, systems engineering and systems management can give the American people new insights, new ideas, now directions and new hope in grappling with many of the perplexing problems of our time.

At the risk of being trite, if our technology can hurtle a man through space around the world in 90 minutes, we can and must find better and easier ways to get to and from work, design and build cheaper and better homes to live in, rebuild our cities, clean up our air and water, reduce crime and rehabilitate criminals, and improve the quality of life for all Americans.

Some critics of the systems approach argue that computers will not tell us anything new. To some extent this is correct. The real genius of the systems approach, as I see it, is a wedding of the many disciplines of the social and physical sciences. By working together on a team basis, sociologists, mathematicians, and many other scientists can apply their special insights to finding new solutions to old problems that beset mankind.

1. *The Problems Are Urgent.* We support S. 430 because problems of air and water pollution, transportation, education and the decay of our major cities urgently need our attention. It has been demonstrated again and again that the social costs of neglect far outweigh the investment required to deal with these problems.

We realize a very tight budget situation faces the nation at this very moment. There is undoubtedly some reluctance by some industries to encourage government spending for programs outlined in S. 430 because of the high priority of defense matters. This, if true, is a tragic mistake.

It is our deep conviction this nation is strong enough to have both guns and butter. We believe investments made in education, the wars on poverty and pollution, and in the rebuilding of our cities are of immense importance and must not be postponed. The kind of outlays we need for education, pollution control, and transportation are mere fractions of our ever growing Gross National Product.

2. *Aerospace Know-How Is A Great National Resource.* Aerospace technology is not the property alone of the various industries who manufacture space hardware. This magnificent technology which resulted from the impetus of the space program and from the demands for national defense, is the property of all the American people.

It is the American taxpayer who pays the research and development bill that makes our space spectaculars possible. This subcommittee is well aware of the vast amounts of tax money poured each year into research and development for space, defense, and other government programs. We strongly believe this brilliant engineering talent and organization should be used to improve the quality of the life for all Americans, not just for space and defense.

3. *Space Program May Be Tapering Off.* Last Sunday's New York Times in a long, front-page story indicated plans for landing astronauts on the moon by 1970 "has plunged space planners into an urgent debate over where to aim next."

Mr. Chairman, it seems obvious to me that one of the targets for the space industry should be improvement of our environment here on earth by using many of the same facilities, technology, and manpower used for reaching the moon.

It is estimated that a man landing on Mars would cost $100 billion and could be completed by the mid-1980's. A small fraction of this sum would go far toward improving our ground transportation systems and catching up with the housing and school needs of the people of the United States.

4. *Labor Has A Stake In Expanding Economy.* Much of our enthusiasm for the systems approach in dealing with social problems results from the plain fact that many of our members are employed by the space companies and these people face the grim prospects of unemployment unless new opportunities present themselves if the space program is reduced in size.

Employment at the space division of North American Aviation, a UAW employer and a prime Apollo contractor, has dropped from 35,000 to 29,000 during the past year. If this downward trend continues, our members will face serious unemployment.

The UAW has always felt that employment opportunities, despite the hazards of automation, will grow with an expanding economy. In the words of the Automation Commission Report, "the basic fact is that technology eliminates jobs, not work." Employment will certainly improve if aerospace technology is applied to social problems.

5. *Systems Teams Should Include People With Horse Sense.* We have already said the genius of systems analysis is the happy combination of scientists working together from many specialties. We also feel it can be demonstrated that persons with special knowledge, but limited education can make a valuable contribution in developing essential information which goes into a systems analysis of a particular problem.

In my city of Detroit, for instance, the anti-poverty program used representatives of Detroit's poor in developing an information profile used to evaluate the Detroit program, using the techniques of planning-programming-budgeting system (PPBS) characteristic of the systems approach. I am attaching a special memorandum describing this so the subcommittee can better understand it.

We feel systems analysis would be wise to include in early planning the special insights of people from the ranks of organized labor where practical.

Since S. 430 involves the systems approach in dealing with social problems, it is particularly important to get people with direct and immediate insight into the various problems. Obviously, trained scientists must be relied on for the major technical work. But there will be many instances where poor people, working people, and people with ordinary, even hum-drum experience can make a significant contribution to a systems team.

6. *Experimental Grants Will Stimulate Industry.* It is my conviction the aerospace industry will not get into work of social consequence unless it can be assured of some continuing interest by the Federal Government.

It is my hunch that if, let us say, Congress decided today to appropriate $1 billion to clean up the Mississippi River from Minnesota to the Gulf of Mexico, there would be a clatter of competition for that federal dollar by many of our most sophisticated and advanced technological systems groups.

The same thing would happen if Congress decided to launch a mass production low-cost housing program, using the systems approach.

One major aerospace industry demonstrated by systems analysis and systems engineering that aerospace technology could be used to vastly improve the construction of school classrooms. However, the materials used in this construction were apparently more costly than commonly used materials. The maintenance of the new building was vastly superior to the old-fashioned schoolhouses so that once these schools were built they could outlast conventional buildings. This aerospace company was discouraged from embarking on this useful work and was unable to compete even though it made a vastly superior product. If both procurement and maintenance costs were considered together on some experimental government grant basis, areospace technology would be harnessed to meeting some of America's school construction needs.

One possible flaw in this experiment is that the aerospace companies, to their credit, are accustomed to make very high quality products and are not used to lowering quality for the purposes of a mass market.

Certainly it should be possible to make the equivalent of a Chevrolet on a mass scale in designing and producing low-cost housing or school classrooms, instead of designing a Cadillac.

The Northeast Corridor Project is an example where systems analysis and system engineering has been encouraged by a substantial federal subsidy to encourage better transportation for this densely populated part of the United States. We hope this program gets every encouragement from Congress.

We believe the proposals in S. 430 or special government grants by existing agencies can harness the technological know-how of aerospace and comparable industries to make real progress in the problems that beset this nation.

Finally, Mr. Chairman, let me emphasize the UAW's deep interest in S. 430 and may we urge you to press Congress for action this year. This can be the beginning of an exciting chapter in the American story, where the new technology that sends a man to the moon can make life better for him on earth.

Supplementary Statement: "Managing the Poverty Program in Detroit"

During the past eighteen months, Detroit's poverty program has experimented with adapting the electronic planning and budget control techniques, now so extensively used in industry and defense, to its human services program. The project is financed by an OEO grant, most of which has been subcontracted to Touche, Ross, Bailey and Smart, a local management consulting firm.

Crucial to the project's success was the development of a reliable method for quantifying client characteristics in a way that permits measurement of their progress from heavy reliance on public services to relative independence.

Anything as new, complex and frightening as an electronic device which acquires, analyzes, manipulates, and stores data about virtually every private aspect of thousands of people's lives is likely to be viewed by them with suspicion and hostility. To head off this predictable resistance, project staff worked closely with representatives of the poor at every stage of the system's creation. Staff explained the system's operation with charts and specially prepared texts. They also pointed out how useful and timesaving the system, if it proved to be workable, would be. Representatives of the poor not only approved use of OEO funds to finance the experiment, they also began attending regular meetings to help develop the all-important quantification scale.

Staff also drew on as many outside perceptions into the causes of poverty as possible, consulting with professional social workers, academicians, and several "people off the street."

Each "consultant" was given a chart similar to the one attached and asked to work across, line by line, rating the comparative importance of each characteristic for each type. When all results were in and synthesized, TRB&S worked out a numerical scale which theoretically measured each client's dependency. The scale ran from one to ten, with ten representing self-sufficiency.

Information about each client is collected at various intake points by regular interviewers. It is analyzed and coded by specially trained staff to insure consistency. Periodic re-measurements and comparison with earlier ratings, should enable evaluators to determine how quickly each client is progressing, what his current needs and past successes are, what overall impact the poverty program is having, and how much it costs to dispense each unit of service. By shuffling data around, they can also determine which component programs are contributing most, and which least, to the city's fight against poverty.

Needless to say, this is all unproven theory. Similar systems work well in industry, but no one knows yet whether they can be successfully adapted to people's problems.

Staff is now testing what the machines say about clients against their personal judgment. If the rating scale works, then the entire system should. There will be errors in individual cases, but in a huge population such as the poor in Detroit, these errors should balance.

Using a computer, the system can recommend various strategies for dealing with the problems of poverty. It sets up mathematical models and, on the basis of present program performance, suggests the best mix for spending whatever money is available. It can also accept pre-conditions, such as the political need to invest heavily in highly visible services, and suggest how remaining funds should be handled. It can also predict how much time and money will be needed to finish the job.

(Prepared by UAW Washington Office, January 25, 1967.)

The Seniority System

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1967

Mr. SCHWENGEL. Mr. Speaker, on the opening day of the 90th Congress I introduced House Resolution 96 to change the method of selection for committee chairman.

The seniority system law needs reform. My proposal would allow the majority party on any committee to choose the chairman from the three of its most senior members.

The Tampa Tribune, Tampa, Fla., editorialized about the seniority system recently. This editorial is indicative of the feeling around the country in regard to the seniority system.

The editorial follows:

Cast Off the Palsied Hand

"Nothing moves so slowly or painfully through Congress as reform of its own procedures."

This is the comment of a young Congressman who tried, in a small way, to correct some of the wrongs he saw in the system and gained mainly a bruised head.

History supports his conclusion.

One of the most obvious evils in the musty structure of Congressional operation is the seniority system. A member of Congress can be a senile dodderer, a compulsive drunk, and a known cheat—but if he has managed to stay in office longer than any other member of his committee he automatically inherits the immense powers of the chairmanship.

The system has done untold damage to the effective operation of the legislative process, yet it persists because those with a vested interest in seniority want no change.

But the system tomorrow comes under its heaviest attack, as a result of the scandalous behavior of Rep. Adam Clayton Powell, chairman of the House Education and Labor Committee.

House Democrats, in caucus, will decide whether to strip Powell of his seniority and chairmanship because of his embarrassing record of misconduct. He is a fugitive from his Harlem district, under jail sentence for contempt of court; he has been charged with having staff members falsify travel vouchers for his benefit; he has used a Congressional employe as a personal maid; and he kept his estranged wife on a $20,500 Federal salary in Puerto Rico in open violation of law—among other things.

Powell's right even to take his seat will be challenged, but many House Democrats seem disinclined to go so far as to expel him. Conceding that he is unfit to serve, they argue that his constituents would surely reelect him and can the House deny voters of a district the right to be represented by a rogue of their choice?

But only those who are intimidated by threats of Negro retaliation and those who, like Speaker John McCormack, suffer no sense of outrage at political corruption can support Powell's continuance as chairman.

Two years ago House Democrats snatched away seniority privileges from John Bell Williams of Mississippi, a Representative for 18 years, because he openly supported Barry Goldwater for President.

We hardly think House Democrats can place themselves in the position of regarding party disloyalty as a graver crime than dishonesty in the handling of public funds and repeated defiance of court orders.

If Democrats bounce Powell as chairman—as they should—their action may shake the sanctity of the whole seniority system.

The right of another Congressman to move into a chairmanship through seniority will be challenged by a group of liberal Democrats.

Their case against William M. Colmer of Mississippi, who is in line to head the strategic Rules Committee, is based not on moral conduct but on philosophy. They contend that no member so opposed to Administration policy as Colmer should boss the committee which decides what legislation reaches the floor for a vote. They would give the chairmanship to the No. 2 ranking Democrat, Rep. Ray Madden of Indiana.

We have no feeling for or against Colmer but we heartily endorse the idea of loosening the rigid line of succession to the seats of power.

Under the present system, for example, we can expect that the crucially important chairmanship of the Senate Appropriations Committee will remain with Arizona's Carl Hayden, who will be 90 years old next October; the leadership of the sensitive House Armed Services Committee will return to South Carolina's Mendel Rivers, whose sobriety problem is openly discussed in Washington; the voice of the Senate Foreign Relations Committee will continue to be that of Arkansas' J. William Fulbright, whose chief aim seems to be to discredit this nation's policies abroad.

All of these might be replaced, to the nation's benefit, if Congress adopted the modification proposed by Rep. Fred Schwengel, Republican of Iowa.

Congressman Schwengel would permit a committee to choose its chairman from among the *three* top-ranking members of the majority party.

This is a simple change; yet it could vastly improve both the effectiveness and the public image of Congress.

Congress has had many examples, over the years, of the need for casting off the palsied hand of the strict seniority system. Adam Clayton Powell has provided both the most convincing argument and the best opportunity for change. Painful as it may be to the beneficiaries of the system, Congress ought to muster the moral courage to adopt this reform.

The Moral Fiber of the United States—Part 1

EXTENSION OF REMARKS
OF
HON. JOHN M. ASHBROOK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1967

Mr. ASHBROOK. Mr. Speaker, because of his vast experience as a writer, educator, and Pulitzer Prize-winning newspaper editor, the views of Dr. Felix Morley on the moral status of our Nation certainly command consideration. A Rhodes scholar who attended the London School of Economics and later president of Haverford College in Pennsylvania, he is no late arrival to the field of education. A number of his productive years were given over to the journalistic field, the Baltimore Sun, the United Press Association, and the editorship of the Washington Post, among his newspaper assignments. He is the author of a number of books on foreign policy and domestic issues, and his authorship of articles include contributions in the political, social, and economic fields. As he points out in the following article, he has written for Nation's Business an unbroken series of monthly columns dating back to 1946.

It can hardly be disputed, then, that Dr. Morley is an active and concerned viewer of the American scene for many years.

In our world of conflict today, it is incumbent upon us to rely on much soul searching and introspection if we are to preserve our freedom and remain the primary bastion of true peace and justice. Comparison of our present moral vitality with that existing during the era of our Founding Fathers supplies much food for reflection.

In our Nation, with the accent on the technologicial, geopolitics and material welfare, there is an urgent need for moral reevaluation, and to stimulate this issue I include the article, "Momentous Question for Our Future," by Dr. Felix Morley from Nation's Business of February 1967, in the RECORD at this point:

Momentous Question for Our Future

(By Felix Morley)

In February, 1946, just 21 years ago, Nation's Business published the first of an as yet unbroken series of monthly columns by me. So the following begins my 22d year as a periodic commentator on "The State of the Nation." This span covers almost one-eighth of the entire life of our Republic. In other words we are still, as history is measured, a young country, with a future which should fulfill the promise of the past.

But the future, it has been said, is past, in the sense that what has been determines what will be. Therefore the editors suggested that I might use this occasion to review the changes that have come to America during the period of my scrutiny in this space. This, it was agreed, should not be a compilation of detail but rather an attempt to detect trends that are determining the shape of things to come. Offhand this seemed a good idea, requiring reflection, of course, but otherwise no great amount of laborious research. I should have realized that it is never easy to see through a glass darkly. Two variables are involved in trying to play the role of Janus, the two-faced

Roman god who looked both back and forward. Any who attempt the task will quickly realize that not only outward circumstance but also internal alteration must be considered.

Nevertheless I was encouraged, in going through the files, to find that in fundamentals my own viewpoint has throughout been consistent. Midwinter of 1946 was indeed a period of disconcerting turmoil and confusion. Amid the prevalent postwar disillusion I recall that "the reefs of history are strewn with the wreckage of republics." Immediately thereafter, however, I quoted Dr. Charles A. Beard, as the dean of American historians, who had then recently written:

"Calamities may come upon America or be brought upon the country by demagogic leadership. . . . Enough of our Republic will be kept intact to restore, rebuild and go ahead. . . . Surely, Americans will endlessly strive to carry on the values in their heritage."

Among those values it is abiding faith in the quality of the human conscience that stands first. As James Madison wrote, in "The Federalist," "we rest all our experiments [meaning the Constitution] on mankind's capacity for self-government." He was using the phrase in the broadest sense. Madison reasoned that men who can control their selfish instincts, out of a real concern for the needs of others, will need a minimum of policing. With self-government the area of external government is minimized. On that assumption was fought and won the battle for a federal republic of limited and divided powers, admittedly an "experiment" which few political scientists had ever before considered practical.

Many have wondered how it was that Americans, so prone to be "realistic" should nevertheless have launched and maintained the most idealistic form of government ever attempted on this earth. The explanation is not obscure. It was the deeply religious faith of most of the early colonists, long before the Revolution, that inspired them to base their society squarely on Christian principles. For Pennsylvania, said William Penn, "I purpose that which is extraordinary. . . . We put the power in the people."

In order to make it work, that democratic principle was always carefully hedged. There is very little socialism in the American tradition and slavery was recognized by the original Constitution. Even today there are those who think that the franchise should be circumscribed. Occasionally Presidents, and Governors, have acted as though the legislature were their tool and the courts their creature. Yet the ideal has remained untarnished. Always Americans have striven "to carry on the values in their heritage." Why shouldn't this continue?

Perhaps because, during the period under review, two fundamental changes have become apparent. It is increasingly argued, in the first place, that there are no absolute values; that people create their own standards and that these alter as circumstances change. It is a development sharply symbolized by the saying that "God is dead," even while every depreciating dollar bill continues to bear the assertion that "In God We Trust."

This irreligious tendency, carried so far as to eliminate prayer from the public schools, of course runs counter to the heritage that we claim to cherish. If there is no higher authority than man, then Mao Tse-tung or any other imposter may reasonably claim pre-eminence. If there are no immutable standards, then there can be no enduring principles on which to take a stand. If the limited vision of fallible officials is sacrosanct, then the very foundations of our political system have been undermined. It may seem outwardly strong, as many a tyranny before it, but the sustaining nature of its spiritual strength has gone.

The tendency to deny all permanent values is paradoxically supplemented by one that makes no sense whatever, if there are no absolutes. This second contemporary trend is an insistence on complete equality as a political and social panacea. To assert that all men are equal in either mental or physical competence is biologically absurd, for evidence to the contrary confronts us every day. But in the spiritual sense, in Jefferson's meaning that all men are *born* equal in the sight of God, there is complete validity, so long as the Creator has meaning for us.

Thus it is wholly rational for a believer to argue that character, rather than competence or complexion, is what counts. For the nonbeliever, however, there is no such over-all commitment. For him, power entails no responsibility to the Ten Commandments. Power is up for grabs and if wheeling and dealing takes it most quickly from the people, that is as fair a way as any. Religious faith, certainly, is no guaranty of ethical behavior, to which agnostics are often unswervingly loyal. But an enveloping atmosphere of disbelief strongly suggests that moral standards have become a matter of personal convenience and soaring crime statistics seem to confirm that inference.

There is no question that the American tradition of limited political government has a firmly religious, though nonsectarian, basis. Only when loyalty to God takes precedence over loyalty to the state is it possible to confine the spreading authority of the latter. Indeed, the story of political progress everywhere is largely written by the heroism of those who, in the test, defied their rulers for religious reasons.

"The Americans," wrote Alexis de Tocqueville 130 years ago, "combine the notions of Christianity and of liberty so intimately in their minds that it is impossible to make them conceive the one without the other."

Not even the well-disposed foreign visitor—and this type is no longer so numerous—would make that observation about us today. And it is within the past quarter-century that the idea of freedom has been completely divorced from religious faith, becoming dependent upon governmental pleasure. In the hymn "America," the punch line still refers to God as "Author of Liberty." But prevalent opinion puts a ghost-writer in the White House. That illusion has a disastrous potential.

There is abundant evidence of disquiet over the contradiction between our traditions and the present reliance on centralized government. A country with institutions based on the principle of diffused power is endeavoring to accomplish ends demanding the utmost concentration of power. Inevitably this produces something akin to national schizophrenia. Few like it, but most conclude that this steadily increasing development is inevitable.

Of course the forces operating to take the power from the people are numerous and persuasive. This is no longer the primitive agricultural country that produced the genius of the Founding Fathers. But it would be one of the most bitter ironies in all history if the technological demands of the modern age should be allowed to smother the philosophy which alone made our unprecedented accomplishment possible.

Misgivings about the future have always been common among the aged. They get consolation from thinking that their own deterioration is mirrored in the society they are about to leave. Today, however, there is an all too obvious apprehension among the young, for whom the future should be exhilarating. Because these anxieties take distasteful forms it does not follow that they are unreal. Surely adolescent unhappiness is as important for us as is the composition of the moon.

Later this month, as always on George Washington's birthday, his Farewell Address will be read aloud to Congress. Hopefully there will this time be special attention for the passage which says: "Let us with caution indulge the supposition that morality can be maintained without religion."

Upon that caution depends the future of this republic. Fortunately many of its citizens are well aware that collective material wealth will not indefinitely accumulate, if individual spiritual strength decays.

Executive View: Foreign Affairs a Business Affair

EXTENSION OF REMARKS

OF

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MORSE of Massachusetts. Mr. Speaker, it has long been known that the business community in Greater Boston has been outstanding in its interest and analysis of world affairs. Typical of these individuals is my good friend Gerhard D. Bleicken, senior executive vice president of the John Hancock Mutual Life Insurance Co., and a director of the World Affairs Council of Boston.

In a recent interview with Alexander Auerback of the Boston Globe, Mr. Bleicken outlined his views on the need for the modern businessman to be alert to what is going on in this shrinking world.

Because of Mr. Bleicken's leadership in the Greater Boston area, I include the article which appeared in the Boston Globe on January 30 in the Record at this point:

Executive View: Foreign Affairs a Business Affair

(By Alexander Auerbach)

Gerhard D. Bleicken is by vocation the senior executive vice president of the John Hancock Mutual Life Insurance Co. By avocation he is a student of foreign affairs.

"Profit is important, but it is equally important to have an awareness of what's going on in the world—particularly for a business such as ours, which operates all over the world," he says.

He is trying to engage the interest of other businessmen in the world beyond our shores through the World Affairs Council of Boston, of which he is a director.

The Council is initiating a five-part series of "downtown luncheons" to encourage executives toward a broader outlook. The first luncheon is scheduled Thursday at the Sheraton-Plaza, with British Ambassador Sir Patrick Dean speaking.

Bleicken is also a consultant to President Johnson's director of emergency planning and to the National Academy of Sciences.

Is all this interest just a hobby? He says no: "The actions of China, Africa and especially South America are vitally important to our economy and to the business and financial sector.

"We have an obligation, as businessmen, to study and to understand our foreign policy, and to try to influence it as citizens.

"The lifeblood of the free enterprise system is trade, commerce, and unless it is carried on intelligently, business isn't doing it's share, and business will suffer."

Is it the place of business to get involved in foreign policy? Isn't the academic world the usual source of ideas and expertise?

"Business is an integral part of society and as significant as the academic world. If the universities can produce good men in academic fields who are also valuable in foreign affairs, business should be able to do the same.

"Not only should it, but it does.

"One officer of our company, a senior vice president, took a three-month tour of European embassies for the State Department, applying business principles of operation to the activities of the embassies."

But is this just a quirk of the John Hancock group? Are insurance men as a group more conscious of long-range policy planning because they are dealing in life-time contracts and 99-year investments in the course of their work?

"I think it depends on the man and on the leadership from top management, not on the type of business.

"The best businessmen are planning a lot further ahead than they used to, and are taking a much broader view of their markets and potential markets.

"It's not just the big firms, either. Many of the smaller companies out on Rt. 128 do the bulk of their business overseas.

"No, it's not the company, it's the man. The younger men coming into management now are very aware of the need for this kind of understanding—as aware, I would say, as the average congressman.

"This has been a remarkable shift for American business. We only became aware of the rest of the world after the First World War.

"We had wanted men who were only interested in production. Now management wants broader people at the top, although of course they want men who can run the company well.

"The type of men who are educated for business today will be doing both—running the business at home and staying abreast of their rapidly shrinking world."

Air Pollution

SPEECH

OF

HON. JOSEPH Y. RESNICK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. RESNICK. Mr. Speaker, I wish to make some remarks in support of President Johnson's recent proposals to improve the quality of our air.

There is a tendency to consider air pollution as a problem which afflicts only the heavily urbanized areas of the country. Then why should a Member who represents an area of villages and farms be concerned with this problem? Because in addition to our natural sympathies for the problem faced by our fellow citizens of the great metropolitan areas, we too have experienced the damages and discomforts caused by polluted air.

In my district, there are many resort areas which have traditionally served as places to which the inhabitants of New York City and other nearby urban centers could retreat, leaving behind them the congestion, noise, and dirt of the city. That tradition is eroding. While our resorts still flourish, there are signs that they too are beginning to suffer some of the blights of the city. Air pollution is one of these.

I have been particularly concerned with the discharges from cement and asphalt plants in my area, and last year I held hearings on this subject. It is my feeling, as a result, that in too many instances the State and local governments have not lived up to the responsibility of controlling air pollution sources within their respective jurisdictions.

I am particularly pleased, therefore, by the President's proposal to establish minimum emission control levels on a national basis. I feel the setting of these levels will be particularly beneficial for the nonurban areas of our country. Too often the headlines seem to be concerned only with the major urban air pollution episodes, while the problems of citizens who may reside in the vicinity of a cement mill, for example, appear to go unnoticed. Yet the person who lives near a single air pollution source may, in fact, inhale as much dirt as the person who lives in the city with its many sources.

The Clean Air Act of 1963, and its subsequent amendments, have started us on the road to purer air, but it is only a start. Meanwhile, the problem grows worse with every passing year. If we are are to roll back pollution levels to the point where the air we breathe supports life without adverse side effects, then we must redouble our efforts. The legislation proposed by President Johnson is an essential step in that direction.

Vital Vietnam Role for Radio Repairman

EXTENSION OF REMARKS

OF

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. LONG of Maryland. Mr. Speaker, I am pleased to bring to the attention of my colleagues the unusual duty of A1c. Charles E. Murphy of 25 Carroll Island Road. Airman Murphy is a member of the 5th Direct Air Support Flight based at Clark Airbase in the Philippines; yet the unit has no aircraft. However, Airman Murphy and his fellow unit members supply a vital link in the Vietnam war while on temporary duty in the combat zone. Following is an article which appeared in the Eastern Beacon of Wednesday, January 25, 1967, which outlines Airman Murphy's special duties.

The article follows:

RADIO REPAIRMAN HAS VITAL VIETNAM ROLE

Airman First Class Charles E. Murphy, son of Mr. and Mrs. Charles E. Murphy of 25 Carroll Is. road, is assigned to an unusual U.S. Air Force direct air support unit at Clark AB, Philippines, that has no aircraft.

Yet Airman Murphy and his fellow airmen are fighting the Vietnam war—in Vietnam.

The airman is a member of the highly-specialized 5th Direct Air Support Flight based at Clark. The unit title is the key to the tough job Airman Murphy has while on temporary duty in the combat zone.

The radio repairman helps provide vital communications support for forward air controllers (FACs), also from his Clark unit, who fly as aerial scouts and direct fighter strikes against the enemy.

Many of the communications specialists from his unit are parachutists and if the mission requires, are airdropped with portable radio gear. Airman Murphy also maintains streamline communications equipment in the field, packed into specially designed jeeps that enables ground FACs to talk with airborne FACs, strike aircraft and ground forces. During his deployment Airman Murphy may also find himself digging a foxhole or pulling perimeter guard duty with Army personnel.

Combat veterans of the Clark-based 5th Support Flight have served in some of the fiercest fighting in Vietnam. They have provided FAC support for U.S., Korean, Australian and New Zealand army units during deployment and combat operations in Vietnam since the unit was activated in October 1964.

Back at home base, Airman Murphy stays ready to go to war with the army when the assignment comes.

The airman is a graduate of Kenwood Senior High School.

His wife, Kathryn, is the daughter of Mr. and Mrs. Wayne Barbour of Johnstown, Pa.

More Shenanigans in Washington

EXTENSION OF REMARKS

OF

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MIZE. Mr. Speaker, my attention has been called to a recent editorial by Mike L. Kennedy, of Midwest Industry magazine, in which he puts his finger on some of the reasons why this administration has not dealt very effectively with the problem of inflation, but, in trying to do so, it has sometimes made some ill-advised proposals. In this editorial, "More Shenanigans in Washington," Mr. Kennedy speaks the minds of many of us when he suggests that a "reduction of Federal spending is the only course to economic sanity."

Under leave to extend my remarks, I include this editorial in the Appendix of the RECORD, and I commend it to the attention of my colleagues:

MORE SHENANIGANS IN WASHINGTON

(By Mike L. Kennedy, Editor and Publisher)

The recent announcement by the Bureau of Public Roads that Federal highway spending will be slashed some 25 per cent this current fiscal year is another of the increasingly-obvious manipulations of the country's economy in a questionable manner. In an apparent attempt to measure up to an earlier promise to reduce spending in order to combat growing inflation, the Administration has sliced, by $1.1 billion, the amount of money to be returned to the states from the Highway Trust Fund for Interstate and ABC road construction. However, there is more than meets the eye in this most recent attempt to decieve (pull the wool over the eyes of) the electorate.

That action is needed to control inflation seems self-evident. Inflation is currently eating away at the dollar at a better than 5 per cent rate per annum. Wages and prices are unable to keep up with this erosion. The Administration, which confidently declared its ability to finance sweeping social changes in our society concurrently with an expanding war in southeast Asia, is now finding itself in deep fiscal trouble.

In an effort to combat the growing inflation, the Administration has gone to both business and labor for help. The 3.2 per cent wage-price guidelines were established. Business was forced to abide by this, but labor evidently chose to get what it could while the getting was good—the 3.2 per cent guidelines have since been forgotten.

Next, the Administration sought to reduce inflation pressures by curtailing the demand for capital equipment through suspension of the 7 per cent investment tax credit at a time when American industry considered updated, modern plants and equipment a must to compete with imports from low labor-rate countries. To date, the 7 per cent tax credit suspension has apparently had less than the desired effect as many companies must still make necessary expenditures even at the increased cost.

Because of free spending policies and ineffective counter measures the Administration is now faced with the problem of cooling an overheated economy. The 89th Congress, spurred by the Administration, sharply increased Federal spending. Cash outlays for the fiscal year ending in 1967 are reported to total $175.5 billion, an increase of more than 20 per cent in two years, and this does not include the $10 to $15 billion dollars that will be needed for the Viet Nam effort through July. At this rate, the Federal Government will be spending more than $200 billion a year by 1969. Is it any wonder that we are faced with growing inflation?

Now, we are hearing rumors that the budget for the fiscal year ending in 1968 will reflect at least a $10 billion increase. At the same time, we also hear that a tax increase will be proposed to fight inflation and reduce the budget deficit. This comes at a time when the rate of failure of our small and medium sized businesses, the bulwark of our economy, has reached an all-time high. This is no doubt due to the vastly increased costs of doing business. To increase taxes could prove disastrous as there is the ever-present threat of throwing the economy into a tail spin.

It appears that a reduction of Federal spending is the only course to economic sanity. The Administration is limited to areas in which this reduction can be made. Anything but all out support of the Viet Nam effort is, of course, unthinkable. Other fixed obligations, such as interest on the Federal debt, more than $8 billion a year, cannot be cut. There are non-fixed obligations and this is the area that must be considered for federal spending reductions. However, the problem arises in classifying programs into essential and non-essential groups.

The Administrations' announcement on Nov. 23 that the amount of money to be made available to the states for the Interstate and ABC highway programs would be cut by 25 per cent seems to classify our highway modernization program as non-essential. This is an example of the many inconsistencies seen in Washington. Just a few months ago, the Administration declared that the nearly 50,000 highway deaths a year was a problem of the utmost importance when requesting controls over the automakers. Now, it appears that this apparent concern by the Administration was only a smoke screen.

Industry is becoming more and more dependent on all means of transportation, including highways, to get its goods to market. In addition, highway construction represents a considerable market for industrial products. To further penalize industry for inflation caused by governmental spending and high wage settlements, is to jeopardize our economic future. Inflation cannot be curtailed by the business community alone. Most profit margins are being continually harrowed and cannot be expected to absorb additional pressures.

Lastly, in defense of the highway program, it should be pointed out that cutting the amount of money available to the states does not release the money to be spent on other projects. By law, money in the Highway Trust Fund cannot be spent for projects other than highway construction. Instead, the Trust Fund, if the spending slash is allowed to stand, will accumulate money while we let our roads deteriorate. As costs of construction continue to rise, the money we do not spend today will buy fewer improvements in the future.

To cut non-essential spending is a desirable goal. In fact, it should be reduced considerably more than the proposed $1.5 billion. However, the flagrantly-abused Great Society Programs would seem to be the first place for trimming. Elimination of corruption and mismanagement of these ill-conceived programs, is the first step toward economic stability and responsible leadership. It seems, though, that this is not politically appealing in our "something for nothing" society. Unless our political leaders put the welfare of the nation ahead of their own political aspirations, the country may very well find itself in the midst of an unequaled depression. We must demand responsible action on the part of those we have elected.

That a handful of men can control the destiny of the country and its people is only one of many indications of our proximity to dictatorial control by the White House, regardless of who occupies it. The power that can legally be exercised by one man is frightening.

Public Relations—Hanoi Style

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1967

Mr. MULTER. Mr. Speaker, the Communist press, and the gullible among us who believe it, has very carefully built up this country as an aggressor in Vietnam, who is senselessly killing and maiming innocent civilians.

There is no question that innocent civilians are being killed in Vietnam. But there is also no question that we do everything we can do to avoid this and never do it deliberately. There is also no question but that the Vietcong quite deliberately murder civilians.

The following column from the January 5, 1967, edition of the New York World Journal Tribune says some things about this that have needed saying for a long time.

I commend the column to the attention of our colleagues:

WE'RE TRAPPED BY HANOI PR PLOT

(By Bill Slocum)

For the benefit of quick readers and particularly for the benefit of dedicated joiners and petition signers I would like to make it clear that I too am opposed to the killing of women and children.

In fact, I am opposed to the killing of any human.

But I do wish that all my countrymen who are screaming so endlessly about wanton killing in Viet Nam would tell me some other way to fight a war there. Or anywhere.

And while they are at it I'd be grateful if they would offer some proof that our shells and bombs hit nothing but helpless noncombatants. I haven't the slightest doubt that the innocent are dying in Viet Nam. But I have no idea in what number.

Nor has anybody else screaming of slaughter of women and children in Viet Nam got the slightest idea of whether many or few are dying. One is too many. Thousands are progaganda.

The innocent always die in war and that is just one of the reasons war is so utterly obscene. Without for a second suggesting that women and children aren't being killed in Viet Nam I would insist that we are entrapped right now in a beautiful Hanoi public relations ploy.

And I object to that ploy because it is potentially very dangerous to the safe return of American troops.

The Pentagon is far more concerned over the mental attitude of the civilian sitting comfortably in an Idaho arm chair than it is over the attitude of a Yank crouched in a rice paddy in the Mekong Delta. The soldier can't do a damned thing to cut down military appropriations in Congress.

So, I'm very much concerned that the Pentagon brass will yield to this thoroughly unspontaneous idea that is growing in the States that our troops are massacring women and children. The Pentagon will send out orders to fight a careful war.

You just can't fight a careful war. And if you try you are still going to kill some innocent and you are surely going to cause the deaths of a lot of Americans who might otherwise get home.

Pinpoint bombing is out of the question in jungles. Villages can't be cleared with a sporting demand to the Viet Cong to "come out in the open and fight like gentlemen." They are neither gentlemen nor madmen so they use the villages and the villagers for the further successful waging of this war.

I most certainly am not arguing that we are engaged in any holy war out there in Viet Nam. Nor am I at all certain we even belong there.

But I know we are there. I know Americans are fighting and dying there. And I can see no reason why their already ghastly job should be made any tougher by an exquisitely run public relations campaign that already has us convinced of something nobody in the world could prove.

I know my fellow Americans are not barbarians in Viet Nam and if my fellow Americans in Chicago, San Francisco and Greenwich Village don't know it too they are kidding themselves. Or being kidded by experts.

I get the impression that this dreadful murder of civilians in Viet Nam is a peculiarly American sin. The hell it is.

I know two wrongs don't make a right but I have seen a lot of very innocent Vietnamese women and children with their heads and legs blown all over the streets of Saigon. These innocent were not slaughtered by Americans. They were massacred by Viet Cong. And it wasn't bad marksmanship by the Viet Cong. It was magnificent marksmanship.

This is a war. Like all wars it is useless and will prove nothing. But until it is somehow ended I think we might give the benefit of all doubts to our own.

The Tragedy on Launch Pad 34

EXTENSION OF REMARKS
OF

HON. JACK BRINKLEY

OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1967

Mr. BRINKLEY. Mr. Speaker, an artist looks into the heavens and sees beauty; an astronaut looks skyward and sees mystery. The tragedy January 27 on launch pad 34 must redefine our purpose and confirm our intention of fully appreciating the beauty of the heavens and full exploration of their mysteries.

For the children and wives of Roger Chaffee, Virgil Grissom, and Edward White to do less would leave their tragic death without purpose. Their search for knowledge, thirst for achievement, devotion to duty and dedication to their country requires us to continue the search they started and win the goal they prized so highly—insight on the birth of our solar system.

A Better Legislature—I

EXTENSION OF REMARKS

OF

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MURPHY of New York. Mr. Speaker, in Albany on April 4, 1967, New York State will convene its first constitutional convention in 30 years. Many other States will be reviewing their constitutions in the near future, and the responsibility for recommending changes and rewriting the State constitutions will, in many cases, fall on members of the executive, the legislative, and the judicial branches of the National, State, and local governments. At this time I would like to bring to the attention of my colleagues, for their study, an editorial from the New York Times of January 30, 1967, on this important subject.

The editorial follows:

A Better Legislature—I

When New York's first Constitutional Convention in nearly thirty years opens its proceedings in Albany April 4, one of its greatest opportunities for enduring public service will lie in proposing ways to improve the State Legislature. Although New York's Legislature ranks among the best in the nation, even its stanchest defenders admit it could—and should—be vastly better.

The Legislature has far from exhausted its own opportunities for self-reform. But there are certain fundamental changes that only a rewriting of the Constitution can effect. The most important of these is enactment of bona fide "home rule" for local government—the granting to cities and other local governments of the autonomy to manage their own affairs.

Every session at Albany finds the Legislature frittering away its time and attention on a multitude of minor, local problems. Scores of these, perhaps hundreds, must be taken to Albany for decision because the Constitution, despite occasional liberalization through the years, still requires it. Others are sent to Albany because local officials or pressure groups prefer to shift the decision for political reasons.

All of these minor matters require bills, many of them involving "flyspeck" decisions. In 1950, for instance, the Legislature took a solemn vote to increase the official fee for performing a civil wedding in New York City from $2 to $3.

Such examples of Albany lawmaking on hometown trivia could be multiplied endlessly; bills to allow towns in Westchester to hire part-time policemen; permission for Buffalo to increase city marshal fees; allowing towns in Suffolk County to control sand and gravel pits to protect children; exempting Oswego trustees from individual liability for library debts—such is the procession of weary making of laws that should have been made at home, instead of Albany.

Where such frivolous foolishness is demanded by the Constitution it signifies an ancient, but unreliable, assumption that Papa Knows Best, with the Legislature cast in the role of Papa. As a matter of fact, such decisions, made by legislators from a distance, proceed too often from ignorance. But whether these laws are made in Albany because the Constitution insists or merely to spare embarrassment to local officials, the Legislature should be freed—and, where there is an option, should free itself—from being a dumping ground for governmental minutiae. Such emancipation would allow the Legislature to reserve its time for the big problems, including those it likes to duck.

The premise on which deprivation of home rule is presumably based—that the Legislature is an infallibly superior fount of wisdom—has taken many a rude jolt. None was more shattering than the 1965 session's flagrantly irresponsible rubber-stamping of the Wagner borrow-now, pay-later plan, which put New York City more than a quarter-billion dollars in debt in one year. The Legislature concurred in this folly, as did Governor Rockefeller, because it was politically less painful than demanding that the city formulate an authentic budget-balancing tax program.

Cities, counties, towns and villages should have the freedom to govern, including the freedom to make mistakes. Their right to manage should not be limited to the lesser affairs of their communities. It should extend to choice of taxes and the incurrence of debt; if the localities go wrong, the voters will tell them so in due time—unmistakably. As for the legislators, they should welcome with relief this opportunity to be rid of the political headaches of imposing their will on local affairs.

The Constitutional Convention should write a home-rule article that means home rule. It can thus simultaneously improve the Legislature and make local government more responsible.

U.S. Arms Sales Circumvent Congress

EXTENSION OF REMARKS

OF

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. BROWN of California. Mr. Speaker, the Senate Committee on Foreign Relations has issued a staff report entitled "Arms Sales and Foreign Policy," which I believe should be required reading for every Member of Congress. In my opinion, it points up the fact that this aspect of our military aid program has become an independent operation that could defy congressional controls or intent and that could easily conflict with any arms reduction or nonproliferation moves we might attempt.

An article in the Washington Post on January 30, 1967, describes the study, which should be read in its entirety for a more complete picture. The article follows:

Senate Panel Raps Pentagon Tactics On Sales of Armaments Overseas

(By John Maffre)

America's sale of weapons abroad has ballooned to more than $2 billion a year in a program so vast that it defies adequate control or supervision by the Government, a Senate report said today.

The Senate Foreign Relations Committee probe challenges the wide latitude of the Defense Department's arms-selling agency in setting foreign credit terms, its rugged sales tactics that have riled U.S. allies and its apparent immunity from considerations of policy.

The growing arms sales program appears contrary to the arms-control policies of President Johnson, Congress and Secretary of Defense Robert S. McNamara himself, the report said.

In the stiffest wording of an otherwise restrained paper, it blasts what it calls Defense's "preemptive selling" philosophy which argues that nations with a shopping list will turn elsewhere if they cannot get a good American deal:

"It seems imperative that at some point the United States take the risk that great powers must take and simply say 'No—go to the Russians or the British if you must,'" the report says.

It quotes Prof. John K. Galbraith's testimony that this philosophy points up the "curious obtuseness which excessive preoccupation with Cold-War strategy produces in otherwise excellent minds."

"One of the major objectives of United States foreign policy is the easing of international tensions, looking toward the possibility of eventual arms limitations—toward a time when it will be possible for nations to devote their resources not to weapons of destruction but to the works of peace and social justice," the report said.

"But it appears that the Defense Department is determined to maintain its arms sales abroad at about $1.5 billion per year level, thus contributing to the buildup of conventional arms throughout the world."

The report also faults the State Department's Office of Munitions Control for "having no influence over the greatest exporter of all, the Department of Defense," and questions whether the Bureau of the Budget or the Agency for International Development (AID) have much say in the selling decisions.

It stresses that "the Arms Control Disarmament Agency, despite its charter, does not sit at the high table when decisions on the sale of arms are made."

CALLS FOR REAPPRAISAL

The United States should, the report concludes, "reappraise the adequacy of the present machinery of policy control and legislative oversight governing the sale of arms."

It was not immediately known whether the committee headed by Senator J. W. FULBRIGHT, Democrat of Arkansas or the subcommittee on disarmament under Senator ALBERT GORE, Democrat, of Tennessee, planned any specific hearings on the issue. In a statement released today one of the prominent critics of the arms race, Senator EUGENE J. MCCARTHY, Democrat, of Minnesota, urged Congress to study the report because "we may be subsidizing weapons manufacturers to a dangerous and undesirable extent."

Chief target of the committee probe was the activity of the International Logistics Negotiations (ILN) office under Deputy Assistant Secretary of Defense Henry J. Kuss Jr., with its sales force of 21 professional officers in four teams with particular functional and regional duties.

HUGE SALES FOR CASH

It states that the ILN, not AID or the Export-Import Bank, had acquired responsibility for negotiating credit terms for military purchases, especially to underdeveloped nations. The huge sales to industrial countries like Britain, West Germany or Canada were mainly for cash.

One major trend, the report notes, is that while Congress was increasing its watch on military grant assistance, Defense was shifting to direct sales. From fiscal year 1952 to 1961 the total was $17 billion in grant aid and $5 billion in sales, but Defense estimates that in the 1962–1971 period the position will be reversed—$15 billion in military sales and $7 billion in grant aid.

The report quotes approvingly. McNamara's statements in September, 1965, on the desirability of influencing underdeveloped allies to give first priority to the social and economic needs of their peoples.

SIX RECOMMENDATIONS

But it felt that the arms race seemed to defy McNamara's "best intentions".

"The question that must be addressed is whether the governmental machinery designed for the management of our military sales program is adequate to the task of bringing the U.S. actions in line with Secretary McNamara's intentions. There is evidence to suggest that it is not."

The 13-page report ends with six specific recommendations:

Direct the Munitions Control Office to compile quarterly statistics on private and government arms exports at least for the Secretary of State and for Congress;

Require Defense to account fully for its military assistance credit account;

Have Congress examine Eximbank's arms financing role;

Have Congress probe military export credits simultaneously with development loans;

Have Congress examine the effectiveness of the Arms Control and Disarmament Agency;

Have the U.S. take the initiative in organizing regional conventional weapons "free zones" that would have no sophisticated offensive or defensive weapons.

A Small Feeling of Guilt

EXTENSION OF REMARKS

OF

HON. JAMES C. CLEVELAND

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. CLEVELAND. Mr. Speaker, an increasing number of people are becoming concerned with the manner in which our Government is treating Rhodesia. I am not personally familiar with whether the Ian Smith government of Rhodesia is a good or bad one.

Although one can obviously disagree with some of its policies, it certainly seems strange to me for our administration to be cracking down on Rhodesia at the very time when it is attempting to promote East-West trade with nations supplying our enemies in Vietnam.

Recently, one of the outstanding editors in New Hampshire's Second Congressional District, Mr. Richard Lewis of the Journal-Transcript in Franklin, wrote a most thoughtful and perceptive editorial on the situation, which I commend to the attention of my colleagues and herewith submit for the RECORD:

A SMALL FEELING OF GUILT

The demands by Great Britain that its rebellious colony, Rhodesia, be allowed its independence only if its vast majority of natives are prepared for eventual sharing in the rule of the would-be new nation, leaves us just the least bit uneasy.

We have no argument with the argument that people should rule themselves, and we are not inclined to be patient with the proposition that a limited elite should monopolize for all time, as a matter, perhaps, of divine racial right, the government of a put upon majority.

Yet, as we say, this whole argument as applied in the case of Rhodesia leaves us somewhat shaken. We are painfully reminded of another set of British Colonies that made the break with the mother country under circumstances that were in many ways parallel, and another set of natives who came out of the deal with a far worse proposition than suffered by the original inhabitants of Rhodesia.

We trust we are allowed a small feeling of guilt when we recall that the American Indian not only never did have much of a crack at sharing the government of the country he occupied before it was hit by a wave of Europeans, but in fact, was very nearly wiped out when he failed to greet the newcomers and their thievery of his land with proper gratitude.

We can, perhaps, work up a certain sympathy with the proposition that the native peoples of Rhodesia ought eventually to share their own government in proportion with their numbers, but we can't, in good conscience, say it with much force.

The American Indian, even today, had a pretty lousy deal of it.

The President on the War

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MULTER. Mr. Speaker, our dedication to peace and our determination to prevent the takeover of South Vietnam by Communist dictators were never better expressed than by President Johnson in his state of the Union message.

An excellent commentary on the message was contained in an editorial in the January 12, 1967 edition of the Washington Post.

I commend it to the attention of our colleagues:

THE PRESIDENT ON THE WAR

The country will have a right perspective about the war in South Vietnam if it keeps in mind the solemn words of President Johnson's message to Congress: "We have lived with danger for a long time, and we shall live with it for a long time to come."

The test of national will and resolution seen by the President is one the American people must come to understand. Much more is involved in Southeast Asia than the outcome of combat in an isolated region. It is, as the President described it, a "test" of our ability to fight a long war of limited objectives, a test of our restraint in the face of temptation to try to end the war at once, a test of our determination to avoid "the hatreds and passions ordinarily loosed in wartime." And it is a test, as he put it, of our will to fight to keep alive the hope of independence and stability "for people other than ourselves."

In the recently published Harold Nicolson diaries, Winston Churchill is quoted as saying that much would turn on the willingness of the United States, in the future, to "think always of something higher and more vast than one's own national interest."

The words of the President and the response of the Congress should correct any illusions that may exist in Hanoi about the resolution and power of this country to continue the struggle in South Vietnam until the North Vietnamese attempt to conquer it is abandoned. The world simply must credit the declaration of the President that "We will stand firm in Vietnam."

There is every present prospect that it will be necessary to stand firm for a long time. The recent spate of peace overtures so far seem to have produced nothing tangible. "Standing firm," of course, does not mean that this country must remain inflexible in the means it employs to prosecute the war or the measures it invokes to seek the peace. The task immediately ahead in South Vietnam clearly is to reinvigorate the war of pacification against the guerrilla forces; to encourage as much as possible the progress toward responsible civilian democratic rule; to maintain the gains against inflation and economic disintegration; to continue the war against the conventional forces of North Vietnam whenever they appear in the demilitarized zone or in South Vietnam. At the same time, means must be sought, through which it can be made clear to North Vietnam and to the world, that our ultimate object is the diminution of the scale of the fighting. If peace by negotiation is impossible—and at present it seems to be impossible—peace must be sought by other means.

This country must be quick to embrace any opening that might lead toward a lower level of hostilities. Since the measures of South Vietnam and the United States are basically defensive, the level of the fighting proceeds at a pace largely dictated by the aggressors. If they exhibit any willingness to lower the plane of combat, the United States forces must be quick to reciprocate.

Congress and the country heard from the President a careful, calm and measured discussion of the outlook in South Vietnam. One might search the archives for utterance of a wartime leader that would exceed it in candor and restraint.

Pacoima Memorial Lutheran Hospital Emerges From Tragedy

EXTENSION OF REMARKS

OF

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. CORMAN. Mr. Speaker, 10 years ago today a junior high school graduation exercise was brought to an abrupt halt by a bewildering boom and blackout.

Today, January 31, 1967, marks the 10th anniversary of the air crash over the Pacoima Junior High School playground, in my district in the San Fernando Valley. This tragic mid-air collision brought sudden death to three youngsters, Ronnie Brawn, Yvonne Eleanor and Robert Callan, who only moments before were enjoying a class recess outdoors.

Out of the shadow of this tragedy has emerged the triumph that is Pacoima Memorial Lutheran Hospital. This great community health center serves as a memorial to those youngsters who died that day and further honors their broken bodies by embracing a concern for the whole of man—physical, mental, social and spiritual.

In its 6 years, the hospital has met the around-the-clock emergency needs of the 32,466 persons in its area. It has developed special medical service departments, including a pulmonary function disease laboratory, a nuclear medicine department, inhalation therapy department, and a physical therapy department.

Pacoima Lutheran Memorial Hospital has focused government and community resources on all aspects of mental health care. Preventation and education, as well as treatment are major activities in its new mental health center.

The hospital has been serving the spiritual needs of its patients and personnel with its chaplain, O. W. Mieger, and, under a mental health staffing grant, is developing a program to educate and train the spiritual leaders of the community in mental health.

The staff of Pacoima Memorial Lutheran Hospital recognizes that the problem of sickness, disease and accident is not self-contained. It has sought to understand the needs of the people of the community. This past summer the hospital had three health care students surveying the Pacoima community to determine the availability, accessibility, and acceptability of its services to the persons who need them.

The dark tragedy of a decade ago has brought the light of a great community health center to the people of the San Fernando Valley, and its future looks even brighter.

The U.S. Merchant Marine: "Down to the Sea—In What?"

EXTENSION OF REMARKS

OF

HON. HERBERT TENZER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 10, 1967

Mr. TENZER. Mr. Speaker, on January 10, 1967, I introduced H.R. 1399, a bill to establish an independent Maritime Administration to coordinate and consolidate the duties and responsibilities relating to our U.S. Merchant Marine now spread throughout the Federal Government.

Forty-three Members of Congress have sponsored identical legislation, a heartening signal that the 90th Congress may take action to stimulate the revitalization of our merchant fleet—making it the first in the world.

In the January 30, 1967, edition of Newsday, an editorial appeared entitled "Down to the Sea—In What?" I urge my colleagues to read this revealing editorial which expresses so well the need for legislation to establish an independent Maritime Administration.

The editorial follows:

DOWN TO THE SEA—IN WHAT?

In three years, the United States will only have 200 dry cargo ships that are less than 25 years old. Our fleet is almost obsolete; our shipyards can't compete with foreign yards, and 96 per cent of the strategic materials we import move in foreign ships.

Succinctly, our merchant marine is in a mess.

The situation troubles the President, the Congress and whole hierarchy of bureaucrats. But little action to reverse the trend has been taken. This, perhaps, is because the problem is an old one and a complex one. The first congressional attempt to help the U.S. shipping industry came in 1789 when customs were reduced on imports carried in U.S. ships. The most significant piece of legislation was the Merchant Marine Act of 1936, which established our desire for a merchant fleet to serve the nation's commerce and defense. It also set the pattern for the subsidy program that continues to this day.

But with government aid, there is always government regulation and administration. It is in this area that confusion reigns. Jurisdictions overlap, lines of authority are blurred and responsibility is uncertain. Currently five cabinet level departments, the Federal Maritime Commission, the Maritime Administration and a welter of subsidiary offices and boards have jurisdiction over the merchant fleet in one way or another. New ideas and bold initiatives have little chance of moving through this thicket of tangled authority.

The N.S. Savannah was one such bold innovation. This automated, nuclear-powered ship was to have set the course for the future of the U.S. Merchant Marine, showing that technology could make the U.S. fleet competitive. But last week it was announced that the Savannah was being taken out of service. As an experiment it had a $53,000,000 impact on the U.S. treasury, but its impact on the problems facing the U.S. Merchant Marine was small. Our fleet is still inefficient, almost obsolete, and dwindling.

The idea of the Savannah was a good one. Automation is the only way that the U.S., with its high wage levels, can hope to become competitive on the high seas. But ideas must be pursued into reality. This one wasn't. One nuclear ship was launched; it sailed in lonely splendor for five years, while the rest of the fleet gathered rust and subsidies.

Our competitive position still demands automation and the construction of an efficient fleet. But who is to set the policy and provide the follow-through that was so clearly lacking in the Savannah experiment? Many in Congress believe the task should be given to the head of a reorganized Maritime Administration. At present the Maritime Administration is part of the Department of Commerce, and its head reports to the secretary of commerce. In addition, many functions that could logically be included in the purview of the Maritime Administration, are the responsibility of other cabinet-level departments. In the last session of the Congress, 11 bills were introduced to make the Maritime Administration an independent agency whose head would report directly to the President. The new agency, in addition, would take over responsibility for many of the functions now performed by other departments.

There was no action on these bills during the 89th Congress. But the 90th Congress is to consider similar measures. A new, independent Maritime Administration, with expanded responsibilities, is an excellent idea. The Congress should act to create this new agency.

It would help eliminate one of the merchant marine's most pressing problems, too many captains in Washington.

Freedom and Independence

EXTENSION OF REMARKS

OF

HON. WILLIAM T. MURPHY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MURPHY of Illinois. Mr. Speaker, Ho Chi Minh must have raised many eyebrows outside his own misguided world when he said peace would mean the surrender of North Vietnam's freedom and independence.

The Washington Post puts the significance of freedom and independence in sensible perspective. We have never threatened the loss of either, the Post declares. The "freedom" we oppose is to overthrow neighboring governments by violence. And the only "surrender" we seek is that of the right to infiltrate and subvert a neighboring area.

Before offering the Post's editorial on Ho's misapprehension for the RECORD, I would like to quote its concluding sentence:

> "North Vietnam's 'freedom' to invade cannot be reconciled with South Vietnam's 'freedom' to resist invasion."

The entire editorial follows:

[From the Washington Post, Jan. 18, 1967]

"FREEDOM AND INDEPENDENCE"

There must be some extraordinary total failure of communication if President Ho Chi Minh of North Vietnam really believes that peace is to be had only at the sacrifice of North Vietnam's "freedom and independence."

The "independence" the venerable president is talking about and the "freedom" he seeks to preserve never have been threatened by the United States. The only "freedom" for North Vietnam that the United States opposes is the "freedom" to overthrow the governments of its neighbors in Thailand, Laos and South Vietnam by the use of force and violence. The only North Vietnam "surrender" sought by this country is the surrender of the right to subvert and infiltrate and invade a neighboring area. It is only a semantic idiosyncrasy of Communist lingo that can construe a nation's compliance with the conventional rules of international law into a surrender of a national prerogative essential to its "independence" and "freedom." This construction of the words "freedom" and "independence" is a construction that was common among tribes of vandals and huns and mongols, but it is not a view of national right appropriate to the Twentieth Century. If it is a right that must be conceded to any nation then we must resign ourselves to an era of lawlessness and conquest and barbarism such as the world has not seen since the Middle Ages.

It is simply not believable that so sophisticated a master of philosophy and politics seriously believes that the right to conquer and subdue neighboring peoples is a right inseparable from full nationhood. So it must be assumed that there is a failure of communication—that North Vietnamese leaders have been misled by their own propaganda into the belief that the United States, notwithstanding a thousand disavowals, means to invade and occupy North Vietnam. Is there any kind of multinational guarantee of the territorial integrity of North Vietnam that would allay this fear and remove any legitimate anxiety? Perhaps it is the first task of diplomats to find it. For if it is a mere misapprehension about the security of North Vietnam that is involved, it ought to be possible to move toward peaceful settlement. But, if peace is to be had only by accepting the principle that North Vietnam has the "freedom" to subdue all its neighbors on the Indo-China peninsula, then, of course, it is a different matter. North Vietnam's "freedom" to invade cannot be reconciled with South Vietnam's "freedom" to resist invasion.

Ukrainian Independence Day

SPEECH

OF

HON. LUCIEN N. NEDZI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. NEDZI. Mr. Speaker, the continued thaw in our relations in Eastern Europe and the spirit of accommodation which presently pervades United States-Russian affairs should not deflect us from a continued interest in the captive nations.

Patriotism and nationalism still permeate the peoples of Eastern Europe, including the Ukraine. Today's seeming tranquillity and stability may be tomorrow's unrest and revolt.

We should not spurn the voices who call attention to the independence days of Eastern European nations, for events have proved them right on more than one occasion. For example, diplomats on both sides were unprepared for the October 1956 events in Poland and Hungary. Since that time, many experts have miscalculated the reversal of the liberal trend in Poland and have underestimated the rapidity of Rumania's political and economical transformation. The point is that we can benefit from a variety of view in Eastern Europe and particularly from giving a sympathetic audience to those most in tune with the enduring nationalism of oppressed people, such as the Ukrainians.

The Ukrainians, as much as any captive nation, have maintained their language, culture and national spirit despite many, many years of Russian dominance. The people of Ukraine have never been truly afforded the right of self-determination. It behooves us, as responsible public officials, to call attention to the facts.

During this week of special attention to the situation in the Ukraine, I am pleased to join my colleagues in observing the 49th anniversary of Ukrainian Independence Day.

Chairman Rivers, Departments of State and Commerce, Give Response to Editorial on U.S. Trade With Communist Nations

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. EVINS of Tennessee. Mr. Speaker, the Nashville Banner recently published an editorial entitled "U.S. Trade Shores Up Hanoi Military Machine." The thesis of the editorial was that trade with Soviet Russia and Communist nations of Eastern Europe is a funnel through which strategic goods are then shipped to North Vietnam to assist in the war against the United States.

Copies of this editorial were referred to my good friend, Chairman Mendel Rivers, of the Committee on Armed Services of the House, to Secretary of State Dean Rusk and Secretary of Commerce John Connor for study and comment. The response by Chairman Rivers and by spokesmen for the Secretaries—Douglas MacArthur II, Assistant Secretary of State, for Secretary Rusk and Director Rauer H. Meyer, of the Office of Export Control, for Secretary Connor—are most interesting.

In view of the interest of this most important question to my colleagues and to the Nation generally, I insert the editorial and the responses by Chairman Rivers, Mr. MacArthur, and Mr. Meyer to be reprinted in the Appendix of the Record.

The editorial and letters follow:

"BRIDGE BUILDING" HAS ITS LIMITS: U.S. TRADE SHORES UP HANOI MILITARY MACHINE

The United States has figuratively kicked itself in the pants for supplying Japan with untold tons of scrap iron prior to World War II.

Officials responsible for okaying shipment of this war material potential fall back on the lame excuse that we weren't at war with Japan at the time and that they had no reason to suspect that we would cross swords with the Nipponese. Nevertheless, they now agree it was a stupid mistake.

However, if our Central Intelligence Agency reports are accurate, we're doing much the same thing with regard to North Vietnam—a nation with whom we ARE at war.

It all stems from a directive issued by President Johnson designed to "build bridges to Iron Curtain countries through increased trade."

It's now revealed that a big share of the precision instruments and hard goods included in this trade deal is winding up in North Vietnam to shore up military strikes against U.S. forces and strengthen Hanoi defenses.

Incredible as it may seem, we are in the position of fashioning the instruments of our own destruction.

Take Hungary for instance, a country LBJ is trying to woo through trade concessions.

That Red satellite is supplying the Viet Cong with U.S.-made vacuum gauges, radiation equipment, and airborne navigational devices over a round-about trade route through Russia.

At the same time we're shipping radio communication receivers and parts, refrigeration compressors, along with technical instructions as to their application, to Poland, which in turn, makes them available to Russia's military complex—thence to Hanoi to modernize weaponry used against our bombers and ground forces.

Much of the artillery and small arms which Russia is supplying in quantity to North Vietnam are fashioned in the famous Skoda works at Pilsen, Czechoslovakia—a country we are furnishing electronic computers, pyrotechnical rocket engines, and a super-duper hydrogen plant which, in this age of sophisticated weaponry, gives stature to the Soviet war machine.

The caravans of trucks, which in recent months have replaced coolie labor in transporting supplies to the North Vietnamese war front, come from Czechoslovakia and the Wartburg Automotive Works in East Germany where we are now shipping a cold steel rolling mill, a tandem temper mill, rotary combustion engines, data-processing systems, and a wide range of computer spare parts!

Can we be so naive as to believe we are "building bridges" to peace, that the technical know-how and hard goods with war potential we are delivering to Russia's satellites will cement a lasting bond of friendship with a combine of nations which has vowed one day to "bury us"?

The fact that our naval intelligence reports that from five to ten Soviet freighters, with concealed cargoes, are being unloaded each day at Haiphong should alert us to the dangers involved and the folly of peace bids based on the barter of machines, chemicals, and electronics destined for the enemy arsenal.

Such "bridges" can only lead to a longer, more costly war—and worse still, mounting U.S. casualties.

Since there is no evidence that such overtures are serving to thaw out our relations with the Reds the wonder is that LBJ's directive is still in force.

It's enough to make even strong men weep!

House of Representatives, Committee on Armed Services,
Washington, D.C., January 11, 1967.

Hon. Joe L. Evins,
House of Representatives,
Washington, D.C.

Dear Joe: This is to acknowledge receipt and thank you for your recent letter with which you enclosed an editorial "U.S. Trade Shores Up Hanoi Military Machine" which was published December 22 in *The Nashville Banner*.

This editorial expresses a concern which I, too, have felt for a considerable period of time. As you might guess, I have had occasion to make a number of inquiries concerning our trade with the Soviet Union and other Communist countries and I have been only moderately satisfied with the responses I have received. When Secretary of Defense McNamara appears before the Committee in the near future, it is my intention to go into this matter with him and see whether we are on sound and safe grounds in the trade we are carrying on with these countries.

As I understand the situation, the Government's policy toward trade with Communist-controlled countries varies, depending upon our relations with the particular country in question.

Trade with Communist China, North Korea, and North Viet Nam is embargoed. Similarly, all imports from Cuba have been embargoed since early 1962. Also, all exports to Cuba are prohibited, except medicines not available outside the United States and charity shipments for disaster relief.

The United States maintains certain trade relations with Communist-controlled countries in Eastern Europe. For reasons of national security, however the Government maintains control over U.S. exports to those countries to make sure that no strategic materials are shipped to them. Imports from these areas are not subject to special controls since there is no need to do so on security grounds.

An important consideration underlying the whole matter of trade with these nations is the availability to them of comparable or nearly comparable equipment from countries other than the United States. For example, take the manufacture of automobiles (and, of course, it could be any number of other items including those mentioned in the editorial); although some U.S. machinery is superior to any produced abroad, there are machines designed and built in Europe and Japan that are now being used to produce quality automobiles. If all U.S. machinery normally used in automobile production were denied to Eastern Europe, the Soviets or their satellites could still equip new plants with non-U.S. machinery. In such event, these countries might have a somewhat less efficient automobile plant, but the loss to the United States would be significant in terms of balance of payments and employment.

I think all of us, including those responsible for trade policies and their execution, fully appreciate the concern of people who are apprehensive that our policy of promoting trade with Eastern Europe at a time when we are engaged in a conflict with communism in Vietnam is contrary to our best interests. However, the explanation which I have made above is at least a partial answer to those who feel this concern and I hope it will be satisfactory to you until I have had an opportunity to examine this whole matter in detail with the civilian and military people in the Department of Defense during our hearings.

Thank you for bringing this important matter to my attention and I hope I have been of assistance to you.

Sincerely,

L. MENDEL RIVERS, *Chairman.*

DEPARTMENT OF STATE,
Washington, January 26, 1967.

Hon. JOE L. EVINS,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN EVINS: The Secretary has asked me to reply to your letter of December 30.

This Government is most emphatically not "shoring up Hanoi's military machine" as charged in the editorial which you enclosed. You may also be assured that American production and scientific knowledge are not being used against American troops through trade with Communist nations. This Governments permits no exports at all to Communist China, North Viet-Nam, or North Korea.

The trade that is permitted, as a matter of policy, with the Soviet Union and the other countries of Eastern Europe, does not include strategic goods. In 1965, 94 percent of United States exports to Eastern Europe, which totalled only $139,000,000, consisted of food, feedstuffs, other agricultural products, and industrial raw materials. Only 6 percent of the goods exported fell in the general category of machinery or industrial equipment, all non-strategic.

These exports from the United States, moreover, must be paid for by Eastern European countries through transfers of gold, foreign exchange, or other resources of measurable value. Our imports from Eastern Europe (unlike our exports, which are largely agricultural goods in free supply) include goods directly useful to our own military and industrial potential.

For example, in 1965, the platinum group metals and chrome ore accounted for approximately two-thirds of United States imports from the Soviet Union, the total value of which was $43,000,000. Our exports to the Soviet Union during that year amounted to $44,000,000. The principal items were inedible tallow, soybeans and cattle hides.

A number of recent newspaper articles have drawn on the information regularly published by the Department of Commerce listing export licenses approved for sale to the Soviet Union and the countries of Eastern Europe. These articles suggest that such goods shipped to Eastern Europe are either sent on to North Viet-Nam or are used in Eastern European countries for the production of war materials for North Viet-Nam.

If there were evidence that this kind of indirect trade were taking place on any significant scale, this Government would cease approving the goods involved. In fact, however, the Department of Commerce watches American exports very closely to follow up on any evidence of unauthorized diversion. End use checks are made in certain cases prior to export license approval, and it is even possible in an increasing number of cases to make post-shipment checks on the use of United States equipment in some Eastern European countries.

Each export license approved is carefully evaluated by the Department of Commerce to be certain that it will not contribute significantly to the military or economic potential of the countries of Eastern Europe in a way that would be detrimental to the national security and welfare of the United States. In making this judgment, the Department of Commerce consults other executive departments, including the Department of State and the Department of Defense. The items licensed also are alternatively available from other Western countries that trade more extensively with the East than does the United States.

One further point deserves emphasis. Approvals of export licenses, particularly for exports of technology for plants and industrial processes, mean that an American company is being given an opportunity to compete for an order. The trade that actually takes place may be quite a different matter, because American companies face formidable competition from well established Western European and Japanese traders. As I indicated earlier in this letter, actual exports have been primarily agricultural products and raw materials.

I realize that some people feel that no trade at all with Eastern Europe, however harmless, should be permitted while we are fighting in Viet-Nam. We can understand this view, and we can answer it by explaining the reasons for our policy.

The President, the Secretary of State, the Under Secretary of State, and other high officials of this Department have repeatedly explained the bases of American policy on East-West trade.

The issue is very simply this: Should we reverse the policy that has prevailed for almost twenty years under four administrations and cut off all exports to the Soviet Union and Eastern Europe? Some of our citizens would clearly feel easier in their minds if we simply had no commercial dealings at all with Communist countries. This view is understandable. It is, however, largely personal, and it is not in itself a sufficient basis for a determination of public policy.

Many other American citizens and nongovernmental organizations do not agree with the simplistic view that all trade with Communist countries is bad. The United States Government must have good reason and a good answer for these groups, too, before placing normal commercial trade outside the law. The only adequate reason for imposing such a ban is the overriding requirement of national interest. That requirement does ban trade with Communist countries in the Far East and the Caribbean engaged in active military aggression or direct subversion. It points in exactly the opposite direction in the case of the Soviet Union and the other countries of Eastern Europe.

We are not at war with those countries and it does not advance our national objectives to treat them as though we are. As the President said on October 6, "the easiest thing we could do is get in a larger war with other nations." This is certainly not what we wish. We wish rather to engage the countries of Eastern Europe, including the Soviet Union, across as wide a range of normal, peaceful relationships as possible. In this way we hope that we can increase their realization of the stake which their governments and their peoples have in the peaceful settlement of international differences.

If there were any possible misunderstanding of American resolve to meet aggression with military resistance, the policy I have described might be a risky one. But there can be no such misunderstanding precisely because we are so deeply committed to fight in Viet-Nam to assure the people of South Viet-Nam the chance to decide their future for themselves by peaceful means.

Thus those who advocate the general rule of no trade or other normal civilian relationship with Eastern Europe until Viet-Nam is settled would destroy the whole point and purpose of United States policy for the last twenty years. They would have the United States act as though a state of permanent warfare, hot or cold, with Communist countries is all we can look forward to.

This would be a defeatist view of the future, given the capacity for mutual destruction in the nuclear age.

The American people surely expect their Government to have a more constructive plan of action. The President does have such a constructive plan, and he has done his best to make it clear, both at home and abroad. He believes it does lie within human capability to find a way to preserve the peace in the nuclear age and to stake out gradually enlarging common ground where all nations can work together on affairs of general benefit to mankind. The President spoke eloquently on these broad purposes of our policy at Idaho Falls last year on August 26. I would respectfully urge that you review that statement again, because I believe the President has made no more careful and succinct explanation of the broad policy considerations underlying his position on trade with Eastern Europe.

The President then defined our compelling task: "To search for every possible area of agreement that might conceivably enlarge, no matter how slightly or how slowly, the prospect for cooperation between the United States and the Soviet Union."

In summary, therefore, our policies on trade and other relations with the Soviet Union and the other countries of Eastern Europe are intended to keep open the prospects for continued peaceful relations and reduced tensions in the future. If we were to reverse the East-West trade policy that has prevailed under four administrations and cut off all exports to Eastern Europe, we would be acting on the assumption that peaceful settlements are not possible. This is not the policy which this Government wishes to follow in its relations with the Soviet Union and other Eastern European Communist countries.

I hope that this information will be helpful to you.

If I can be of further assistance to you, please do not hesitate to write me again.

Sincerely yours,

DOUGLAS MACARTHUR II,
Assistant Secretary for Congressional Relations.

U.S. DEPARTMENT OF COMMERCE,
BUREAU OF INTERNATIONAL COMMERCE,
Washington, D.C., January 19, 1967.

Hon. JOE L. EVINS,
House of Representatives,
Washington, D.C.

DEAR MR. EVINS: I am writing in reply to your letter of December 30, with which you enclosed an editorial from The Nashville Banner entitled "U.S. Trade Shores Up Hanoi Military Machine."

There are, of course, many considerations involved in determining and implementing our trade policies under the Export Control Act. The United States Government has, for some years past, authorized peaceful trade with the Soviet Union and other Eastern European Communist countries. To that end we permit commercial exports to them of a variety of non-strategic goods. We do not, however, authorize the export of any product that would contribute significantly to their military or economic build-up in such a way as to prove detrimental to U.S. national security and welfare.

Determinations as to the advisability of issuing a license to export goods such as the editorial referred to are reached only after careful deliberation by the Department of Commerce in consultation with all the interested United States Government agencies. The approval of such exports represents a governmental decision that the transaction would not adversely affect the security or welfare of the United States.

That foreign trade transactions conforming to our laws and regulations are clearly advantageous to our nation is widely accepted throughout our country. Nevertheless, we fully appreciate the concern of those citizens who are apprehensive that our policy of promoting trade in peaceful goods with Eastern Europe at a time when we are engaged in a conflict with Communists in Vietnam will undermine our position. Secretary of State Dean Rusk explained this policy when he sent the proposed East-West

Trade Relations Act to Congress in May 1966. In his letter of transmittal he said:

"We are reaffirming in Vietnam—as we have on many earlier battlefields—our determination to aid free and independent nations to defend themselves from destruction by Communist aggression or subversion. But determined resistance to such force is only part of our strategy to maintain a peaceful world.

"It has equally been our purpose to demonstrate to the Communist countries that their best interests lie in seeking the well-being of their peoples through peaceful relations with the nations of the free world. We want the Soviet Union and the nations of Eastern Europe to understand that we will go step-by-step with them as far as they are willing to go in exploring every path toward enduring peace. We require only that our willingness and our actions be genuinely matched by theirs.

"We are confident that this policy is sound even when we are fighting against Communist weapons in Vietnam. Indeed, it is when we are resisting force with force that it is most important to hold open every avenue to peace. We need to make unmistakably clear to all the Communist nations in Eastern Europe that their best interests lie in economic development and peaceful trade, not in support of futile attempts to gain advantage through the use of force."

For additional background, I am enclosing the Report to the President of the Special Committee on U.S. Trade Relations with East European Countries and the Soviet Union, and a State Department publication that includes both the proposed East-West Trade Relations Act and the full letter of transmittal by Secretary Rusk.

If I can be of any further assistance, please let me know.

Sincerely yours,

RAUER H. MEYER,
Director, Office of Export Control.

The Late Christian Herter

SPEECH
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 24, 1967

Mr. MORSE of Massachusetts. Mr. Speaker, it is with profound sadness that I join my colleagues today in paying tribute to one of the finest public servants of this or any century. Christian Herter brought humility, courage, intelligence, and distinction to every office he held—from the State legislature in Massachusetts to Secretary of State. When lesser men would have chosen to let the arduous duties of public service pass him by, Christian Herter without fail rose to the challenge of political and administrative duty.

It was my great privilege to be associated with Chris Herter from time to time during his public career. I was chairman of the Republican City Committee of Lowell, Mass., when he ran for Governor and had the honor to introduce him to my friends in that community.

I always admired his statesmanship, never more so than when after a difficult term as Secretary of State under President Eisenhower, he once again responded to his President's call and took up the post of Special Representative for Trade Negotiations under Presidents Kennedy and Johnson.

Christian Herter exemplified what is best in a public man; he was a warm and humble private man as well. We all join his fine family in mourning his passing.

Federal Motor Insurance Guaranty Corporation

SPEECH
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1967

Mr. FARBSTEIN. Mr. Speaker, on Thursday, January 26, together with others of my colleagues, I introduced a bill to establish a Federal Motor Insurance Guaranty Corporation. At the time of introduction, the following release, giving in concise language the purposes of the legislation, was introduced:

Congressman Leonard Farbstein (D-N.Y.), called today for a thorough congressional investigation of the automobile insurance industry and the establishment of a Federal Guaranty Corporation to protect policyholders and injured parties against automobile insurance company failures.

This corporation would compensate the victims of auto insurance company bankruptcies much in the same manner as the Federal Deposit Insurance Corporation protects depositors against bank failures. This legislation is similar to a bill introduced by Senator Thomas J. Dodd, and co-sponsored by Senators Magnuson, Bartlett, Brewster, Clark, Hart, Hartke, Moss, Nelson and Yarborough.

During the past six years, 73 companies writing auto insurance have failed. An estimated 300,000 policyholders and injured accident victims are attempting to recover some $600 million out of assets with a net worth of $25 million. The Congressman pointed out that in Pennsylvania 4,000 claimants will receive 1 cent on the dollar; in Illinois 50,000 claimants will be paid 25 cents on the dollar; in Michigan 25,000 claimants will be getting 25 cents on the dollar; and in Missouri 20,000 claimants will receive 10 cents on the dollar.

The Congressman expressed the belief that the Federal guaranty and examination system proposed in the bill would be an essential first step in the protection of the public. He stressed, however, that such serious problems as the indiscriminate cancellation of auto policies, including the refusal of companies to write auto insurance in low income areas, and the method of setting and regulating auto insurance rates need a thorough probing to determine whether other Federal legislation is necessary to fully protect the American public. "To most American families," declared the Congressman, "the automobile is no longer a luxury item, but a virtual necessity." 79% of all U.S. families own one or more autos and 25% own two or more cars. Automobile liability insurance is likewise a necessity. All the states either require or encourage auto insurance. "The regulation of this great interstate business of insurance has been under the domain of the several states, and it's about time Congress took a good hard look at how effectively the public interest is being served", he said.

Mr. Speaker, in 1944 the Supreme Court ruled that the insurance business was subject to full Federal regulation and taxation under the interstate commerce clause of the Constitution. In 1945 the McCarren-Ferguson Act returned to the individual States the power to regulate and tax the insurance business. This legislative history makes it clear that this was a conditional delegation of power to the States.

In 1966, nearly $9 billion in premiums were paid by approximately 100 million drivers of over 80 million motor vehicles. The Interstate Highway System allows our citizens the opportunity to drive from State to State. They should be able to do so with guarantee protection from financial loss.

The proposed Guaranty Corporation, however, is not enough by itself. Such other serious problems as the indiscriminate cancellation of auto policies, including the refusal of companies to write auto insurance in low-income areas, and the method of setting and regulating auto insurance rates, require a thorough probing.

The automobile has become a necessary form of transportation to most American families. Automobile liability insurance is likewise a necessity. To make sure that the general public is fully protected, a good, hard look must be taken to determine whether other Federal legislation is necessary.

For Reforms in Federal Budgeting

EXTENSION OF REMARKS
OF
HON. JOHN M. ASHBROOK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1967

Mr. ASHBROOK. Mr. Speaker, the Philadelphia Inquirer of January 29, 1967, carried a constructive editorial on present Federal budgeting procedures and the need for their revision. I request that the editorial "For Reforms in Federal Budgeting" be inserted in the Record at this point.

The editorial follows:

FOR REFORMS IN FEDERAL BUDGETING

Although the President and Congress are in disagreement on many aspects of the Federal budget for fiscal 1968, there seems to be wide agreement on the need for basic changes in the budget-making process. Differences of opinion arise, however, on precise revisions to be made.

Mr. Johnson made several references to the desirability of budgetary reforms in his budget message. A number of bills introduced in Congress deal with the subject. The principal goal should be a budget that, as the word implies, will serve as an effective means of budgeting the Government's income and expenditures on an orderly basis.

This is not now the case. Budget figures on spending are little more than loose approximations. Supplemental appropriations, to cover spending by Federal departments and agencies in excess of their budget amounts, have become a way of life in Washington. For all the talk about economizing, there is not much incentive to compromise when the profligate bureaucrat who runs short of funds is confident that a generous Administration will prevail upon Congress to bail him out.

One budget reform that Congress should consider is a requirement that projected long-range costs of new Federal spending programs be submitted to the appropriate House and Senate committees when the authorizing legislation is introduced. A major flaw in the present system is that Congress enacts vast numbers of new programs with very small initial costs, without any real idea of the huge future expenditures that will be required to keep the program going. The Administration has used this foot-in-the-door technique successfully on many occasions by requesting only nominal funds for new programs the first year, then raising the ante in future years after the program has become firmly entrenched.

Sound and responsible budgeting practices are needed to keep the Government on firm financial ground and the national economy on even keel. Such practices now are lacking in the Federal establishment.

National Student Council Week

EXTENSION OF REMARKS

OF

HON. JOSEPH G. MINISH

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MINISH. Mr. Speaker, we are living in an age where the teenager has come to dominate our civilization. The American teenager represents one of the largest consumer markets and quite a sizable proportion of our population. American fashions have come to revolve around the teenage image and the adolescent has become a major target of news coverage.

Recently the press stories concerning the American teenager have been deprecating. One often reads how rebellious the American adolescent has become and how eager he is to express his nonconventionality. This is particularly emphasized in regard to a lessening of patriotism and a fadishness which seems to condone un-Americanism.

Whether or not it is true that our younger generation is trying to grow up too quickly and asserting themselves too strongly, they are, nevertheless, a force to be reckoned with. They are making their protests known and are demanding to be heard. I believe that they should be listened to, but I also believe that the worthwhile voices of the teenager are often muffled. Adolescents are of an age when they are coming into their independence and must display responsible leadership.

I can think of no better organization that attests to their maturity and dependability than the student councils in our schools. Today, almost every American secondary school has some form of student organization which is usually designated as the student council. Since the student council is a school organization elected by students to represent them, speak for them, and act for them, I believe that this is an excellent introduction to our American form of government by the people.

An effective student council is based on the democratic philosophy in which cooperation is encouraged. A high school student council body cannot succeed in an autocratic school in which the faculty and administration maintain a restricting control of the school. On the other hand, the student council will not be successful under a laissez faire policy, in which the students are allowed complete freedom without any adult help or supervision. A productive student council understands and respects the value of both faculty and student participation in school management.

I believe that we must encourage this understanding of the democratic philosophy so that these high school students will become effective citizens of the future. The student councils of our American high schools need the recognition that they are contributing to the enlightenment of our society and this can best be accomplished by declaring that a week be established to honor them.

The students of South Orange Junior High School, South Orange, N.J., have undertaken a vigorous campaign to win this rightly deserved recognition of National Student Council Week and have enlisted the cooperation of their parents and such fine organizations as the South Orange Woman's Club, who has kindly written me in support of the project.

To any of our colleagues, Mr. Speaker, who may be pessimistic about today's youth and the future of our beloved country, I offer as antidotes the following commendable letters written to me last fall by students at South Orange Junior High School:

From Robert Freda:

I am president of the ninth grade at South Orange Junior High School. Our school president attended the Leadership Camp at Blairstown this summer and while he was there he learned about National Student Council Week. When he told me about this, I explained to him that I thought it was an excellent idea. I then asked him to bring this idea up in our school congress and have a committee formed with me as head to help this program become a reality.

My committee, the National Student Council Week Committee, has done a great deal to get the adults of our community to support the program. However, in another letter I will send you just what my committee has accomplished but since it has not finished its work yet, I will wait a while. This letter that you are reading now is just a message telling you that I think that N.S.C.W. is an excellent idea as an individual and also as a representative of my fellow classmates.

I realize that it will not be able to be brought up in Congress until next year, but I feel if enough people write to you now and express their support it may help in the passing of the bill. This is why I am writing you now.

I truly hope that Congress will pass this bill because it will be a great aid in the changing of the image of the teen-agers of today if the nation will recognize them as hard-working and conscientious students.

I thank you very much.

From Bernard Hellring, Jr.:

I am writing this as the president of South Orange Junior High School, which is the only junior high in South Orange, with an enrollment of over one thousand students. We would like you to support the request for a proclamation of a National Student Council Week. We would like you to help get this bill passed in Congress. You are probably bothered by many people who ask for all sorts of special days and weeks, but we really feel that ours has a worthwhile purpose, and we have received widespread adult support.

The purpose of the Week would be to further the effort of today's teenager to change his image and to show that the conscientious, hard-working students are the ones in the majority, not the hoodlums. The Week would do this by honoring that faction among the students. It would especially honor the school student councils, which are often responsible for healthy student attitudes, and it would promote the student council idea in schools which do not have one.

Recently we have contacted many clubs and organizations in South Orange, such as The Businessmen's Association, The Holy Name Society, Seton Hall University, The League of Women Voters, B'nai Brith and many others, and have already received the support of most of them.

The National Association of Student Councils adopted the program of support for the Week at a convention last year, a program which was started by the New Jersey Association of Student Councils. This year our school joined the rest of the New Jersey schools in working for the Week. Each year, Governor Hughes proclaims the last week in November New Jersey Student Council Week, and we would replace this statewide Week with the national one.

From Eileen Constantin:

I am in the ninth grade at South Orange Junior High School and as president of my homeroom I know how well our school government is run. Our school officers are working very hard to have a week set aside as National Student Week. The entire school is working together trying to get the support of our community and we would really like to get a law passed sometime this year while we (the ninth grade) are still in Junior High. We need your approval and influence to help us and if you possibly could get the law passed I know our school and many others would appreciate it very much. Students today work very hard and I believe there should be one week set aside recognizing the students of America. We are the future businessmen, doctors, lawyers, scientists, and presidents. Everyone talks about how important it is not to drop out of school and to get a college education. This is so true in the progressing world today, but these students that work all year and train for a profession should be acknowledged and praised for their efforts. If the importance of this act could be explained to Congress and they realized how much it means to us all maybe action could be taken to pass it quicker. Thank you very much for taking the time to read this.

From Linda Gittlin:

I am writing you as a representative of my homeroom, as you represent us. I feel that it is our privilege to ask a favor of you, and that is for your support for National Student Council Week. As you might already have heard, this event should take place in Essex County, in the last week of October.

National Student Council week is set aside to recognize all the students of our County, not only as hoodlums and vandals, but as the hard-working students most of them are. These are boys and girls working towards the time when they may enter college so that they may learn how to become good citizens, and be worthy of that title.

We would appreciate your support to promote this to a national basis.

I believe these fine young constituents are representative of the vast majority of American teenagers who are developing into responsible, enlightened adults. A National Student Council Week would focus attention upon the admirable qualities of our young citizens and would encourage an effective student government. It gave me great please to introduce on the opening day of this Congress House Joint Resolution 5, requesting the President to proclaim the last week in October of every year as National Student Council Week. I am delighted to be joined in this cause by my distinguished colleague from the 10th District of New Jersey, the Honorable PETER W. RODINO, JR., who is the sponsor of an identical measure, House Joint Resolution 6. It is my earnest hope that other Members will interest themselves in this proposal and will lend their wholehearted support to House Joint Resolution 5 and House Joint Resolution 6, the text of which follows:

H.J. RES. 5

Joint resolution requesting the President to proclaim the last week in October of every year as National Student Council Week

Whereas the several States have had statewide student council weeks; and

Whereas the National Association of Student Councils in convention at Ann Arbor, Michigan, in June of 1963 approved the student council week project; and

Whereas the student council more than coordinates student activities and contributes to orderly administration of our secondary schools, but also fosters a sense of citizenship and provides a training ground for youngsters interested in participating in democratic government; and

Whereas the values acquired within the student council have great significance when carried over into adult life; and

Whereas the need for efficient and responsible government is even more urgent in these days of strife, it is especially fitting that student councils receive recognition: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the last week in October of every year is designated as National Student Council Week, and the President of the United States is authorized and directed to issue annually a proclamation setting aside that week as a public occasion and inviting the people of the United States to observe that week with appropriate ceremonies.

Johnson Versus the Military

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MULTER. Mr. Speaker, the restraint with which we are conducting the war in Vietnam has met with criticism among those who believe that we should use our enormous power to simply obliterate North Vietnam. That we have not adopted the latter course is due to the good judgment of our President.

The truth of this is told in the following column which appeared in the January 12, 1967, edition of the Washington Post.

I commend it to the attention of our colleagues:

JOHNSON VERSUS THE MILITARY

(By Rowland Evans and Robert Novak)

In Saigon two months ago, Gen. William Westmoreland, the U.S. commander, carefully planted the word with a high-level delegation of U.S. visitors that the next escalation of the war would be the bombing of airfields in North Vietnam.

In fact, however, there has been no bombing of the airfields, nor does President Johnson have any intention of approving such escalation in the foreseeable future.

This, then, is another example of the President's refusal to be stampeded by the generals into dangerous escalation that might provoke Red Chinese retaliation and even bring on World War III.

Such persistence of the President and Secretary of Defense Robert S. McNamara in withstanding pressure from the brass is neither understood nor appreciated by his critics because the civilian vs. military tug of war is shrouded in secrecy.

For example, it has not been reported previously that just before Christmas Mr. Johnson, strongly backed by McNamara, said "no" to a formal recommendation from the Joint Chiefs for a heavy increase in naval shelling of North Vietnam.

What the Navy proposed and what the Joint Chiefs approved was sea bombardment of transportation routes running near the coast. The request was rejected on familiar grounds: Too much danger of killing civilians.

Other proposals by the military have been systematically turned down in the White House. It is no secret, for instance, that mining the harbor of Haiphong, long on the military's priority list of new initiatives, has been consistently vetoed by the President. Bombing of the docks in Haiphong, another military proposal, also has been rejected by Mr. Johnson and his top civilian advisors.

Thus the picture of a wanton President overruling civilian advisers and yielding to military brass is both untrue and unfair. This inaccurate picture also collides with a significant fact about President Johnson understood only by his intimates.

During his 23 years in Congress, when Mr. Johnson specialized in defense preparedness matters, he developed a healthy skepticism, sometimes bordering on contempt, for run-of-the-mill generals and admirals—particularly the Air Force bomber men.

Mr. Johnson carries this skepticism with him today, and those who know him well are made aware of it. In privacy, he has said: "The generals know only two words—bomb and spend."

Furthermore, McNamara, as the President's principal civilian adviser on the war, has fought the generals with even more gusto than the President. Always somewhat skeptical about the necessity of bombing in the North, McNamara describes it privately as having a useful but distinctly limited value. Naturally, then, he opposes escalation.

As military pressure rises today for approval of new bombing targets, McNamara's closest associates say he is determined to keep civilian control. If he ever feels he is losing it, he will resign forthwith.

In the recent dispute with Westmoreland over bombing the airfields, for example, McNamara claimed that harassment from North Vietnamese Mig fighter planes is far less dangerous to U.S. aircraft than the Soviet built SAM missiles and the tremendous concentration of conventional antiaircraft guns.

Furthermore, McNamara worries that if the North Vietnamese airfields were actually bombed out of commission, Hanoi's infant air force (only six or seven late-model Mig-21s are now fully operational) would move to Red China airfields close to the border. Then the President would be confronted with this agonizing choice: Hot pursuit across into Chinese territory or allow the North Vietnamese planes a privileged sanctuary.

Mr. Johnson is following McNamara's counsel, and the fields are not being bombed. Thus, the critics' charge that the President and his Defense Secretary always yield to the military cannot be supported today.

Indeed, the most significant influence on Mr. Johnson to escalate comes not from the generals but from the politicians. If the President decides on a major escalation during 1967, his old hawkish colleagues on Capitol Hill—Sen. Richard B. Russell of Georgia and Sen. John Stennis of Mississippi—can take the credit, but the Pentagon brass simply can't call the shots with Lyndon Johnson.

The Nursing Shortage: A National Problem

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. DONOHUE. Mr. Speaker, last January 18 Miss Ruth Sleeper, former director of nursing at the Massachusetts General Hospital spoke to a meeting, in Worcester, Mass., of the Central Massachusetts Regional Hospital Planning Council on the challenging subject of the nursing shortage that unfortunately exists throughout this country and which must be equitably solved if we expect to meet the rising demands of nursing services that will be increasingly required by our people in the years ahead.

Miss Sleeper is an acknowledged authority in this field and her comments and judgments on the subject will be, I am sure, of deep interest to the Members of Congress and RECORD readers.

At this point, I would like to include a copy of the newspaper report of Miss Sleeper's remarks in the January 19, 1967, issue of the Worcester Telegram.

The article follows:

NURSE TRAINING PROPOSALS ARE HIT

Vague plans afoot for abolishing the three-year diploma nursing schools in favor of two- and four-year academic training for nurses are misguided, a nationally known authority on nursing said last night.

Miss Ruth Sleeper of Boston, who retired in September as director of nursing at Massachusetts General Hospital, told the Central Massachusetts Regional Hospital Planning Council and its guests at a special program that academic programs and diploma schools together will barely suffice to fill the country's growing need for nurses.

She said a paper published by the American Nursing Association in early 1966 sparked discussions about abolishing the nursing schools and that recent journalistic articles had spread the idea that the nursing schools are closing.

Massachusetts is the fifth largest nurse-producing and employing state in the union, Miss Sleeper said, and 95 per cent of its nurses come from diploma schools, while the national average is 80 per cent.

REAFFIRMED BY LEAGUE

The continuance of such important sources of nursing skill has been reaffirmed recently by the National League for Nursing and the American Hospital Association, she said.

The movement toward academic education comes from a natural desire by nurses to advance their profession and to claim the social distinction that attaches to any college degree, she said.

It is only honest to say that true professional education lies not in a three-year or even in a four-year school, but in a master's degree program, she said. But the distinction might help to confer order on the system, she said.

But whatever system develops, the important thing is not to close the diploma schools, it is rather to add the new programs to them, she said. Only in this way will the state or the nation continue to have the nursing skill needed, she said.

Let Them Help You

EXTENSION OF REMARKS
OF

HON. E. S. JOHNNY WALKER

OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 31, 1967

Mr. WALKER. Mr. Speaker, on January 24 my distinguished colleague and Senator from New Mexico, JOSEPH M. MONTOYA, addressed the plans for progress meeting in this city. The accent of the gathering was placed upon civil rights. Many of those in attendance were industrial and business leaders from all over the Nation.

Because of their presence, Senator MONTOYA sought in his address to accent practical methods of getting potentially frustrated young people from minority groups into the mainstream of American life.

The main pathways to follow, he emphasized, were technical and vocational education for those not continuing on to college, and cooperative education for the bright but economically underprivileged youth.

Because he stressed practical methods of self-help, I feel that he was able to further enlighten these men who make our society move. Rather than stand and shout into the wind, he quietly has put forth practical steps whereby a business or industry may hold out full opportunity and enhance its own profit picture as a result.

As you know, Mr. Speaker, the distinguished junior Senator from New Mexico was my predecessor in this body. During his years in Congress, he has devoted himself to the study of the problems which confront our underprivileged across this Nation. He has established himself as the champion of so-called minority groups and has an intimate knowledge of the perplexity of their dilemma. I do not think his knowledge has been more conclusively or constructively shown than in his speech before this plan for progress meeting. Therefore, Mr. Speaker, I recommend it to my colleagues' reading, and I hope that not only they, but also the business and industrial leaders across this Nation, will give his thoughts the consideration I think they deserve. I hope these realistic steps may be of assistance to others who seek down-to-earth ways of aiding those who wish to share fully in the American dream.

Mr. Speaker, I insert the speech to be printed in the Appendix of the RECORD.

The speech follows:

LET THEM HELP YOU

Ladies and gentlemen: I have come here today not to speak in platitudes nor to say complimentary things. That is not the best way in the world to win an audience, I know. Of course, I do not mean to offend you. Rather I say that what we must consider here is a problem that goes to the roots of American life as deeply as the aspirations of any American minority group.

The American Negro was brought here against his will, enslaved, treated like a beast and finally ushered into a state of twilight freedom from which he is now graduating. The strictures and pains of that emergence are enormous and will continue to be so for a long time to come. Nevertheless, he shall emerge faster and faster until he obtains his full share of the wherewithal of the nation he has helped to build, defends and believes in.

But now I wish to spotlight another group of Americans, now numbering 6 to 9 million, which is on the verge of bursting upon our national scene with a full realization of what has been denied them in the past. I am proud to say they are my own people. The Spanish-speaking Americans of this country were here before the eastern part of this continent was settled. Their history, culture and heritage are proud, gracious and meaningful. Yet they have been ground into the dust and back alleys of this nation for hundreds of years. Now this is at an end! I say this once more! It is at an end!

I have called them "The Silent People." Why? Because they have labored silently in a million fields . . . have stood silently at a hundred thousand counters . . . have waited silently and patiently at a million back doors. Their hats are no longer in their hands. Their faces no longer contemplate the ground. They no longer are content to await what the fates or an established power structure decree for them. They look up . . . at life . . . at their fellows . . . at our tomorrows.

All are ablaze with new realizations. All have seen with their own eyes the struggle of others to be free. All have seen through our mass media a society they have helped to build, but in which they have not fully shared. They have seen their sweat . . . their strength . . . their agony . . . go to others, and have had to settle for scraps from our national table. They are no longer content with their previous status quo.

Now most are astir. They want. They need. They must have, and will not settle for less. How shameful that while I speak some of these people can do stoop labor (Have any of you gentlemen ever done a day's work of stoop labor in a field under a roasting sun?) in some areas of this nation and when they ask politely for a minimum wage of $1.25 per hour . . . are treated as if they have asked to use the family toothbrush.

I say these things to you in the fervent hope that you will see coming what I have forseen for several years. Many of our boys have served in our armed forces . . . have gone overseas and returned to form G.I. Forum groups all over areas where the Spanish-speaking live. They have carried their message back to every town and village . . . each small and large slum. They have seen the wonders of this world in our nation and overseas. They have risen in a hundred meetings I have attended to ask questions never heard a few years ago.

Why do we not have better schools? Why do we not have higher wages? How come we live as we do? Why are we good enough to fight America's wars, yet come home to be denied equal opportunity?

These are embarrassing questions, gentlement. They go on and on. Why do we have to take some of the social insults that have been the order of the day for our elders? Why are there not more of our people in better paying jobs in industry and business? How can we better ourselves? Where are the schools? Roads? Medical facilities?

Our American dream dances before their eyes, enticing them on. It is their dream too, no? They have fought for it . . . worked for it . . . died for it. They have believed in it. It is the same dream you all believe in. Are they to be denied it?

Do any of you remember a few headlines that struck with such bitter force a few days before last Christmas? They concerned an Army sergeant by the name of Richard F. Campos, who died in Vietnam in action, and whose body lay unclaimed in the Oakland Army Terminal.

Or does the name of Danny Fernandez ring a bell? He came from Los Lunas, New Mexico, and died at the ripe old age of 21 because he chose to fall on an enemy hand grenade in order to preserve the lives of his comrades. I know his parents. They are very proud of the fact that he is to receive the Congressional Medal of Honor. Their awful loss is a shade more bearable because they believe as he did, in the principles this nation was founded upon, and for which he was serving.

Both were Spanish-Americans. Both died for all of us. Both sacrificed so we can sit here today. Neither would be able to earn $1.25 per hour doing stoop labor. Neither really had a chance to live. Would either of them have had any real opportunity had they lived? Would they have been discriminated against in any way?

I speak to you as an enlightened, understanding group of Americans who lead. I ask you to understand their desires and empathize with them. I ask you to understand hopes so many of these young people have that are so similar to those you undoubtedly had not so many years ago . . . dreams that motivate them as they do any young man and woman.

No one can deny that the doors of many an American industry and business have been closed to Spanish-speaking people in this nation. This has been changing for a number of years, but it must change still more and faster in the near future if mounting pressures are to be eased.

But before I make any suggestions to industry and business, let me dwell for a moment on civil rights.

Not only have Spanish-speaking people been deprived of equal opportunity, but the very guarantees due them under the Constitution have sometimes been adjourned, just as has been the case with Negroes and other groups who have suffered injustice. Names they have been called are already added to the too long list of our negative slang expressions. They have in some areas been beaten, clubbed, shot, imprisoned and deprived of their liberties. In a few areas of the country these overt deprivations are still all too frequent. It almost goes without saying that this will come to an end wherever it raises its ugly head.

But now let us get down to realities of everyday business and industrial life, for that is where so much will be decided. If American business and industry, that incredible team that works wonders every day, will extend a hand of opportunity, it will be clasped with eagerness and a will to work and succed by young Spanish-speaking people who are emerging.

They want to be with you . . . not against you. They want to have a chance to enter the mainstream of our free enterprise system, earning their promotions or riches along with the rest of American youth. They want to be your skilled and semiskilled workers as well as your managers and executives. Many a bright young mind growing up in Spanish-speaking communities can and will make money for your enterprises and stockholders if given a chance.

I have seen and talked with them . . . bright, eager and quick to learn. Ideas of work, education and self-help are infecting them in ever-increasing numbers. My personal crusade among my people is built around those words. Others are saying the same to uncounted thousands of them.

Let American business and industry take a deeper interest in programs that will enable them to contribute. Make it your business to understand the concept of cooperative education. This, as I am sure you are aware, is the concept allowing youngsters to alternate between off-campus work and on-campus study, thereby enabling many a young man and woman from economically underprivileged circumstances to earn a higher education while preparing for our world of work at the same time. Last year I cosponsored the first statewide conference on this subject at the University of New Mexico. The Ford and Kettering Foundations are assisting in this. When industry and business join us, our battle is more than half won. Think of the contribution these educated young people can make within and to your enterprises, rather than the thought of them sitting in festering frustration outside your gates.

The other half of this total effort is technical and vocational education that takes potential dropouts, dropouts, underemployed and persons with outdated skills, and reeducates or trains them in technical and vocational fields modern business and industry must utilize in order to function today.

Wherever I go among them I speak of these twin pathways to a full share of America's fruits. If this drive meets with cooperation from men and women like you, then we can open the safety valve wide, releasing pent up frustrations before they erupt in their ugliest forms.

American business and industry has grown to be the wonder and envy of our world on the principles of free enterprise and equal opportunity. Many pay lip service to them. But for a moment reflect upon these enormous enterprises owing their genesis, development and success to immigrants and poor young men who were given a chance and took it. I am sure many of these operations are represented in this audience now.

United States Steel, although put together by J. P. Morgan, had as its major segment Andrew Carnegie's organization. He was a penniless Scotch immigrant boy. Bank of America and the name of Gianinni are synonymous. Weyerhauser Lumber speaks for itself.

A certain department store in Tucson, Arizona, was started by a Jewish merchant whose name for the moment escapes me.

But think for a moment about how this nation was really built. Think of the 29 million immigrants who found here what had been denied them in their countries of origin. Ponder the fact that we have built the greatest nation on earth with people who were, as Emma Lazarus said in her poem . . . "The wretched refuse of your teeming shore."

America gave them all a chance. Where would the free world be today had this opportunity not been extended? We have built it upon the finest expression of man's spirit yet given voice. The words of our basic national documents surely must have meaning and vitality. Surely we have not become so blase as to yawn politely behind our hands when they are referred to. I, for one, believe in them passionately.

When we deny the meaning of those words, and with them all they imply, are we not denying the very essence of this republic? Give these young people a chance! Let this new generation of Spanish-speaking Americans earn what others have earned in our past . . . what your own people have earned. They wil lnot let you down.

Give our free enterprise system a chance to show its vitality. Take them into your ranks and let them be exactly what they want to be . . . Americans who take pride in what they are and what they form an integral part of.

I have as much faith in you as I have in them. Otherwise, I would not be here.

Who's Hiding All the Half Dollars?

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. CONTE. Mr. Speaker, in the year and a half since the Coinage Act of 1965 was signed into law, we have been progressing quietly and quite successfully through a time of testing for our coinage system—the transition period from the old 90-percent-silver-content coins to the cupro-nickel-clad-copper dimes and quarters and the 40-percent-silver 50-cent pieces.

Through my work on the Treasury-Post Office Appropriations Subcommittee and my anticipated participation in the Joint Commission on the Coinage, I have followed closely the activities of this transition. The Bureau of the Mint has met a difficult challenge without hesitation and the American public has sensibly accepted the new coinage system quite matter-of-factly.

However, there is yet another hurdle to be cleared before the race will be won for a viable coinage system fulfilling its primary function—that of a commercial medium of exchange passing from hand to hand and pocket to pocket. It is, of course, the missing 50-cent pieces.

The anguished protests of the silver speculators and coin hoarders to the adoption of the new coinage system have faded to a murmur as they are left with only their silver-containing 50-cent pieces to gloat over. Their persistence defies explanation; their foolishness is apparent.

In the January 1967 issue of "Changing Times," an article entitled "Who's Hiding All the Half Dollars?" reiterates the oftcited arguments against coin hoarding and silver market speculation. With the hope that it might convince just a few of these parasites of our coinage system to let loose of their private treasure troves and seek a wiser and more profitable form of investment, I ask permission to have it reprinted at this point in the RECORD.

The article follows:

WHO'S HIDING ALL THE HALF-DOLLARS

Since 1948 the mint has stamped out more than 900,000,000 50-cent pieces, about four each for all of us. Most of them, it seems, have gone into hiding.

Perhaps 500,000,000 bearing the image of President Kennedy rest in keepsake drawers. But even those imprinted with the likeness of old Ben Franklin are rarely encountered in certain areas.

The mystery of the vanishing halves began in 1961 and deepened last year after the Treasury started making those "sandwich" quarters and dimes, with a copper-colored pinstripe around the edge.

The half-dollar looks suspiciously like a new prisoner of silver hoarders, joining in monetary limbo some 481,000,000 silver dollars and millions of dollars in silver certificates.

Why this surging interest in silver? Is it really worth the time and effort many people are spending to accumulate coins and silver certificates, either for their presumed value as collectors' items or for their trade-in value as pure silver if the price goes up?

THE TREASURY HAS IT

Look at the supply of and demand for silver—the things that really determine how much it is worth.

By far the largest domestic supply of silver is in the U.S. Treasury, which has authority to buy and store silver, order its use in coins or sell bullion to commercial customers. Yet it must keep sufficient silver to back up millions of dollars in silver certificates (bills that entitle the holder to a specified amount of silver) still circulating or in the hands of silver savers.

Although no such certificates have been issued since 1964, the government must back up each unredeemed dollar with 371.25 grains of silver, the amount contained in a silver dollar. Last September the Treasury had on hand nearly 3,000,000 silver dollars to stand behind unredeemed certificates. Since there were $586,000,000 in silver certificates out at the time, it had to make up the difference by stocking bullion or crystals (the Treasury isn't giving out any scarce silver dollars now).

In addition, the Treasury must stock enough silver for its coinage. This need has been reduced because only one coin being minted now contains silver—the new Kennedy half, and even this has been cut to 40% silver.

Quarters and dimes minted today contain no silver mainly because industrial users have convinced the government that silver is a "commodity" and needed more for photo film, electronics, silverware and jewelry than for coins.

THE PRICE OF SILVER

The hope of the savers of silver certificates and coin hoarders is, of course, that the price of silver will rise and make their haul worth more as a metal than as spendable coins.

How would this work? Today, the Treasury's price for silver is $1.29-plus an ounce. By making it available at this figure, the Treasury, in effect, controls the price. But if the Treasury should get out of the silver business, the price would probably go up. When the Treasury stopped selling bullion in 1961 for 91 cents an ounce, for example, the price in the free market began rising. It eventually reached $1.29, the price today.

This figure is especially important. Here's why: By law each silver dollar contains about three-quarters of an ounce (or 371.25 grains) of silver. This is what you could get in actual silver if you turned in a one-dollar silver certificate.

With the market price of silver at $1.29 an ounce, there is just about a dollar's worth of metal in a silver dollar. But if the price should go above that, people might find it worthwhile to melt down silver cartwheels of no coin-collection value for their resale value as silver.

Such an increase could make the silver dollar worth more as meltable silver, but not the older halves or silver quarters and dimes. For these coins to be worth more than their face value, the price of silver would have to exceed $1.38 plus the 2- to 4-cent cost of melting. This is because they contain less silver in relation to their face value than a dollar does.

The mystery of the vanishing halves becomes more perplexing when you note that few, if any, of the more than 106,000,000 reduced-silver Kennedy halves minted as of September 1966 are circulating. If people have been squirreling them away as collector's items, they're probably wasting their time. Millions of the new Kennedy half-dollars have been minted and millions more will be; they hardly qualify as rarities.

The chance of a profit from their silver value is remote. They are 60% copper and 40% silver. The precious-metal content is just .148 ounce. So the price of silver would have to soar to $3.38 an ounce for these new halves to contain 50 cents' worth of silver. This is viewed as "most unlikely in the foreseeable future," by Handy & Harman, a large silver fabricator and refiner. The Silver Users Association, which keeps an eye on the silver market for industrial clients, expects a stable price for at least several years.

CAN YOU MAKE A MINT?

Today, if you took a silver certificate to the government's assay office in New York or San Francisco, you would receive a manila envelop containing .77 ounce, about two heaping teaspoons, of a glistening, coarse sugarlike substance—silver in crystal form. You could sell it for $1 at the present price of $1.29 an ounce. Whether it will bring more someday and how much more are questions tantalizing silver savers.

Alas, every silver lining has its cloud. If you are stashing away coins or certificates with the idea of a profit, consider these points:

Some experts believe that for any chance of a profit by melting halves, quarters or dimes, the price would have to reach a point between $1.50 and $1.75 an ounce. Even if this happened in a few years, you wouldn't make much more than you would with an ordinary savings account, and perhaps not as much.

As long as the supply can meet the demand, the price will probably *not* go up. And the supply, theoretically at least, has been increased by the changeover to silverless coins.

If the price should go up, the Treasury has the authority to prohibit coin melting, and you might end up having to break the law to make a profit. Moreover, Congress could change the rules on redeeming silver certificates.

Finally, you would have to be pretty alert to cash in on a silver hoard: An attractive silver price might suddenly bring out so much silver that the price would go right back down.

Graham A. Barden

SPEECH

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. SIKES. Mr. Speaker, I am deeply saddened at the untimely death of our former distinguished and beloved colleague, Graham A. Barden.

Mr. Barden, better known to most of us as "Hap," was elected to the House of Representatives in 1934 and began his first term of office in 1935. I took office in 1941 and had the honor and privilege of serving with Mr. Barden for 20 years. North Carolina and the Nation, too, have sustained a major loss in the passing of this great former Representative. In many ways and under often difficult circumstances, he gave so much of himself, his time and talents, to the service of his district, State, and Nation. Those of us who knew him cherished his friendship and appreciated his great talents. He was a true friend and a distinguished gentleman in the fullest sense.

Mr. Barden was and always will be remembered as a friendly man. In his work here in the Congress, he was very frank. But those of us who knew him caught the spirit of his great courage and convictions and his determination to stand by them under all circumstances.

I admired him for his strength in standing by his convictions regardless of the consequences.

Among his many fine qualities was a sense of humor which enabled him to express himself without incurring the wrath of opponents who knew him. He was a Representative who retained the affection of the people he represented throughout his long career in the House. They, too, admired his strength of character and his unwillingness ever to swerve from principle. They also appreciated his long and faithful service to them and returned him to Congress year after year almost automatically. He was a tireless worker and a devoted public servant. Although he was chairman of a major House committee, he nevertheless found the time to give personal attention to the countless problems of his constituents.

A great American has passed from the scene. We shall all miss him. He will not be soon forgotten. He has left a legislative monument and a record of service that all of us should seek to emulate.

I consider it a privilege to add my praise to his memory and I extend my condolences as a longtime friend to the sorrowing members of his family.

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MOSS. Mr. Speaker, I am one who takes great pride in the vast natural beauty of California. There is, however, a great growing fear among California citizens that failure of the Congress to act promptly on creation of a national redwood park will result in destruction of a monumental segment of that beauty.

For the benefit of my colleagues in the House an editorial on this subject which appeared in the Sacramento Bee of January 21, 1967, follows:

FEDERAL REDWOODS PARK STILL IS A NECESSITY

The delay in congressional hearings on a proposed national redwoods park in Northern California, granted at the request of Gov. Ronald Reagan, should be employed by conservationists to consolidate their forces. The goal of creating a redwoods park of high quality is no less important merely because the new governor wishes more time to prepare his views.

The over-riding consideration is that a park of national standards should be established. It would serve no purpose just to change the name of a state park to a federal park with no additional redwoods of prime quality set aside for the future.

The position of the Reagan administration insofar as can be determined at this point is against that kind of park. But this is only one of many viewpoints which Congress must consider. Chief among the others is what is significant from the standpoint of the entire nation.

The desire for a redwoods park of national quality is not of recent origin. As long ago as 1918, when the highly respected Save-the-Redwoods League was organized, a national redwoods park was advocated on the principle that the rare coast giants are of significance to all of the United States.

The campaign received renewed drive in April 1963, when the National Geographic Society made a grant to the National Park Service to finance a special study. The experts concluded all of their investigation led to one most basic conclusion and that is there was even then an urgent need to shore up and consolidate redwood preservation.

In fact, they said it was essential in the national interest.

The duty of Congress is to keep this point in mind. And Congress must not procastinate any longer in fairness to the lumber companies which have held off timber cutting in proposed park areas pending a decision.

Many conservationists fear that should logging be resumed at the previous rate and should no more acreage be placed in the public domain all of the privately-owned old-growth redwoods will be gone by the end of this century.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paving the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Supersonic Transport Race

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, February 1, 1967

Mr. MAGNUSON. Mr. President, when I visited the Soviet Union last fall, I inquired about the status of their supersonic transport development. Although the Russians would not allow me to inspect their development, of course, it was clear to all of us that they were proceeding with this program and would probably fly a supersonic transport long before the United States had one in the air, even though we proceeded promptly and adequately in this field.

Their present plans are to fly a supersonic transport, probably into Kennedy Airport, now that the Moscow-London-New York run has been opened—probably in early 1968. All the evidence points to that. I am sure they want to show their knowledge and technology and their energies in the field of air superiority.

In a recent issue of Look magazine, Mr. Najeeb Halaby, former Administrator of the Federal Aviation Agency, has written an article on this subject and I ask unanimous consent to have it printed in the RECORD.

Mr. Halaby, in this article, points to our lagging program. I believe that Senators will read the article with a great deal of interest because Mr. Halaby is a man who knows this field and has had close contact with not only the French and British Concorde, which we do know about, but also with the work on the supersonic transport.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILL RUSSIA WIN THE SST RACE?—THE RUSSIANS NEED A SUPERSONIC TRANSPORT AND PROBABLY WILL FLY ONE FIRST, SAYS THE MAN WHO HEADED OUR LAGGING SST PROGRAM

(By Najeeb Halaby as told to Ben Kocivar)

When Najeeb Halaby was a U.S. Navy test pilot during World War II, he studied Russian, hoping to become naval attaché at our embassy in Moscow. That never happened. But when he became head of our Federal Aviation Agency, he was sent to the Soviet Union twice to negotiate for airline service between the two nations. He is now senior vice-president for Pan American World Airways. These exchanges with the Russians and his experience as head of our SST program put him in an ideal position to answer the questions that Look asked him in this exclusive interview.

Question. Could the Russians have the first supersonic transport?

Answer. Any time the Russians wish to put a passenger pod in one of their supersonic bombers and fly their leaders to a politically important spot, they could do so. Back in 1961, we anticipated that Premier Khrushchev might make such a spectacular flight from Moscow to New Delhi or Peking, or even London or Paris, to demonstrate their technological progress. We could have done the same thing. In fact, there was a proposal, when I came into office in the spring of 1961 as President Kennedy's administrator of the Federal Aviation Agency, for Convair to modify one of our supersonic delta-wing B–58 *Hustler* bombers as a Special Air Mission plane.

Question: What is the present SST schedule?

Answer. The first planned U.S. flight in 1971 is the last of four. The French expect to fly the first prototype test *Concorde* on February 28, 1968. A few months later, the British will fly their identical model out of the United Kingdom.

At the moment, there is quite a bit of evidence that the Russians will fly their *Tupolev 144* first. During a recent visit by French technicians, designer Andrei Tupolev said his Tu-144 would be airborne "somewhat before" the *Concorde*.

We know that the Kuznetsov 144, which is the power-plant designation, is operating on the test stand at TsAGI, the Soviet Aeronautical Research Institute, about 25 miles outside of Moscow. More than a thousand test hours have been conducted to date. This fan-jet engine is rated at about 28,000 pounds of thrust, and with the afterburner, about 35,000 pounds. It is designed for their delta-wing airplane, quite similar in shape to the *Concorde* and our rejected Lockheed 2000 supersonic proposal. A full-scale mock-up that prospective passengers are trying has been seen at TsAGI. I think the Russians plan their first flight for next winter and commercial service three years later.

Question. *Have you seen it?*

Answer. I have not. But British and French technicians recently visited it. Designed for 286,600 pounds takeoff gross weight, it is slightly smaller than the *Concorde* and about half the weight of Boeing's winning swing-wing SST. It seats 121 passengers four and five abreast. Designer Tupolev predicts speed of 1,550 mph at 65,000 feet altitude. Like all other supersonics, it has a droop snoot, with a needle nose for highspeed cruise flight and a lowered, visor-like arrangement for landing and takeoff. They will have three in the cockpit and four or more flight attendants.

Question. *Do the Russians have the industrial capability for the SST?*

Answer. They can do anything they place at the highest priority.

They have, as we do, a limited number of scientists, aeronautical engineers, metallurgical engineers. They, like us, cannot do everything at once, filling all of their military and civil desires. Second, they see in both the British-French effort and the American effort a challenge in an area of transport and communications. For world communism, this is an area of very important activity.

Third, they have not had a great success with their long-range subsonic transport, the *Ilyushin 62*, which is not yet in scheduled service; and in conversation with the Russians, I learned they would like to recover with a resounding victory.

Finally, the Russians appear quite advanced in fabricating metals including titanium, particularly in engines, and are developing large presses. In fact, they have a 75,000-pound press that can make very complex aluminum extrusions.

Question. *When did the British and French people see the mock-up?*

Answer. I think an important visit was October 1965. A French delegation of about 30 aeronautical experts spent about three weeks in Moscow, TsAGI, Kharkov and other places. The French and Rusisans have exchanged visits in technical areas a number of times, the last one involving groups of military and journalists last spring.

I took part in discussions with them at the Paris Air Show during June of 1965. Prior to that, I visited them at the direction of President Johnson in 1963. My predecessor at FAA, Gen. Elwood R. Quesada, took a group to the Soviet Union in the spring of 1960.

Question. *The Concorde is in the 1,400-mile-an-hour area; the American SST is in the 1,800-to-2,000-mile-an-hour area. What speed do you think the Russian SST will have?*

Answer. About 1,500 mph. The British, French and Russians are pressing the strength and durability of aluminum to its upper limits, and they have scaled their airplanes to that speed, approximately Mach 2.3.

Question. *Does that mean that this airplane will use titanium in the engines and aluminum for the frame?*

Answer. Both the *Concorde* and the *Tupolev 144* will have some titanium in the engines and in the airframe. In the airframe, the titanium will be around the very hot parts, such as the exhaust in the engine, and perhaps some of the hottest parts of the leading edge of the wing. Even now in our supersonic aircraft, such as the North American XB–70 and the McDonnell F–4H, there are titanium sections in the airplane. The Lockheed SR–71 and the two American SST proposals are all-titanium.

Question. *Do the Russians have any supersonic bomber that they could convert directly to a commercial transport as they did for their first jet airlines, the Tu–104?*

Answer. No, they do not. It would be much more like our building space in what would be the bomb bay and electronic compartment in the B–58 . . . a few seats. It would never be economical to do this.

Question. *Would there be any value in having a smaller supersonic airplane?*

Answer. Well, ultimately, after supersonic commercial-flight safety, economy and public acceptance have been fully demonstrated. This will probably be in the mid-70's. There will be at least two versions of supersonic transports. One will be for long-range intercontinental runs of about 3,500 and 4,500 miles. And the second will be the medium range, from 1,000 to 2,500 miles. This is the way the world's route structures occur.

Question. *Considering the time it takes for takeoff, climb and landing, is there any value in a 1,000-mile-range supersonic airplane?*

Answer. I don't think that there'd be any value in an airplane designed for optimum performance at 1,000 miles. The best performance on a theoretical chart is about 3.5 Mach at around 5,000 miles. The next airplane, the hypersonic transport will have a speed of Mach 6 to 8, and range about 8,000 miles. The ballistic transport will be even faster.

Question. *You've been negotiating with the Russians on a Russia-United States airline service that, optimistically, might start* *sometime in 1967. Could the Russians introduce this service with an SST?*

Answer. With people as capable as the Russian technicians and the Aeroflot operators, I would rule out nothing as impossible. But I think they will not introduce the supersonic before 1970.

Question. *Do you think the sonic boom will restrict the SST to use over large bodies of water?*

Answer. Possibly. Unless the manufacturers and the operators find the answer to the problem of the sonic boom, it could be banned over parts of Western Europe and the United States.

Question. *What can be done about the boom?*

Answer. Distance, detour and design. First, distance from the public. This would be accomplished by very-high-altitude cruising, twice the current level of 30,000 to 35,000 feet. Second would be to detour around noise-sensitive areas. One good thing about the sonic boom is that it doesn't occur at the airport, where the congested population is located. It starts between 150 and 250 miles out as the airplane accelerates through the speed of sound on its way to cruising altitude. The third approach is by design. There are some ingenious ways of shaping the airplane and locating its engines so that the sonic boom is lessened.

Question. *Do you have any reason to believe that the Russian SST would be less safe than an American or the French or British?*

Answer. The Russians' air-safety statistics are not published. They are not members of the International Civil Aviation Organization, and we can only speculate as to their record. I have flown Aeroflot, as have many Americans. It is the world's largest airline in numbers of aircraft and in route mileage. It also must be one of the most rapidly growing airlines. In 1965, Aeroflot reported 23.6 billion passenger miles compared to 19.2 billion in 1964. Of course, this includes all Soviet aviation except military. Present routes are within the Soviet Union, down to the Middle East, across Western Europe to London, over the Atlantic to Montreal, down along our coast to Havana and out to Siberia and Red China.

The Russians have capable pilots, very well-proven manufacturers, good airplanes and power plants. Their electronics and instruments are behind. They are actively seeking to import and license these for manufacture in the U.S.S.R. Without any accident data, we can only believe that their safety record is probably similar to that of other airlines around the world.

Question. *Do you feel that the Russians will try to sell their SST to countries outside the Soviet bloc?*

Answer. At the last Paris Air Show, they had over a hundred salesmen and exhibitors. They displayed their very large military logistics airplane, the *Antonov 22*, their new turboprop, the An-24, similar to our F-27, a whole family of rotary-wing aircraft—including a flying crane that held, kangaroolike under its belly, a bus with seats for 25 passengers—and their regular line of the Tupolev series for short-to-medium-range aircraft.

My hunch is that, because of its own large, long-range structure, Aeroflot would get all of the early *Tupolev 144's*. The next recipients might be other Communist carriers such as the Czechoslovak Airline. So far, the sale of Soviet aircraft in competition with British, French and American products has been negligible.

Question. *Has it occurred at all?*

Answer. Yes. Several helicopters, the IL-14, the IL-18 and the An-24 planes have been purchased by airlines in the Middle East and Africa. Of course, the terms for sale of the Soviet aircraft have been unusually favorable to the customer, particularly for other Communist countries. I don't believe that any Western countries have bought any Soviet aircraft.

Question. *Have any of our companies been invited to see Soviet developments?*

Answer. To my knowledge no American has visited the Soviet SST research-development or manufacturing enterprises. And, in turn, no representative of the Soviet Union has visited Lockheed or Boeing or our SST manufacturing and research sites.

Question. *We have a modest running interchange of scientific information with the Russians on communications and weather satellites. Is there anything like that in the field of aviation?*

Answer. The relationship between Aeroflot, the Soviet national-flag carrier, and Pan American World Airways and the Federal Aviation Agency has been cooperative and candid. There have been two full visits by the FAA to Moscow, in 1960 and again in 1963. The Russians have visited Washington and New York on several occasions, and from time to time, there have been visits such as Vice-President Nixon's celebrated one to the fair in Moscow. In fact, on that occasion, the first real discussions of an exchange of flights between Moscow and New York were initiated.

Question. *Recently, a naturalized American, Vladimir Kazan-Komarek, was arrested by Czech police from an Aeroflot plane that made an unscheduled landing at Prague. In another incident, American safety inspectors were not allowed to visit the crash scene of a Pan Am jet freighter in East Germany, although the plane was later cut apart and shipped over the line. Could these events affect operation of air service that would start this year?*

Answer. Possibly.

Question. *Now, if the Russians start serving the United States, would there be any requirement that their aircraft meet American safety standards of manufacture and operating techniques?*

Answer. This is a very difficult and touchy question. United States and British airworthiness experts have, over many years, exchanged standards of safety and adopted the general procedures and tests and specifications regarding the safety of airplanes, engines, instruments and even pilots. The same is generally true of the French, Italian, Swedish, German and Japanese.

In the case of the Soviet Union, a wholly new situation is faced. But because the airplanes that the Russians have indicated they would operate have been in service for years over Western European countries, my impression is that the Federal Government will permit their operation. They will also have to meet local requirements, such as noise standards of the New York Port Authority.

Question. To achieve this interchange, would we compromise our desire to inspect their airplanes?

Answer. I don't think that any compromise would be permitted, and I suppose if the Russians found that we were operating unsafely, they would correct us; similarly, we would correct them quite candidly. In fact, in our discussions with the Russians in December, 1963, they pointed out several respects in which they believed their standards, particularly of strength of the aircraft, were somewhat more rigorous and higher than ours.

Question. Do you think they will build more than one first test model of the SST?

Answer. The most desirable number in the American experience is three; two for flying and one for static tests. The more available, the sooner the necessary experience is gained, and the safer and better the product is.

Question. Would you have any guess as to what their prototypes might cost? We're talking about ours costing up to two billion dollars.

Answer. There is no comparable basis for estimating the cost of any Soviet development. As to the purchase price for a customer in dollars, that can only be the wildest sort of guess. The Soviet Government will set the price. When I talked to Minister of Civil Aviation Yevgeny Loginov, chief executive of Aeroflot, in the winter of 1963, I asked him why he wished to fly to the United States, and he said "For profits." I believe he meant the prestige of adding the United States to Aeroflot's worldwide system of routes, plus the earning of scarce dollars which the Soviet Union needs to import critical products as well as revenue for his airline.

They use the word profit, in other words, in a broader, less commercial way than we do. In actual dollar terms, I would guess that they would price it somewhat below the *Concorde*, which is about $16 million per copy.

I do not believe that this Soviet Tu-144, being half the size and 70 percent of the speed of the U.S. SST, would approach our estimated price of $36 million each.

Question. Do you think that their development of a supersonic transport is primarily for propaganda?

Answer. I believe it is one reason.

However, other very strong factors are the long reaches of communism from its base in Moscow. I tried to go across the Trans-Siberian Railroad in 1931. From Moscow to Vladivostok was 8½ days. Today, in the turboprop *Tupolev 114*, the trip takes one full day. Their routes from Moscow to Peking, from Moscow to Havana, are very long. The supersonic transport promises to be the greatest, the most efficient, most productive long-range transport in history, so they have a basic Communist communication need for it.

Aeroflot, under the very effective, very able leadership of Minister Loginov, is trying to be a sound commercial competitor along the world's air routes, and they want to do a superior job of flying passengers and freight around the world.

The supersonic transport is not just a technological tour de force. First, it's a time killer. The businessman in California who now takes six flights a year from Los Angeles to Paris would save two full weeks per year if the supersonic were available. Those two weeks are extremely valuable to him and his company.

Second, it presses forward our technology. It isn't just in the space field or the nuclear-energy field that we need to press forward, it's in the aeronautical field as well, which has direct commercial benefits to our society.

We have long exported a billion- to two-billion dollars worth of aeronautical products a year. If we had to buy all of our superjets and supersonic jets abroad, it would cost us in the order of fifty to sixty billion dollars in foreign exchange between now and, say, 1990; whereas if we build the best superjet and the supersonic and sell most of them abroad, we would reverse that trend.

Question. *The British and Russians were first to have jet airliners, and we were last. Yet there are more American jet airliners in use around the world. Do you think the past will repeat itself?*

Answer. This could definitely happen.

Our Government made a big point of saying that there is no military requirement for the supersonic transport. . . . Yet, we already have flying a military Mach 3 airplane, the XB-70, and the YF-12A, Mach 3 titanium airplane which holds the world speed and altitude records. We are also producing the F-111, a Mach 2.5 fighter-bomber.

Question. *In other words, you feel there is a confusion in what we are saying and what we are doing?*

Answer. No, we are pushing military Mach 3 flight, and now we are about to push for commercial Mach 2.7 flight. These airliners may well be used in future Presidential and defense missions.

Question. *Are the Russians maintaining schedules as well as Western carriers?*

Answer. My own experience is that even in the last three years, I've seen progress in their operation and regard them as a formidable competitor along the world air routes.

I also see in the Communist world the greatest untapped market for American airline services. The area from East Berlin to Warsaw to Moscow, southeast to Tashkent, out across Siberia to Vladivostok, then south to Peking and Shanghai is the next frontier for American commercial aviation to develop.

We want very much to see the airplane fulfill its natural role of linking safety, economically, competitively and peaceably all the peoples and products of the world. Here is a challenge worthy of the airmen of the future.

Employee Morale Sagging a Bit? Just Guess Whose Fault That Is

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. BROYHILL of Virginia. Mr. Speaker, many of our colleagues were not in Washington on December 7, 1966, when an unusually humorous column appeared in the Federal Spotlight in the Washington Evening Star. Mr. Joe Young, one of the best friends Federal employees have in the press, attempted to reveal through humor the hopeless situation in which employees find themselves today.

As I believe all will benefit from reading Mr. Young's work, I am pleased to insert it in full in this RECORD.

The article follows:

THE FEDERAL SPOTLIGHT: EMPLOYEE MORALE SAGGING A BIT? JUST GUESS WHOSE FAULT THAT IS

(By Joseph Young)

Q. Good afternoon, sir. As a top official of the Civil Service Commission, are you concerned about reports about employe unrest in government?

A. What unrest? President Johnson has been vitally concerned with improving the morale and the esprit de corps of federal employes.

Q. But what about invasions of employes' privacy, and pressures to make them contribute to savings bonds drives. . . .

A. President Johnson has appointed careerists to some executive jobs hitherto filled by political appointees.

Q. And questionnaires that require employes to list their racial and ethnic backgrounds?

A. He has also appointed women to some key jobs.

Q. And requiring employes, even some in jobs as low as Grade 3, to list all their financial holdings and those of members of their families. And forcing employes to join their local PTA and community and political activities. . . .

A. The President has also set up a talent pool for super-grade employes.

Q. Well, employes seem to be unhappy about the 2.9 percent pay raise they got this year. They feel the President was out of line in holding them to this amount when employes in the private sector got considerably more.

A. When President Johnson was Senate majority leader, he always scheduled federal pay raise bills for prompt action—well, almost always, he did.

Q. Do you think the President's veto of the life insurance bill helped employes morale?

A. No employe that we know of wrote the President to complain and signed his name.

Q. Then you would say that federal employes never had it so good.

A. Absolutely.

Q. Then why are political experts saying that many federal and postal workers voted Republican this year?

A. That's what our Hatch Act investigators are looking into.

Q. What about employes being asked intimate questions about their sex lives?

A. Speaking of sex, President Johnson has appointed a woman as personnel director of a top government agency.

Q. What about the chairman of the Civil Service Commission "wearing two hats" in also being chief political talent scout for the President? Is this good for the career system?

A. Mr. Macy says it's good.

Q. What about the Ervin bill?

A. What bill?

Q. The one sponsored by Sen. ERVIN—to give federal employes a bill of rights to protect their rights against unwarranted invasion of their privacy?

A. Oh, no one favors that bill.

Q. Well, all the government employe unions testified unanimously in favor of it.

A. They didn't understand the provisions in the bill.

Q. What about all the documented evidence uncovered by the Ervin committee and also presented by government employe leaders on invasion of privacy?

A. Oh, all these cases were the result of misunderstanding on the part of the employes. Agency officials wouldn't hurt a fly. The employes are just supersensitive, that's all.

Q. What do you think will happen to the Ervin bill next year?

A. Oh, we're all closing our eyes around here and hope that when we open them up next year the Ervin bill will have disappeared.

Q. Why isn't the Johnson administration endorsing the pay comparabilty principle of the 1962 pay act to place government salaries on a parity with industry?

A. President Johnson took a full hour out of his busy workday recently to address the Civil Service regional directors who were in town for a meeting.

Q. What about the administration curtailing overtime in government and trying to circumvent the law by giving compensatory time instead of paying cash?

A. Lady Bird is working very closely with government agencies to beautify their surroundings.

The 49th Anniversary of Proclamation of Free Ukrainian National Republic

EXTENSION OF REMARKS

OF

HON. EDWARD W. BROOKE

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1967

Mr. BROOKE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a proclamation issued January 22, 1967, by the distinguished Governor of Massachusetts, His Excellency John A. Volpe, marking the 49th anniversary of the proclamation of the Free Ukrainian National Republic.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

THE COMMONWEALTH OF MASSACHUSETTS—A PROCLAMATION, 1967

(By His Excellency John A. Volpe, Governor)

Whereas, January twenty-second of this year marks the Forty-Ninth Anniversary of the Proclamation of Free Ukranian National Republic, and

Whereas, The year 1967 marks the Fiftieth Anniversary of the restoration of a network of national independent republics in Central and Eastern Europe, which were later destroyed by Communist Russian forces, and

Whereas, The love of freedom still reigns in the hearts of the Ukrainian people, and enables them to oppose with fierce determination the oppression of Russian Communist domination, and

Whereas, All freedom-loving people join in sympathy with the thousands of American people of Ukrainian descent in abhorrence of the Communist terror and repression directed against those intellectuals in the enslaved Ukraine who have struggled for freedom of expression for the Ukrainian culture, and

Whereas, This year on January twenty-second, thousands of Americans of Ukrainian descent in this Commonwealth and across the nation will pay tribute to the heroic struggle of those enslaved in the Ukraine, thus enhancing their aspirations for freedom and justice;

Now, therefore, I, John A. Volpe, Governor of the Commonwealth of Massachusetts, do hereby proclaim January 22, 1967, as "Ukrainian Independence Day" and urge all citizens of the Commonwealth to take appropriate recognition of this observance.

Given at the Executive Chamber in Boston, this tenth day of January, in the year of our Lord, one thousand nine hundred and sixty-seven, and of the Independence of the United States of America, the one hundred and ninety first.

JOHN A. VOLPE.

By His Excellency the Governor:

KEVIN H. WHITE,

Secretary of the Commonwealth.

Seafarers Achievement Report

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. FARBSTEIN. Mr. Speaker, the Seafarers Log, the official organ of the Seafarers International Union, contains in its January 6, 1967, issue two articles which are, in effect, an achievement report on a most unique trade union school. The articles were written by Paul Hall, president of the Seafarers International Union, and Raymond T. McKay, president, District 2, Marine Engineers Beneficial Association, SIU.

Last year our Nation was confronted with a serious shortage of licensed marine engineers to man the vessels required to transport supplies and material for American and allied operations in Vietnam. To correct this situation and to insure that these needed vessels sailed, the Seafarers International Union and District 2, Marine Engineers Beneficial Association, established a jointly operated license training and upgrading program to produce qualified marine engineers, known as the School of Marine Engineering.

This program has managed to provide the trained engineers necessary to cope with this transport crisis. It has also helped prepare this district for future peacetime requirements.

The success of this program can be easily measured. One hundred and eighty-eight men have completed the program without undue financial hardship to themselves and their families. Additionally, all contracted vessels sailed without a single delay.

Mr. Hall and Mr. McKay are to be commended on their acumen in making this school possible. This is but another example of the attempts of Mr. Hall and his organization to meet the needs of this Nation, not only during times of war but in peacetime.

The articles follow:

[From the Seafarers Log, Jan. 6, 1967]

LICENSE TRAINING AND UPGRADING PROGRAM JOINTLY OPERATED BY THE SEAFARERS INTERNATIONAL UNION, AGLIW DISTRICT AND DISTRICT 2, MARINE ENGINEERS BENEFICIAL ASSOCIATION

ACHIEVEMENT REPORT

Once again, this is an occasion to be proud of the determination and performance of SIU members. In less than one year's time, 113 Seafarers have obtained licenses as ships' engineers after preparing for their examinations at the School of Marine Engineering jointly sponsored by the SIU and District 2 MEBA. Many more SIU engine department men are presently enrolled in the School, receiving instruction that will enable them to sit for their licenses and to sail as engineering officers.

This unique school and what it is accomplishing is important to the men themselves, to the SIU and to the nation. From the standpoint of the Seafarers themselves, the manner in which they have upgraded themselves is a convincing demonstration that the foc'sle is still a major source of potential licensed officers. Provided with the protection of the benefits they have earned as unlicensed seamen, the record shows that men from the foc'sle can and will obtain their licenses and perform creditably on the job.

The benefit to the union as a whole derives from the fact that by helping to fill the need for licensed engineers aboard American-flag vessels, these men have enabled SIU-MEBA District 2 jointly contracted ships to continue to sail on time.

And the national interest is served by the continued sailing on time of these ships, particularly those engaged in the vital Viet Nam sealift.

The response to the license training program, first of its kind to be offered anywhere, is most gratifying. We take special pride in the manner in which these SIU engine department men have performed in school and subsequently in their new shipboard duties. The example of those who have successfully completed the course should inspire their union brothers to also take advantage of the opportunity that this union training program affords to SIU members, their families and the nation.

Finally, the jointly operated union school is an example of what trade union cooperation can accomplish and contribute in the interests of the workers involved, and to the security of the industry and the nation.

PAUL HALL,
President, Seafarers International Union.

A little over a year ago, the shortage of licensed marine engineers became more acute as a result of the impending breakout of ships for the Viet Nam sealift. District 2 MEBA, like other unions, faced the possibility of delayed sailings, which posed a threat to the national security and to the security of every District MEBA member and all other ships' personnel.

Now, in January 1967, the picture has changed remarkably for District 2. Because of the success of our joint training and upgrading program—and our ability to provide opportunities for the graduates of the maritime academies—our contracted ships have been able to sail throughout the year without delays, and the Union has met its contractual commitments.

In the relatively short period since the School of Marine Engineering was established, 75 District 2 members have raised their licenses, and the flow of men taking advantage of the upgrading program continues. At the same time, 113 SIU members have obtained original licenses under the program and have sailed as engineers on District 2 ships.

District 2 is proud that we have been able to provide a means through which our members can raise their licenses without hardship to themselves and their families. We have also been able to draw qualified unlicensed men from the SIU into our ranks as engineers, enabling us to cope with the Viet Nam crisis and to prepare for our future peacetime requirements for new engineers.

The success of this program has been made possible by the outstanding cooperation and support of the union's deep-sea membership. A great deal of credit also belongs to the quality of instruction offered by the School of Marine Engineering and its exceptionally qualified staff, many of whom are District 2 members.

We cannot stop now. The need for qualified engineers in all ratings will continue well into the future. Our license upgrading program has proved its worth. Every District 2 member is urged to make use of this unusual opportunity to raise his license.

RAYMOND T. MCKAY,
President, District 2, Marine Engineers Beneficial Association.

Consulate Exchange With U.S.S.R.

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, February 1, 1967

Mr. MAGNUSON. Mr. President, a very capable newspaper in the State of Washington, the Longview Daily News, had a very fine editorial in its issue of January 24, 1967, and a good analysis on the issue of the consulate treaty which will be before the Senate, which was a question before the Senate last year, and on which the Senate Foreign Relations Committee had some hearings.

I ask unanimous consent that there be printed in the Appendix of the RECORD the editorial to which I have referred, entitled "Consulate Exchange Ought To Improve United States-Russ Relations," discussing the pros and cons of the question. The editorial comes to the conclusion that it would improve United States-Russian relations.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONSULATE EXCHANGE OUGHT TO IMPROVE UNITED STATES-RUSS RELATIONS

Seattle has 28 consulates and other foreign government representatives, Portland has 18. They're listed alphabetically in the yellow pages from Austria to Venezuela. But there are none from the Union of Soviet Socialist Republics. There are none in any part of the country except the Soviet embassy in Washington, D.C. And there are no American consulates in Russia except our ambassador in Moscow.

Officials of both countries are trying to change this situation and get a treaty establishing consulates, but the U.S. Senate is dragging its feet. It won't ratify the treaty. Secretary of State Dean Rusk testified Monday before a Senate committee in this years' go-round.

Arguments against such a treaty stress the espionage angle. FBI Director J. Edgar Hoover says Russian consulates spread across the country would make counterespionage work of his agents much more complicated, that the Communists would have an easier job infiltrating labor unions, student groups, and so on.

But would it? Is such a reaction primarily one of fear? Communists aren't getting very far in this country, despite what some alarmists print and broadcast. Labor unions have learned that organized labor is one of the first casualties after a Communist takeover. The Communist reasoning is: "Now that 'the people' are in control, the need for unions is gone." Unions aren't buying that line any more.

The Communists aren't doing very well among the students either. There are some demonstrations from the fringe, and there always will be in a free society where they're tolerated, but young people today are turning more toward personal, individual gratification rather than identifying with "the masses." This generation identifies better with personal problems on a person-to-person basis (as in the Peace Corps) rather than identifying with a government or mass movement. So the Communists are not really doing well with the students, either.

The Communist effort to infiltrate the civil rights movement and organize the Negro has been a total flop.

So what are we afraid of? Spying. Some 90 percent of the effective spying done in the world today is putting together bits and pieces of information from newspapers and technical journals. And this is already available to the Russians.

There was a story once about a newspaper editor who published a story about a new airplane that could fly X-miles-per-hour, and had done so on such and such a date. Officers from the Pentagon swooped down on him and demanded to know how he knew such secret information. He told them he found out in the library by tracing newspaper accounts of sonic booms across the country, complete with the times of when the booms occurred. This was in the days when sonic booms were front page news. The editor had traced the flight of the plane from the Northwest across the country to the South, compared the distance traveled with the time it took, and he had the information on the new plane. Simple as that.

So if it can be concluded that Russian consulates will not hurt us particularly, will they do any good?

Looking at the situation realistically, we cannot be at odds with Russia forever. Tensions between the two nations have eased. Increased trade, which is the prime objective of the consulates, could ease them further.

We should not feel so insecure about our free society that we must keep it sheltered. And the advantages gained by Russia here will be our advantages over there.

A 1966 Survey of Russian Merchant Shipping

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. PELLY. Mr. Speaker, at this time I would like to call to the attention of the Members of Congress an assessment of the growing Russian merchant fleet which just reached my desk. This report is called "A 1966 Survey of Russian Merchant Shipping" and was the result of the labor of Robert L. Nichols, a graduate student in history at the University of Washington. Mr. Nichols undertook his research at the direction of the applied physics laboratory at the university.

The researcher was given the following instructions: He was to survey the Russian literature, primarily through the use of Russian maritime journals and Russian newspapers and the official utterances of high Russian officials, especially those charged with the control and development of the merchant fleet, and produce a compendium of facts about the Russian fleet and its capability to do the tasks assigned to it. He was requested to be particularly attentive to any indications as to the broad purpose for which this enormous fleet was being constructed, both in peace times and war times. He was to draw no conclusions excepting those that could be drawn by a simple reading of Russian literature.

The real conclusions of national import were to be drawn by others possessing the appropriate military knowledge but who lacked direct contact with the nature of the Russian merchant fleet. He was instructed to derive information primarily from Russian sources, and especially not to be influenced by the facts and conclusions of American and British writers on the same subject unless he could substantiate them from the Russian literature. He was given no advance conclusions to support.

Mr. Speaker, this new survey points up very clearly that the Soviets are on a crash program, as a matter of feverish urgency, to upgrade their merchant fleet, while as we know in the United States the administration policy of slow strangulation of our merchant fleet continues.

Unfortunately the report consists of 54 pages of illustrations—so it is not possible to include the complete study in the RECORD. However, as a matter of information, under unanimous consent previously obtained, I am placing the introduction and conclusion of the study in the RECORD at this point:

INTRODUCTION

Because Russia lacks a long history as a seafaring nation Westerners tend to pay little attention to Soviet ships and shipbuilding. Little is known outside Russian borders about Russian shipyards, ports, and harbors. Ports recently completed, some as long ago as 1958, do not appear in Western atlases. This is partially the result of Russian reluctance to disclose information about such matters, but more basic is our neglect of the Russian maritime expansion which has occurred so unexpectedly. This report is based on the latest and fairly accurate information published in the Soviet Union. It conveys the feverish urgency the Russians feel for their new maritime fleet and at the same time provides a reliable picture of Soviet maritime activities.

What are Russia's maritime intentions? This study will not provide final answers to this question, for the answer lies in what the Soviets do with their fleet in the next five years. Some guidelines for interpreting Russian moves will be presented here.

Russian ships, although standardized and mass produced, are modern and technologically advanced. They also possess certain features which make them suitable for purposes other than commercial trade. At a time when our own merchant fleet is shrinking and ships placed under "flags of convenience" are drifting toward the registries of European countries, the appearance of these Russian ships increasingly darkens an already somber picture.

The following report attempts to survey several different facets of the Russian merchant marine: its growth, policies, administration, types of ships, shipyards, and port facilities. How effectively we interpret Russian moves today may well determine the fate of Western shipping in the near future.

CONCLUSIONS

We are all accustomed to see the Russians grandiosely outline their economic plans in five year chunks and then fail to fulfill them. Shipbuilding is one part of the plan which the Russians consistently not only fulfill but overfulfill. Foreign and domestic yards hum with the construction of new ships for the Soviet Union. Embodying the latest technological equipment such as mechanical hatch covers, unstayed bipod masts, bridge and engine room automation, ship board cranes and adjustable pitch propellers, Russian ships present a sleek, modern profile on the world sea lanes. Over half of the Russian tankers and just slightly less than half of the dry cargo ships are under five years of age and the vast majority of ships in both categories are under nine years old.

The Russians are currently in full swing in their campaign to make the Soviet Union a major maritime power. Tonnage is being added from every direction and there is no indication that the tempo of ship construction is going to slacken in the next few years. On the contrary the amount of new tonnage on order is larger than ever before.

Every kind of ship is being built for the Soviet fleet. Tankers ranging in size from 3,000 to 60,000 tons ply the world's oil routes. Being clean oil carriers, these tankers are designed for easy conversion as fleet auxiliaries to the Russian navy. Dry cargo ships are being built in even greater numbers than tankers. Some, like the POLTAVA, have extended holds which can carry missiles, as they did to Cuba a few years ago. Passenger ships are now operating on major tourist lines in the Caribbean, Mediterranean, and the Atlantic.

The Russian fleet has both an economic and a political role to play in the plans of Soviet leaders, for its relieves them from any independence upon foreign shippers for cargo transport. It also provides the Russians with a means of gaining foreign currency, by carrying cargo for foreign countries. Several ships have been sold to Greece partially for this same reason. In the past the Russian merchant navy has been used as a political device for extending the influence of the Soviet Union into Cuba, the UAR, Zanzibar, and presently to North Vietnam.

To what purposes the Soviet Union will use its fleet on the world scene is still not fully clear. However, the next five years will probably provide the answer. The ships for the Russians' own domestic needs have been produced; the ships for other purposes are now being launched.

Crime in the District of Columbia

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. BROYHILL of Virginia. Mr. Speaker, under leave to extend my remarks I am submitting a copy of a letter addressed by the Washington, D.C., Clearing House Association to the President of the United States, concerning crime in the District of Columbia. Similar letters were sent by the association to the Honorable JOHN L. MCMILLAN, chairman of the District of Columbia Committee of the House, and to the Honorable ALAN BIBLE, chairman of the Senate District Committee.

I feel that since this correspondence was signed by several outstanding citizens of the District of Columbia, who are interested in the District as residents as well as because of tremendous business investment, there is no question as to their sincerity or their interest in having this deplorable situation in the District of Columbia improved.

Their letter follows in full:

CRIME IN THE DISTRICT OF COLUMBIA

THE WASHINGTON, D.C., CLEARING HOUSE ASSOCIATION,
Washington, D.C., January 25, 1967.

THE PRESIDENT,
The White House,
Washington, D.C.

Mr. PRESIDENT: We are writing this letter as one of the groups with some responsibility for leadership in the District of Columbia, some responsibility to speak out on behalf of the entire community.

The crime rate in the District is deplorable. It is unnecessary to muster statistics for purposes of demonstration, nor do we consider it relevant to compare law enforcement here with law enforcement elsewhere in the Nation. The Constitution gives the Congress jurisdiction over law enforcement in the District and that trust should be adequately discharged, should be discharged indeed in such manner as to be a model to the Nation. Armed robberies of banks and other business establishments are happening with frightening frequency. At times it seems to become almost a daily occurrence. Naturally, representing as we do the banking and business community, this is a matter of deepest concern to us. But of even greater concern to us, as having some responsibility for leadership in the community, is the growing and justified feeling of anxiety and insecurity on the part of all of our citizens. In no true sense can we say proudly today that our Government affords us those protections for our persons and property which allow men to live securely and devote themselves without distressing anxiety to the well-being of themselves, their families and their neighbors.

This is no irremediable thing. It may, it probably will, because of past neglect, for a time in the future require large investment. We are prepared to contribute our share. The Nation which has jurisdiction of this community should not be penurious in contributing its share.

Undoubtedly, the root causes need to be attacked, poverty, slum conditions, the lack of adequate education and adequate opportunity which burden so many of our citizens. But these are long-term objectives. The problem is immediate, and the immediate resource is strict and adequate law enforcement.

Our police are undermanned. The facilities available to them are inadequate. The Congress should appropriate whatever is needed to provide enough police, well equipped police and the best police leadership obtainable. Consideration should be given as to whether in the Nation's Capital, as a temporary measure, the Federal Bureau of Investigation might not lend more aid. If this were to be done it should of course be done in such a way as not to reflect adversely, or in any way undermine the responsibilities and morale of the police force of the District. We have confidence in our present police force, if properly supported, but there are areas where no local police force can hope to match the facilities of the Federal Bureau of Investigation, and in our view the problem is sufficiently serious to consider making all of their facilities available to correct these deplorable conditions.

Speedy and effective administration of justice also requires adequate financial support and the ablest possible manning of the United States Attorney's office and the Corporation Counsel's office. This requires large increased appropriations. We have confidence in the leadership of those two offices, but they are both overburdened and undermanned. The speedy administration of justice cannot be attained unless they are adequately staffed and unless the salaries are sufficient to attract the ablest people to those jobs.

The speedy and effective administration of justice is also the responsibility of the Courts. We applaud the developments of the last few years. There has been a thoughtful reappraisal of the distribution of burdens between the District Court and the Court of General Sessions. The Courts have been working longer hours, taking fewer vacations, but much still needs to be done. We applaud the recent undertaking by the Courts themselves of an independent survey of the handling of the business of the Courts. The speedy and efficient administration of justice will do much to curb unbridled crime. Swiftness is no substitute for justice, but swift justice will certainly lend the community greater security. Here again, however, in our view the Congress has not done its part. The Court of General Sessions is understaffed, badly housed, badly equipped. The best of men cannot function adequately in such circumstances.

We hesitate to express a judgment on the recent legislation affecting bail. There has not been an adequate time to try out the consequences of this legislation. If there are inadequacies in it, it would not appear to suggest a return to bondsmen, but it might be worthy of consideration that, if a person charged has theretofore been found guilty of a serious crime of violence, some discretion should be allowed the District Court as to whether such a person should be released to the community. We are in no position of course to appraise the constitutional problems that might be involved, but obviously a prompt trial would need to be a corollary of any refusal of bail.

Finally, why should the Congress permit these bandits to be freely armed against the community. Few hold-ups would be attempted without hand-guns. Some restrictions should be imposed on their sale.

The District of Columbia Clearing House strongly urges that you attack this problem of crime in the District immediately and that you make available whatever may be needed in the way of appropriations to attack the problem adequately.

Sincerely,

John C. McCormack, Secretary, the Washington, D.C., Clearing House Association, Executive Vice President, the Riggs National Bank of Washington, D.C.; Robert C. Baker, Chairman, the Washington, D.C., Clearing House Association, President, American Security & Trust Co. Other members: Leo M. Bernstein, President, District of Columbia National Bank; George A. Didden, Jr., President, the National Capital Bank of Washington; William J. Schuiling, President, the First National Bank of Washington; Douglas R. Smith, President, National Savings & Trust Co.; Louis C. Paladini, President, Madison National Bank; William M. O'Neill, President, Public National Bank; T. P. McLachlen, President, McLachlen Banking Corp.; L. A. Jennings, Chairman, the Riggs National Bank of Washington, D.C.; Barnum L. Colton, President, the National Bank of Washington; Frank A. Gunther, President, Security Bank. Associate members: L. P. Harrell, President, Union Trust Co. of the District of Columbia; B. Doyle Mitchell, President, Industrial Bank of Washington.

Ukrainian Independence Day

SPEECH

OF

HON. FRANK J. BRASCO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 25, 1967

Mr. BRASCO. Mr. Speaker, 49 years ago, after centuries of domination by foreign rulers, the people of the Ukraine overcame their oppressors and acclaimed their independence on January 22, 1918.

The democratic government constituted in the new Ukrainian Republic did its utmost to cope with the new state's difficult problems, but, having neither the manpower nor resources to defend itself successfully, it was overrun by the ruthless Red Army in 1920. Thus ended a brief 2-year period of independent existence for the Ukrainian people.

The oppressive Soviet domination has continued over the freedom-loving people of the Ukraine ever since. They have been robbed of their worldly possessions, and put to death by the thousands. They have been forced to work for their heartless taskmasters in the Kremlin under most abominable conditions, with no promise of restoration to their rightful place in the community of nations. Nevertheless, the thirst for freedom has not weakened among these wonderful people, and the spirit of resistance is as strong today as in generations past.

The more than 40 million Ukrainians under Soviet domination are afforded no opportunity to commemorate the anniversary of the winning of their short-lived freedom in 1918. Only we, who live in freedom and independence, can mark the day for them. We can express our concern over their present plight, and pray to God that soon again, they, and all oppressed people throughout the world, will be masters of their own destinies.

Woolworth President Urges Business Careers for Youth

EXTENSION OF REMARKS

OF

HON. EDWIN D. ESHLEMAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. ESHLEMAN. Mr. Speaker, recently the Lancaster New Era in my congressional district published an editorial about a matter of great importance to the business community, and indeed, the Nation as a whole.

The editorial concerned a speech by Lester A. Burcham, president of the F. W. Woolworth Co., in which he urged college students to accept the challenges of a business career.

It is appropriate that this fine newspaper in my district should bring attention to an enlightened speech by the current president of the world-famous Woolworth chain of variety stores. Eighty-seven years ago, the first store established by the company founder opened its doors in Lancaster.

Called at first the Great Five Cent Store, a line of 10-cent items was added a month later and the "5 and 10" was born. From a sales total of $127.65 the first day in that first store, in 1879, the chain has grown to 3,160 stores with sales last year aggregating more than $1 billion. These stores have outgrown the old "5 and 10" by adding more lines of merchandise to meet the demands of modern retailing.

In his speech, Mr. Burcham points out that misunderstanding of business is causing young people to downgrade it as an interesting career. They do not understand its opportunities for creativity and challenge. The New Era notes that the difficulty business leaders are having in telling this story is affecting recruiting of the men and women who will take over in years to come.

I commend the editorial to the attention of my colleagues:

CAREERS IN BUSINESS

New concern has been expressed recently that college students are not looking to careers in business. Lester A. Burcham, president of the F. W. Woolworth Co., a company which got its start here, says that misunderstanding is a major reason.

Many students are not familiar with basic economics, says Burcham.

Take profits, for example. Some people think of profits as a nasty word. But Burcham calls profits essential, "not merely to provide a fair return on stockholder investment, but for expanding and improving the business, for opening new markets, developing new products and creating new jobs."

Profits also, he continues, "produce taxes and add to the nation's total wealth. They are the key to economic growth and economic growth, in turn, is essential to the overall improvement in our living standards."

Another factor preventing students from seeking business careers is that they think there is no challenge in business.

Burcham answers that this way:

"Challenges, in my opinion, are more prevalent in the market place or business world than in any other field of activity, because change is occurring so rapidly. The swift stream of new inventions, new products, new methods of production and distribution, changing demands of consumers, changing patterns of population and changes in competition do not allow businessmen to get in a rut or become complacent.

"There is challenge in modern business wherever you look. It is a field for do-ers and achievers—for creative people who like to 'get involved'—for men and women of action."

Some students think companies lack social consciousness, Burcham finds. Enlightened corporations, he replies, are in the forefront on civil rights, and have made "tremendous progress in providing career opportunities and training so that all employes, regardless of race, can advance to higher levels of achievement."

Burcham is an able spokesman, in a day when many young people look down on business as merely "commercial" as compared to other fields of endeavor. Many of the youngsters who have this attitude, however, come from families whose livelihood stems from business and industry, and many rely on their paychecks from summer or part-time jobs with business and industry, to meet all or part of college expenses.

The nation could not survive without business and industry, yet leaders in this field sometimes have a difficult time telling this story, and recruiting the men and women who will take over in years to come.

Tribute to the Late Graham A. Barden

SPEECH

OF

HON. NICK GALIFIANAKIS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. GALIFIANAKIS. Mr. Speaker, I never had the privilege of serving with the late Graham Barden, but the record of accomplishments he left behind in this body are achievements which all freshman legislators such as myself would do well to emulate.

You who have served with him will remember Graham Barden for his strength of character, his integrity, for his skills in the legislative process and his vision of the future.

We who have watched his career from the sidelines will remember him as a man who never sought a fight but never backed away from one. We will remember Graham Barden as a man who sought sincerely for the truth and for what was right and best for the people and the Nation he served.

There are others though who will remember Graham Barden and mourn his passing as we do.

The farmers and businessmen of eastern North Carolina will remember Graham Barden as the man who led the fight to move a stagnating agriculture-dominated economy into a fruitful 20th century.

The schoolteachers of the entire State of North Carolina will remember Graham Barden as the one-term State legislator who sparked the drive for pay standards for all of the State's teachers.

Graham Barden will be remembered by every person in this country who ever benefited from the talents of home economists or agriculture instructors educated under the provisions of the George-Barden Act.

And he will never be forgotten by the countless thousands of physically handicapped who have been turned into productive citizens by the Barden-LaFollette legislation for rehabilitation.

Mr. Speaker, Graham Barden will be remembered as one of the giants of this House and of his home State. Our deepest sympathies go out to his family for their loss only magnifies our own.

The Saturday Review Discusses Pollution

EXTENSION OF REMARKS

OF

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. STEIGER of Wisconsin. Mr. Speaker, I have introduced legislation which will be an important first step toward the reduction of air and water pollution. A recent editorial in the Saturday Review points up some of the reasons this legislation is necessary and also describes some of the answers that are available for this growing problem.

In order that my colleagues may have a chance to read this fine editorial, Mr. Speaker, I ask that it be included at this point in the RECORD.

The editorial follows:

THERE'S SOMETHING IN THE AIR

1. IN THE U.S.A.

The main point made repeatedly at conferences on air pollution during the past two years has been that little could be done unless the public became aroused. That objective has now been achieved. During the past year, air pollution as a major problem has exploded into the national consciousness. The issue has been brought home to the American people by books, magazines, newspapers, television, and radio. The result is that the public is now ready for the drastic measures that only a few months ago would have seemed beyond popular support. In fact, it is possible that the American people are actually ahead of government in their readiness to move swiftly and decisively.

Another major change in the air pollution situation is that the problem no longer affects seriously only a few American cities and population centers. If the concern has become a national one, so has the problem. The airshed over the United States is steadily filling up with poisons. Only a few years ago, the sky over the nation was clear except for the pall over the cities. Today, however, the pall extends hundreds of miles in every direction. It is not unusual for the eastern half of the United States, all the way from Maine to Florida and extending west from Boston to Des Moines in the upper half of the country and from Miami and Atlanta in the Southeast to New Orleans and even Dallas in the lower half, to be covered by a pollution blanket. Arizona, traditionally regarded as the state with the driest and cleanest air, now has to cope with heavy smoke drifts from its mining and smelter operations. The Thanksgiving weekend air pollution episode affected not just New York City but the entire East Coast. Such dangerous inversions can be expected to recur with increasing frequency and severity—not because of new meteorological phenomena but because of the steady buildup in airborne poisons.

Each year for the past decade in the United States, several million acres have been taken out of cultivation for our spreading cities and for the construction of superhighways. This represents double jeopardy. First, it impairs nature's restorative cycle by which air is purified. Soil, vegetation, trees are part of the vital balance of nature. Second, what was formerly open space becomes filled up with pollution-causing agents—people, furnaces, incinerators, manufacturing, automobiles, buses, trucks.

The poisons in the air are no longer transient. They are fast becoming cumulative. The air pollution buildup is developing at a faster rate than nature's ability to neutralize it, or man's attempts to combat it. The gap between the intensification of the problem and the response to it becomes wider all the time.

All this sets the stage for the key question: What would happen if the rate of population growth, industrial growth, automobile growth, and highway growth of the past two decades were to remain constant or increase during the next two decades, assuming the same pace of national attack on the problem?

The conclusion is inescapable that most of the large cities in the United States could be regarded as uninhabitable within a decade.

This does not necessarily mean that the air pollution over the nation's large cities will reach and remain fixed at a lethal level. What it does mean is that enough serious episodes will have occurred within a decade so that the large cities will be considered unsafe as permanent places for habitation or business. This is why a vast acceleration of anti-pollution planning activity, both local and national, is now critically needed. The federal government must play a major part in such a stepped-up program. It would be a mistake, however, to assume that the cities and states should no longer have responsibility for attacking the prime sources of pollution.

The reason for a prodigious expansion in federal aid is clear. No municipality has the resources for carrying out all the measures essential to cope with the increasing sources of pollution. Any comprehensive program for the largest cities requires an expenditure of hundreds of millions of dollars, both public and private, if critical episodes are to be averted.

There is nothing more important that the United States Government could do to help safeguard the nation's air than to mount a "Manhattan District" program behind the development of the fuel cell as a source of energy.

Gas turbine engines, propane gas, liquefied petroleum, natural gas, electric motors—all these promise relief from air pollution. They should receive strong research-and-development support from the federal government. However, a major breakthrough in replacing the combustion engine may have to await the development of a fuel cell.

The United States Government mounted a $2 billion project for harnessing nuclear power. It did so because it believed that atomic energy was essential to national survival. The same is no less true of the fuel cell. The combustion engine has revolutionized the way of life not just in the United States but throughout the world. But it has produced large clouds of carbon monoxide, lead, oxides of nitrogen, and pyrobenzine, and literally has become the greatest nonpolitical enemy of the human species on earth. It carries the smell of death inside it.

No one knows how much the development of the fuel cell would cost, any more than anyone in 1940 knew how much it would finally cost to liberate atomic energy. But the need is great enough to warrant the efford. The abandonment of major American cities would be incalculably more costly.

This does not mean that everything else should be deferred until a fuel cell is developed. Mention has already been made of the need for a federal crash program to speed up the availability of efficient gas-turbine engines, or engines powered by propane gas or natural gas or liquefied petroleum gas. (Chicago is already operating propane-gas buses.) The federal government should also promote research in chemicals that can be added to gasoline, diesel fuels, and heating fuel oils to reduce excess smoke and noxious fumes. Such chemical additives already exist; they are far from being finished products, but at least they are good enough to indicate that a substantial increase in research and development is clearly justified.

The federal government should also be involved in the regulation of large smokestacks, beyond a specified capacity. Such capacity is of interstate significance. While all smoke emitters, however small, contribute to the overall density and drift, the large stacks are specific and clearly identifiable offenders over a large area, and ought to come under federal statutes, in addition to local and state regulations.

The federal government should require air-pollution control equipment, and clearly defined performance characteristics, for all such stacks. The costs of installing such equipment should be fully tax deductible by industry within a reasonably short period.

The federal government should promote research in the improvement and sharp cost reduction of electrostatic precipitators and scrubbers. Especially is it important to promote research in the development of sulfur recovery from smokestack gases.

Again, this is not to say that the local units of government should be relieved of the central responsibility for controlling or eliminating airborne garbage and poisons. An effective nationwide program involves combined operations, with separate though related activities going forward on the national, regional, state, and city levels. But more and more, the national government will have to get into the business of setting minimum safety standards and establishing *enforcement* procedures in those cases where large air masses of poisonous drift exist.

The fight against air pollution has won its first and most important objective. The public consciousness has been pierced. Those in authority no longer need fear inadequate public support for hard measures. All the parts are now in place for a prodigious step-up in planning and implementation. Delay or inadequacy can be chargeable neither to public opinion nor technology but to government.

Air pollution is but one aspect of the whole environment. It is impossible, for example, to separate the causes and effects of impure air and impure water. Poisonous chemicals in air affect streams and reservoirs. Contamination of both air and water affects crops livestock, and wildlife. Waste disposal through burning can create air pollution; through dumping it can create water pollution. Dumping also creates sanitation hazards.

As these and similar conditions are studied, it seems clear that *whole systems* are needed. The attack on air pollution must be part of a comprehensive program to protect the total environment. What is needed on a national scale is a plan for interrelating and coordinating problems of air pollution control, water pollution control, solid-waste disposal, noise abatement, congestion, and protection of both natural and man-made facilities that give pleasure and well-being to its citizens.

2 IN THE WORLD

It is not now too early to begin thinking and planning on the highest levels for a world attack on the problem of contamination. Week after week, reports are published on the increasing concern of city officials in Europe, South America, Asia, and Africa about the fast-developing hazards of environmental poisoning. Tad Szulc writes from Madrid about a blanket of dust and smoke so thick that it is sometimes difficult to see fom one side of a thoroughfare to the other. From Paris, Stephen Coulter reports that 180,000 tons of toxic matter are now being pumped into the air of Paris and the suburbs every year. The number of vehicles coming onto the streets is constantly increasing—carbon monoxide gas pollution from cars and trucks has tripled since the early 1920s.

London, according to correspondent Colin Chapman, no longer has to cope with soot pollution fumes caused by coal burning. City ordinances now forbid burning of soft coal. But the danger to Londoners now is from carbon monoxide and sulfur dioxide.

Rome's problem, according to Alan McElwain, may not be as serious as that of New York, but it is severe enough to warrant serious counterattack. There are now about 500,000 automobile registrations in Rome and new cars have been coming onto the roads at an average of 100,000 a year.

Tokyo, writes Robert Trumbull, is one of the worst. Oxygen tanks have been installed at ten of Tokyo's busiest intersections for the use of traffic policemen who must stand for hours in a miasma of automobile exhaust fumes. Early in 1966 an air sampling revealed the presence of sulfuric acid in the atmosphere in a proportion of .5 milligrams to the cubic meter—.1 milligram above the point generally accepted as being a serious danger to public health.

And so it goes. Berlin, Frankfurt, Amsterdam, Warsaw, Moscow, Kiev, Karachi, Calcutta, Bombay, Singapore, Jakarta, Hong Kong, Bangkok, Cairo, Tel Aviv, Johannesburg, Buenos Aires, Caracas—all these and others are now apprehensive about the blackening canopy overhead. Meanwhile, scientists examining the ice near the Arctic polar cap report detectable traces of lead.

The United Nations has not been able to fulfill the major hopes of the Preamble to its Charter because the large nations have consistently failed to provide the authority required for these purposes. But surely the protection of the world's air supply is an issue that transcends ideology and national interests. There is no reason why the United Nations cannot now begin to plan for a coordinated world attack on the environmental poisoning of the planet earth. Indeed, its activity in this area may produce a general strengthening of the organization, all of whose members have to breathe.

Address by Senator Howard W. Pollock, Republican Candidate for U.S. Congress, Noon Luncheon—League of Women Voters—World Affairs Council Discovery Room, Captain Cook Hotel, Anchorage, Alaska, October 29, 1966

EXTENSION OF REMARKS

OF

HON. JOHN J. DUNCAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. DUNCAN. Mr. Speaker, our able colleague, the Honorable HOWARD W. POLLOCK of Alaska, presented a very noteworthy address last fall on membership in the United Nations. Since few of us have had occasion to hear or read this timely statement, I would like to call attention to it by placing it in the RECORD today.

The address follows:

ADDRESS BY SENATOR HOWARD W. POLLOCK, REPUBLICAN CANDIDATE FOR U.S. CONGRESS, NOON LUNCHEON—LEAGUE OF WOMEN VOTERS—WORLD AFFAIRS COUNCIL DISCOVERY ROOM, CAPTAIN COOK HOTEL, ANCHORAGE, ALASKA, OCTOBER 29, 1966

Madame Chairman, Senator Bartlett, General Leonard, Mrs. Suhrke, Distinguished members of the League of Women Voters and of the Anchorage World Affairs Council:

It is my sincere pleasure and privilege to have this opportunity of appearing before you to discuss an aspect of the purpose and meaning of membership in the United Nations, and have chosen the specific issue of admission of Red China to the UN.

Although there is substantial internal strife in the International Communist movement, we must understand that Communist governments and their fronts are waging war against free peoples worldwide. At the moment the hot spot, the test case for us, is Vietnam—as at other times it has been Greece, Berlin, Korea, Quemoy, Lebanon, Cuba. In my view the stake is not Vietnam; it is Asia—and ourselves and the world. The problem is not Vietnam; it is aggressive, militant Communist expansionism—this time from North Vietnam, backed up by the Soviet Union and Communist China, who are fortunately bickering among themselves.

No great expansionist movement has ever stopped until it was checked. Our choice with Red China—just as it was with Japan and with Hitler—is not between checking or not checking—It is whether to check early, while we can, and with Allies—or try to check the aggression later, when it is stronger, closer, and we have fewer and weaker friends and allies. The question really is *how* to check it . . . with unwavering determination, but with least risk and cost.

Since the beginning of the Korean War in 1950, America's policy toward Communist China under the Truman, Eisenhower, Kennedy and Johnson Administrations has been a hardheaded realistic attempt to protect the security interests of the United States by resisting any steps that would further increase Chinese Communist influence and power. An indispensible part of the policy has been to support and strengthen all non-Communist governments that are trying to preserve their independence and thereby to keep their manpower, territory, bases and resources out of Communist control.

I sense a changing Administration attitude concerning admission of Red China to the UN, talk about "reappraisal" of our China policy, statements by Vice President Humphrey and UN Ambassador Goldberg and Senator Fulbright and *others,* calling for "containment without isolation." It seems to me the Administration is softly and slowly but firmly and surely trying to soften the American attitude and condition the American will to accept Red China as a partner in the United Nations Security Council. I oppose this change and feel we should continue to exert every effort to keep Red China out of the UN.

To those who suggest official diplomatic recognition by the U.S. and expansion of trade relations and admission of Communist China to the UN, let me briefly refresh your memory on certain points.

It is said that to admit Red China to the UN would bring the Chinese *people* into the World community. The only thing it would bring in is a tyrannical regime that holds the Chinese people in bondage. Do we show friendliness toward a people by accepting and strengthening the regime that is oppressing them? Was our opposition and resistance to Quisling when he was in control of every foot of Norway equivalent to hostility toward the Norwegian people? Of course not!

I do not believe all of the people of China have accepted Communism, nor that they are better under it; and I am not at all convinced that the Communist regime is in complete and secure control of the country. The internal purges and terror in China in recent months attest to serious problems within that country.

It is said the UN ought to be a universal organization with *all* existing governments in it. But the Charter makes perfectly clear that the UN was never intended to be a universal organization. The concept was discussed at San Francisco and rejected. Article 6 provides for expelling "A member which has consistently violated the principles contained in the present Charter." Article 4 reads: "Membership in the United Nations is open to all other peace-loving nations which accept the obligations contained in the present Charter, and in the judgment of the organization, are able and willing to carry out these obligations."

What obligations? Article 2 reads in part: "All members shall settle their international disputes by peaceful means" and "All members shall refrain in their international relations from the threat or use of force against the territorial or political independence of any state, or in any other matter inconsistent with the purposes of the United Nations."

We have tried to get Red China to accept the membership obligations prescribed in the UN Charter and agree to refrain from the threat or use of force in their relations with their neighbors, but they have refused. Red China is stubbornly keeping *itself* out. It simply refuses to qualify. Mao Tse-tung responds by saying, "Political power comes out of a barrel of a gun."

"But what's the difference between Communist China and the Soviet Union?" you ask. The Soviet Union doesn't refrain from the threat or use of force either. The answer is that the Soviet Union got into the UN at the time of the founding when it pretended to be peace-loving and willing to cooperate for peace in international affairs. Red China does not even pretend—in fact, the essence of its quarrel with Moscow is over its unwavering insistence on the use of force.

It is said that if the United Nations does not admit Communist China, then it ought to expel the Soviet Union. This is a good logical argument, but a useless one. The Soviet Union can veto its own expulsion. If Red China were admitted, it could not be expelled, no matter what its conduct. The step is irreversible. Ambassador Adlai Stevenson, who can hardly be called a blind reactionary, stressed before the UN General Assembly that ". . . . A power given to such bitter words and ruthless actions as those of the Peking regime . . . would be encouraged by its success in gaining admission to exert, all the more forcefully, by threats and maneuvers, a most disruptive and demoralizing influence on the organization at this critical moment in its history—its admission, in circumstances in which it continues to violate and defy the principles of the Charter, could seriously shake public confidence in the United Nations . . ."

If we do not amend the Charter to admit lawless aggressors then our only alternative in allowing the entry of Red China is to ignore the Charter, nullify it, and we must never advocate that course.

Seating of Red China in the UN would be illegal, for it would require violation of the organization's Charter. It would be immoral, for it would almost certainly mean removal of a member that abides by the Charter to seat a non-member that brazenly refuses to abide by the Charter. It would tell the 700 million people on the China Mainland that we are accepting their subjugation, that we think there is more hope for peace for ourselves in deals with their oppressors than in standing steadfastly with them, the oppressed. It would properly be regarded as an attempt to buy peace for ourselves by sacrificing our principles and the freedom of other peoples.

It would pull the rug out from under our loyal Allies on Taiwan, 12 million strong who represent Free China, but who could hardly maintain indefinitely the will or the capacity to resist the alleged representative government of 700 million, with the World Organization for Peace itself rejecting the 12 million and accepting the oppressors of 700 million.

Free Asia has been gaining in strength and determination because of our presence and resistence to Communist transgressions. But let's be realistic. Free Asia will crumble once it believes the Communists are winning, and that Communism might be the wave of the future. Admission of Red China to the UN would mean to much of Asia that the Communists have all but won.

Admission would represent for Red China the greatest possible diplomatic victory. It would give the Mao regime the stamp of legitimacy and add immeasurably to its prestige and power all over the world.

Having spent more than $100 billion to strengthen the will and capacity of free nations and peoples to resist Communism, does it now make sense to strengthen Communism? The whole Communist movement worldwide is in serious trouble today. Why change the policies that have contributed to its difficulties both abroad and at home?

Admission of Red China is, within the meaning of the UN rules, an "important" question, which must therefore be settled by a two-thirds rather than a majority vote. A year ago the member nations again considered the perennial question of admission of Red China, and it again failed but then with a tie vote, 47 to 47. Interestingly, several countries that voted for Red China have now broken relations with it. Does it make sense to accept Red China's representatives into our country and into the United Nations just when its representatives are being exposed and expelled from countries in Africa, Latin America and Asia, countries that followed the very policies toward Red China we are now being urged to adopt? The 15 million or so Chinese living in Southeast Asia would be as shaken as the 12 million on Taiwan. They occupy key positions of power and influence in Vietnam, Malaysia, Thailand, Burma, Indonesia, the Philippines. The Governments of those countries could not refuse Communist China once we did. Can anyone reasonably expect the Governments of these smaller and weaker countries to be stronger and firmer vis-vis Red China than the great United States is? What would happen to the whole system of collective security we have been building at such cost and effort and which is absolutely indispensable to our own survival as a free nation?

Admission of Red China would mean every Chinese Embassy and Consulate in Southeast Asia, and in the world for that matter, would become a protected center of Communist espionage, propaganda, sabotage and subversion of the host government—as recently exposed in Indonesia and Ghana. Through these "Embassies and Consulates" the Chinese minorities would be under direct and almost irresistible pressure to support the aggressive policies of the Mao regime. The stability of strategic countries of Southeast Asia would inevitably be weakened. If the strong accept the Communist overlords, how long can the weak continue to resist them?

It is clear that Communist governments do not join the United Nations with the same purpose in mind as we and other governments do, namely, to help make it an effective instrument for resolving disputes. Obviously the Soviet Union joined in order to make sure the UN does *not* work effectively. It has a world organization of its own, the Communist party with organized, disciplined, efficient units in every country. The Communists have openly sworn over and over again to the destruction of our way of life. They intend to win for *their* world organization. What could be more advantageous than to have seats in the other world organization also, particularly the Security Council, where perfectly legally under the Charter they can keep the rival organization crippled and ineffective whenever they wish to. Almost all of the more than 100 Soviet vetoes have been against measures that were favored by the overwhelming majority of UN members and were in the direction of peace.

Incidentally, it is not necessary to have Red China in the UN in order to negotiate with her. We've had over 130 negotiations with Red China in the last eleven years—almost one a month—and more than any other non-Communist government has had.

There is no course that does not involve serious risk; we are dealing with a ruthless and resourceful enemy. But we must not aid them to our detriment. If some member of an organization breaks its rules and standards, that is not fatal to the organization. *But* if the organization itself votes to scrap its own rules and standards in a vain effort to appease some lawless members, that is starting down the road to its own destruction. I do not want to see the United Nations destroyed by its own action, as happened to the League of Nations nearly fifty years ago.

In these closing moments I wish to very briefly touch on two other points. The UN has a 1967 Budget of $128,227,800, about 7 million above this year and 50 million above five years ago. The UN "hopes" that donations, voluntary contributions, will overcome this deficit—and you can have one guess as to what nation will be expected to volunteer the most generously. Right! The U.S.A.! In my view, before we give any more contributions, the nations which are more than 2 years behind on their dues and debts to the UN should have their voting rights jerked until they pay up—as Article 19 provides. Why the Administration has been reluctant to more vigorously push the enforcement of this Article I cannot understand.

The final point is that in my humble opinion we are fighting in Vietnam in the just cause of freedom against Communist aggression. I heartily disagree with the views of our junior U.S. Senator on the subject, and am firmly persuaded that but for our resistance to the Communist transgressions all of Southeast Asia today would be in Communist hands; Malaysia would not have survived as a federation; Indonesia would not have toppled the Communist regime of Sukarno; Red China would likely have been admitted to the UN by now; the new atmosphere of hope and confidence and courage throughout Asia's southern crescent of nations would not exist to shore up and strengthen Red China's fearful neighbors from Pakistan and India to Japan and Korea. Because we met our commitment to a nation desiring freedom over Communist domination, a rather astonishing series of transformations has taken place. There has been a quickening of national pride, a new solidity of national spirit, a sense of autonomy and freedom. The nations of the crescent have stood up and gone their own way with a new assurance that Chinese Communism need not be the battering wave of the future, and we must have a determination to insure that it is not.

Down to the Sea—In What?

EXTENSION OF REMARKS
OF

HON. JAMES R. GROVER, JR.

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1967

Mr. GROVER. Mr. Speaker, I am pleased to submit for the RECORD an excellent Newsday editorial which clearly summarizes in a few paragraphs the sad state of our merchant marine and the importance of action in this Congress.

The editorial follows:

DOWN TO THE SEA—IN WHAT?

In three years, the United States will only have 200 dry cargo ships that are less than 25 years old. Our fleet is almost obsolete; our shipyards can't compete with foreign yards, and 96 per cent of the strategic materials we import move in foreign ships.

Succinctly, our mercthant marine is in a mess.

The situation troubles the President, the Congress and whole hierarchy of bureaucrats. But little action to reverse the trend has been taken. This, perhaps, is because the problem is an old one and a complex one. The first congressional attempt to help the U.S. shipping industry came in 1789 when customs were reduced on imports carried in U.S. ships. The most significant piece of legislation was the Merchant Marine Act of 1936, which established our desire for a merchant fleet to serve the nation's commerce and defense. It also set the pattern for the subsidy program that continues to this day.

But with government aid, there is always government regulation and administration. It is in this area that confusion reigns. Jurisdictions overlap, lines of authority are blurred and responsibility is uncertain. Currently five cabinet level departments, the Federal Maritime Commission, the Maritime Administration and a welter of subsidiary offices and boards have jurisdiction over the merchant fleet in one way or another. New ideas and bold initiatives have little chance of moving through this thicket of tangled authority.

The N.S. Savannah was one such bold innovation. This automated, nuclear-powered ship was to have set the course for the future of the U.S. Merchant Marine, showing that technology could make the U.S. fleet competitive. But last week it was announced that the Savannah was being taken out of service. As an experiment it had a $53,000,000 impact on the U.S. treasury, but its impact on the problems facing the U.S. Merchant Marine was small. Our fleet is still inefficient, almost obsolete, and dwindling.

The idea of the Savannah was a good one. Automation is the only way that the U.S., with its high wage levels, can hope to become competitive on the high seas. But ideas must be pursued into reality. This one wasn't. One nuclear ship was launched; it sailed in lonely splendor for five years, while the rest of the fleet gathered rust and subsidies.

Our competitive position still demands automation and the construction of an efficient fleet. But who is to set the policy and provide the follow-through that was so clearly lacking in the Savannah experiment? Many in Congress believe the task should be given to the head of a reorganized Maritime Administration. At present the Maritime Administration is part of the Department of Commerce, and its head reports to the secretary of commerce. In addition, many functions that could logically be included in the purview of the Maritime Administration, are the responsibility of other cabinet-level departments. In the last session of the Congress, 11 bills were introduced to make the Maritime Administration an independent agency whose head would report directly to the President. The new agency, in addition, would take over responsibility for many of the functions now performed by other departments.

There was no action on these bills during the 89th Congress. But the 90th Congress is to consider similar measures. A new, independent Maritime Administration, with expanded responsibilities, is an excellent idea. The Congress should act to create this new agency.

It would help eliminate one of the merchant marine's most pressing problems, too many captains in Washington.

Men of All Ages Successful in License Program

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. FARBSTEIN. Mr. Speaker, it was my privilege to submit earlier an achievement report written by Paul Hall, president of the Seafarers International Union, on the results achieved by the union's School of Marine Engineering, established jointly by the International Union and district 2, Marine Engineers Beneficial Association. The purpose of this school was to produce qualified licensed marine engineers to man the vessels required to transport supplies and material for American and allied operations in Vietnam and for future use.

It is my further privilege to insert at this point in the RECORD an article printed in the Seafarers Log citing the achievements of three men, varying in ages from 21 to 61, who attended this School of Marine Engineering. The article sets forth a message which is worth remembering as we study legislation aimed at improving the quality of our society—that men, regardless of age or their varying ability to absorb knowledge, possess one equalizing force, a willingness to learn.

The article follows:

MEN OF ALL AGES SUCCESSFUL IN LICENSE PROGRAM

One of the most notable features of the joint union operated license training and upgrading program is the fact that it has enabled men of virtually all ages to participate successfully in the course of instruction and to obtain original and upgraded licenses. As the record points up, the age of a man presents no obstacle if he is interested in taking advantage of the opportunity offered by the program. And, as the record shows, the older men are having as much success in the program as their younger shipmates. This is true of both unlicensed SIU members sitting for original licenses and of District 2 MEBA engineers raising their licenses.

The point is that if a man is interested in upgrading, all he needs is the willingness to try. The program provides him with the necessary financial assistance so that he can concentrate on his training. Men attend the school with shipmates and fellow union members in an atmosphere designed to help them with their studies. The entire program is geared to the man. At all time he is under the instruction and guidance of highly competent and qualified instructors who themselves are licensed engineers.

Similarly, there's no fixed limit on the amount of time a man may spend at the school preparing for his examination. Most of those who have participated in the program take about 90 days to get their licenses, but a man may stay longer if he needs the time. The joint program boasts successful candidates of all ages ranging from those in their early 20s to those in their 60s.

The youngest SIU member to obtain a license after preparing at the school is Harry Pilalis, 23 years old, who is now sailing as a Third Assistant Engineer. Pilalis shipped as a fireman, oiler, watertender on SIU contracted ships before attending the school. He also had received instruction in lifeboat training, for which he holds an endorsement, and in firefighting. The last ship he sailed on before attending the school was the SS Penn Vanguard.

At the other end of the age scale is SIU member Siguard George Nielsen, who obtained his Third Assistant Engineer's license at the age of 61. Nielsen, who is an SIU oldtimer, lives in Hoboken, N.J. He is married and has four children. He sailed in all unlicensed engine department ratings and had most recently been sailing as Chief Electrician. His last vessel before going into the school was the SS Colorado.

The youngest District 2 MEBA member to upgrade after attending the school is Edward Adamson, 21, who has just obtained his 2nd assistant's license. Adamson graduated from the Massachusetts Maritime Academy in 1965 and sailed later as Third Assistant on the SS Transarctic. He also holds a firefighting certificate. Adamson, who got his new license in December, is taking a short vacation before going back to work.

The oldest District 2 engineer to raise his license after attending the School of Marine Engineering is Carl Anderson, who got his license as Chief Engineer at the age of 58. Anderson is now sailing on the SS Manhattan.

Address by Secretary of Agriculture Orville L. Freeman

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

ADDRESS BY SECRETARY OF AGRICULTURE ORVILLE L. FREEMAN

It's been nearly two year since I've had the pleasure of taking part in your Governor's Conference on Agriculture, and I welcomed the opportunity to return today to review with you what's happened since . . . and to share with you some speculations about the future.

Back in the 16th century, Michel de Montaigne wrote: "'Tis one and the same Nature that rolls on her course, and whoever has sufficiently considered the present state of things might certainly conclude as to both the future and the past."

If we heed his advice, then we should properly consider the present before we make any conclusions about the future or the past. I intend to do just that.

Today's agriculture certainly is *not* what it was two years ago. And just as certainly tomorrow's agriculture will not be what it is today.

Considering the "present state of things," I think I can conclude that American agriculture has laid some important foundations for today and tomorrow in the two short years since I visited with you last.

Here in Kentucky—as a result of Governor Breathitt's creative, hard hitting leadership, through the work of your Commission on Agriculture, and, I would hope, partly as a result of the efforts of the USDA—you are well on your way toward the billion dollar farm income goal which has been your State's dream for many years.

The last time I met with you, I reported that an increase of between $300 and $400 million would bring you to your goal . . . and I remember describing this as a "big jump" indeed.

Yet already today, you're within a hair's breadth of completing that jump.

Economists are now estimating that Kentucky's gross farm income may reach the $920 million mark for 1966, or 8 percent greater than the 1965 total. And realized net farm income in Kentucky may be as high as $395 million.

With your continued efforts, and with the new help provided by the Food and Agriculture Act of 1965 and the Food for Freedom program, I'm confident you'll break the billion dollar barrier this year or next.

Governor Breathitt, members of the Kentucky Commission on Agriculture, and citizens of Kentucky—President Johnson has asked me to bring you his congratulations on this record of progress and accomplishment.

Today, Kentucky is a different, and, I believe, better place in which to farm and to live than it was when I visited you just two short years ago.

The same holds true on the national level.

We began to turn a dramatic corner in agriculture two years ago, and we completed the turn last year. Now we have moved into a *New Era in Agriculture*—an era of change, challenge, and hope, an era in which we'll complete the foundations we're building for the agriculture of the future.

To appreciate the significance of that turn into tomorrow, let's spin the clock back for just a moment to 1960 . . . to that point in time when a decade and a half of overproduction had piled up costly, price-smothering, income-stifling surpluses and cast a pall of gloom over the future of the American farmer.

Think back. What would you have thought had the Secretary of Agriculture appeared before you in 1960 and made these predictions?

1. By January 1, 1967, surpluses of corn, wheat, milk, vegetable oil, and rice will be gone, and tobacco and cotton surpluses greatly reduced.

2. By 1966, total net farm income will rise from the 1960 level of $12.7 billion to $16.3 billion, the second highest mark in history and gross farm income at $49.5 billion and net per farm income at $5,024 will set all-time records.

3. By 1967, agricultural exports will climb from $4½ billion to $7 billion.

4. By 1967, the Government for all practical purposes will be out of the marketplace. Agriculture will be freer of controls than at any time in decades.

Had you heard those predictions, I'm sure you would have suspicioned that the Secretary of Argiculture had harvested a bumper crop of Kentucky bourbon before he stepped to the podium.

Well, I didn't make those predictions, and if someone else had I'm afraid I would have been sniffing his breath suspiciously, too.

But . . . if bourbon sharpens the visionary focus that well . . . then Kentucky's got a new testimonial for one of its best known products.

For *all* of these things did happen!

Because our farm programs have worked . . . and because we put our vaunted abundance to work feeding hungry people . . . surpluses *are* gone.

With the suffocating surplus mantle thrown off, farm prices grew and farm income blossomed. Nationally, net farm income in 1966 *was* the second highest in history, and gross and net per farm income *did* set all-time records. The 1966 income figures I've quoted are brand new . . . released for the first time today.

And agriculture *is* freer than it has been for many years. The feed grains, wheat, and, in part, cotton programs are now voluntary. Only rice, peanuts and tobacco are still under mandatory programs and these have been approved in farmer referenda by majorities of 98 to 99 percent.

Similarly, the Government, in the form of the Commodity Credit Corporation, has largely removed itself from the marketplace.

Farm commodities are now our leading single export . . . and the biggest positive contribution to our balance of payments position. Farm exports set new records in seven or the past eight years and in 1967 will surpass $7 billion.

Again, as in the progress made in the State of Kentucky, this national advance of agriculture didn't "just happen."

It took six years of tough fights in the Congress; it took two great Presidents, both committed to bringing prosperity to rural America; and it took close cooperation between the United States Department of Agriculture and groups such as your Governor's Commission on Agriculture to arrive where we are.

Now let me make it emphatically clear that not all of agriculture's problems of today—or tomorrow—have been solved.

Let me point out as strongly as I can that—despite steady progress all along the agricultural front the last six years—the farmer's income *still lags far behind that of other Americans.*

On a per capita basis, the average farmer's income in 1966 was only $1,700, whereas the average nonfarmer's income was $2,610.

And farm prices, though up last year, have been down the last few months, and today are *less* than they averaged between 1947 and 1949.

But at the same time, food costs are 35 percent *higher.*

This discrepancy the farmer bitterly resents—and properly so. *It must be corrected.* It must be corrected because it is unfair to the farmer—and therefore wrong. It must be corrected because if farmers don't get a fair return commensurate with other segments of the society, *we will lose our best farmers.* And if that happens, the entire nation—not just the farmer—will be hurt.

Let me turn now from the farm price problem of today to a potential production problem of tomorrow.

Today, surpluses are gone and agriculture is more in balance than it has been for half a century. But no sooner have we dug ourself out of the "no farm program mess" of the 50's than certain elements are calling for the abolition of all farm programs and a quick return to totally unrestricted production.

They ignore two facts. First, the farm programs they want to see abolished are the very programs that adjusted farm output expansion in the Sixties until the surpluses of the Fifties were reduced and relative balance restored. At the same time, these programs, largely voluntary, strengthened the market . . . and helped boost farm income through commodity supports and direct payments.

Second, even with large increases in plantings this year, these same programs will continue to help farmers hold 30 to 35 million acres out of production.

If this acreage, coupled with rapidly accelerating yield per acre potential, were unleashed all at once, we'd be plunged right back into the gloom of 1960 . . . inundated by new surpluses, and the price and income structure crushed again.

Technological breakthroughs in production potential will make it infinitely more difficult than it has ever been before to adjust farm output expansion to effective demand in the years immediately ahead. Yet it must be done.

It *can* be done, for now in the Food and Agriculture Act of 1965 and the Food for Freedom Program of 1966, we have the tools to do it. With cooperation among producers, the trade, agribusiness and government, we *can* hold a workable balance between supply and demand, strengthen the agricultural economy, and encourage the advances we will need as demand grows in the years ahead.

Now let me bring this overproduction problem down to specifics—down to nuts and bolts as it were—with an appropriate example—Kentucky tobacco.

Tobacco accounted for an estimated 32.8 percent of Kentucky farmers' receipts from all agricultural commodities—including your great livestock industry—last year.

Your acreage allotment and price support program for burley tobacco have been an outstanding success story . . . but in recent years some problems have developed.

The problems, we all know, are due primarily to substantial increases in per acre yields. Not only have these yield increases resulted in a surplus . . . but, as farmers strive for quantity, quality is deteriorating.

In the five years from 1956 through 1960, the average burley yield per year was 1,620 pounds. In 1966, the estimated average yield per acre reached an all-time high of 2,284 pounds—an increase of more than 40 percent. And, I'm told, many farmers have already produced 3,000–3,500 and even 4,000 pounds per acre.

In 1966 we saw the result of the yield per acre increases. It was necessary to reduce acreage allotments by 15 percent . . . but—and here is the problem—total production was reduced by only 6 percent.

This poses the question: Can controlling acreage alone regulate tobacco supplies to keep them in line with effective demand? If it can't be done that way, we must find some other method or face disaster.

The 89th Congress, upon recommendations from tobacco industry leaders and the Administration, authorized a new program to regulate output. Actually this program—called acreage-poundage—had its origin in the burley area some 10 years ago.

In 1965 a referendum of growers of flue-cured tobacco was held. The flue-cured growers voted to adopt the acreage-poundage method of regulating supplies. The program became operational in 1965 and was followed in 1966. Here's what's happened since:

1. The surplus supply has been reduced 233 million pounds in two years.

2. Tobacco taken under Government loan dropped from 20 percent to 6.8 percent.

3. Loan stocks have been reduced 27 percent, or a total of 262 million pounds.

4. Quality has greatly improved.

5. Exports have increased, and may go up as much as 20 percent during the current year.

6. Growers received an estimated 67 cents a pound in 1966 . . . 8.5 cents more per pound than they received before the acreage-poundage method was adopted . . . and a new record high. Growers received an average of 58.5 cents per pound for the 1964 crop and 64.6 cents a pound for the 1965 crop.

This is a mighty impressive record.

What, then, do we do about burley? Taking into consideration the burley tobacco leadership's support of the acreage-poundage method . . . the steadily increasing yields per acre . . . the need for quality tobacco production . . . and the mandate in the law which states that the Secretary of Agriculture must give growers an opportunity to vote in a referendum if he determines that acreage-poundage may be a more effective means of administering the quota program—I have today signed a proclamation announcing a referendum on acreage-poundage for burley tobacco.

This referendum will permit growers to decide which program—the present acreage allotment system or an acreage-poundage method—will best serve their interests in maintaining a sound tobacco industry in the years ahead.

Now—in the time remaining—I'd like to discuss with you another matter of major importance . . . importance to city people as well as to country people.

On September 8, 1966, President Johnson announced two wise and important decisions.

He established a National Advisory Commission on Rural Poverty—which I am confident will make history—and he appointed your own Governor Breathitt to chair it.

It is appropriate, I think, to examine two questions which come immediately to mind in connection with the President's action. (1) Why did he establish such a Commission? (2) Why did he select Governor Breathitt to chair it?

Let me direct attention to the first question.

No problem is as severe, nor threatens the future of this country more, than the two-horned dilemma of too little opportunity in the country and too little space in the city.

Sometimes this threat to our national well-being is called, simply, the poverty problem.

Sometimes it is referred to as the displaced farmer problem. Frequently the words slums, ghettoes and human degradation are used to describe it . . . for it embraces all of these and more.

Let me describe it with statistics and examples.

First let's look at the countryside.

Though only one-third of our people live in the country today . . . we find half of our poor there. And ten million of the sixteen million rural poor are *not* farmers.

In a word, the country is job-starved. There are enough underemployed in rural America to equal 2.5 million unemployed.

From 1950 to 1965, 13.6 million new jobs were added to the country's economy. Yet, in a sense, not one was created outside urban America!

This is not precisely true, of course. But let me put it this way: Neither the total rural population, nor the total rural labor force, varied significantly in that 15-year period. Yet during those years we did, indeed, add 13.6 million more jobs to the economy.

Job starvation is only one problem in rural America. Rural communities are short doctors, dentists, clinics, hospitals, classrooms, meeting halls, libraries, theatres, swimming pools, golf courses, and many other things that make a place better to work in, play in . . . live in.

Rural communities face a housing shortage. By 1972, it is estimated, between a million and two-and-a-third million more rural homes must be built—and millions more repaired and improved.

Rural communities need modern facilities. At least 30,000 need improved water systems, and an even greater number better sewer systems.

At the time of the last census, some 7 percent of city school children were behind in school . . . but 11 percent were behind in the country. City elementary schools had an average of 11 to 18 teachers per school. Rural counties had an average of less than 4 teachers per elementary school.

The percent of school dropouts averages about 33 percent among rural school children . . . but only 26 percent among city children.

Sixty-three percent of the children of white collar workers who complete high school go on to college. But only 27 percent of farm children do.

Opportunity-hunger in the countryside is compounded by each of these problems. A shortage of jobs means a shortage of taxes. A shortage of taxes means a shortage of classrooms and public services and facilities. A shortage of services and facilities discourages those businessmen and industrialists who *could* bring jobs to the countryside from locating there. And so the endless circle continues . . . breeding more and more despair and discontent.

And what do the despairing and the discontented do? They move to the cities.

The migration from countryside to city has been going on for many, many years, but in recent times the exodus has accelerated. Now what we have is an old set of problems, transported to a new set of troublesome circumstances.

Thus the slums of our big cities today are people largely by rural immigrants, or the descendants of rural immigrants, who migrated to the city in hopes of a better life . . . and found instead the ghetto.

Let's consider the hypothetical example of a man whose small farm no longer can provide himself and his family with a decent standard of living . . . and he is unable, or, for other compelling reasons, unwilling to increase his farming operation to viable size.

It is unrealistic to expect—and cruel to hold out hope—that farm commodity programs can bring salvation to the farmer whose inadequate-size farm no longer can sustain him. Commodity programs are not designed to do that. They are not welfare programs. They are designed to make possible a tolerable balance between supply and demand in the market so that the adequate-size commercial family farm can earn a fair price for its products and a decent standard of living for its owner-operator.

Now suppose this farmer we're talking about is 45 years old. What is he to do when his farm fails him and his family? There are no jobs in the small town where he's done his modest shopping . . . and no nearby opportunities for job training.

Without choice, he packs his belongings and moves to the city . . . there to become the Biblical "stranger in a strange land."

His limited means limits his choice of housing . . . and he settles in a tenement in the decayed heart of the city. His limited education—perhaps no more than eighth grade—limits his job perspective and potential. His limited occupational skills are useless in the city . . . for who needs a man to plow a straight furrow up an asphalt field . . . or mend a harness for a mechanical mule?

Soon he finds there are thousands like him . . . all disillusioned, all disenchanted, all weary of scrambling for the menial jobs that fall to their lot in piecemeal fashion.

Left behind in a world that had passed him by, trapped in a life that was not his making, crushed by the death of misbegotten hope, his pride expires and his spirit flees. As his pride dies, his authority withers, and as his authority withers, his children lose respect. Sooner or later they wander off to take up blighted lives of their own.

Though I've used a hypothetical case, I know and you know that living counterparts of this human tragedy are taking place every hour of the day in every big city in America.

And they will continue to take place—in ever growing numbers—as long as the out-migration from the country goes on.

Given our present demographic and migration patterns, by the year 2000 three of every five Americans will live in five "strip cities" with nearly twice the population density of present-day Japan.

These cities, and other urban complexes, will contain 70 percent of our population on some 9 percent of the land. The other 30 percent of our people will live on the remaining 91 percent of the land.

Now certainly, the present problems of the cities—congestion, soot, smog, human disillusion and frustration, crime, delinquency, riots, inner decay and outward ugliness—won't be eased by millions more jammed into less and less space.

Yet if this is what we want, we can surely have it. All we have to do is . . . *nothing*. If, on the other hand, we want an America tailored to human size, an America where human values and human resources are given more consideration and invested with greater worth, we can have it . . . by doing *something*.

Happily, this Nation is coming to realize that one of our greatest assets in this increasingly crowded world is space . . . the one commodity in great abundance in Countryside U.S.A.

We are coming to understand that we can made *another* place in the countryside for those who, for one reason or another, cannot find a rewarding place in commercial agriculture. More than that, we are coming to believe we can help relieve the strain on our crowded, troubled cities by building new opportunity into the countryside for those city dwellers who *want* to live and to work in rural America. And—the Gallup Poll revealed last spring—half of our people *do* want to live there.

And rural America boasts more than space. It has fresh air and sun and sky and water. It has proximity to nature. It has uncrowded streets and sidewalks. It has power and communications and transportation. It has a built-in labor pool of people who are eager to work. And it has real profit potential for the businessman and the industrialist who can appreciate the benefits of a healthy, happy work force and relatively low overhead.

Some rural communities already have almost everything people and industry could want. Others need help. *And help is on its way.*

New legislative tools to do the rural development job, tools enacted for the most part by the 89th Congress, are covering the whole range of rural needs, from water and sewer systems to job retraining to loans for better housing to many other services and facilities, and providing the means to attack and solve problems at the local level.

Tools, however, are useless without a skilled work force to utilize them, and a plan to follow. But here, too, we are making progress. I don't intend to minimize the difficulties on the local level which these new programs have presented to local leaders. I know they exist, and I know that coordination has sometimes been a frustrating, difficult task.

Nevertheless, progress is being made, and new ideas and new approaches are helping to close the coordination gap.

And here is where I intend to offer an answer to the second question of why President Johnson took the action he did last September.

Why did the President name Governor Breathitt to chair the National Advisory Commission on Rural Poverty? Because Governor Breathitt and the State of Kentucky had already shown the President and the Nation that they were attuned to both the problems of rural America and to the ideas and approaches to solutions.

Here in Kentucky, you have pioneered the multi-county approach, keyed to growth centers within each multi-county unit, and allowing concentration of manpower and resources within a logical framework.

Your State has also been a leader in the multi-State regional approach to common problems, providing much of the leadership and drive for the Appalachian Regional Commission—a new approach now being used in the Upper Great Lakes and the Ozarks—and your Statewide Kentucky Development Council can well provide a model for other States determined to achieve coordinated, Statewide human and economic development.

And now your Governor Breathitt has a new charge—a direct assignment by the President of the United States to put his insight and experience to work on the whole range of rural need—from border to border and coast to coast.

He and other members of the National Advisory Commission on Rural Poverty—all outstanding private citizens—will study the problems of low income, retraining, unemployment, rural economic development, sources of additional rural employment, housing, health and cultural opportunities, the adequacy of rural community facilities and services and the present state of our rural development program.

Governor Breathitt's commission will then present recommendations for action to the President's Committee on Rural Poverty, a group of Cabinet-rank officers which I have the honor of chairing, and next September will report to the President.

Study and planning are the keys to success in the massive effort now getting underway to bring parity of opportunity to rural America . . . and breathing room to our cities. I am confident that Governor Breathitt's Commission will achieve the big breakthrough we need in this effort.

Many years ago, Henrik Ibsen wrote: "I hold that man is in the right who is most closely in league with the future."

Governor Breathitt and the great State of Kentucky are in the right, because they have proved that they are, indeed, in league with the future.

I am confident you will stay that way.

Thank you.

Crippling His "War on Crime"

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. BROYHILL of Virginia. Mr. Speaker, on the opening day of this Congress I reintroduced the District of Columbia crime bill, as approved after 6 years of careful study in both the House and Senate, and as vetoed by the President after he was, in my opinion, advised to do so by persons far less familiar with the needs of the District of Columbia than those House and Senate Members who had approved it.

In this connection, I am pleased to insert in the RECORD so that all my colleagues may read, an editorial appearing in the Evening Star on Monday, January 16, 1967. The Star editorial, with which I am in complete agreement, follows in full:

CRIPPLING HIS "WAR ON CRIME"

The President has always talked in ringing terms of his determination to wage an all-out war on crime, to make certain that the law-abiding American people will be safe on the streets, in their homes and in their places of business. When the chips are down, however, he tends to back away from the fight.

This was demonstrated, we think, in his misguided veto of the District crime bill passed by the 89th Congress after long and careful study. The same tendency has cropped up again in his message to the 90th Congress on the state of the Union. Two of his paragraphs illustrate the point.

In the section dealing with "improving the quality of life and enlarging the meaning of justice for all Americans," the President said: "We should protect what Justice Brandeis called the 'right most valued by civilized men'—the right to privacy. We should outlaw all wire-tapping—public and private—wherever and whenever it occurs, except when the security of the nation is at stake—and then only with the strictest safeguards. We should exercise the full reach of our constitutional powers [whatever that may mean] to outlaw electronic 'bugging' and 'snooping.' "

Six paragraphs later the President came to the 1967 version of his War on Crime in a section headed: "This nation must make an all-out effort to combat crime." Here are the key sentences: "Our countrys' laws must be respected. Order must be maintained. I will support—with all the constitutional powers I possess—our nation's law-enforcement officials in their attempt to control the crime and violence that tear the fabric of our communities."

We do not know who is responsible for the inherent contradictions in this rhetorical nonsense. But we do know that the laws are not being respected, that order is not being maintained, that the incidence of crime is constantly rising, and that neither lofty verbiage nor more federal money, which the President proposes, can reverse this trend.

What, we wonder, does the President think Justice Brandeis meant by the right to privacy—the "right most valued by civilized men"? Does this right of privacy apply to the criminal who kidnaps a child for ransom, and who will not hesitate to kill the child if it serves his purposes? Does it apply to those unconscionable characters at the top who enrich themselves from the sale of narcotics, even down to the level of our schools, and never mind the cost in ruined lives? Does it extend to organized crime, to the racketeers who survive by corrupting law-enforcement officials at the price of tearing apart "the fabric of our communities"?

There are two possible conclusions. One is that Mr. Johnson is insincere in his war on crime. We do not believe it. The other is that he doesn't really know what he is saying. This, we think, is likely.

Nothing is easier than to be against "snooping." Who isn't? But the fact remains that wiretaps and electronic devices are vitally important tools if the war on crime, especially organized crime, is to become anything more than a mouthful of words. To say as some do that these tools cannot be used without invading the privacy of the bedroom, whatever the emotional impact of this contention, is simply not true.

Our hope is that the President will take a second look at the phony advice which has been given him, that he will talk to people who know something about the facts of life in any meaningful war on crime, and that he will exercise all of the constitutional powers he possess to seek authorization, subject to strict controls, of the use of wiretaps and electronic devices in the many instances in which they are essential to effective law-enforcement. As a companion piece, he should seek legislation imposing a total ban on *unauthorized* "snooping." For this is the area in which the valid right to privacy is being destroyed.

Incompetents Do Come Along

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. SCHWENGEL. Mr. Speaker, there is ever-increasing support to change the seniority system. On January 23, 1967, the Des Moines Register, Des Moines, Iowa, supported the resolution I introduced to change the method of selection for congressional committee chairmen.

I am gratified for the support of the Des Moines Register. I hope that the Rules Committee will give my resolution prompt and adequate consideration. I am pleased to make this evidence of support for this approach to the problem available to the Members of the House.

The article follows:

INCOMPETENTS DO COME ALONG

Representative Fred Schwengel (Rep., Ia.) made a plea for revision of the seniority system in selection of House committee chairmen when the adoption of rules for the session was under consideration.

The Iowa congressman urged that the members of each standing committee be permitted by secret ballot to select their chairman from one of the three senior members of the majority party. Chairmen of standing committees now are chosen on the basis of their length of service.

Schwengel conceded the importance of experience but said:

"Experience cannot guarantee competence, nor can it promise character and fairmindedness.

"The incompetents, the dictatorially inclined and the dishonest come along infrequently, it is true, but they do come along. The great trouble with our current method of applying seniority to the selection of committee chairmen is that it makes no allowances for the exceptions. It is too rigid, too inflexible."

Representative Schwengel's remarks were well timed. Only a few minutes earlier the House had voted to deny Representative Adam Clayton Powell his seat in the House pending investigation of charges against him. The previous day the Democratic caucus had removed Powell from chairmanship of the Education and Labor Committee.

Had Schwengel's proposal been in effect, the probabilities are that Powell would have been removed by members of his committee before his behavior became a matter of national scandal.

We hope Representative Schwengel continues to press vigorously for adoption of his proposal. It is a reform that is badly needed.

George E. Lewis Is Outstanding Citizen

EXTENSION OF REMARKS

OF

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. FUQUA. Mr. Speaker, the retirement of Mr. George E. Lewis as chairman of the board of the Lewis State Bank marks the end of an era for Florida.

Here is a man that serves as an example and I count it a real privilege to call him my friend. His advice and counsel have meant much to me, as it has for so many others.

The Lewis State Bank is more than just a bank, it is an institution for Florida. Our oldest bank, now in its 111th year, there is a family banking tradition here that would make a tremendous article in itself.

But I am concerned here with paying tribute to Mr. George E. Lewis. I have not often felt that this method of paying tribute was necessary, but in the case of Mr. Lewis, I feel it is appropriate. I would like to have reprinted here an editorial from the Tallahassee Democrat of January 14, 1967, which is well worth reading.

Mr. George E. Lewis has meant much to Tallahassee, to his State and to his Nation. I wish for him many happy years of retirement, rich in the knowledge that his has been a life well spent in service to his fellow man.

The article follows:

MR. G. E. RETIRES

The Lewis State Bank here in Tallahassee is Florida's oldest, going into its 111th year—and for more than half of those years, George E. Lewis has been so constant a member of its staff that he has almost become a symbol of its stability.

Now he is retiring. That is, he's no longer chairman of the board. He's chairman emeritus. He still has an office; and we imagine he'll occupy it frequently, but he won't have to get down early enough to open the vaults in the future.

It's not that Mr. G. E. isn't spry enough at nearly 87 to carry on. He showed the same keen good nature of old the last time we talked with him. Mr. G. E. long ago earned his retirement as a banker and as an active citizen of Tallahassee. He's just now taking it.

His grandfather, B. C. Lewis, started the business which became the Lewis State Bank in 1856. His father, George, carried it on until 1933. Mr. G. E. started on Jan. 1, 1901 as a bookkeeper, and has worked through every position to the top. Now his son, George II, succeeds him as board chairman. His son B. Cheever becomes president, and his namesake grandson, George E. II, is trust officer as the fifth generation begins rising in the business. It's a fine old family institution which has opened its directorate to many other outstanding businessmen of our city.

This piece, though, is about Mr. G. E.

While working at and directing the bank these 66 years, he has contributed more than his share to community service. He was captain of the old volunteer fire company when he was a young man. He was a city commissioner. He was a school trustee when the office had responsibilities. He was a leader in St. John's Episcopal church. The Boy Scouts conferred on him one of the organization's highest awards, the Order of the Antelope. (All five of his sons became Eagle Scouts, and a daughter was a Golden Eaglet Girl Scout.) There is no way to recite all his services.

But for all of them, we'll remember Mr. G. E. best as a gentleman of quiet dignity, simple sincerity and considerate courtesy. From exercise of those qualities, he is not retiring.

Red Mass—St. Matthew's Cathedral

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. ROONEY of New York. Mr. Speaker, last Sunday many Members of this House, including the distinguished Speaker, once again had the privilege of attending the Solemn Votive Mass of the Holy Spirit, which is historically known as the red Mass. The function of this very special Mass offered at St. Matthew's Cathedral is to invoke the blessings of the Holy Spirit on the courts, the members of the bar and those who have the responsibility of enacting and administering our laws.

The red Mass was presided over by His Excellency the Most Reverend Patrick A. O'Boyle, D.D., archbishop of the archdiocese of Washington. His Excellency the Most Reverend John S. Spence, D.D., vicar general of the archdiocese of Washington, celebrated the mass and His Excellency the Most Reverend George H. Guilfoyle, D.D., Episcopal vicar of the archdiocese of New York, preached the sermon. It was a fitting and proper sermon for the occasion and one which well bears reproducing here. Under the permission heretofore granted me, I include the text of the sermon:

TEXT OF SERMON BY THE MOST REV. GEORGE H. GUILFOYLE, D.D. RED MASS—ST. MATTHEW'S CATHEDRAL, SUNDAY, JANUARY 29, 1967

Text: "The joys and the hopes, the griefs and the anxieties of the men of this age, especially those who are poor or in any way afflicted, these too are the joys and hopes, the griefs and anxieties of the followers of Christ."

This text is the opening sentence of the Second Vatican Council's "Constitution on the Church in the Modern World."

Pope John XXIII convened an Ecumenical Council for the renewal of the Church. A principal mark and recurring theme of the Second Vatican Council was pastoral concern for the dignity, the rights and the freedom of each human person.

As the Council opened, with the endorsement of Pope John the Fathers issued a "Message to Humanity." In it they said:

"Coming together in unity from every nation under the sun, we carry in our hearts the hardships, the bodily and mental distress, the sorrows, longings and hopes of all the peoples entrusted to us. We urgently turn our thoughts to all the anxieties by which modern man is afflicted. Hence, let our concern swiftly focus first of all on those who are especially lowly, poor, and weak. Like Christ, we would have pity on the multitude weighed down with hunger, misery, and lack of knowledge. We want to fix a steady gaze on those who still lack the opportune help to achieve a way of life worthy of human beings.

"As we undertake our work, therefore, we would emphasize whatever concerns the dignity of man, whatever contributes to a genuine community of peoples. 'Christ's love impels us', for 'he who sees his brother in need and closes his heart against him, how does the love of God abide in him?' "

While the Council solemnly closed a year ago last month, its work has really only begun. Not only must the Catholic Church internally pursue its renewal but continued efforts must be made to achieve the Ecumenical and other conciliar goals for this society in which we live and through which we seek our personal happiness and salvation.

We have come together in this Cathedral of St. Matthew to offer the traditional Red Mass and to invoke the blessings of the Holy Spirit on the courts. The central thoughts of the Second Vatican Council have special pertinence not only for you who are members of the Bench and Bar, but for those of you whose responsibility it is to enact and administer our laws.

In recent years, increasing stress has been placed on the exalted dignity of the human person, every human person. This heightened awareness of man's dignity is evident in the court room and in the legislative chamber as it was in the deliberations of the Council. And yet, the individual man is not an island. Man is, by his very nature, a social being, forming with all other men one human family. In this family God wills that one person treat another in a spirit of true brotherhood. The dignity and the rights of each human person have become daily more evident and their fulfillment more urgent, but so also has human interdependence. Acceptance of human interdependence, in the spirit of brotherly love, is the hope and need of mankind in our time.

In April of 1963—shortly before his death—in the Encyclical "Peace on Earth" Pope John gave mankind a Declaration of Interdependence. This wise and holy man stirred the conscience of the world with firm insistence that we are rightly brothers, all truly members of one family, the family of God on earth. He called on you and me to help achieve the immense task "of giving a Christian and human note to modern civilization, a note that is required and almost asked by that civilization itself for its future existence."

This high ideal of Pope John was strongly reflected in the Ecumenical Council. The Fathers insisted that the social order must work unceasingly for man's benefit. They warned of the need for constant improvement in the social order which must be "founded on truth, built on justice, and animated by love; in freedom it should grow every day toward a more humane balance." While the Council spoke to mankind—so much of which experiences bitterest suffering and strife—its message is pertinent to our own beloved country. For, despite all that has been accomplished by the United States in achieving the goals of our Constitution and Declaration of Independence, there is still much to be done.

Reverence for man is urgently necessary—necessary everywhere—in the Near East and Far East—in Africa—in Russia—in the United States. Everyone must accept his neighbor without exception as another self. Everyone must take into serious account his neighbor's rights and his needs for a life with dignity.

The equal dignity of human persons and man's brotherhood in one human family demand a more humane and just condition of life for those who are suffering. The deprived and underprivileged are found all over the world, and in their number unfortunately are many millions of our fellow Americans.

Excessive economic and social differences, the Council unequivocally stated, "militate against social justice, equity, and dignity of the human person, as well as social and international peace." While the relationship between poverty and violence has been obvious, it is becoming painfully more evident here at home as well as in the distressed and war-torn areas of the world. Peace efforts are out of touch with reality if they do not envision remedies for basic human needs.

The Council stressed freedom—the individual freedom vital to each man's person and dignity. It is in freedom that man properly directs himself toward goodness. Indeed, "authentic freedom is an exceptional sign of the divine image within man." In every aspect of life today, the conflict between freedom and authority causes frightening situations. The problem perplexes courts; it concerns theologians and philosophers; it agitates universities and social institutions. Whatever the proper roles of freedom and authority—boundaries there are and must be—we should be mindful that Christ "commanded His apostles to preach to all peoples the gospel message to that the human race might become the family of God, in which the fullness of the Law would be love."

St. Paul, in his Epistle to the Galatians, warned men not to "use your freedom as an opportunity for the flesh, but through love be servants of one another." Love imposes its own restraints by reason of one's love for others. Love of God and love of neighbor are the greatest commandments, but they also are essential to the welfare of the human community. They are the paramount need of our troubled times.

In the spirit of love as well as justice the Second Vatican Council insists that "there must be made available to all men everything necessary for leading a life truly human, such as food, clothing, and shelter; the right to choose a state of life freely and to found a family, the right to education, to employment, to a good reputation, to respect, to appropriate information, to activity in accord with the upright norm of one's own conscience, to protection of privacy and to rightful freedom in matters religious too."

These goals are those of most Americans. Our people are showing unprecedented concern for the serious social problems among us—racial bias, insufficient income, bad housing, illiteracy, illness, loneliness, unemployment, lack of opportunity. Independence—so courageously achieved and treasured in the United States—has not fully blossomed and cannot fully develop without respecting mankind's necessary interdependence. Americans have demonstrated to the world in a practical way sacrificial acceptance of the demands of our universal brotherhood. Foreign aid programs underscore our brotherhood and charity. More than that, the works flowing from brotherly love are crucial for peace in the world as they are for peace at home, for peace in families and among neighbors, for peace in the hearts of individual men.

This is neither the place nor the occasion to offer opinions on the specific programs, public and voluntary, undertaken to assist our brothers at home and across the world. I do believe, however, that the values motivating such programs merit admiration and active support. You members of the Bar can and should make a special contribution to them. Endowed with the particular insights and knowledge of your profession and so often situated in positions of importance to others, yours should be keen concern for human need and for the relationship of law to the needs of the poor, whatever the form of poverty involved.

Laws and the courts, of course, have the responsibility of seeking to protect rights and to deter crime. Yet, should not all members of the Bar seriously interest themselves in the formulation and administration of programs to promote human welfare—to provide what is needed, to develop what is helpful, to eliminate what is impractical and wasteful? The present mood of many seems to be—"to be against." Let us rather be—"for"—for what we believe is best whether it involves modification or restriction or expansion.

In addition, should not the legal profession in which so many already contribute much to others, in even greater degree provide personal service of the needy by counsel and representation? Such service is in truth an implementation of the fundamental law of charity—the equivalent of giving a cup of water to the thirsty and food to the hungry. It was urged at the 1965 National Conference on Law and Poverty here in Washington: "Without the active support of the Bar, the poor will not emerge from the tentacles of slum housing, job discrimination, welfare inequities, unjust criminal procedures, and commercial exploitation."

The Vatican Council pleaded that Christian charity seek out the needy, console them with eager care and relieve them with the gift of help.

Seek them out—console them—help them! Surely you members of the Bar have a major role in this vital objective, not only in the policies and programs you espouse but, also, in the personal service you offer to neighbors in need.

Let us, then, invoke the blessing of the Holy Spirit upon our courts and on each one of us while we strive to measure up personally to that inspiring declaration of belief and purpose: "The joys and the hopes, the griefs and the anxieties of the men of this age, especially these who are poor or in any way afflicted, these too are the joys and hopes, the griefs and anxieties of the followers of Christ."

Matter of Fact: The Biggest News

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. DINGELL. Mr. Speaker, the February 1, 1967, issue of the Washington Post carries a very interesting column by Joseph Alsop. For the benefit of some of my colleagues I, pursuant to permission granted, insert Mr. Alsop's column into the Appendix of the Congressional Record:

Matter of Fact: The Biggest News

(By Joseph Alsop)

The biggest news at the moment is not getting into the newspapers. There are two closely related items. On the one hand, Hanoi is actively sounding out the Johnson Administration, through diplomatic third parties, to discover whether the President will "stop the bombing to get talks."

Whether the President will be wise enough to insist on the essential quid pro quo for stopping the bombing, still remains to be seen. And it also remains to be seen whether Hanoi really wants negotiations, or merely desires a badly needed respite or breathing spell in which to reinforce the Vietcong units in the South and start the war all over again.

This move forward, from noisy propaganda to quiet diplomatic inquiry, is none the less a very big development. The reason for it can be easily discerned in the other big, as yet unnoticed piece of news. In brief, U.S. bombing of North Vietnam has now begun to produce precisely the strangling effect that it was designed to produce from the outset.

To be specific, the southward movement of North Vietnamese regular troops, to reinforce the Vietcong, has been reduced by no less than 75 percent in the past six months. The Pentagon estimates of month-by-month infiltration in 1966 show many a peak and valley, on both sides of the dividing line. This is at the end of June, just after the bombing of North Vietnamese oil stores began. But the contrast between the first six months and the last six months is dramatic.

In the first six months, the average rate of infiltration of northern troops into South Vietnam was just under 7000 a month. But in the last six months, the rate of infiltration dropped to around 1700 men a month, or one quarter of the former input.

One must say "around 1700" a month because the U.S. Government is currently riven by a vicious insiders' debate about the exact figures for infiltration in November and December. (This kind of argument, it may be noted, can make the religious wars look like fun and games.) But the argument is merely about whether the right figure for these two months is in the range of 1500 men or 2000 men.

As this argument indicates, the formal estimate for each month is only made long after the month in question has passed into history. More time has to pass after that, before the ultimate dependability of the formal estimate is properly cross-checked by additional defector-interrogations, captured documents, agent-intelligence and the like.

Thus the figures for July and August infiltration, having been cross-checked, can now be regarded as pretty hard data. Rounded off, they show 2700 infiltrators in July and 2000 in August. The rounded estimate for September, only 1400 infiltrators, is also hardening fast. The October estimate, well under 1000, seems really too low to be hard. The problem of November-December estimates has already been covered.

There are two reasons why this incalculably important development, previously surfaced in part by Lloyd Norman in Newsweek, has received almost no attention. One is the idiotic information-policy of the McNamara Pentagon and the Johnson Administration.

The other reason is the equally idiotic conviction of the lower echelons in U.S. Headquarters in Saigon, that if they admit to making the smallest progress in the war, the civilians at home will instantly begin clamoring to "bring the boys home." Thus "possible" infiltrators, generally imaginary as the event has repeatedly proven, are included in the infiltration rates cited in Saigon.

The fact remains that the very low Pentagon estimates of infiltration for the last six months of 1966 were produced by precisely the same process, and were based on precisely the same kinds of information, that produced the exceedingly high estimates of infiltration for the first six months of last year. The high estimates were used by opponents of the President's policy to prove that "the northern bombing does no good anyway." Logically, these people ought now to eat their words—although nothing, of course, could be more wildly unlikely.

They will instead attack the figures which they formerly cited to prove their case; or they will talk inspissated nonsense about "voluntary de-escalation." But in fact what has happened is perfectly clear.

Bombing lines of communication, which is what the United States is doing in North Vietnam, is a very long, very slow business. Immediate results are never to be looked for. Results are only obtained, in fact, by the gradual accumulation of thousands of bridge-breaks and roadbreaks and convoy-losses and bomb-caused shortages of this or that.

At a certain stage, however, the cumulative process reaches what may be called a critical point. When that point is reached, all traffic does not stop, of course. But when that point is reached, there is a great reduction of traffic on the lines of communication that are under attack. This is what quite clearly began to happen in July, and has gone on happening to date.

Interstate Highway Program

EXTENSION OF REMARKS

OF

HON. JAMES H. (JIMMY) QUILLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 30, 1967

Mr. QUILLEN. Mr. Speaker, the progress of our interstate highway program is one of the most commendable achievements of the past decade.

Because an increasing number of our people are taking to these highways, it is even more imperative today that we push onward toward completion of the program.

I have received a great deal of mail from my district and from every corner of the State of Tennessee requesting that the funds for our Interstate System are not reduced, and I wholeheartedly support these recommendations.

I think the following editorial from the Greenville, Tenn., Sun will be of interest to every Member of this body as we contemplate the future of our interstate highway program, and I include the article at this point in the RECORD:

OUR INTERSTATE SYSTEM

The newspaper Grit has reported last summer's highway building brought the nation's interstate system past the half-way mark.

It estimated total cost of the complete system at over $46,000,000,000 (far more than originally estimated) and estimated completion in 1973. In all, the super highway network will total 41,000 miles. When the system is finished a motorist will be able to travel to any part of the country on a super highway without encountering a traffic light or crossroad.

The system will—it is hoped—reduce highway accidents, now costing the nation almost a thousand deaths a week (50,000 a year).

Many states have already completed long sections of the new highways within their borders. Meanwhile the number of vehicles being driven by Americans in all states now totals more than 94,000,000!

Registration continues to increase and no doubt when the biggest super highway network in the world is finished, in 1973, the total will be well over a hundred million and the need for superhighways will be greater than ever. And it may be that launching this highway-building program will be one of the best remembered accomplishments of the Eisenhower Administration.

The Unlimited Supreme Court

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. BERRY. Mr. Speaker, nearly 100 years ago Alexis de Tocqueville said that the power of the American Supreme Court was the power of public opinion but that it should last only as long as the people respect the law and that it would be impotent against popular neglect or contempt of the law.

This is a double-edged warning, applying equally to judges and to the people, and it has lost none of its timeliness with the passing of years. Recent Supreme Court decisions, in fact, bring these prophetic remarks into clearer focus. The question now is: What to do with the unlimited power of the Supreme Court?

The three divisions of our Government, to wit, the legislature, the executive, and the judicial were unquestionably intended as a balance, one against the other. Yet, speaking from a frank and realistic standpoint, the Supreme Court is presently vested with powers, based upon precedent, that actually could constitute it a dictatorial tribunal from which there is no appeal.

The President is checked by the Legislature and the Court.

The Legislature is checked by the Court and the President.

The Court, however, is responsible to no one.

The American people have no appeal from the dictatorial decisions of the Supreme Court despite the fact that recent decisions protecting the rights of avowed Communists, guaranteeing them free speech, and banning prayer in the public schools are all decisions which are overwhelmingly opposed by the American people.

The only solution to the unlimited and abusive power of the Court is to spell out the intent of the framers of the Constitution and deny the judicial branch its current power to make its own laws, execute its own law and violate our traditional balance of power in Government.

A definite move to grant the Congress judiciary reviewing power was narrowly defeated four times in the Constitutional Convention.

Today, I am introducing a House joint resolution which would provide a constitutional amendment which would allow Congress to limit the power of the Supreme Court by permitting it the right to override a Supreme Court decision by a two-thirds majority vote in both the House and Senate.

The congressional veto would check the power of the Supreme Court just as the President can check Congress by the use of the veto. The American people would then be the final seat of authority because they would have the power of the ballot to reverse any actions of the Congress at the polls at the next election.

No Federal court has the authority to rule out or alter laws unless the law violates the Constitution. Now, however, the Court is exercising final power over not only what the law means, but how it is to be written and how it is to be carried out.

It is my hope that Congress can take action on this legislation in the near future. It is my feeling that establishment of the limiting procedure will provide a true voice of the people and slow down the trend toward concentration of power in Washington.

Explorer Scouts Learn About Medicine

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. BARING. Mr. Speaker, under leave to extend my remarks, I would like to have inserted in the CONGRESSIONAL RECORD an article which appeared in the Journal of the American Medical Association, January 16, 1967, issue, describing an experiment undertaken by the Washoe County, Nev., Explorers Post 117 in the field of medicine.

The article follows:

EXPLORER SCOUTS LEARN ABOUT MEDICINE

Instead of tying knots, building campfires, and studying camping lore, 30 members of an Explorer Post in *Washoe County, Nev.*, are learning how to correct bone defects, making bacterial smears and cultures, and studying tissue slides.

Explorer Post 117 is another Boy Scouts of America experiment in broadening Scouting horizons. And in keeping with this theme, the Washoe County youths have been furnished copies of "Horizons Unlimited," the American Medical Association's medical careers handbook.

The AMA careers handbook is a fitting supplement to the regular Scouting handbook for this group of Scouts. All are top local students interested in medicine, and Post 117 is an Explorer Post in medicine.

Special Program: It is one of several professionally-oriented Explorer Posts springing up across the nation under the Special Interest Explorer Program.

Post 117 is sponsored by the Washoe County Medical Society, which has created an imaginative scouting program designed to give interested high school students an inside look at numerous aspects of the medical profession.

It is the first such Explorer Post to be organized in Northern Nevada, and has caught the imagination of other students and physicians.

MD is adviser: "This is a new experience for us, too," says the Post's adviser, Fred Coddington, MD, a Reno general practitioner.

"But it is the obligation of doctors to help youngsters interested in a medical career. It is a valuable thing. I wish we had had it when we were young."

The Post meets twice a month. One meeting deals with some phase of medical knowledge, and the other is a guided tour of a physician's office, hospital department, or other medical facility.

Post 117 is different in several ways from general Scouting purposes. It is open to girls, and the first meetings have been attended by several interested high school girls.

A typical program prepared for the Explorers by the Washoe County Medical Society members included a lecture course entitled "What Medical School Is Like," presented by James I. Botsford, MD, followed by a "Patho-Physiology Laboratory Demonstration" by George T. Smith, MD.

House Reflects on Powell Haste

EXTENSION OF REMARKS

OF

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. ROSENTHAL. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to set forth at this point an article by William S. White, which appeared in the Washington Post on January 31, referring to the action by the House of Representatives on Congressman ADAM CLAYTON POWELL.

This justifies, in my opinion, the position that many of us took when the Congress convened and considered the Powell case.

The article follows:

[From the Washington Post, Jan. 31, 1967]

SECOND THOUGHTS: HOUSE REFLECTS ON POWELL HASTE

(By William S. White)

The House of Representatives is now gloomily trying to dig itself out of a pit lined with misplaced moralism and extremely poor judgment into which it so recently plunged in denying a reseating to Adam Clayton Powell pending an investigation of his conduct.

As a special House Committee of nine unhappy members proceeds with this inquiry there is now a belated general recognition of the central reality of it all. This is that all the House had accomplished here was to give Rep. Powell a loud martydom which will infallibly send him back to Congress from Harlem with a bigger vote than ever, even in the unlikely event that the investigating committee finds him still ineligible.

There are, moreover, second thoughts now all over the House. For the plain truth which was hustled aside in the first place is still there and is now being reluctantly faced. This truth is that Powell, demagogue though he is and highly improper though his behavior has been, has not in fact even been charged with offenses sufficiently grave to warrant his ouster under the unbroken traditions.

In a word, the disciplinary action thus far taken against him, while entirely human, was also entirely unjustified. And it cannot be made to appear just simply because he is a bad and swaggering fellow.

The entire Republican membership of the House plus most of the Southern Democrats on Jan. 10 rushed in to refuse to seat him then and there while wiser heads were trying to seat him provisionally pending inquiry. A majority of the committee which has the thankless chore of investigating him tried then to avoid the more abrupt of these actions and for its pains is now stuck with the job of getting the House off the hook.

The whole thing is an ironic and perfect illustration of the fact that, unlike the Senate, the House allows no "obstructive" debate at times of passion and emotionalism. Given the right to filibuster in the House, a right not present there, and this foolish and extreme business would never have occurred. Never, for illustration, could it have happened in the Senate, with its supposedly evil filibuster custom. For in the Senate a majority is not always right all at once and a minority is always able to slow things down until the heat can subside and men can at last deal in reason and at leisure.

And by a curious coincidence the Senate itself has again just refused to destroy the right of the filibuster at the demand of avowedly liberal members who simply cannot grasp that instant actions by an instant majority are not always wise and are not always even "democratic" except in a highly oversimplified definition of that term.

For the true heart of the American representative process lies in the ability of a minority in one forum and one alone—the Senate—to insist upon long and sometimes even overlong debate as the last guarantee against unfair or heedless actions by momentary and inflamed majorities which might themselves—as now in the case of Powell—decide on more mature reflection that what they were about to do might be both wrong and self-defeating.

What the House forgot here in its howling haste to vote, and what any sort of unrestricted debate would at length have compelled it to remember, is that verdicts in this country are supposed to come after, and not before the trial is held.

The Right to Breathe

EXTENSION OF REMARKS

OF

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. HANNA. Mr. Speaker, "Los Angeles at 3:30 p.m.," is the caption of the picture on the cover of the January 27, issue of Time magazine. The picture, or lack of it, tells the story. The new Los Angeles Federal Building is the only structure that one can make out with any reasonable surety. From the picture you would never know that only two short blocks from the Federal Building stands the famous Los Angeles City Hall. At 3:30 p.m., on almost any given day in Los Angeles, the range of visibility is rarely greater than two city blocks.

If you live on the seacoast, or have a home in the mountains you can see a faint brown haze begin to etch itself against the blue sky that usually greets each southern California morning. By the end of the morning rush hour the faint haze has taken on the hue of a rich dense brown and has seeped into every crack and corner of the greater Los Angeles basin. Unless it rains, and as the city chamber of commerce boasts rain is rare, or unless a wind sweeps in from the ocean or desert, the 7 million residents of the area are treated to another day of breathing large portions of nitrogen dioxide, hydrocarbons, ozone, peroxyacyl nitrate, and a little oxygen.

The "right to breathe" in Los Angeles, and every other urban area in the Nation is becoming an increasingly perilous right to exercise. In their January 27, edition the editors of Time magazine devoted the lead article to the increasingly menacing specter of air pollution. The article was singularly impressive, and I would encourage every Member of Congress to take the necessary time to read it.

The article of course is part of a larger dialog on air pollution. Yesterday the President joined in the discussion, and while his proposals are not as hard hitting as I had hoped, they are significant.

The President's recommendation to Congress asking for the passage of the Air Quality Control Act of 1967 is a step forward, but only a small step. The act places its emphasis on establishing and enforcing maximum levels of industrial pollutant emissions. Regional air quality commissions would be established where they do not already exist and charged with enforcing the standards that control the emission of pollutants.

I would remind the President and the Congress that this proposal is not new. Some years ago the Los Angeles County Air Pollution Control District was established and given the needed strength to enforce its responsibilities. Today, Los Angeles' Air Pollution Control District runs the strictest and most extensive control program in the United States. The control board battled business and industrial leaders eventually overcoming their objections to regulations limiting the amount of pollutants released into the atmosphere. The control board banned the use of high pollutant fuels, the burning of junked cars, and burning household and industrial garbage. Thousands of violators of pollutant regulations were hailed into court by the control board.

Oil refineries in Los Angeles have developed new techniques in reducing the emission of sulfur pollutants and recycling other wasteful materials that would have ordinarily been dumped into the atmosphere. Los Angeles located power companies are required by statute to use low sulfur natural gas when available and fuels containing a minimum amount of sulfur when the natural gas is not available. Los Angeles industry, especially the oil refineries are considered to be the cleanest in the world.

Since 1964 cars sold in California have been required to be equipped with various types of smog control devices. The 1966 cars sold in California had to have equipment that reduced carbon monoxide by 50 percent and hydrocarbons by 65 percent. In 1970 stricter measures controlling car tailpipe emissions will go into effect.

All in all the Los Angeles County Air Pollution Control District spent close to $4 million in 1965 trying to win the battle against air pollution. This represents an expenditure equal to almost one-sixth of the present total Federal expenditure.

With the great financial investment made by Los Angeles, and with the most comprehensive air pollution control program in the Nation, Los Angeles is steadily losing the battle against smog. Some 13,730 tons of noxious waste are released daily into the Los Angeles sky to contaminate an already overburdened atmosphere. The 3.75 million area cars alone are responsible for 12,500 tons of the daily pollutants. Despite strict enforcement and periodic checks of smog control devices, the level of pollutants released from the exhaust of cars is continually rising. With 2 million more cars expected on Los Angeles highways by 1980, and more than 100 million cars on America's roads by 1975, President Johnson's warning that at the present rate of increased contamination, America can expect to be overwhelmed by a poisonous atmosphere in 10 years is startlingly vivid.

What the above suggests, Mr. Speaker, is that the President's approach, while encouraging, is too modest. Americans are choking their atmosphere with contaminants at the horrendous rate of 370,000 tons of pollutants daily. By 1975 we will be polluting the atmosphere at the incomprehensible rate of more than 1,500,000 tons annually.

Proposing measures for the rest of the Nation that Los Angeles has been using for years while the smog problem has become steadily more acute seems almost futile. Certainly the President's recommendations will meet part of the problem, but only a very small part.

There are two critical areas that should have been given more emphasis in President Johnson's message. First, he did not strike home hard enough the very critical roles that must be played at the local and State levels. While the Air Quality Act provides a framework for meaningful participation by the local levels of government, it seemingly allows little flexibility or room for initiative. Granted, the proposal is primarily designed to affect those areas where little or nothing is being done, but what about the many local programs that have already been initiated?

The National Association of Counties has produced an excellent series of community action guides on air pollution designed to help its membership. The guides are very specific and provide a wide range of alternatives that would allow the local jurisdiction some flexibility in experimenting in order to determine the most effective programs.

Air pollution is not, and nor can we allow it to be an issue of concern only to the various levels of government. It is imperative that industry be one of the leading elements in meeting this problem. We should make it clear whenever we have the opportunity that success in cleaning our air can only be expected if all segments of the society cooperate and recognize their particular obligations.

The other area in which the President's message was weak was in what it offered, or more accurately, what it did not offer in the way of providing leadership for developing new and imaginative programs. The President made a curt reference to the fact that he intended increasing research funds by 50 percent. Nowhere was there an estimate of the kind of research program we will need. Even a 50-percent increase in research appears woefully inadequate in light of the increasing enormity of the problem. It is in this area of ingenuity where leadership is most needed and appears most lacking.

Let me make perfectly clear, Mr. Speaker, that I am one of the many who welcomes what the President is proposing. These proposals are overdue. And it is precisely because this Nation has waited so long in focusing its full attention on the problem that the question of our pollution is now so critical. The problem requires infinitely more than the President has suggested.

Experts have estimated that anyone born in New York City since 1945 has breathed enough contaminated air to have smoked the equivalent of nine cigarettes a day during every day of his life. The richest, most technically advanced Nation in man's history must offer its citizens something better than that.

I see no room for compromise or delay on this issue. Each day of inaction brings us one day closer to a poisoned earth. Our resolve must be equal to the task, and the task that now confronts us deals with our very survival.

There can be no compromise or delay on our right to breathe. Without this right all other rights are rather meaningless.

Nassau County Executive Eugene Nickerson Applauds Congressional Efforts To Modernize and Strengthen Local Governments

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1967

Mr. REUSS. Mr. Speaker, Eugene H. Nickerson, the county executive of Nassau County, N.Y., is painfully aware of the fiscal problems facing local governments, especially those which are striving to provide the improved public services demanded by a growing and increasingly sophisticated population. He follows closely congressional discussion of ways to help local governments both administratively and financially. To share his concern with citizens, he wrote an article in January for the Long Island Press. Referring to my bill, H.R. 1166, proposing "the State and Local Government Modernization Act of 1967," Nickerson stated:

> I consider it my duty, as it should be the duty of every local official, to fight for all such legislation which will strengthen local government in its era of greatest danger.

H.R. 1166 provides that each State would first receive Federal funds—at least $250,000—to draw up within 18 months its own "modern governments program." This program would set forth plans and timetables for modernizing both State and local governments. Such plans would have to include specific proposals for dealing with interstate regional problems, for strengthening State governments, and for strengthening and modernizing local, rural, urban, and metropolitan governments—for example, by reducing the number of counties, eliminating inefficient local governments, reforming personal practices, and strengthening local governments in metropolitan areas.

Each State's "modern governments program" would then be reviewed by one of the four regional coordinating committees—to be set up under H.R. 1166 by the participating Governors in each of the four regions: eastern, southern, midwestern, and western—and by the existing Advisory Commission on Intergovernmental Relations. Those States with plans designated as reflecting "sufficient State creative initiative so as to qualify that State for Federal block grants" would then begin receiving, in 1970 or at the latest by 1971, unrestricted Federal grants from a 3-year, $5-billion-a-year authorization.

Funds would be distributed according to population, with not to exceed 20 percent for supplements to those States having a low per capita income; a high degree of poverty, dependency, or urbanization; and an adequate State tax effort, as indicated by the amount of State and local taxes relative to personal income. At least 50 percent of the money going to a State would be earmarked for its local governments.

The text of Eugene Nickerson's article follows:

> IF YOU WERE UNCLE SAM
>
> (By Nassau County Executive Eugene H. Nickerson)
>
> Suppose for a moment that you are Uncle Sam and I come to you, hat in hand, with a proposal to stop the squeeze on the local property taxpayer.
>
> I point out that in your star-spangled pockets is the revenue from a nation-wide income tax that you could be sharing with local governments.
>
> "Look, Sam," I say, "local government today is dealing with nation-wide problems, like crime, unemployment, disease, the population explosion, water and air pollution, education, housing, transportation, the whole works."
>
> What would you say to that? Would you turn the corner and run fast? Would you invite me out for a cup of coffee and a hard luck story?
>
> From the talks I have had lately with various of Uncle Sam's relatives, I think you would be sympathetic, but before reaching for your checkbook you would ask me a tough question:
>
> "Why should I write a blank check to local administrations all over America, many of which are inefficient and wasteful?"
>
> And I would say "The answer to that question is partly up to you, Uncle Sam, because you share responsibility for the state of local government today."
>
> Most local governments are not operating at top efficiency because they don't have the resources to initiate new techniques to meet the problems of a rapidly expanding population.
>
> In other words, it's going to cost money now to save money tomorrow, and here's where the U.S. comes in.
>
> The local property taxpayer should not have to foot the whole bill for such techniques as electronic data processing, which are expensive to inaugurate but in the long run save millions of dollars.
>
> In Nassau County government we established the Office of Administrative Services to cut red tape and purchase costs, increase workers' efficiency and morale, and make computer decisions in seconds which in the past have involved weeks and months of clerical processing.
>
> Under a bill which died in committee last year, Congress would have given us substantial aid to develop this economy system.
>
> Well, that's water over the dam now. The new 90th Congress is settling down to business. On opening day, Congressman Henry Reuss of Wisconsin introduced a bill to provide Federal grants for States and localities seeking to modernize their governments, to cut down government costs for decades to come.
>
> I consider it my duty, as it should be the duty of every local official, to fight for all such legislation which will strengthen local government in its era of greatest danger. This year I hope my fellow taxpayers will join me.

A Special Report

EXTENSION OF REMARKS
OF
HON. JAMES J. HOWARD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 30, 1967

Mr. HOWARD. Mr. Speaker, on Monday of this week I introduced legislation which would create a Sandy Hook National Seashore in the Third Congressional District of New Jersey which I have the privilege of representing in the Congress.

Under my bill, this beautiful area would be preserved for a public park and recreational area for all of the people of the great State of New Jersey to enjoy.

My bill was introduced because the Department of Defense has announced that some 400 acres of land it has been using at Fort Hancock is no longer needed. The State of New Jersey presently leases 745 acres of land from the Federal Government and that land is used as the Sandy Hook State Park.

Mr. Speaker, what I want to do is have those 1,200 acres turned into a Sandy Hook National Seashore and eventually be expanded to 1,600 acres when the 400 or so acres still being used by the Federal Government are no longer needed.

Mr. James S. Brown of the Asbury Park Evening Press has written a most interesting article which I think will be of great interest to every Member of Congress who will be asked to vote on my bill. For that reason I am enclosing at this point in the Record, the text of Mr. Brown's well written and comprehensive article:

[From the Asbury Park Evening Press, Jan. 27, 1967]

A Special Report—Sandy Hook Worth Saving as Historic Site, Wildlife Area

(By James S. Brown)

Sandy Hook.—This six-mile-long peninsula, soon to be largely abandoned as a military base, is doubly qualified for public preservation—as an historic site and a recreation and wildlife area.

At times an island, according to the whims of the sea, the hook has served as graveyard, lifesaver and battleground since the earliest days of our country.

Some historians say it was first visited by white men in the spring of 1524 when Da Verrazano, sailing for France in his ship Dolphin, cruised along the coast.

There is general agreement that it was here Henry Hudson's sailors from the Half Moon came ashore in 1609 and left behind a crewman, John Colman, who was killed by an Indian arrow. Colman was buried on the hook which Hudson's men named Colman's Point.

And here it was only a few years later that a ship from Holland ran aground. One of its passengers was Penelope Van Princess, later to become the celebrated Penelope Stout, first white woman in Monmouth County.

By 1663, the area was referred to as Sand Point and in 1677, Richard Hartshorne, early settler and probably the first lawyer in the country, leased "the beach called Sandy Hook" for 21 years, rental to be "one peppercorn, if demanded." In granting the lease, the governor and council noted that Hartshorne proposed "to set up a fishery at the river's mouth."

In 1692, Hartshorne obtained title to the hook and other large holdings through a patent from the East Jersey Proprietors. But he apparently was having trouble with the Indians and he finally paid 13 shillings to Vowavapon and Tocushis "for peace and quietness sake, and to the end there may be no cause of trouble with the Indians and that I may not for the future have any trouble with them as I formerly had, in their doggs killing my sheep and their hunting on my lands and their fishing."

By the deed, the Indians also gave up the right to go berrying or obtain wood for canoes on Sandy Hook.

During this same period, the barren, desolate strand was also a hangout for privateers who anchored their ships in the shelter of the hook while awaiting the arrival of likely prey. Treasure hunters have combed the hook periodically in the belief Capt. William Kidd buried some of his loot there.

Many a sailor met death here as storm-lashed ships inbound for New York were driven ashore. But it wasn't until 1759 that the plan originated to mark the hook with a lighthouse.

In 1761, a group of New York merchants began negotiations with the Hartshornes and finally agreed upon a price of 700 pounds for a four-acre tract about 500 feet from the end of the hook.

The land was transferred from Robert and Esek Hartshorne to New York Mayor John Cruger, Philip Livingston, Leonard Lispenard, and William Bayard on May 10, 1762. Three years later, these four men were to serve as New York delegates to the Stamp Act Congress.

In the next two years, the New York Legislature authorized three lotteries which raised a total of 9,000 pounds toward construction of the lighthouse. The 103-foot tower was built by Isaac Conro of New York and when completed in 1764 was lighted by 48 oil lamps whose light was beamed seaward by mirrors.

Only 12 years later, on March 4, 1776, New York officials who had promoted the lighthouse decided to destroy it to prevent its use in guiding British warships into New York harbor. Instead, however, the lamps, reflectors, and oil supply were removed.

For most of the next seven years, the British used the hook as a base of operations, the tall brick and stone lighthouse serving as a fort which was impervious to attacks by local militia units,

In 1778, British forces from Philadelphia, retreating after the Battle of Monmouth, were brought onto the Hook over a pontoon bridge. A storm a short time earlier had again opened an inlet across the base of the Hook, making it an island. From this vantage point the English and Hessian soldiers were taken aboard British warships.

Raiders led by David (Black David) Forman and Lt. John Schenck on several occasions seized British boats and took prisoners but as one English officer wrote, the cannon fire "could make no impression on the walls" of the lighthouse.

On Jan. 19, 1780, in one of the last raids, a party of Colonial rangers took seven prisoners and seized 45,000 counterfeit continental dollars, which the British had planned to circulate to reduce the value of American currency.

Soon after the end of the war, in 1790, the 4-acre lighthouse tract was ceded to the federal government by New Jersey's Legislature. This parcel probably will remain in federal ownership in the future to protect the still-operating lighthouse, according to Joseph J. Truncer, the state's director of parks and recreation.

The Hartshornes in 1797 sold an interest in the hook to Tylee Williams and Nimrod Woodward and apparently the owners began having problems with the government employes keeping the lighthouse.

Several suits were filed against the government and on Dec. 26, 1805, Williams, Woodward and Richard Hartshorne made an agreement ending the litigations. It is recorded at the county courthouse at Freehold, with government ratification bearing the signature of President Thomas Jefferson.

Under the terms, the government agreed its employes would not keep stock on Sandy Hook except for a horse and "no more than four milch cows" unless the animals were kept fenced up on the four-acre site:

Further the government agreed that "no tavern or ordinary or house of public entertainment shall be permitted by the United States of their assigns to be kept on the lands hereby confirmed to them . . ." The agreement seems to imply that the light keepers also operated a tavern during New York's ownership of the property. No doubt the customers came by boat.

Apparently aware of the importance of the Hook, the government on Feb. 26, 1806 bought from Hartshorne, Williams and Woodward all land lying north of an east-west line through the lighthouse. A price of $3,750 was paid for 125 acres.

Though the original four-acre site was only 500 feet from the end of the hook when it was sold in 1762, it is now more than a mile distant. Sand carried northward by ocean currents has extended the beach northward.

During the War of 1812 a massive log fort was built about a half-mile north of the lighthouse and was manned for the most part by Monmouth County militiamen.

On June 17, 1817, Richard Hartshorne and his wife sold a major portion of the Hook south of the lighthouse to the government for $20,000. This deed grants all land north of an east-west line from the ocean to the mouth of Young's Creek.

Finally, in 1892, the government spent an additional $27,000 to buy 21 lots from the Highland Beach Association, the Atlantic Highlands Association and the New Jersey Southern Railroad at the southern end of the Hook.

So, for a total of $59,750 the government purchased property which now includes 1,634 acres and has a value estimated at $250 million. None of the deeds called for property to revert to original owners upon termination of government use.

In 1858, shortly before the start of the Civil War, the Army began construction of massive fortifications built of New England granite near the end of the Hook. Seventy-five cannon were mounted in the incomplete fort during the war and for a brief period it was known as Ft. Lincoln.

During this period a rail spur was extended onto the Hook by the New Jersey Southern Railroad, serving steamboat landings at Spermacetti and Horseshoe Coves.

By the war's end, the government had spent $10 million on the unfinished fort, and because of advancements in artillery weapons, it already was obsolete and work was halted.

About 1875, the Hook was designated the Sandy Hook Ordnance Proving Grounds for testing artillery weapons, a function later shifted to Aberdeen, Md. About 1888, the government began dismantling part of Ft. Lincoln, using the salvaged granite blocks to complete the southwest part of the fort. Increased government use at this time ended rail and steamboat use of the Hook by the public.

The fortifications were named Ft. Hancock on Oct. 30, 1895 in honor of Gen. W. S. Hancock, a hero of Gettysburg. In the past half century, the fort's military significance has gradually diminished, although 13 buildings of brick and stone were built in the early 1920s.

Several years ago, the government leased 745 acres to the state for a public recreation area. Bathing, fishing and nature walks are included in the park area. Vegetation on the hook includes some of the finest holly groves in the state, stands of bayberries and beach plums, which have all but disappeared from other parts of New Jersey.

Inlets across the base of the hook have opened and closed with considerable regularity in severe storms during the past three centuries, during the 19th Century occurring almost every 20 years. For the past two decades, there have been proposals to reopen the old Shrewsbury Inlet at the base of the hook to provide fishermen quicker access to the sea.

Sandy Hook has long been a favorite with fishermen since its waters abound with record-sized striped bass. In years past, it was one of the best duck hunting areas on the Jersey Coast, huge flocks of migrating birds seeking shelters in coves along the bay shore.

With this historical background and these physical attributes, Sandy Hook is well qualified for permanent preservation for the public.

Emergency Parents

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1967

Mr. DULSKI. Mr. Speaker, a unique plan, called Emergency Parents, was put in operation about a year ago by the Children's Aid Society of Erie County in Buffalo, N.Y.

Well known for its sympathetic and sensible approach to problems concerned with the welfare of children in our community for many years, the Children's

Aid Society has embarked upon a program that is filling a real need. A great deal of credit for this must go it its executive director, Mr. Norman W. Paget.

In an article which appeared in the Parade section of the Buffalo Courier-Express, Buffalo, N.Y., on January 29, 1967, Shirley Camper Soman tells how the program works and how it helps children who suddenly find themselves without a parent due to illness or other misfortune.

With permission, I include the article below:

EMERGENCY PARENTS

(The program—which can be copied in your community—provides love for abandoned children.)

(By Shirley Camper Soman)

BUFFALO, N.Y.—"All the kids call me 'Mama.' " Mrs. Marguerite Bressler, a plump, happy-go-lucky housewife here, is talking with pride about children who have never seen her before, whose home she has entered in the middle of the night. She has come, a stranger, to care for dozens of frightened youngsters at a crisis point in their lives: when their parents are missing. Mrs. Bressler is an "Emergency Parent."

Established just a year ago this month, "Emergency Parents" is one of the newest and most revolutionary social welfare services provided in the U.S. today. It was originated by the Children's Aid Society of Erie County—and is being closely watched by other agencies all over the country—to deal with the ever-increasing problem of children found neglected or abandoned or otherwise left alone at night.

In all too many such cases, children meet with accidents. According to the National Fire Protection Association, in 1965, 50,000 children left alone suffered moderate to severe injuries or died in fires, and the National Safety Council says 25 percent of children killed in home accidents were alone and unsupervised at the time the accident occurred. Almost equally bad is the fact that children unharmed otherwise are wrenched from their familiar surroundings and plumped into a foster home or other impersonal institution. The shock of such treatment can last a lifetime.

"Consider the steps in the experience," says Norman W. Paget, executive director of Children's Aid, who instituted the Emergency Parent program. "The absence of a parent, the presence of a policeman, the sudden removal from home by strangers at night, being taken to an unfamiliar and often grim place. It leaves children in a state of terror. They can't eat, can't sleep, won't speak, throw up or complain of headaches, stomach aches, every place aches. Some never get over it."

ANSWER TO A PLEA

It was to stave off such consequences—and to provide continuity in the children's lives—that Emergency Parents was started. It came about when Paget, a noted family-life education specialist and troubleshooter on family problems, came to a new post with Children's Aid here. He lent a fresh ear to the plea of longtime staff member Mrs. Dorothy Washburn: "We must do something to prevent these awful night placements of children." The two decided that what was needed was a small corps of low-paid volunteers who would go into a home and run the household until the parents returned or other arrangements could be made.

With a small grant from the Josephine Goodyear Foundation, Children's Aid put the program into action. They advertised for volunteers to be on call all night one week a month. The volunteers were to be paid $2 for each night they were on call, $1.25 an hour ($1.50 after midnight) for time actually served. A teacher, a practical nurse, a management trainee, a postman, a factory worker, a housewife and several husband-andn-wife teams responded.

In the year since, Emergency Parents have more than lived up to expectations. Their service has saved children from fire, smoke poisoning, gas and other assorted perils. Just as important, they staved off emergency placement for 129 children in a ten-month period during 1966. Twenty-six children did need foster care eventually, but the work of Emergency Parents helped them to get used to the idea and allowed time for the best possible foster home situations to be found. And over 100 were able to stay in their own homes *only* because of Emergency Parents.

One recent case illustrates how the program works. At 9 o'clock one stormy night, a mother of four small children was rushed to a hospital after complaining to a neighbor of severe pains in her head. The family was new to the city. The neighbor, who could not help with the children, knew only that the father worked on a night shift. A social worker at Children's Aid Society, called by the hospital, went to the home but could find no address book. And the children, aged 2, 3, 5, and 6, who had been awakened by the ambulance and the commotion hid themselves in an upstairs closet and under beds—and wouldn't come out.

SWEET SMELL OF PANCAKES

The caseworker then called an Emergency Parent, who tried to explain to the children —through the closet door—that she would care for them until their father came home. Silence. She then went downstairs, mixed a batter of pancakes, added apple slices and raisins and began to cook. As the odor of pancakes wafted up the stairs, the children came down one by one—big eyes round, still scared, but interested in the food *and* in the cook. When the father returned, the Emergency Parent was snoozing in a chair, and all the children were sleeping contentedly and well fed. If the Emergency Parent had not been available, the four would have been removed to a foster home in the middle of the night.

Most of the Emergency Parents would have been equally competent to improvise in such a situation. Although untrained in welfare work, they are all men and women with a large-sized affection for children and an easy way of dealing with people. Mrs. Bressler is typical.

In her "Frau Bressler dress"—a clean, starched housedress that "makes children feel more at home," she has set out on her mission even on such occasions as the first night of her husband's vacation, her own birthday, Easter evening. A woman who talks and laughs easily, she has "cuddled the little ones, petted the bigger ones" and in one instance, insisted that a family of deserted children pitch in and clean up their filthy house while she cooked dinner.

Mrs. Bressler has been an Emergency Parent for a few hours, for overnight stays and in some cases for several days at a time. She has gone into very nice, well-kept homes and others in deplorable condition. Her husband, a mail carrier, has often gone along. "I've been scared skinny in some neighborhoods!" Mrs. Bressler explains.

All such volunteers carry an "emergency kit," and each has made suggestions as to what should be included. At present it contains an array of items needed to care for children and home under any possible condition: disposable diapers, light bulbs, canned and packaged foods, paper and plastic eating utensils, pots and pans, an aerosol can of a mild tear gas for protection against potentially hostile intruders (no Emergency Parent has yet been obliged to use it), soaps and cleaning supplies, blankets, a pillow and a folding aluminum cot. The bed was added after one Emergency Parent, Jessie Oates, had to curl up on the floor to get some sleep during one of his missions.

With few exceptions children have responded warmly after their initial fright has passed. Most have tried to pitch in and be helpful. One group of small children burst into tears when the time came for the Parent to leave.

Many of the cases handled by Emergency Parents have had overtones of pathos. Mrs. Myrtle Miller, mother of four children under 4, had been deserted by her husband and had no relatives in Buffalo. When she developed a high fever and became delirious, a neighbor took her to the hospital and stayed with her. An Emergency Parent came to take care of the children, three of whom were ill with measles.

A HOSTILE GREETING

Mrs. Rosamond Domedian, legally separated from her husband, went on a week's trip with friends. She left a teenage babysitter in charge of Gail, 2½, and Jeffrey, 5½. A series of mishaps promptly occurred. The teenager simply left the children after a day. Mrs. Domedian's mother was unable to care for them because her husband had suffered a stroke. Mrs. Domedian herself was out of reach. The Emergency Parent remained nearly a week until Mrs. Domedian returned.

The Emergency Parent program has even involved some drama. One Emergency Parent was greeted with knives and steel-tipped arrows by three out-of-control teenage boys when she answered a call for help. And in a few cases, police have been called to break down a locked door to admit the Emergency Parent. In still another case, a worker arrived to find three small children were sleeping upstairs, while an unvented gas stove was filling the home with fumes.

Children's Aid works closely with police, firemen and hospitals in providing Emergency Parent service. The agency keeps an emergency caseworker on duty around the clock to receive calls. When he or she is notified that children have been left alone, the caseworker goes immediately to the home and tries to locate the parents or a responsible relative. Two-thirds of the time he is successful. Only otherwise does he call an Emergency Parent.

In addition, knowing that children left alone is often a sign of deeper trouble in the home, the agency provides follow-up help. Parents in such cases are asked to come in for counseling afterwards.

In these sessions, caseworkers have found many reasons why parents have left children alone. Illness, accident and unreliable babysitters are most common.

A certain number of parents have gone out carousing and just forgotten home and children. Some simply haven't realized the dangers involved.

One problem lies in the age of the parents: Usually, they are in their early 20's and have taken on too much responsibility at too young an age. In addition, three-fourths of the children in emergency cases were from broken homes. A mother (or father) trying to bring up children alone is often too pressured to give sufficient care and to take reasonable precautions for the children. Many such parents are living in poverty or near poverty—which further limits the kind of care their children will have.

The dividends paid by Emergency Parents are considerable. Besides the shock and trauma spared the children, there are practical benefits. In Buffalo, the total cost of foster-home care averages $5.35 per day for *each* child. Institutional care ranges between $10 and $15 a day per child. This is in contrast to the low fee paid to the Emergency Parents.

"The Emergency Parents program makes hard-boiled sense in human terms and in money terms," declares Paget. If one child can be spared the shock of midnight placement, Paget feels, the program will have been worth it.

Address by the Honorable John C. Kluczynski, Member of Congress, Chairman, Subcommittee on Roads, House Public Works Committee Before the National Limestone Institute, Washington, D.C., January 17, 1967

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 18, 1967

Mr. BLATNIK. Mr. Speaker, with the transportation challenge heavy on all our shoulders it is, indeed, gratifying to know that men like our most respected colleague, Congressman John C. Kluczynski, of Illinois, is hard at work helping to conquer some of the vexing problems of transportation. It is an honor to include the following address made by our distinguished chairman of the Subcommittee on Roads:

Address by the Honorable John C. Kluczynski, Member of Congress, Chairman, Subcommittee on Roads, House Public Works Committee, Before the National Limestone Institute, Washington, D.C., January 17, 1967

Thank you, Mr. Raese, and good morning, gentlemen. I'm very pleased to be able to be with you this morning. I had hoped to be with you at your annual meeting last year, but urgent problems elsewhere made that impossible, so I am particularly glad to be here today.

About 15 months ago I spoke before the annual gathering of the American Association of State Highway Officials, an organization with which most of you are well acquainted. My subcommittee on Roads works closely with that group, and in addressing them then, I urged that they become more directly involved in comprehensive community planning. I urge the same course upon you.

We have long since passed beyond the time when, as highway people, we can be content to pave another road, or connect another town with the highway network. Highway philosophy, if you will forgive that somewhat fancy term, must now be much broader.

Our highways are the basic element in the national transportation system. They are the physical plant upon which the continued economic and social strength of this country depends. I am convinced that we are going to have to develop new or different kinds of transportation on a large scale—mass transit, high speed rail, helicopter, and special inner city methods of getting about—but I am equally convinced that *all* of these revised or added transportation forms will have to be built around the highway networks.

Americans are not going to give up their cars, and the freedom of mobility that these cars make possible, and the expanding human population *and* vehicle population demand that we recognize that fact and be guided accordingly.

But simply to say there will be such and such a number of cars in a given year, and that there must then be so many miles of pavement in that year is not enough. We must rebuild many, if not most, of our existing roads, but in planning new roads, we must outguess everyone else.

We are going to have to be able to *foresee* potential industrial and residential growth, and build the roads to handle the *coming* load, so as to forestall future traffic jams. When the zoning boards consider opening a new area, the highway people had better be on hand to say what that will require in the way of new roads and the zoning boards had better be prepared to take their advice, and make some requirement for the roads before they act.

When the school board plans a new school, the highway people had better be working with them to be sure that the location and plans include adequate provision for safe roads, sidewalks, traffic controls, and whatever else is needed to protect the safe transport, in cars or busses, or on foot, of the children the chool will serve,

When a developer lays out a community, he had better be required to clear his plans with the highway people, to be sure the streets, and sidewalks are properly laid out, and that appropriate access to arterial roads is provided for.

When the city fathers decide to rejuvenate downtown, they had better have the highway people on hand to determine what will have to be done to streets, traffic controls, and parking facilities to make the rejuvenation meaningful.

None of this is going to be easy gentlemen. Everyone likes to operate in his own bailiwick, and everyone is faced with problems of achieving some reasonable balance between function, cost, and good looks. But easy or not, this is the way it will have to be done.

Some of our smaller cities will have to grow bigger. Some of our big cities will have to be content to stay the size they are. And all of our planners are going to have to realize that there is plenty of space for development in this country. It doesn't *all* have to take place on less than 10% of the nation's landscape. The critical factor is bringing about a rational use of the other 90% in a diversified transportation system that will link new areas to older areas in ways that permit people to move about with speed and comfort and convenience.

The bulk of the responsibility for achieving this is going to rest with the state and the local governments. It is the state and the local governments who make the rules, and rightly so. The federal government can help, with advice and guidelines and money, but the actual work has to be done where the people are going to live. A federal official recently suggested that if local zoning practices weren't cleaned up, the federal government might have to take over the zoning. It wasn't the first time that suggestion has been made, and I suppose it won't be the last time, but I certainly hope it never gets beyond the suggestion stage.

Obviously, as we continue to grow, towns and counties, and even states in some cases, will have to come together to do their planning, but that will still be planning by the people who will be doing the living and working, and that's where it belongs.

So when I say highway philosophy, what I am really talking about is the best coordinated system of transportation that can be devised to serve the people who are going to be using it—planned and built, including room for expansion, when the new communities are developed, not 5 or 10 years later when the agonies of safety hazards, traffic jams, and relocation costs are already built in.

In addition to being difficult, this will also be expensive, but not nearly as expensive as doing it the old way. It may *look* expensive to require the roads being built in 1967 be adequate, in both design *and location*, to handle 1987 traffic, but it's a lot less expensive to do it in relatively open areas in 1967 before the housing and industrial build-up actually takes place than it will be in 1977 or 1987, when all the really expensive collateral problems will have taken over.

It's going to be rough, gentlemen, finding the money to provide a good transportation program, and a good pollution control program, and good zoning procedures, and good community development programs that see businesses and industries, and homes and schools, and fire departments and police departments, and water and sewage systems, and sidewalks and streets and traffic controls, as one unit. But if we don't start finding the money to do this now, we're going to have to find a lot more money to do it later.

I think we can accomplish this if everyone will seriously look ahead, and if everyone will be just a little more willing to take an active interest in the kind of development that's going on, or could come, in his area, and how that development can best be handled.

You people are, by virtue of your business interests, in an excellent position to help lead the way. I sincerely hope you will do it.

Thank you, Mr. Raese. I am sorry I have to go to a very important caucus, but I have said this time and time again—as Chairman of the Sub-Committee on Roads in the House of Representatives, it is up to me to take care of that trust fund and see that none of that money is diverted, as I saw in your motion picture, for anything but road building.

The Job Corps: "A Marvelous Thing"

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 31, 1967

Mr. MOSS. Mr. Speaker, Miss Ida May Juelch, of Sacramento, is a winner in the war on poverty. Miss Juelch was recently graduated from the Job Corps for women in Huntington, W. Va., and has returned to Sacramento to accept a position with the State department of motor vehicles in the data processing and proofreading division.

Ida May's story is warmly presented by Melody Kercheval, writing in the Sacramento Bee on January 5. Miss Kercheval's article shows how the Job Corps is helping less fortunate young Americans to help themselves open the doors to opportunity, and I include it at this point in the Record:

[From the Sacramento, (Calif.) Bee, Jan. 5, 1967]

Sacramento Girl Successfully Completes Job Corps Training

(By Melody Kercheval)

One of the first graduates of the Job Corps Training Program to return to Sacramento is Ida May Juelch, the daughter of Mr. and Mrs. Buck Juelch who was graduated from Sacramento High School.

Ida first heard about the Job Corps program through television publicity and decided to file an application.

The Women in Action of Sacramento, who handle Job Corps applications from this area, interviewed her and forwarded her application to Washington, D.C., for further processing. Trainees are carefully screened to assure only those who would benefit most from the program are chosen.

Ida and other trainees from the West Coast met in San Francisco Mar. 14, 1966, for the flight to Job Corps centers in the East.

When Ida arrived at her center in Huntington, W. Va., she was given diagnostic tests in basic areas of knowledge.

A typical Job Corps training program includes mathematics and English courses, physical education, courses in home management and in community and personal problem solving, as well as specialized vocational training.

Bowling, pool, tennis, modern dancing, figure skating and swimming are included in the varied physical education program which is offered, in order to broaden the trainees' recreational horizons. Because of Ida's swimming ability, she was one of three girls chosen to be an assistant swimming instructor.

As part of the home management training, trainees are given clothing allowances and even given practice in comparative shopping.

For her vocational training, Ida chose to prepare for library work and photo finishing. As part of her instruction she was working in a school library in Huntington. Training that she had received at Sacramento High School enabled her to set up the entire library system at her center.

One of Ida's most memorable experiences in the Job Corps was meeting President Johnson. She was among forty girls chosen to represent her center when the President visited Charleston, W. Va.

Ida's parents are convinced that the Job Corps is a "marvelous thing." They feel that the program has enabled Ida to achieve a sense of independence and to receive experiences that she could never have had at home. "The Job Corps background opened many doors for Ida," they said.

Ida found prospective employers impressed by her training and eager to employ young people who had completed the Job Corps training.

Upon returning to Sacramento, Ida accepted a position with the State Department of Motor Vehicles in the Data Processing Proof Reading Division.

Petroleum Industry Leader Looks to Nation's Future

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1967

Mr. EDMONDSON. Mr. Speaker, I have received a copy of an address Mr. Stanley Learned, president of the Phillips Petroleum Co., made at a recent meeting of the Texas Mid-Continent Oil and Gas Association.

Mr. Learned's speech is entitled "An Oilman's Glimpse at the Next 100 Years," and it shows outstanding foresight and a deep sense of public responsibility from an acknowledged leader in the petroleum industry.

Mr. Learned's speech should be of great interest to all of us who are concerned with the development of this Nation over the next 100 years, and I would like to have it appear in the RECORD:

AN OILMAN'S GLIMPSE AT THE NEXT 100 YEARS

(By Stanley Learned, president, Phillips Petroleum Co., before the Texas Mid-Continent Oil and Gas Association, Corpus Christi, Tex., Oct. 19, 1966)

Mr. Chairman, fellow members of the Texas Mid-Continent Oil and Gas Association, guests of the Association:

My subject today, "An Oilman's Glimpse at the Next 100 Years," developed from a suggestion of your program committee that "since we are observing the 100th anniversary of the drilling of the first well in Texas, a *paper devoted to the next 100 years would be timely and of immense interest.*"

Accurate forecasts are difficult because our world is a world of change. What appears to be a valid premise today has a way of being invalid a year or two from now. I have, therefore, generally tried to disassociate myself from prophesying about even the immediate future, let alone the next 100 years.

However, I decided to take a glimpse at the next 100 years even though my glimpse must be mainly conjecture, because we can benefit by peering into the crystal ball. We can look at some of the ways our civilization is trending and at some of the exciting possibilities which may develop along these ways. Certainly such a look stimulates our imaginations about the enormous promise and potential of our industry.

It seemed the best way to start to get ideas about the next 100 years was to look at the history of the past 100 years. People living 100 years ago could never have even dreamed of the amazing developments the future had in store. Even the visions of Jules Verne in his "science fiction" of 100 years ago were less wondrous than what the realities turned out to be.

Let us look at just a random selection of developments which have come upon the scene since L. T. Barret completed that first Texas oil well near Nacogdoches in September 1866. These developments include the gasoline engine with all its ramifications including automobiles, trucks and buses, farm tractors, piston driven airplanes, motorcycles, motor boats, power mowers, stationary engines, and mobile construction and military equipment of all kinds; the diesel locomotive; turbine and jet powered aircraft; oil fueled ships; rockets and missiles; petroleum fueled boilers, pumps, and other industrial equipment and machinery of many sorts; oil and gas fueled space heating, and cooking equipment; *air conditioning;* the washing machine; clothes dryer; water heater; dishwasher; refrigerator; vacuum cleaner; incandescent lamp; phonograph; telephone; movie machine; radio; television; radar; rotary drill; cream separator; milking machine; flame weeder; orchard heater; linotype; cash register; key punch machines; the atomic reactor; *computers and automatic instruments;* X-ray; heart-lung machine and iron lung. And there are, of course, thousands of other amazing developments which have emerged since 1866. May I interject here that the Petroleum Department of the Chase Manhattan Bank has called air conditioning, just one of the items I have mentioned, the most far-reaching development of a technological nature now on the scene affecting energy demand.

Just the developments I have listed make the tales of Jules Verne pale by comparison. The developments mentioned all have in common one aspect which is especially significant to us—*they all affect energy demand.*

Of course, continued population increases accelerate energy demand. In the past 100 years world population has increased from 1.3 billion to 3.3 billion. U.S. population alone has zoomed from 36,000,000 to nearly 200,000,000 during this time.

Because of developments stimulating energy use, annual consumption of energy in the U.S., measured by barrels of oil equivalent, has skyrocketed from 500 million barrels of oil 100 years ago to 9.4 billion barrels in 1965. In just the past 25 years U.S. energy consumption has more than doubled. Who in 1866 could have ever speculated that we would require such prodigious amounts of energy? At that time, for instance, who would have ever dreamed that the internal combustion engine would come along to open the floodgates for petroleum which was being used then mainly for illumination?

The discoveries listed, revolutionary as they turned out to be, did not burst upon the scene all at once to alter the energy business. Most of them unfolded gradually. The gasoline powered automobile, for instance, was first introduced in the United States in 1892. The airplane was a 1903 invention. Television was a reality at the Chicago World's Fair in 1934. The important factor dictating the large-scale availability of these and other discoveries was economics. *Their solid impact came when they could economically be made for and utilized by great masses of people.*

Now with this background let us look to the future. There seems no end to the variety of discoveries and improvements flowing from the minds of men." This is indicated by patent applications filed. In 1965 alone more than 94,000 applications for U.S. patents were filed, an increase of 11,000 over the number filed five years ago. It certainly doesn't look as if discoveries based on science and engineering are dwindling. Predictions about future developments may actually turn out to be conservative and any estimates about energy demand may be too low. Here are some possible developments that may unfold in the next 100 years, *all of which would affect the use of energy.*

An increase in world population to more than ten billion by 2066. And this figure is based upon man's having the wisdom effectively to control the birth rate. The greatest population increase will occur in countries where per capita energy use is now low. This per capita energy use will climb steeply as technology and machine operation reach the underdeveloped areas of the globe.

In the U.S. population may zoom to 575 million and gross national product may reach $16 trillion 100 years from now. Resources for the Future, a Ford Foundation research group, estimates that by the year 2000—less than 35 years away—U.S. population will be more than 330 million, the annual gross national product will jump from approximately $700 billion now to $2.2 trillion, and 244 million autos and trucks will be in use, compared with 90 million today.

Many forecasters predict that within 100 years we will have computerization of nearly every aspect of life. They predict that computer-robots will prepare and deliver food, and do the laundering, cleaning, dishwashing, and grass cutting around the home, and that offices and industries will be operated almost wholly by machines and computers.

Other energy affecting developments which the speculators say may unfold over the next 100 years include underground, automated highways but with wheels and road surfaces eventually giving way to hovercraft riding on air; enormous supersonic transport planes; individual propulsion; transportation by ballistic rockets to any place on earth within 40 minutes; permanent space stations; regular trips to the moon; all-plastic houses entirely weather conditioned. The next 100 years may also see huge cities entirely enclosed and weather conditioned and served by trains reaching speed of 1,000 miles an hour; synthetic clothes, and other goods and appliances made to be used and thrown away; teaching machines; automated libraries; facsimile newspapers and magazines; communication with anyone, anywhere at anytime by voice, sight, and written message via satellite telephone, radio, and television; motorized and computerized artificial arms and legs; far more use of elevators and escalators, outdoors and indoors; and chemical control of the aging process extending life by up to 50 years.

Part of the most important energy supply of all—food for the human body—may come during the next 100 years from huge fields of kelp and other kinds of seaweed, whale farms, and from cheap, edible protein derived from petroleum.

Needs for fresh water are going to grow enormously during the next 100 years. Thus, one of the most significant developments for furthering human progress will be the economical desalinization of salt water by cheap nuclear power.

These predictions do not allow for any cataclysmic event such as a devastating war. Obviously, any such catastrophe would crush all the grand hopes and dreams of man before they had a chance to become realities. During the next 100 years, therefore, mankind will have the hard job of solving the problems of human and national relationships while there is still time. In any look at the next 100 years this challenge overrides all the others.

One expert has estimated that world energy demand will increase as much as 50 times over the next 100-year period. In terms of billions of barrels of oil equivalent this would be an increase world-wide from 26 billion barrels a year today to 1,350 billion barrels in 2066. This is only conjecture, however. No one can tell really how much energy the world will need.

We do know this though. The energy demand for the future is going to be colossal. There can be no doubt about this in view of the certain explosion in population, dazzling new energy gobbling developments, and increase in per capita energy use. *The really big problem will be getting the energy to supply the massive needs.* In fact, many of the prophets consulted in my research believe that the extent to which *the dreams of the future are realized will be dependent upon the amount of energy available.* Dr. Philip Abelson, Editor of "Science" magazine, this year said, "Fuel reserves are not sufficient to meet our long-term needs."

The huge energy needs of the future, therefore, are going to require not only the utmost from petroleum, but large use of other energy sources as well. It is inevitable, for instance, that electrical energy supplied by nuclear power will become an important factor in the energy picture. Although it may be doubtful an atomic reactor will ever be feasible for operation of small mobile equipment such as the automobile, I believe advances in nuclear power technology will shortly enable this source of energy to supply increasingly larger amounts of electricity. The Atomic Energy Commission now estimates that by 1980 atomic power may provide 20% of total estimated consumption of electricity. Some of the long-range forecasters predict that 100 years from now over 50% of the world's energy supply will come from electricity generated by nuclear power.

Still other energy sources will have to enter the picture on a large scale to supply the astronomical demand. As these demands increase, man will develop energy from the vast reserves of low-grade oil shale and tar sands, thin and deep-lying coal seams, from the great locked-in energy of ocean tides. He may do the same with geothermal energy and energy differences within the earth. Eventually he may find a way to harness and transmit solar energy. These can all develop when the "price is right."

Now what about petroleum? What does this glimpse into the future mean to you members of the Texas Mid-Continent Oil and Gas Association in this year of 1966?

The energy needs of the future are going to be so enormous that the petroleum industry will have to exert a supreme effort to supply its share of these needs. Some prophets predict that at the end of the 100-year period there will be no economically producible petroleum remaining at all because the petroleum will have been used up supplying its share of the huge energy demand.

You get a good idea of the challenge which you as petroleum industry members have by looking at what is on tap for just the time from now through 1980. In barrels of oil equivalent, by 1980 energy consumption in the United States will total some 15 billion barrels, 60% greater than the 9.4 billion used in 1965. Although there will be some changes in the proportion of U.S. energy supplied by the various energy sources in 1980, these will not be radical. Liquid hydrocarbons will still supply the lions' share with about 40%, only a slight decline from the 43% today. Let me say that energy consumption for the Free World as a whole will zoom 100% by 1980. *The stark fact is it looks as if we will use more petroleum energy between now and the end of 1980 than we have used in all of our previous history.*

To see what a tremendous job this forecast just to 1980 poses, let me quote from a recent address by Interior Secretary Stewart Udall. He said, "In the case of oil, if domestic sources continue to supply approximately the same relative proportion of our total demand for liquid hydrocarbons as they now do, and if we elect to hold to the historic reserve-to-production-ratio at 12:1, we will have to add 83 billion barrels to our proved reserves between now and 1980." *This means a yearly average for the period of 5½ billion barrels. When you consider that the average of yearly additions since 1955 has been 3.3 billion barrels you get an idea of the big job before you.*

Natural gas consumption in the U.S. should also increase providing the natural gas supplies are ample. Natural gas demand will get a big boost in coming years by total energy systems. The development of an economic fuel cell could well skyrocket gas demand.

As to the outlook for gas supplies, Secretary Udall had this to say, "choosing to maintain a reserve-to-production ratio of 18 : 1, we shall need to add 450 trillion cubic feet to our proved reserves. This is an average of 30 trillion cubic feet a year. At no time in its history has the petroleum industry ever added as much as 25 trillion cubic feet to reserves in any one year. The average since 1955 has been 20 trillion."

To meet these challenges of coming years, some spectacular changes must be made. New and better techniques and devices for mapping underground structures and detecting possible presence of petroleum will be needed. Techniques for defining stratigraphic traps are needed. We are going to have to make breakthroughs in techniques of drilling and in reducing casing costs. Many wells will be in remote, difficult to drill areas such as the Arctic ice cap. Offshore techniques must be improved as we will have to drill further out in the ocean and position producing equipment on the ocean floor.

Artificial lift methods to supplement reservoir energy must be made economical. We are going to have to find and perfect methods of recovery of much more of the oil left in the reservoirs. Controlled nuclear explosions comprise one possible new recovery method which may emerge. Complete automatic transfer in the fields will be a requirement. Computerizing plants and transportation is an inevitable eventuality.

Huge amounts of capital will be needed. Quality people in increasing numbers will be required by the industry. May I say that to attract the individuals the industry must have we are going to have to convince outstanding young people that supplying petroleum energy for the future is just as exciting and significant a job as going to the moon, or eliminating poverty, or rebuilding cities, or beautifying the land, important as these are.

Now what is the one ingredient necessary to accomplish these tasks and sucessfully meet the coming challenges? You know the answer. It is economic incentive. Gentlemen, this economic incentive is not sufficient at present. This is vividly illustrated by several facts about our industry which I should like to mention briefly.

During the nine years following the last general increase in 1957, crude oil prices deteriorated so that the average U.S. crude oil price, according to the U.S. Bureau of Mines, dropped from $3.09 in 1957 to $2.86 in 1965, a decrease of 23 cents per barrel or 7.4%.

Let's compare this decrease with the experience of other segments of our economy, including those which make up the producer's major costs. From 1957 through 1965 the wholesale price index for all commodities other than farm products and foods in the United States rose 3.3%. According to the U.S. Bureau of Labor Statistics, the cost of living in 1965 was 12% higher than in 1957. Data published by the U.S. Bureau of Labor Statistics show average hourly wages for production employees in crude petroleum and natural gas fields during 1965 were up about 23% from 1957. The cost of oil field machinery in 1965 was up 5.1% and the cost of oil well casing was 11.6% higher than in 1957.

It is only natural that this disparity in experience of crude oil prices and that of items representing the major costs of crude oil producers would have a seriously depressing effect upon exploration and drilling activity. From 1956 through 1965, total well completions in the United States declined 29%. But exploratory wells, which are the ones that find new reserves, declined 42%. Geophysical activity, the forerunner of exploratory drilling, decreased 53% from 1956 through 1965. *The situation is not improving.* For the first six months of this year, total domestic well completions dropped 15% from 1965's first six months. Total footage posted a greater percentage drop than completions, sagging 17% below the first six months of last year.

Meanwhile the reserves-to-production ratio for oil has been declining. Despite the great potentialities for greater recovery from old fields, the scarcity of new oil reserves is a cause of real concern. It is too early to tell whether the recent small, spotty crude price increases will provide sufficient incentive to reverse the downward trends.

As for gas, the economic incentive since Federal regulation of producers was imposed in 1954 has, in my opinion, been insufficient to encourage exploring for the necessary new reserves. We are all familiar with the continued decline in the gas reserves-to-production ratio. Anyone familiar with this situation will agree that at some point this decline must be stopped and to do so will require a reversal of the continued downward trend in exploratory activity. In my opinion, the time to begin this reversal is now because of the time lag between exploration and final gas delivery to the pipeline.

It should seem obvious that the prices for both oil and gas are inadequate to provide the incentive sufficient to find and supply the needed petroleum for the future. I don't know precisely what the prices should be to provide an adequate incentive. I know they must be higher than they are now—for crude, at least as high and perhaps higher than in 1957 when prices began their downward slide. *As for gas, there needs to be the added qualification of having the price assured by a contract which cannot be altered by subsequent regulatory actions.*

The industry requires sufficient economic incentive to do its job of helping supply the world's massive future energy requirements. I have faith that competition will do the job of establishing prices that are both adequate and fair if the public and its elected representatives are fully informed of the critical need for such prices and thus permit free, competitive enterprise to do its job.

Vietnam—The Clergyman's Dilemma

EXTENSION OF REMARKS
OF
HON. DANIEL E. BUTTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 1, 1967

Mr. BUTTON. Mr. Speaker, under unanimous consent I place in the Appendix of the RECORD an excellent report en-

titled "Vietnam—The Clergyman's Dilemma," and prepared by the Executive Committee of Clergy and Laymen Concerned About Vietnam, for distribution at the Washington mobilization, January 31 and February 1, 1967.

Vietnam—The Clergyman's Dilemma

(A position paper prepared by the Executive Committee of Clergy and Laymen Concerned About Vietnam, for distribution at the Washington Mobilization, Jan. 31–Feb. 1, 1967)

I. THE NEED TO SPEAK

A time comes when silence is betrayal. That time has come for us in relation to Vietnam. As members of American churches and synagogues, we voice not only our own convictions, but seek also to articulate the unexpressed fears and longings of millions of Americans.

The Old Testament forbids us to prophecy "smooth things," and in the face of any evil, the mandate of Albert Camus is laid upon all men, whether religious or not, that they "should speak out, loud and clear, and that they should voice their condemnation in such a way that never a doubt, never the slightest doubt, could rise in the heart of the simplest man. That they should get away from abstraction and confront the blood-stained face history has taken on today."

Our share of responsibility for that blood-stained face haunts us today and prompts our outcry. We confess that we should have spoken sooner and with clearer voice, but we do speak now, hoping it is not too late, adding our voice to the voice of Pope Paul, the World Council of Churches, the Synagogue Council of America, the National Council of Churches, the National Conference of Catholic Bishops, and other religious bodies, in urging a reappraisal of our policy in Vietnam.

Our allegiance to our nation is held under a higher allegiance to the God who is sovereign over all the nations. When there is a conflict between those allegiances, the priorities are clear: "You shall have no other gods before me." "We must obey God rather than men." Each day we find allegiance to our nation's policy more difficult to reconcile with allegiance to our God.

Both the exercise of faith and the expression of the democratic privilege oblige us to make our voices heard. For while we speak as members of religious communities, we also speak as American citizens. Responsible expression of disagreement and dissent is the lifeblood of democracy, and we speak out of a loyalty that refuses to condone in silence a national policy that is leading our world toward disaster.

We speak in full awareness that no easy answers are available. But we believe that issues must be pressed and questions forced, if new answers are to be forthcoming. For the old answers no longer satisfy us.

II. THE ONGOING ANGUISH

No one planned the type of war in which we are involved. It has slowly escalated from one small move to the next small move, each presumed to be the last that would be necessary, so that now we find our nation able to offer only military answers to poitical and human questions. We sympathize with the dilemmas that face our President and Congresmen in dealing with a situation all decent men abhor. But a recognition of past mistakes does not entitle us to repeat and compound those mistakes by continuing them on an ever-widening scale.

We are unable to support our nation's policy of military escalation, and we find those to whom we minister caught as we are in confusion and anguish because of it.

1. This anguish is based first of all on *the immorality of the warfare in Vietnam*. We add our voice to those who protest a war in which civilian casualties are greater than military; in which whole populations are deported against their will; in which the widespread use of napalm and other explosives is killing and maiming women, children, and the aged; in which the combatants are systematically destroying the crops and production capacity of a country they profess to liberate; in which the torturing of prisoners by both sides has been a commonplace.

All who believe that man is made in God's image must be horrified by such crimes committed against God and man. There is guilt on all sides in such a war as this, but the guilt is ours far more than we have courage to admit. We can only tremble at the thought that God is just.

2. Even those of us who recognize that sometimes evil must be done lest greater evil prevail, feel a sense of anguish in *the inconsistency between our stated aims and the consequences they produce.*

Our ongoing escalation, far from bringing the war closer to an end, serves rather to increase its duration and intensity.

Our bombing of the north, far from bringing our enemies to their knees, serves rather to strengthen their will to resist us.

Our military presence in Vietnam, far from stemming the tide of communism, serves rather to unite more firmly those communist societies which might otherwise develop separate destinies.

Our widening military involvement, far from demonstrating to the world our firmness and resolve, serves rather to make the world suspicious of us and fearful of our use of power.

Our unilateral action in Vietnam, far from strengthening our influence among other nations, serves rather to jeopardize new alliances we might be creating.

At home, we find the war threatening the very goals we claim to be defending in Vietnam. Programs to help members of minority groups realize their own human dignity are jeopardized if not destroyed. A spurious type of patriotism is challenging the right of dissent and the open debate of public issues. Financial and psychological preoccupation with the war is destroying creative plans to alleviate poverty, overcome disease, extend education, replace city slums and exalt human dignity. We grieve over lost opportunities that may never be reclaimed.

Many of us are called upon to counsel young men of draft age who in conscience question our presence in Vietnam. The moral dilemma they face is part and parcel of our own. Their anguish is frequently motivated by a high patriotism that forces them to challenge, often at great personal cost, policies they believe will stain their nation's honor. How can we counsel them to participate in such a war as this? When they decide that they cannot condone the war by their personal involvement, we must support them in that decision.

3. Our anguish is deepened by *the discrepancy between what we are told by our government and what we discover is actually taking place.*

We are told that the other side gives no indication of desire to negotiate, and we then discover that such indications have been given, but that we have responded either with rebuff or military escalation.

We are told that our nation is prepared to negotiate with all concerned, and we then discover that certain of the combatants will not be welcome at the conference table.

We are told that certain cities have not been bombed, and we then discover that they have been.

We are told that civilian targets have been avoided, and we then discover that they have not been.

Such actions not only play into the hands of those who distrust us, since they can consistently discount our word, but the continuous discovery of discrepancies between our nation's word and deed has already shaken the confidence of our own people in the word of their government. We fear both the immediate and long-range consequences for our nation of this increasing deterioration of trust.

This, then, is our ongoing anguish: a crisis of conscience concerning what we *do* know, and a crisis of confusion concerning what we do *not* know.

III. THE NEED FOR CLARIFICATION

The public debate is forcing us to choose between wrong alternatives in Vietnam. Consequently, agreeing with the American Roman Catholic Bishops that it is "our duty to magnify the moral voice of our nation," we ask for clarification of the real alternatives.

The choices usually presented to the American people are three: (1) we could escalate rapidly and "win the war" in the forseeable future; or (2) we could withdraw our troops and accept defeat; but (3) since to most Americans these alternatives are unsatisfactory, we must continue our present course, i.e. gradually escalate the war until the other side capitulates to our increasing pressure.

We believe the realistic alternatives are closer to the following: (1) we can continue to fight a hard, bloody, increasingly bitter and frustrating war for many years, a war we can conceivably "win," but at the price of destroying the land and people we presume to liberate, of sacrificing more and more of our own young men to death, of widening the probability that other nations will enter the conflict, of engendering increasing hostility against ourselves throughout the rest of the world, and of emerging at the end with no "victory" worth what it has cost; or (2) we can commit ourselves unequivocally to seek now rather than later for a negotiated peace, realizing that history does not present us with easy choices and that the road to such a peace would be long and torturous. Just as there has been frustration and heartache in our gradual escalation, so too there would be frustration and heartache in the development of new initiatives leading to a negotiated peace. Just as the risks of extending the war are great, so too the risks of seeking new initiatives for negotiated peace are great.

But confronted by such a choice, we believe the American people will choose the path of initiatives for negotiation, and that the risks involved in such a choice are well worth taking.

And so we put these questions to our government:

1. Will you help our nation confront the choice between the expansion of a war no one can "win" without destruction so terrible as to negate its stated aim, and the immediate pursuit of a negotiated peace no one can "win" in the conventional sense?

2. Will you make clear to all that we are not trying to win through negotiation what we have been unable to win through military might, and that we seek a peace without victory—a peace that can come only on terms agreeable to all at the conference table?

3. Will you make more credible use than you have of international agencies that could help us find ways to initiate negotiation?

IV. THE PRECONDITIONS OF NEGOTIATION

The possibility of negotiation will depend in large part on how such questions are answered. Many in our nation already feel that all efforts toward a negotiated peace have been made by us, and that any further initiatives must come from the other side. But certain preconditions that seem indispensible to negotiations are not yet present in our policy, and without them other nations can hardly be expected to take seriously our intent:

1. The first precondition is implied in our questions and involves an assurance from our government that we are genuinely ready to negotiate, and that we are not merely trying to win diplomatically what we have not won militarily. There will be no reason for

response from the other side unless we indicate a willingness to seek peace without prior assurance that all details of the peace will follow our desires.

2. There must be some action by our government to lend credibility to our willingness to negotiate. It is increasingly clear that one indispensible prerequisite is our willingness unconditionally to cease the bombing of North Vietnam.

We are at an impasse. We have said we will not cease the bombing until there is a sign from the other side of willingness to negotiate, and yet when such signs have come we have ignored them. They have said they will give no further sign of willingness to negotiate until we cease the bombing, and yet when we have briefly ceased the bombing, no sign has come.

There is no way beyond this impasse until someone takes a fresh initiative. We, as the stronger nation, have both the obligation and the opportunity to take that initiative.

The initiative must be unconditional. Having ceased the bombing, we must be prepared to wait until the other side responds. We have no reason to expect that a response will come soon, for it will take time to gain credibility for our intent. In the interval, while diplomatic channels are explored, we will call upon religious leaders in other countries to intercede and urge that positive response be made.

3. If we truly do not intend to dictate the terms of peace in advance, then we cannot exclude from the conference table any who are involved in the present struggle. Our nation must accept the National Liberation Front as a partner in the peace talks in its own right. The previous assurances of our leaders have failed to state this clearly.

4. Other conditions are desirable, such as a de-escalation of the ground war to a degree commensurate with the protection necessary for those already there. But since the destiny of all nations is involved in a negotiated peace, we must not seek it unilaterally, but must ask the full cooperation of all agencies designed to deal with international tensions. These must include an increasing role for the United Nations, and a recognition of the potential role of the International Control Commission in reducing ground hostility by providing an international presence under cover of which foreign troops might ultimately be withdrawn from Vietnam.

Although we address these appeals particularly to our own nation, we are fully aware that negotiations involve more than one participant, and we lay the seriousness of our concern upon all men everywhere to offer further help in transforming possibilities into realities.

V. RECOMMENDATIONS FOR FURTHER ACTION

There are further steps that Americans can take to indicate our desire to play a creative rather than destructive role in the future of Vietnam.

1 Our Congressmen will shortly begin debate on an appropriations bill. Their response to that bill will say much about our true intentions in Vietnam. We urge that additional time be allocated for a careful estimate of the costs of the war by a number of congressional committee, such as the Joint Economic Committee, the Ways and Means Committee, the Education and Labor Committee, the Judiciary Committee and the Foreign Affairs Committee, in addition to the Appropriations Committee and the Armed Services Committee, to determine what costs are necessary (1) to maintain the current level of military operations, (2) to finance new stages of build-up and escalation, and (3) to provide the type of military and civilian security that would be needed during a period of prolonged negotiation. In this way, members of the Congress can choose the type and degree of military operation they wish to support.

2. We ask the Congress to re-examine the international agreements to which the United States is pledged. To an unprecedented degree, today's world order and human life itself depend upon the exercise of constraint in the conduct of foreign affairs. The origin and conduct of the war in Vietnam must be examined in this light. Particular attention must be focused on the destruction of civilian life and property, the use of gas and other chemicals, and the treatment of prisoners of war. Our country must pledge itself anew to conform policy and practice in Vietnam to international law, as embodied in the several agreements of Geneva and the Hague, the Nuremberg judgments, the charter of the United Nations, and other such documents. The abandonment of constraint leads our country and the world down the path of brutalization and destruction.

3. Our religious bodies must assume a particular responsibility for prisoners of war in both the north and south. We call upon international religious agencies to take the initiative in developing effective programs for speedy repatriation and human treatment of prisoners, with special attention to nutritional and medical needs. Under no circumstances can our nation condone brutal treatment of prisoners on the ground that the other side does so.

4. We must immediately support efforts to insure that victims of bombing and terrorism, particularly those who have been burned by napalm, are given proper hospitalization wherever adequate facilities are available, including the United States. We welcome the formation of the Committee of Responsibility that is working to this end, and urge governmental support for its efforts.

We urge all religious organizations to follow the example of the World Council of Churches in arranging special offerings for the relief of all victims of warfare in Vietnam, whether in the north or south, to be administered through the International Red Cross or similar agencies.

5. At such time as negotiations have begun, further creative opportunities should be opened up for both the public nad the private sectors of our nation. There will be need for the development of a genuinely representative government in the south. Members of our Congress and our legal profession can offer their services, under the auspices of Asian members of such bodies as the International Parliamentary Union, for whatever counsel the Vietnamese desire in the development of a constitutional assembly.

Those with special skills in such fields as education, land reform, housing, nutrition, medicine and job training can be prepared to help in Vietnam during the long and, involved period of negotiations. The resources of various Catholic, Protestant and Jewish relief agencies can be coordinated for these and other ventures, and we urge foundations to support extended opportunities for service in these areas.

We are eager that many of our citizens pledge themselves to acts of mercy and rebuilding and reconciliation. These are a particular American responsibility because of the deep measure of American involvement in acts of injury and destruction. But such acts will have enduring meaning only when our nation has pledged itself to seek negotiated peace in more courageous terms than have yet been undertaken. Otherwise we will appear to be using small gestures of creativity to excuse massive acts of ongoing destruction.

Other projects should be initiated even as negotiations proceed, and we urge that further suggestions be sent to Clergy and Laymen Concerned About Vietnam, 475 Riverside Drive, New York, New York 10027, for appropriate implementation.

In all such ventures, however, there is a danger to which Americans must be particularly sensitive. We must not seek to export the American way of life, or impose an alien culture on the Vietnamese. By insisting that our help be channeled through international agencies, we can clarify our desire to serve only as others choose to use us, and not as we dictate. We must convey by word and even more by deed, our desire to let the Vietnamese be the arbiters of their own destiny, and insist only on such international controls as will temporarily be needed to insure that injustices are prevented or properly rectified.

VI. OUR ONGOING RESPONSIBILITY

We know that millions of Americans share the anguish we express, and endorse the alternatives we propose. If they have been silent heretofore, we plead with them to speak up now, and pledge them our support. If they have spoken earlier and felt no resonance of public response, we plead with them to speak again, so that together we can create the new groundswell of public outcry that will force a reappraisal and a new direction.

We reaffirm our own responsibility to urge that new direction. We pledge to lay this burning concern upon the consciences of our religious bodies, through our local congregations, our denominational agencies, our councils of churches, and our involvement in civic groups, so that increasing pressure can be brought to bear, through the pulpit, the public forum, the mass media, and the ballot box, upon those in public life who make our policy decisions.

As we face a difficult and dangerous period in the history of man, we remember that our task is not to assign blame for the past, but to accept responsibility for the future; not to cast the stone of condemnation, but to offer the helping hand of reconciliation; not to proceed self-righteously and vindictively, but to walk humbly and repentantly.

We who are so deeply involved in the immensity of the present war must have the courage to initiate the steps that will lead to peace. If we do not take those steps, we firmly believe that God will judge us harshly, and will hold us accountable for the horror we continue to unleash. But if we do turn about, if we seek to undo whatever measure we can of the wrong that has been done, then we also firmly believe that as we walk that long and hard and often discouraging road, God himself will be with us, to guide us to chasten and sustain us, and that He will deign to use even us in restoring some portion of the divine creation we have so grieviously misused.

Woodford County Protests Control Takeove.

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. MICHEL. Mr. Speaker, the board of supervisors of Woodford County, in my congressional district, has drawn a resolution protesting the ever-increasing trend to take away the control of our local governments. They feel as I do that the control of governmental functions should be kept as close as possible to the people.

Under unanimous consent I include the resolution at this point in the RECORD:

RESOLUTION

Whereas there has been developed within the last few years the thought among certain minority groups that the best possible government would be one of bigness, controlled centrally by appointed persons not directly answerable to the electorate, and

Whereas it is the thought and belief of the County Board of Supervisors of Woodford County, Illinois, that the best of government is that in which those governed have a direct voice through the ballot in the selection of those persons who actually govern, and

Whereas this Board feels that it is not in the direct interest of the people of various townships, districts, nor of the State, that governments be necessarily further centralized, and

Whereas the Legislature of the State of Illinois is currently in session and many new proposals and bills will come before this group for elimination of certain local government offices and consequently a centralization at a district or regional or state level removing certain essential functions of government including schools, law enforcement, taxing bodies, and other groups of this nature, from local control.

Now therefore be it resolved by the Board of Supervisors, the County of Woodford and State of Illinois, in session on January 10th, 1967, that it is the consensus of opinion of this Board that before any Master Plan and any further consolidation or centralizations of functions of government is carried out, or passed into law, that there be pilot programs established to evaluate and to give serious study to any type of local, governmental consolidation.

Be it further resolved that the County Board of Supervisors of Woodford County, Illinois, are in general opposed to any further appointive offices and will strongly oppose any movement to remove local government officials from the elective process.

Be it further resolved that the Board of Supervisors of Woodford County, Illinois are on record as favoring efficiency and responsible local, state and national government and will support any consolidation and change which is in the best interest of our society.

Be it further resolved that a copy of this Resolution be distributed to the Honorable Governor of Illinois, the Honorable Senators Everett M. Dirksen and Charles Percy of Illinois, the Honorable U.S. Representative Robert Michels, to State Representatives William Scott, Harber Hall and Ed Madigan and to the Honorable Senator E. B. Groen of this District.

Dated at Eureka, Illinois this 10th day of January, 1967.

Approved and adopted by the Board of Supervisors of Woodford County, Illinois on this 10th day of January, 1967.

JOHN WUETHRICH, *Chairman.*

Attest:

CECIL W. NOHL, *Clerk.*

Preservation of Wet Lands

EXTENSION OF REMARKS

OF

HON. HERBERT TENZER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. TENZER. Mr. Speaker, on January 10, 1967, I introduced H.R. 1397, a bill to preserve the Nation's valuable estuarine areas. The importance of legislative action to establish procedures for Federal, State, and local cooperation in protecting our natural resources was illustrated at public hearings conducted by the House Merchant Marine and Fisheries Subcommittee on Fish and Wildlife Conservation last year.

H.R. 1397 sets forth a plan for preservation of valuable estuarine areas. The basic provisions of the bill are:

First. To preserve, protect, develop, restore, and make accessible selected parts of the Nation's diminishing estuarine areas which are valuable for sport and commercial fishing, wildlife conservation, outdoor recreation, and scenic beauty.

Second. To authorize the Secretary of the Interior to enter into agreements with States and local communities for the permanent management and preservation of publicly owned estuarine and wetland areas; to designate national estuarine areas; and to pay all development costs, except development for recreational uses other than hunting and fishing in which case the Secretary would pay 50 percent of development costs.

Third. To authorize the Secretary to aquire privately owned estuarine areas provided such acquisition is approved by Congress.

Fourth. To authorize the Secretary to conduct a 5-year nationwide study of estuaries of the United States and to report annually to Congress the results of the study. Maximum cost, $4.5 million.

Fifth. To prohibit anyone from dredging, filling, or excavating any estuary of the United States, or the Great Lakes and connecting waterways unless the Secretary issues a permit for such purposes—in addition to Corps of Engineers.

Sixth. The bill provides that State hunting and fishing laws relative to fish and wildlife will apply within any national estuarine area and that the bill shall not affect any authority of the States and local communities to regulate and permit shellfishing.

My original interest in establishing national estuarine areas stems from my efforts to preserve the remaining 16,000 acres of wet lands located on the south shore of Long Island. This area was the subject of my bill, H.R. 11236, introduced in the first session of the 89th Congress. During the past 20 years, the valuable wetlands area of the south shore of Long Island, N.Y., has diminished from 30,000 acres to the present 16,000 acres.

The history of the "rape of Long Island's wet lands" by indiscriminate dredging of bay bottom for commercial development, is set forth in the public hearings on estuarine and wetlands areas referred to above. It is a record of destruction which signals the need for immediate congressional action.

A major change in the legislation which I am sponsoring in the 90th Congress—H.R. 1397—relates to the respective jurisdictions of the Army Corps of Engineers and the Department of the Interior in connection with dredging or filling permits. At the present time the Corps of Engineers has exclusive jurisdiction over applications for permits to dredge, excavate or fill estuarine areas.

Under H.R. 1397 the Secretary of the Interior is given a voice in deciding whether these valuable estuarine areas shall be altered for the commercial benefit of builders and real estate developers. The Department of the Interior is given a veto power over activities in estuarine areas which could destroy valuable wet lands.

A dual permit system is established under section 12 of H.R. 1397 which for the first time places an agency with conservation responsibilities on an equal footing with the Corps of Engineers whose primary responsibility relates to navigation.

I believe this section will place our public policy of preserving natural resources in proper perspective and have a beneficial impact on our sport and commercial fishing industries and our efforts to promote wildlife conservation, recreation, and scenic beauty.

Mr. Speaker, the protection of valuable estuarine areas from the threat of the bulldozer which buries natural resources under concrete foundations is a national problem.

In the November 1966 edition of the Conservation Bulletin published by the Natural Resources Council of Maine, Robert L. Dow has written an interesting and informative article on the "Economic Yield of Some Main Coastal Wet Lands."

I insert the article at this point:

ECONOMIC YIELD OF SOME MAINE COASTAL WET LANDS

(By Robert L. Dow)

We may discuss the value of estuaries in terms of nutrient generation or as spawning and nursery areas for various commercially important marine animals, but in trying to communicate with those who eventually determine the disposition of estuaries, it may be more appropriate to report specific monetary values. Locally, municipal government finds the argument to broaden the tax base a compelling appeal. Biological reports are ignored because frequently they are concerned with intangibles.

I believe the only effective method of assuring protection and intelligent utilization of estuaries and associated wetlands is to use the same techniques that exploiters of these areas have been employing for years—the appeal of economic return.

In 1962 and 1963 I made some preliminary appraisals of the cash value of wetlands. Since then, further study of these source data indicates that my early estimates had been extremely conservative. Studies of shellfish growth and survival in Maine estuarine areas have shown that growth is a continuous process except during the winter months. The length of the non-growing period varies somewhat from year to year, but does not appear to exceed three months. Contrasting with this cessation in growth, shellfish in similar areas to the south frequently decline in metabolic activity during the summer.

From observations made during the past 20 years, it is assumed that the productivity of wetlands in Maine is at least 9/12 of the calorie production of southern marshes reported by Odum, or approximately 24 million calories per acre per year. According to the Maine Department of Agriculture, the best agricultural land in Maine produces about twelve to fifteen million calories (ensilage corn) per acre per year or roughly, one-half the nutrient yield of wetlands. Gross income from the best, market garden farms in Maine runs as high as $2,000 per acre per year. On a comparative basis the major marshlands of Maine are producing $4,000 worth of nutrients per acre per year.

Since the yield of shellfish growing areas within the optimum range of environmental conditions has often exceeded this figure, it is assumed that with more sophisticated management methods, coastal wetlands should produce in shellfish alone average yields considerably in excess of $4,000 per acre per year.

The Scarboro River, for example, produced 1.4 million pounds of clam meats worth one-quarter of a million dollars in 1946 from what is believed to have been the 1941 year-class. Yield was estimated to have been between 500 and 700 bushels per acre, at current landed values worth from $6,000 to $8,400 per acre. The 1947 set in the three to four acres of Brigham's Cove, West Bath-Phippsburg, yielded more than 18,000 bushels or 198,000 pounds of quahog meats, with a landed value of $81,000, currently worth $161,370, or approximately $46,100 per acre. The 1947 set near Bunganuc Point, Brunswick, produced 2,087 bushels of quahogs per acre, or an average value of $9,392 per acre; at current prices, $18,687 per acre. In 1959, a twenty-acre portion of the Wells Marsh flats produced 91,350 pounds of clam meats having a landed value of $42,637, or $2,131 per acre.

The 1952 year class of quahogs in Middle Bay by 1955 had been reduced by natural mortality to 89 million individuals averaging one inch in diameter and occupying 22 acres. Had it been possible to utilize this crop fully, the primary wholesale value at today's prices would have meant a yield of $64,470 per acre for the crop, or approximately $16,117 per acre per year. In 1965, an eight-acre portion of the Scarboro Marsh flats produced 43,035 pounds of clam meats with a landed value of $22,952, or $2,869 per acre. For the past 20 years, a 20-acre portion of Cod Cove, Edgecomb, has produced an annual average landed value of marine worms of $75,000 or $3,750 per acre.

It will be observed that these values are for one species only in each area and suggest that reasonably optimum conditions existed prior to the time when the crop was harvested. Studies of seawater temperature, precipitation, surface water runoff, and other environmental factors in relation to abundance and availability have indicated that total landed value for the more important commercial species has remained fairly stable. Only at the extremes of the historic temperature range have there been significant declines in relative value. Wide fluctuations in the population of individual species have occurred, but generally when some species have declined in abundance because of unfavorable environmental conditions, other species have increased in population and served to equalize the total value of all landings.

Across the Scarboro River from Pine Point is Western Beach, a shellfish area with an entirely different aggregation of problems. The population of this 136 acre flat was estimated from sampling done during the winter of 1947–1948 to be 11,293 bushels of clams averaging one-half inch in diameter, and consisting of one billion, one hundred and thirty-eight million individual animals. Quantitative measurements of clams surviving in the area over the four-year period from 1947 to 1950 indicated that total survival from the time they were one-half inch in diameter until they reached two and one-half inches ranged from .003 percent under the most favorable conditions to .0004 percent under the most unfavorable conditions. Had it been possible to stabilize the sediments, the yield of the resource might very well have been more than 1300 bushels per acre, with a current value of $15,600 per acre for the four-year period.

Efforts to improve the efficiency of estuary yields have not been entirely successful nor completely lacking in promise. Experiments to improve water circulation, thus reducing hydrogen sulphide have been carried out on a small scale. Efforts to reduce scour have likewise been made on a modest experimental basis. Results were encouraging but produced only short term benefits. It is believed that a complete hydrographic study would develop information on the location and construction of baffles, deflectors, stabilizers, or other devices which would make possible an increase in the efficient use of calories and the production of food materials commensurate with the capability of the area.

The Maine Department of Sea and Shore Fisheries has been carrying on commercial-scale shellfish management experiments since 1947. In addition to these projects, various experimental-scale operations have been carried on in many other coastal areas. Management has consisted of area and population surveys, protection of natural sets from predation and premature harvesting, rotation of growing areas, controlled harvesting, in terms of area and amounts, and transplanting of seed stock. Total cost between 1947 and 1954 amounted to $20,489.44. The total landed value of shellfish resulting from these experiments was $238,617.50. Commercial fishermen themselves estimated that the total value of landings would not have been more than the cost of the experiments had no management controls been established. Even without sophisticated management of estuaries, resource productivity directly usable by man has been noteworthy. The crop yields described were from five managed and three unmanaged areas. Average acre yield of the managed areas was $26,851; of the unmanaged areas, $12,600.

Marine worms are generally three years of age when they are harvested. Soft shell clams in the better growing areas first enter the fishery at three years of age; the median for the State is five years. Hard shell clams also first enter the fishery at three years of age, but may remain fishable for as long as ten years. On the assumption that the average inshore crop of shellfish or annelids will be four years of age, the average annual yield per acre for managed resources has been $6,712; for unmanaged stocks, $3,150; or an average of $5,377 per acre per year for all areas.

Since harvesting methods are extremely primitive, inefficient, and resource destructive, the actual productivity of these areas is far greater than the fishery yield. Without mangement, soft shell clam harvesting efficiency, for example, is equivalent to about 34 percent of the total supply.

Mr. Speaker, last year a similar bill was reported favorably by the House Merchant Marine and Fisheries Committee and on October 3, 1966, the vote in the House was 208 for, to 108 against. However, despite this overwhelming support the bill failed because a two-thirds vote was required for a suspension of the rules, to permit other legislation to be considered out of their regular order.

Mr. Speaker, I know that many of my colleagues in the House are concerned with the preservation of our valuable natural resources located in their own congressional districts. I believe the new concept and the procedures established by H.R. 1397 provide a unique opportunity for the Federal Government, the States and political subdivisions to work together under an agreement drawn by them to preserve and protect our natural resources.

I urge my colleagues to review the provisions of H.R. 1397 and to support this needed legislation.

Secretary Freeman Speaks at Tulsa

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 1, 1967

Mr. EDMONDSON. Mr. Speaker, it was my pleasure last week to attend a luncheon at the Southwest Agricultural Forum in Tulsa, Okla., where the Honorable Orville Freeman, Secretary of Agriculture, took the guests on a fascinating excursion into the future of farming.

The future Secretary Freeman sees as farmers using computers to select crops and acreages and seed types. It has automation and applied genetics. But it also has people, more people than ever before, living in the countryside, enjoying the outdoors and the proximity to the soil, because the Secretary envisions industry scattered across the Nation in the rural areas, rather than clustered around overwhelmingly large cities.

The Secretary's vision, as expressed in his speech in Tulsa, tells us much about the reasons farming is turning into a more prosperous, sounder industry today, with increases in net income and exports and decreases in surpluses during the years he has served.

Mr. Speaker, I believe many Members of this body might find the Secretary's Tulsa speech interesting and informative. I would like to have it appear in the Record.

The speech follows:

AGRICULTURE, 2000

(Address by Secretary of Agriculture Orville L. Freeman at the Southwest Agricultural Forum, Tulsa Civic Assembly Center, Tulsa, Okla., January 20, 1967)

You may have noticed by the title that my talk today will go beyond the boundaries of this conference's prime concern—the decade immediately ahead. It will. But in doing so I hope to expand the dimension in a manner that enhances the importance of the next ten years—rather than diminishes it.

Man's fascination with Tomorrow is as old as man himself.

From the dawn of his imagination, he has tried to peer behind the "curtain's magic fold" to where Bret Harte said "the glowing future lies unrolled."

He has speculated about the future for profit, for amusement, out of simple curiosity . . . and sometimes for reasons bigger than himself.

And sometimes, he has, indeed, looked into Tomorrow.

Tennyson said he "dipt into the future, far as human eye could see" and "saw the Vision of the world, and all the wonder that would be."

Tennyson was a romantic. A more pragmatic poet turned his inner eye upon Tomorrow and declared that the future has never been . . . that it remains for man to make it.

The towers of Tomorrow, he said, are built upon the foundations of Today.

We're gathered here in Tulsa to try to turn back a corner of the "curtain's magic fold" . . . to peer into the future of American agriculture . . . to determine whether the glowing prospects many foresee will, indeed, materialize . . . to decide whether we have built the foundations for the towers of Tomorrow . . . and to anticipate, if we can, the problems we may be called upon to solve.

In just 33 years we'll turn the corner into the 21st Century. What will it be like, American agriculture in the Year 2000?

No one really knows, of course. There are too many intangibles . . . too many uncertainties. But predictions are being made, and perhaps we should examine them.

As I stand here—about to tell this group what may or may not happen in their own chosen field—I'm reminded of the story of the Army sergeant who had made an excellent reputation lecturing to enlisted men on a certain subject. His captain called him in, complimented him, and said he had been chosen to lecture to a special group.

The sergeant walked into the lecture room and gazed out over the biggest collection of brass hats he had ever seen gathered in one place. Every man in the room outranked him.

Embarrassed, he tried to think of a modest beginning. "There are thousands of men in the Army who know more about this subject than I do," he began. Then, realizing he was destroying his reputation as an expert, he blurted out, "But I don't see any of them in this room!"

Well, I make no pretense of being an expert prognosticator. All I can do is tell you what some experts foresee for agriculture in the year 2000.

So, let's jump to the turn of the new century and take a look at what they predict we'll find.

Some envisage the Year 2000 as the time when the American farmer finally is freed from the arduous and time-consuming demands of planting and harvesting . . . a time when he, too, enjoys leisure for the pursuit of recreation, entertainment, advanced learning, and he and the world he inhabits can provide true parity of education and opportunity for his children.

Some see him sitting in an air-conditioned farm office . . . scanning a print-out from a computer center . . . typing out an inquiry on a keyboard which relays the question to the computer.

The computer center, which he may own in partnership with other farmers, perhaps through his cooperative, helps him to decide how many acres to plant to what crop, what kind of seeds to sow, what kind and how much fertilizer to apply, exactly what his soil condition is, and what day to harvest what crop.

The experts say the fields on this hypothetical farm will bear a surface similarity to the fields of today . . . but a surface similarity only. They see a land carefully graded and contoured to control erosion and the use of precious water. They see a soil bearing nutrients to meet the specific needs of each crop, and treated to control harmful organisms, weeds and plant diseases.

They foresee virus-free plants, bred by geneticists to give higher yields in a much-shorter growing period and to mature at the same time. The stalks on these plants, they say, will lend themselves to mechanical harvesting, and new uses will be made of the parts of the plant once discarded at harvest.

The experts envision all the field work on this farm carried out by automated machinery, directed by tape-controlled programs, and supervised by television scanners mounted on towers.

They predict that weather will no longer be the incalculable threat it remains in our time, for satellites will provide long-range forecasting—providing time to prepare for, divert or dissipate damaging storms.

They say robot harvesters will complete the farming operation with high-speed picking, grading, packaging and freezing . . . and will then transport the produce to transportation depots for distribution to retail warehouses.

While many find this picture of the future exciting, others find it depressing. Some contend that automation and the computer will excise the soul from farming . . . will destroy its joy, dull its satisfactions, and chill the ageless intimacy between man and his land.

But others say No. They say the farmer of the 21st Century will be more deeply, intricately, and learnedly involved with the land than ever before. They point out that no computer can give a learned answer until it is asked a learned question . . . that no robot tractor can operate until a skilled human being programs it to operate.

And they contend that the joy and satisfaction of farming will come—as it always has—from the successful interplay between the farmer and his soil.

By the year 2000, optimistic visionaries say, this interplay will have become so successful that yields of today will be doubled or tripled . . . that corn yields, for instance, could run from 300 to 500 bushels to the acre.

Ah yes, the critics counter, but what good automation, what good maximum efficiency, what good bigness, what good record yields . . . if the producer cannot *own* the land he works? How much joy, how much satisfaction, how much ageless intimacy with the soil can a farmer reap from land that is not his?

For how, they ask, could one farmer ever hope to own a farm that big, that automated . . . that incredibly expensive?

If there is one troublesome nettle in agriculture's garden of tomorrow, this is it. Financing the farm of the future through the methods of today would be impossible, for the farms of the Year 2000 will require investments of millions—not thousands—of dollars.

The inexorable nature of the technological revolution dictates that the farms of the future will be bigger, will be better, and will be far more costly to own and to operate.

The issue then is this: If nothing is done now to insure the creation of a dynamic, new, creatively flexible system of financing farms and farming, the farms of tomorrow will *not* be owned by the farmers who work them. If this is what we want . . . we do nothing.

If this is what we do *not* want . . . if we agree that farming is, indeed, a way of life, and not just a means to make a living . . . if we agree that it is important that the family farm system continues to make a key contribution to the strength and health of this nation . . . then we will adjust our credit systems for tomorrow.

This we have done before. This we can do again.

And now, let me turn my attention to the consumer of tomorrow. What will Agriculture/2000 mean to the housewives of America?

It will mean better foods, more nutritious foods, better tasting foods, a bigger variety of foods . . . and still at a reasonable cost, thanks to an efficiency of operation which continues to hold unit production costs to a minimum.

By the year 2000, the consumer should be able to buy her whole milk according to whatever butterfat content she desires. She'll choose meat cuts with hardly any fat. She'll receive more protein per portion of cereal. And all of these changes will come about through the miracle of genetics . . . by breeding cows and meat animals and cereal grains to meet specific dietary and taste requirements.

And how will she shop?

Most likely, she'll go to a pushbutton supermarket. There she'll drop a coded card into a slot beside the commodity she selects and punch a button. Impulses travel two ways—to a cash register where her bill is totaled, and to a central warehouse where the order is assembled. The completed order will await the customer at her car.

I said this was a speculative sketch. In a few moments I'll point out some of the pitfalls which lie before this optimistic concept of tomorrow's agriculture. But in the meantime, bear in mind that this sketch scarcely touches the surface of the wonders of the future.

As I think of the other fantastic advances predicted for the years ahead—advances I haven't mentioned—I'm reminded of the story about the two soldiers from an inland State who one day found themselves on a transport ship going overseas.

Standing on the deck, one of them gazed out over the vast expanse of ocean and said, "That's the most water I've ever seen in all my life. I never thought there was that much water in the world."

To which the other soldier replied, "Heck, you ain't seen nothin' yet. That's just the top of it!"

And that's the way it is in agriculture. We "ain't" seen nothin' yet.

But the question is . . . are we ready for it? Have we laid those foundations of Today to build those towers of Tomorrow? If we haven't, there'll be no towers of Tomorrow, for as Marcus Aurelius observed many centuries ago, "That which comes ever after conforms to that which has gone before."

So now let's take a quick look at "what has gone before."

In the brief history of our young nation, we've seen the prestige, the influence, and the prosperity of agriculture wax and wane time and time again. Farmers built this nation. They pushed back its frontiers. They won its independence. And they created its government.

In Colonial Days, 90 percent of the working Americans were engaged in agriculture, 90 percent lived on the land, and an overwhelming percentage of the national income came from farm production.

Then came the cyclical changes in the farmer's fortune. When demand outstripped farm production, the farmer gained in income and importance. When production outstripped demand, his income and his influence declined.

In the past quarter century, the cycle has come full circle once again. Throughout World War II and the Korean conflict, farmers produced to intense demand. Their importance was acknowledged and their efforts were rewarded. But the technological advances which had enabled the farmer to meet wartime production demands were to do him in when the Korean conflict ended.

By the middle of the 1950's, the genius of the American farmer had produced the supreme irony. He had become an object of derision and the target of epithets. He was accused of feeding at the public trough, of contributing to high taxes, federal deficits, strained family budgets, and inflation. For a time flogging the farmer threatened to eclipse baseball as the nation's favorite pastime.

By 1960, overproduction had robbed the farmer not only of prestige but had cost him dearly in earnings. By the close of that year, we had a stockpile of 1.4 billion bushels of wheat and 85 million tons of feed grains, and net farm income had plummeted $2.4 billion in just eight short years. In the meantime costs were rising steadily and the cost-price squeeze tightened.

The outlook was so grim that some observers held out little hope. They foresaw political abandonment of the farmer, punitive farm legislation, continued price and income depressing surpluses, little social and economic leigslative concern for his unique conditions, further loss of prestige, a decline in farm living standards and farm production and a resulting loss of natural resources as a product of human neglect.

None of these things happened.

Instead, in six event-filled years, American agriculture turned the corner from gloom to promise.

We began to look on agriculture not as an isolated problem segment of the American economy but in terms of its contribution to the whole economy. We began to view abundance not as a liability but as an opportunity. We focused attention on agriculture as a success story.

Politicians did *not* abandon the farmer. Despite the fact that his representation in the Halls of Congress has diminished in the face of population shifts and redistricting, recognition by urban Congressman of the farmer's new importance was such that five major pieces of farm legislation were passed in the first six years of this decade. Many in this banquet hall helped to pass this legislation.

Each of these was designed to meet specific needs and solve specific problems. The record since their passage is evidence of their effectiveness.

The surpluses of the Fifties are gone—replaced by sensible reserves. By the end of November, the Commodity Credit Corporation investment in farm commodities was down to $4.55 billion, a reduction of $1.9 billion from the previous year, and about $4 billion less than the peak investment years of 1956 and 1959.

Government is reverting to the role of referee in the marketplace—an insurer of equity instead of a participant—and, except for a brief period during the Forties, the market is freer today than it has been for 30 years.

In place of the "little concern" predicted in 1960 for rural America, social and economic measures have been enacted since that time which concentrate on the countryside's special problems and special needs. I speak now of the struggle to build a viable, balanced economy in rural America, of which farming per se is an integral part.

Rural development programs, better community facilities, new homes, improved schools, medical services, expanded electric and telephone service, water and sewer installations, and a resulting variety of new off-farm jobs are helping to bring to an ever-increasing number of rural nonfarm and small farm Americans parity of opportunity.

Let me digress here for a moment. Gradually this nation has come to realize that one of our greatest assets in an increasingly crowded world is space. We are coming to understand that we can make *another* place in the countryside for those who, for one reason or another, cannot find a rewarding place in commercial agriculture. We don't *have* to dump these people into our already-crowded, problem-beset cities.

More than that . . . perhaps we can help relieve the strain on our cities. There are many frustrated urban dwellers who are eager to return to a new countryside—a countryside with opportunity.

Space, fresh air, sun, sky, and water can be "packaged and sold" . . . sold to the industries that can bring jobs to rural America . . . sold to city people who seek outdoor recreation—a chance to get back to Nature—and are willing to pay for it.

So . . . as we look ahead to the Year 2000, we can see a new kind of America—an America where the giant arms of industry extend into the countryside, there to profit by adequate space, adequate power, water and communications, adequate and eager manpower; an America where more and more Americans can live happier, healthier lives where they *want* to live—*in Countryside, U.S.A.*

And now let me turn once again to those gloomy predictions made back in 1960, the predictions that luckily went awry.

Farm living standards were supposed to decline. They did not. They improved because farm income increased . . . and farm income increased because surpluses diminished, the number of consumers grew, the amount of consumer income climbed, farm exports skyrocketed, and Government price support and incentive payment programs moved ahead with the times.

From the 1960 level of $11.7 billion, net farm income jumped to more than $16.1 billion in 1966 . . . the second highest mark in history . . . and gross farm income at $49.2 billion and net income per farm at $4,900 set all-time records.

Of even greater significance was the accelerated graduation into "adequate size" class by family farms in recent years. One measure of "adequate size" is gross sales of $10,000 a year or more. Since 1959, nearly 200,000 farm families have moved into that class. Studies indicate that at that level they are gaining on city workers and approaching parity of income.

But let me make is emphatically clear at this point that, despite steady progress the last six years, the farmer's income *still lags far behind that of other Americans*.

On a per capita basis, the farmer's income is $1,700. Other Americans earn $2,610 on an average per capita basis.

Farm prices, though up last year, have been down the last few months, and today are *less* than they averaged between 1947 and 1949. At the same time, food costs are 35 percent *higher*.

This the farmer bitterly resents—and properly so.

This discrepancy *must be corrected*. It must be corrected because it is unfair to the farmer and therefore wrong. It must be corrected because if farmers don't get a fair return commensurate with the other segments of society, we will lose our best farmers. If that happens the entire nation, not just the farmer, will be hurt.

And now let's look at the final gloomy prediction made in 1960—that farm mechanization and production efficiency would stage a ruinous retreat in the face of continued economic decline and political rebuff.

Once again the prediction was wrong.

From 1960 to 1965, investment in farm machinery *increased* by more than $5 billion.

In the past ten years, farm production per man-hour has doubled. Today, a third fewer people on farms, harvesting one-ninth fewer acres, produced one-fifth more than a decade ago. The average farm worker now supplies food and fiber for 37 persons, 22 more than he could less than a generation ago. In comparison, a farm worker in Russian feeds only seven, and a farm worker in France only fourteen.

In four and a half decades, U.S. productivity per acre has increased 82 percent and output per breeding animal has almost doubled. One hour's farm labor now produces five times more than it did in 1921.

The productive capacity of the American farm has provided this nation's consumers with the best diet in the world—at the lowest cost in terms of percentage of take-home pay—the only realistic measure.

Moreover, the exploding technological revolution in American agriculture has been of vital importance to the poorer nations of the world, for the resulting abundance has often meant the difference between life and death for millions of people overseas. Last year, our country shipped a fifth of its total wheat production to India, alone, and exported two-fifths more to other nations. Yet American consumers suffered no shortage of bread.

I hope this remarkable record of accomplishment in the Sixties is convincing enough proof that American agriculture has, indeed, built its foundations of Today for the towers of Tomorrow.

In this year of 1967, we are embarked on a New Era in Agriculture . . . and we've set sail in a sound ship.

But there are reefs and shoals ahead.

Earlier, I said that historically the fortunes of agriculture in America have been tied to the production-demand ratio. When demand moved ahead of production, farmers prospered for prices were strong. When production moved ahead of demand, the reverse was true.

In recent years, government has used a number of management tools and programs to slow agricultural output expansion, move toward fair income for producers, and make better use of our abundance.

First, the rate of output expansion has been held down by a system of largely voluntary government programs, which strengthened the market and also helped farmer income by means of commodity price supports and direct payments.

Second, our Government joined with private groups to develop new and expanded commercial markets—bringing successive new records in dollar exports in seven of the past eight years.

Third, we have carried on one of history's great humanitarian efforts under Food for Peace—a continuous stream of life-saving food and fiber that since 1955 has averaged about $1.5 billion a year. In addition, in the last six fiscal years we have distributed commodities valued at $2,439,000,000 to needy families, schools, and institutions in the United States. In the same period, our cash donations to the school lunch and special milk programs totaled $1,253,000,000, and Food Stamps given to needy American families were valued at $158,000,000.

Fourth, commodities produced beyond the limits of what the commercial market could absorb at support price levels—and beyond Food for Peace needs—moved into government-held stocks.

In the past six years, these stocks have declined. In fact, the combination of efforts I have just listed—bolstered by new legislation and the support of the farm and business communities—has brought an end to the mountainous surpluses of the Fifties. Prices have been strengthened, and farm income has been sharply boosted.

I only wish I could tell you that all our problems are solved—that the balance in agriculture we are enjoying for the first time in half a century will continue—and that future farm production will keep steady pace with demand.

I can't do that. We must all accept the fact—here and now—that the technological revolution in agriculture is really just beginning . . . and that the production potential it promises for tomorrow staggers today's imagination.

Bear in mind that in 1966—with relative supply-demand balance in the marketplace—your government in effect "bought" about 60 million acres out of production. Even with large increases in plantings to meet world demand and build reserves of wheat and feed grains to safer levels, our programs will continue to help farmers hold 30 to 35 million acres out of production in 1967.

If all that acreage, plus the steadily accelerating production per acre, were turned loose . . . the result would be chaos.

If we ignore the lessons of history, and let supply outrace demand again, we could plunge ourselves right back into the predicament of 1960, a predicament it has taken us six years to overcome.

We can only avoid this predicament by the disciplined use of judgment, reason and vision, for we know that adjusting farm output expansion to effective demand in the years immediately ahead will be infinitely more difficult than it has ever been before.

Yet adjust it we must.

This we can do in the New Era of American Agriculture. For by trial and error, and in the traditional pragmatic American way, we have developed the necessary tools. With cooperation among producers, the trade, agribusiness and government—we can hold a workable balance between supply and demand, maintain economic strength in agriculture, and encourage continued scientific and technological breakthroughs . . . and do it with accelerating efficiency.

For many years now, I have been talking about a National Food Budget. This implies a careful advance determination of what demand will be—how much must be provided for commercial use at home and abroad, and how much must be produced for needy, hungry people at home and overseas.

With the inducements of voluntary programs, our farmers can then set the stage to produce it. Thus they will produce for use . . . real use . . . and not for storage.

Farmers will be able to move acreage in and out of production as it is needed . . . and the market will return fair parity income to the family farm of adequate size.

Admittedly, we can't be precise about this. Weather variations, for example, can make an enormous difference in production. With 70 million acres growing feed grains, a 10-bushel-per-acre variation means 700,000,000 bushels difference in available feed grains. Nevertheless, we can make allowance for such variations, and the free market and the farmers' holding power can carry most of our reserve.

The next few years are both crucial . . . and promising. I say crucial because it is so important that the farmer and his government use the new farm programs wisely and efficiently. If they do—and get good results—then Congress undoubtedly will improve and extend these programs in 1969. I say promising, because the population and income explosions taking place around the world almost certainly will continue to stimulate a strong demand for food.

Prices, then, should be good . . . and income should grow for both the farmer and for the agribusiness which serves him and the consumer.

In such fashion—and with the balance that comes from mature judgment based on experience—we can look forward to a future of abundance for America . . . and prosperity for the farmer and for those who fashion and move his produce to the tables of the world.

I conclude, then, on a note of positive optimism.

I envision the income of farm operators as commensurate with their contribution to American society—income fully comparable with that earned by other business owners, executives, and managers.

I envision a vast flow of the products of American farms to Africa and Latin America, as well as to Europe and Asia—sales for dollars through regular commercial channels.

I envision the continued contribution of American food aid, technical and capital assistance to the developing nations of the world until that time when they are able to sustain themselves.

I envision an American countryside rich in beauty—with the doors wide open to economic opportunity—a countryside which once again will exemplify the good life.

Agriculture's journey to the Year 2000 can be a useful . . . and a pleasant one. I think it will.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

Code of Laws of the United States

Title 44, Section 181. Congressional Record; arrangement, style, contents, and indexes.—The Joint Committee on Printing shall have control of the arrangement and style of the Congressional Record, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional Record semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

Title 44, Section 182b. Same; illustrations, maps, diagrams.—No maps, diagrams, or illustrations may be inserted in the Record without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer shall arrange the contents of the daily Record as follows: the Senate proceedings shall alternate with the House proceedings in order of placement in consecutive issues insofar as such an arrangement is feasible, and the Appendix and Daily Digest shall follow: *Provided,* That the makeup of the Record shall proceed without regard to alternation whenever the Public Printer deems it necessary in order to meet production and delivery schedules.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the Record shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the Record issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Record for 1 day. In no case will a speech be printed in the Record of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the Record shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the Record style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Record.

7. *Thirty-day limit.*—The Public Printer shall not publish in the Congressional Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10(a). *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the sine die adjournment of a session of Congress may be printed in the Congressional Record.

10(b). *Makeup of the Appendix.*—The Appendix to the Congressional Record shall be made up by successively taking first an extension from the copy submitted by the Official Reporters of one House and then an extension from the copy of the other House, so that Senate and House extensions appear alternately as far as possible throughout the Appendix. The sequence for each House shall follow as closely as possible the order or arrangement in which the copy comes from the Official Reporters of the respective Houses.

The Official Reporters of each House shall designate and distinctly mark the lead item among their extensions. When both Houses are in session and submit extensions, the lead item shall be changed from one House to the other in alternate issues, with the indicated lead item of the other House appearing in second place. When only one House is in session, the lead item shall be an extension submitted by a Member of the House in session.

This rule shall not apply to extensions withheld because of volume or equipment limitations, which shall be printed immediately following the lead items as indicated by the Official Reporters in the next issue of the Congressional Record, nor to Records printed after the sine die adjournment of the Congress.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of theHouse or Senate shall return to the Member of the respective House any matter submitted for the Congressional Record which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The Kee Report—Federal Funds for Scientific Research

EXTENSION OF REMARKS

OF

HON. JAMES KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1967

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include this week's public service television and radio newscast, "The Kee Report." The subject discussed is "Federal Funds for Scientific Research."

The report follows:

THE KEE REPORT—FEDERAL FUNDS FOR SCIENTIFIC RESEARCH

This is Jim Kee bringing you the Kee Report. The role played by Federal funds in promoting the advancement of science is perhaps the least understood function of the national Government. Many people wonder why the government is engaged in this work at all. The answer is that failure to do so would imperil the security of the United States.

In this brief talk, I would like to review with you the highlights of one of the most important programs our government has ever undertaken. The space exploration program brought the scientific activities of the Government to the attention of the American public in dramatic fashion. But actually the work has been going on for 25 years—during which time Federal funds have contributed to important scientific discoveries.

At the end of World War II, there were virtually no Federal Government funds for research and development apart from the military. In the brief time since then, Congress has pioneered by creating 5 major agencies whose purpose it is to keep this country in the van of scientific knowledge. The Government is currently spending more than 15 billion dollars a year on these actitvies. The prospects are that this sum will increase.

A large portion of this research money is spent by the military and the Atomic Energy Commission in keeping our military establishment up-to-date. But the Government is also devoting large sums to the improvement of health and education and other peace-time activities.

I believe most American are proud of our space program which may succeed in landing a man on the moon before too many years have pasesd. However, the space program is severely criticized by many well meaning citizens who believe the money might better be spent elsewhere. They believe it would be more appropriate to employ these sums in cancer research or in widening the war on poverty.

The answer is that the United States is engaged in the space race up to the hilt because it cannot afford to do otherwise. Military men have warned that whoever controls outer space will control the earth. The only other nation engaged in space activities at this time is Soviet Russia. If our nation abandoned the space race, we would abandon the cause of liberty for ourselves and we would abandon the rest of the free world as well.

However, the view that nothing practical will result from the space race is entirely wrong. On the contrary, the knowledge gained by this effort will make substantial contributions to everyday living. Already scientists engaged on the program have come up with the strongest plastic ever developed for resisting extremes of heat and cold. In future years, this new substance will have wide-spread domestic uses. The space race will also increase our knowledge of what causes weather disturbances, something which will be of great value to the nation's farmers.

The National Institutes of Health are supervising a vast inquiry into the cause and cure of disease. When the final results are in, I believe this program will prove as important as the space race.

In promoting scientific research, our Government is cooperating with private enterprise and private educational institutions. This partnership will accomplish great things for the future of the American People.

Thank you for listening.

Cleanest Town Achievement Award

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 2, 1967

Mr. RANDOLPH. Mr. President, my home city of Elkins, W. Va., has won a national award for its cleanup campaign in the 1966 National Cleanest Town Achievement Award contest.

This honor was won in competition with cities and towns throughout the United States and we are grateful. But, of course, we are proud of the achievement because we feel we earned it.

The citizens of the community are to be commended for their civic pride and for taking part in this worthwhile project. This award, which is to be presented during the National Cleanest Town Conference in Washington, D.C., on February 21, is the result of real cooperative effort.

Mr. President, I ask unaminous consent to have the Elkins Inter-Mountain article on the subject in its January 28, 1967, issue printed in the Appendix of the RECORD.

There being no objection, the story was ordered to be printed in the RECORD, as follows:

[From the Elkins Inter-Mountain, Jan. 28, 1967]

ELKINS WINS TOP NATIONAL CLEANUP CONTEST IN DISTRICT OF COLUMBIA

WASHINGTON, D.C.—Elkins, West Virginia, has won a top national award for its unique and ambitious Clean-Up Campaign.

The national "Distinguished Achievement Award" was won in competition with hundreds of cities and towns—regardless of size—in the 1966 National Cleanest Town Achievement Award Contest.

A member of the city's delegation will receive the award in person at an elaborate Awards Ceremony which is the highlight of the National Cleanest Town Conference in Washington, D.C., on Feb. 21. The presentation of this award which recognizes the city's achievement will be witnessed by beautification leaders from all over the country.

In addition to this high honor, the contest judges have chosen the city's scrapbook entry to be placed on display during the entire length of the Feb. 20–21 Conference at the Statler Hilton Hotel. This will enable delegates from other communities to see first hand the public record of what the city has accomplished.

The award was earned because of the community's enthusiastic response to the month-long clean up campaign which began with a parade led by the "2-B Clean" astronauts. Among the many beautification projects, there was an essay contest in the schools, property complaints were investigated and rectified, and college boys cleaned up the river banks.

"The citizens of this community should be commended for their voluntary accomplishments in the field of civic improvement and beautification," said R. H. Hackendahl, director of the National Clean Up-Paint Up-Fix Up Bureau.

Director Hackendahl has invited the mayor and other civic leaders to attend the National Cleanest Town Conference and to witness the national honor presented to their community and its residents as a result of their 1966 clean up and beautification efforts.

Awards in this, the oldest and largest competition of its kind in the country, are based on the degree of achievement in relationship to the five objectives of the National Clean Up Bureau and on the concept of voluntary self-help. The objectives are: (1) Home and Community Beautification, (2) Prevention of Slums and Rehabilitation of Blighted Areas, (3) Improving Health and Safety Standards, (4) Teaching Juvenile Decency, and (5) Supporting Fire Prevention Programs.

A panel of six judges was responsible for naming the winning cities in two classifications—communities conducting clean up campaigns of short duration and communities conducting continuous programs of clean up and civic improvement.

The judges for this year's contest are: Mrs. Henry H. Fowler, wife of the Secretary of the Treasury and chairman of the White House Speakers Bureau for Beautification; Mrs. E. D. Pearce, president of the General Federation of Women's Clubs; John Garvey, deputy director of the National League of Cities; Harold E. Horn, associate director of the International City Managers' Assn.; Alastair McArthur, deputy executive director of the National Association of Counties; and John J. Meehan, manager of Community, Regional and Natural Resources Development, U.S. Chamber of Commerce.

The two-day National Cleanest Town Conference, also sponsored by the National Clean-Up Bureau, each year brings together citizens and civic leaders who are interested in turning their ideas for beautification into practical results.

This year's conference opens at 9 a.m. on Monday, Feb. 20, with the trophy winners forum. After a special luncheon at which programs of the Department of Housing and Urban Development will be presented, the three afternoon seminars begin. These are the working part of the conference, at which the roles of government, business and industry, and citizen action will be explored and recommendations made to the President's

Council and his Citizens Advisory Committee on Recreation and Natural Beauty. In the evening is a reception for delegates to meet the Contest judges.

The awards ceremony starts at 9 a.m. on Tuesday, Feb. 21, in the Presidential Ballroom of the Statler Hilton, and is followed by a special luncheon. The conference ends that afternoon with a general business session which gives delegates the opportunity to discuss their civic problems with Bureau Director Hackendahl and members of the National Advisory Council to the Clean Up Bureau.

The Jaycees 10 Outstanding Young Men

EXTENSION OF REMARKS

OF

HON. SAM GIBBONS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1967

Mr. GIBBONS. Mr. Speaker, the U.S. Junior Chamber of Commerce recently paid great tribute to 10 fine Americans by naming them the 10 outstanding young men in the Nation. I am proud that one of them—Dr. Walter Lane—is a resident of my congressional district. Dr. Lane was cited for his research in translating complex laboratory procedures into practical, daily office techniques, but his contributions to his community and Nation go far beyond his research.

Under unanimous consent I include two articles from the Tampa Times honoring Dr. Lane and his wife:

HIGH HONOR FOR DR. LANE

Temple Terrace and Tampa have hit the national news map because of the selection of Dr. Walter Lane by the U.S. Junior Chamber of Commerce as one of the Ten Outstanding Young Men of 1966. The Times joins in extending congratulations.

Dr. Lane, a graduate of Hillsborough High and University of Florida's Medical School, first won national recognition while still a medical student. He developed a new and better method in the college laboratory of detecting bacterial infections.

The Jaycees also praise his professional attitude as a general practitioner. He has persistently urged more medical students to become GPs rather than specialists; he insists that the general practitioner, once known as the "family doctor" or the "country doctor," works "where the people are."

There certainly is a widespread impression that this country has too many specialists and not enough "country doctors." The specialist, of course, is important, in research and in treatment of rare or unusual cases of illness. But his fees are usually higher than the GP's, and the latter often effects a cure as promptly as a specialist.

Dr. Lane, now only 32 years old, is in distinguished company with the other nine on the Jaycees' list; they include onetime Army football star and now Vietnam War hero Capt. William Carpenter, and Ralph Nader, author of the bestseller "Unsafe at Any Speed," which has led to the building of safer automobiles.

May Dr. Lane go on to even higher honors.

THE AWARD IS HIS—AND HERS

(By Diane Vallee)

Success is sweet—and—sweeter when shared.

Dr. and Mrs. Walter Lane are sharing an honor that comes to few.

The United States Jaycees have named Dr. Lane, a Tampa doctor dedicated to the family physician's community role, as one of the nation's Ten Outstanding Young Men.

He has been cited for his research in translating complex laboratory procedures into practical, daily office techniques.

Dr. Lane was presented the American Academy of General Practice Gold Medal Award during the 1966 American Medical Association convention.

He also received the Aesculapius Award for the outstanding scientific exhibit at the 1966 convention of the Alabama Medical Association.

While friends and strangers from coast to coast applaud Dr. Lane and his contemporaries, the doctor is applauding his wife, Nancie.

"Without her help and complete support, the honor would never have been possible, he explained.

"She assisted me in many ways and there was never the problem of fighting a war at home," he said.

In turn, Nancie, is "thrilled and delighted" over her husband's honor—"He worked so hard and I really feel he deserves it.

"I think he's pretty wonderful," she said. "And he's an outstanding husband and father as well as a dedicated doctor."

The Lanes have shared hopes for the future since they met in Hillsborough High School.

Even when Dr. Lane continued his education at The Citadel and Nancie attended Florida State University and the University of Tampa, they maintained strong ties through letters and visits home.

The couple was married in Tampa at Seminole Heights Methodist Church when Nancie was a senior at the University of Tampa and Walt was attending Naval flight school in Pensacola.

After his stint with the Navy, he decided on a career in medicine, a field which had fascinated him for many years.

Following graduation from the University of Tampa and the University of Florida Medical School, he interned and took his residency at Lloyd Noland Hospital in Birmingham, Ala.

During these years of training, he worked part-time in laboratories while his wife taught school and helped him with "small technicalities" whenever she could.

"It was difficult sometimes," Nancie recalled, "but certainly worth every effort."

Last July, the couple returned to Tampa and Dr. Lane went into practice here with Dr. Wayne Lafferty.

They reside in Temple Terrace with three daughters, Pamela, 4; Sharon, 2, and Melissa, three weeks.

When all the excitement of a new home, a new baby and a new award simmers down, Nancie has some plans of her own:

To join a garden club group and help "my black thumb," to become active with the local Zeta Tau Alpha Alumnae group, to play golf with her husband and to sail with him on their new boat.

She'll be with Dr. Lane this week in Jekyl Island, Ga., when he and the nation's other nine outstanding Young Men accept their awards at the National Convention of the Jaycees.

After all, according to her husband, she earned it, too.

Dangerously Neglected Merchant Marine

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, February 2, 1967

Mr. SCOTT. Mr. President, I invite the attention of Senators to an excellent editorial published in the Philadelphia Inquirer of January 31. It explains succinctly why the American shipbuilding industry has been falling behind its foreign competitors. I ask unanimous consent that the editorial, entitled "Dangerously Neglected Merchant Marine," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DANGEROUSLY NEGLECTED MERCHANT MARINE

Defense Secretary McNamara, in testimony before the Senate Armed Services Committee, has made some broad statements about inadequacies of America's privately owned merchant fleets and shipyards.

There is no question that serious inadequacies exist—a fact which this Nation's hard-pressed shipowners and shipbuilders have been emphasizing for some time—but Mr. McNamara need look no further than the Federal Government's own misdirected foreign aid policies to find the main sources of the trouble.

"The American shipbuilding industry is generally technically obsolescent compared to those of Western Europe and Japan," the Defense Secretary testified. "This is a startling development, in view of the fact that the United States is the most highly industrialized Nation in the world."

We see nothing at all startling about this development. It is deplorable and inexcusable, but not startling. It is a development that American shipbuilders have been warning Washington about for many years. Washington's response invariably has been to go on pouring huge sums of foreign aid to this country's shipbuilding competitors, knowing full well that the funds were enabling beneficiary nations to replace war-ravaged shipbuilding facilities with completely new and modern yards capable of operating more efficiently and economically than aging U.S. shipyards.

There are a number of shipbuilding experts in the Delaware Valley, at once-prosperous shipyards, who would be glad to provide Secretary McNamara with the details if U.S. foreign aid officials in the Nation's capital are reluctant to do so.

Zambia Growing Wary on Rhodesia Sanctions

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1967

Mr. YOUNGER. Mr. Speaker, yesterday I took a special order of 1 hour on the Rhodesian sanctions and was interested that the Evening Star of February 1 carried a story about Zambia growing wary of the Rhodesian sanctions. A lot of hope has been placed on Zambia, as the next-door neighbor to Rhodesia, carrying out the mandatory sanctions as imposed by the United Nations.

Apparently they, as well as Switzerland, are beginning to renege on compulsory enforcement. A recent story from Switzerland said that in view of the large amount of trade which Switzerland has with Rhodesia, there was going to be great difficulty on the part of Switzerland to stop that trade. This is a good way to say that they are not going to stop it. They are not members of the U.N. so are in no way obligated to carry out the U.N.'s orders.

The story on Zambia follows:

ZAMBIA GROWING WARY ON RHODESIA SANCTIONS

By Gordon Lindsay

JOHANNESBURG.—As Zambia's reappraisal of its confrontation with Rhodesia drags on, a clear reluctance is growing in the Zambian cabinet to approve any hardening of the current limited sanctions.

Government economists estimate that it cost Zambia $300 million to sustain its opposition to the white Rhodesian regime last year.

Copper revenue would have been at least $180 million higher had production not been lost due to coal shortages, rail difficulties and strikes in the mines.

More than $90 million was committed to hasty improvements of Zambia's northern supply routes (the Great North Road from Abercorn, south of Lake Tanganyika, to Dar es Salaam) and a further $30 million can be written off for a variety of reasons including higher prices for goods imported from sources other than Rhodesia and higher traffic rates on routes other than Rhodesian railways.

Reorganization costs spread throughout private business probably would make a mockery of the last figure.

COPPER PRODUCES SURPLUS

But, with the luck of a reckless gambler who throws away winning cards and still finds an ace up his sleeve, Zambia ended 1966 with a $90 million improvement in its balance of payments.

Government estimates are that Zambia will have a favorable trade surplus of $360 million this year.

Exports in 1966 were worth $720 million (compared to $570 million in 1965) and imports were valued at $360 million ($315 million in 1965).

Foreign reserves are now well over $240 million—by far the highest in black independent Africa.

Copper accounts for nearly all Zambian exports and the phenomenal price for copper this year—once as high as $1,800 a ton because of worldwide shortage—is the reason for the record surplus.

Doubles over Zambian supplies contributed to the scarcity value of copper although the Vietnamese war, Chilean strikes and the Congo-Union Miniere wrangle, would still have pushed prices higher than in 1965.

There is little jubilation over the trade surplus among the more level-headed members of the Zambian cabinet, who point out that if Zambia had ignored the Rhodesian issue and exported normally, the copper industry would have been worth at least $900 million this year.

The loss of revenue is by no means their only argument. Christmas goods were arriving in Lusaka shops last week—an odd proof that things are not going at all well with the new supply routes.

In fact, Rhodesian railways still carry more than 80 percent of Zambia's imports. The rest is brought in by road from Dar es Salaam and Malawi and by rail through the Congo to the copperbelt. All the routes are affected by practical or political factors.

Export routes are slightly better with Rhodesian railways now carrying only about half of Zambia's reduced copper output of some 48,000 tons a month.

Against the monetary costs Zambia can also blame its often hysterical stance over Rhodesia for the steady exodus of whites caused by worsening race relations. An easing of tension would arrest any new trek south.

ARGUMENTS LESS VALID

Meanwhile, the arguments for Zambia increasing the confrontation with Rhodesia become less valid.

Zambia has always recognized that if it decides to go it alone against Rhodesia and undertake a complete boycott, it risks economic suicide. While there is still strong support for this sort of move in the cause of pan-Africanism, those in favor of it can do nothing to prove it will have any effect.

A $33 million cutback last year of imports from Rhodesia does not appear to have unduly shaken Ian Smith, the Rhodesian premier.

And those in favor of weakening the confrontation with Rhodesia can show that Zambia still needs at least $60 million worth of Rhodesian goods a year.

Vietnam

EXTENSION OF REMARKS

OF

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 2, 1967

Mr. EDWARDS of California. Mr. Speaker, one of the foremost critics of this Nation's policy in southeast Asia has been Mr. James P. Warburg. Mr. Warburg's thinking on Vietnam has recently crystallized to where he sees only one alternative to the ruthless pursuit of total victory and this is withdrawal of our forces. We may not agree with Mr. Warburg that we do, in fact, face this choice. Nevertheless, I urge my colleagues to carefully read this letter to the editor of the New York Times, which appeared in that distinguished newspaper on January 10, 1967, for this exposition is thoughtfully written by a man who has studied in depth the entire situation.

The letter follows:

EDITOR, THE NEW YORK TIMES: There is an old Greek saying that "whom the gods would destroy they first render mad." And madness seems, indeed, increasingly to take possession of those into whose hands the American people have confided the destiny of their nation. It seems at this moment as if our beloved country were bent upon suicide and upon tearing down in its self-destruction the whole fabric of that human civilization to which it has contributed so much in the past.

The essentially decent and sensible American people do not share this madness but feel powerless to arrest it. They are forced to stand by helplessly, watching their hopes for the meeting of long-neglected public needs dissolve into unfulfilled promises, their nation's substance being wasted, and their sons and brothers being maimed or killed in a brutal war in the making of which they had no part.

To be sure, voices are being raised to demand an end to this all-devouring conflict but, increasingly, these are the voices of men who know of no other way to end it than by doubling and redoubling the stakes in a gamble for total victory through total annihilation.

Until now, this deeply concerned citizen has not favored an outright withdrawal from a commitment unwisely entered into and stretched far beyond the intentions of those who originally made it. But, if the choice is between withdrawal and the ruthless pursuit of total victory, then the time has come to face the issue; for, if that is indeed to be our choice, it is a choice between sanity and madness.

Your newspaper has rendered a great sevrice by exposing upon unimpeachable evidence the cynical brutality and the futility of seeking to bomb North Vietnam into submission, but there is little evidence that your advice to halt this effort will be heeded. In a broader sense, there is little evidence that our government has recognized the arrogance and the folly of seeking to impose a *Pax Americana* upon a world which does not want and will not accept it.

In these circumstances, true patriotism must demand withdrawal from Vietnam, whatever the consequences. Nor will these consequences necessarily injure our national interest, if that interest is truly appraised. As for prestige, our withdrawal will not be seen as a confession of defeat but, rather, as the recognition of a serious error in judgment—an error for which no one leader and no one political party can be held responsible.
